186 181 The picture becomes more gratifying if one observes the Masai in intercourse with his own kind. Behind all patch sides el masai * make a good mouth toward the Masai, that is, be good, friendly, sincere toward your fellow tribesmen.

/119 cont./

593 The Masai are animated by a deep feeling of solidarity; they
181 stand united against all foreigners. A sincere attachment and love
(186) bind the individual members of the family; they vie with one another in order to free a relative who has fallen into slavery. Thus, in 1896, the Masai who returned from the Berlin Exposition immediately used the greater part of their savings to buy back relatives who had become slaves during the great livestock epidemics around the year 1890. The tightness of the bond between parents, especially the mother, and children, as well as between brothers and sisters, looser between married people, where the lowly, oppressed position of the wife is of some importance.

181 The men scorn any kind of work. Only waging war is worthy of a
461 man. Large herds of livestock and many wives are his supreme
554 happiness. One who has both enjoys respect and prestige. One looks down on a poor devil. Truly poor people, however, are exceptions,
735 since relatives support one another in generous ways. One who does
602 not have such quickly finds accommodations as a rule with one who is well-to-do. He receives food and for that helps the women and children of his benefactor with their work (livestock-tending, kraal-building, night watch for the small livestock, etc.). The condition of /120/ poverty is so always only of brief duration; the poor man soon acquires some prosperity again through gifts from friends or a share of the spoils of war. Toward friends, one is just as generous
574 as one is good-natured; the hospitality to countrymen, no matter
(972) where they come from (with the exception of the blacksmiths, of course), is unlimited. Everyone offers a visitor whatever he happens to have in food and drink. Everything that the stranger needs or wishes is at his disposal. He reserves for himself a hut for the night
(139) by sticking his spear in the ground in front of it; the host then seeks other quarters for the night and leaves home and wife to the guest. If a woman comes for visit, the wife leaves the hut for the night, so that the stranger may take her place. Hospitality toward other peoples is known only if peace is concluded with them through the ceremony of infant-exchange or through blood friendship. The
181 cruelty of the Masai is no greater than that of the other black peoples, for example, the Negroes neighboring the Masai. If they

/204 cont./

776 779 improvement. He then does this through sickness, drought, or cattle epidemics.

779 721 [186] The Masai feel that they are the chosen people of 'Ng ai; all other peoples should be subject to them. God created the world with all that is in it only for them, and thus everything on earth belongs to them. If they obtain booty in war against another tribe, they are only taking what has been given to them by God for their own, what lawfully belongs to them, and what that tribe is unlawfully withholding from them. "If the el mgg would voluntarily give us our property, for that is what the livestock in their possession is, we should not have to make war on them. But since they do not do this, we are forced into war." And they are constantly waging this war against the despised, savage heathen, who know nothing about 'Ng ai and do not pray to him, but to spirits, which is why he does not assist them and always makes the Masai victors for a worthy cause.

776 779 In their journey through life God protects the Masai through guardian angels, who are pictured as winged, invisible beings of human form. The guardian angels are the same sex as their protégés: a male individual has an ol dunganí l Ng ai, a female one an ol gwojení Ng ai, watching over them. The angel accompanies the person always and everywhere and protects him from dangers, so that he will not succumb in the struggle for existence before the lifetime previously set for him by God has run out; only then does the person [195] die. The angel carries his soul /285/ to the other world and then undertakes the protection of a child born on the same day. Every day a Masai dies and every day one is born, the people say.

775 779 Into the other world (ol gwambó = cloud land, i.e., the land where the clouds come from) go the souls of all the deceased, both those of the Masai and of non-Masai, both those of the good and those of the bad people. As soon as a soul reaches the portal of the other world, which lies far to the north (Kapelukí), God decides its future fate. The souls of good people gain entry into paradise, which is equipped with all the beauties and splendors of nature. Lush pastures with fat cattle alternate with lakes, rivers, and cool glades whose trees bear the most delicious fruits. In the midst of this splendor the good souls live in human fashion, but without care, trouble, or

/311 cont./

XXII.

000 Law. -- Concerning family and personal rights, cf. 2nd Part, II, IV, and XX. -- Property rights. -- Things found. -- Barter or purchase. -- Liability of the relatives for debts, gift. -- Penal law. -- Murder and manslaughter. -- Revenge. -- Composition. -- Negligent homicide. -- Bodily injury of various degrees. -- Accomplices. -- Immoral offenses. -- Suicide. -- Kidnapping. -- Theft. -- Treason. -- Arson. -- Cowardice in war. -- Death penalty. -- Fines. -- Degrading punishment of warriors. -- Compensation for innocent accused persons. -- The mentally ill. -- Warning. -- Legal proceedings. -- Courts. -- Example of a /312/ criminal case. -- Inquiry about an unknown culprit -- Pleading. -- Swearing to the truth. -- Torture for exacting the truth. -- Ordeals in the search for truth. -- Sorcery procedures. -- No international prosecution of criminal deeds.

691 As awareness and understanding of justice are very little developed among the Masai. Therefore only a small number of customary
[184] legal provisions exist, which are by no means uniform for all Masai, but rather often enough vary in the different districts. As nomads,
[361] among whom individual families frequently live alone or with their closest relatives in a kraal, by themselves, without having neighbors in the larger vicinity, they make do with fewer laws than another tribe whose numerous members are supposed to live within definite fixed limits in permanent order and peace. Furthermore, the nomadic life in and of itself leads to a freer conception of life, which opposes tutelage through laws and often prefers to let might
[593] come before right. But in order to understand the great inconsis-
[619] tency in individual legal decisions, one must above all take into
[186] consideration the feeling of solidarity, which is strongest in the family and always still strong enough in the tribe to arouse from the first great prejudice against anyone who does not belong to the
593 tribe. The questions concerning family and personal rights have

/331 cont./

*539 as the closest association of ideas circumcision -- conception --
*773 birth. Therefore circumcision is regarded here as a means, even
*171 though not necessary for conception, nevertheless desirable for it
*121 and promoting it. We find the same thought in the Bible, where
304 God in Gen. 17, 6, when he announces to the 99-year-old, childless Abraham the sign of the covenant, i.e., circumcision, says "And I will make thee exceeding fruitful, and I will make nations of thee."

According to the preceding, the circumcision of boys seems to owe its origin to the view that it increases the procreative ability of the man. Quod judicium positum est in experientia, virum membro circumciso coire longius, feminam magis irritat. Vir membro non circumciso collectis seminis ejaculatio accelerator, saepe nimia, priusquam feminae voluptas venerea culmen ascenderet. Membro circumciso seminis ejaculatio retardatur et cum voluptatis venereae culmine congruit, quod ad conceptionem efficiendam faustum est. /It is a judgment based on experience that a man with a circumcised organ has intercourse longer, and excites the woman more. The ejaculation of semen of a man having intercourse with an uncircumcised organ is speeded up, sometimes too much, before the sexual pleasure of the woman reaches a climax. When the organ has been circumcised, the ejaculation of semen is slowed down and coincides with the climax of sexual pleasure, which is favorable to bringing about conception./ This leads to the conjecture that the lawgiver who introduced the circumcision of boys was acting with the intention of promoting conception and along with that increasing the number of births, i.e., multiplying the people. Circumcision
[87] became a preparation for marriage and, accordingly, is still carried out by the Masai, as among other primitive peoples, only after the onset of puberty. A later age made it a tribal symbol for the Israelites and Masai and, as such, moved it among the former to earlier childhood. Through the belief -- strong in Israel as well
• [86] as among the Masai -- in the divine favor before other peoples, the tribal symbol then became a visible sign of this, from which is derived the explanation of circumcision as a symbol of religious

/331 cont./
poetry (1).

1. That circumcision among the Israelites -- as is assumed -- attained religious significance only during the Exile is refuted, it seems to me, by the use of the stone knife in earliest times,

as the Bible often designates it.

Circumcision certainly does not owe its origin to considerations of cleanliness -- as one so often hears -- since the desire for cleanliness could be satisfied more simply in other ways and without an operation not always entirely safe. Furthermore, we also find this custom preferred precisely among those peoples who certainly do not attach any particular value to cleanliness. Moreover, however, I also doubt that /331/ the utility of circumcision in the matter of cleanliness is actually so great, for among the only very scantily clad primitive peoples the part in question is so much more exposed to the effect of dust, etc. and injury by thorns, spiny leaves, blossoms, and grasses than it would be otherwise.

The circumcision of girls among primitive peoples may also be interpreted as a preparation for marriage. Among the Masai, besides the point in time at which it is undertaken, the way of life of the girls before and after the operation argues in favor of this. Clitoridectomy excises libido diminutive or substituent capitulum veneris. /Clitoridectomy excises lessens desire and, in substituting, restrains passion./ This has, in the opinion of the people, great advantages for the growing and suckling child, as is also shown by the continence rules of the Masai during pregnancy and the suckling period.

As we know, the Bible knows of no circumcision of the girls. That such was customary in Egypt, however, even during the oldest Biblical period, is taught by the 15th of the British papyri, in which there is mention of the circumcision of the girl Tamnit, the daughter of Nefert ef Amenphis. Here, too, the girls were circumcised at the age of puberty (1).

1. Plum, "Das Kind in Brauch und Sitte der

/347 cont./

132 caused the Masai people in the period before the occupation of the
731 country by Europeans. I have no reliable observations made by myself
233 or by Europeans. Both can scarcely exist, for at that time the Masai were a feared power that every caravan liked to avoid. I am therefore relying on the statements of old men. According to their recollection, the epidemics were never capable of producing actual famine. As soon as the beginning of an epidemic was observed, the Masai fled in wild flight with the herds, leaving the sick animals lying along the way. Half the herd at most is supposed to have succumbed. If one considers the size of the herds at that time, one understands that the surviving part could always still furnish sufficient milk and meat.
[721] Furthermore, the war expeditions soon brought substitutes for the fallen animals and thus acted to preserve prosperity (2).

2. It is to be lamented here that empirically Uvamoi's epidemics caused few losses for the sedentary Negro practicing animal husbandry along with agriculture. This is probably chiefly due to the fact that he calls only very few head his own and keeps them in his hut, which is far from the cattle.

Though that the Masai were able to replenish their depleted herds quickly and easily.

182 Finally, the Masai's profound contempt for the surrounding Negro
• 78 tribes was also favorable for the preservation of the people. It kept the people free of foreign elements, which here would only have resulted in a degeneration of the race.

121 The fable that primitive peoples would have continued to develop
177 peacefully and favorably if Europeans, with their corruption, had not disturbingly interfered has long been recognized as such. On the other hand, however, it remains an /[illegible]/ undeniable fact that these peoples decline upon contact with the higher culture, and that many even disappear as a people. The reason for this phenomenon lies in the fact that these peoples have already been living on an unhealthy basis and have owed their preservation to causes that we designate as

/348 cont./

182 931 had been seen with the bleaching skulls of those who had starved and
[348] out of the stricken animals. Any of the women and girls who had not died of hunger sought and found refuge among Negroes practicing agriculture, who always like to buy or kidnap female individuals. A mother would sell her child for a handful of maize and would sell herself a day later for a similar price. In order to avoid starvation. Negroes and caravans /349/ took possession of the will-less ones, in order to resell them as slaves. Many have since come back, in part through flight, in part through redemption by their relatives, but more are still found in strange hands. The latter, even though their blood lives on beneficially in the new mixture with Negroes, are
182 931 669 permanently lost to the Masai people. So greatly has the misfortune, to which an opposite effect is so often attributed, broken up the former organization, the firm unity, that, soon after the end of the epidemics, the unhappy quarrel between the brothers Lenana-Lenolen about the undivided rule over the Masai could begin. With its continuing civil wars it acts powerfully toward the completion of the destructive work of the epidemics. The Negroes, with whom alone
[724] the Masai formerly waged war, except for smaller undertakings
[187] among themselves, which have more the character of provocations than of serious battles, were oppressors inferior to them. Now equal parties stand opposite each other, which makes the wars bloodier, more destructive.

178 29 Through increasing impoverishment as a result of these epidemics and civil wars, there is now going on among the Masai -- as formerly among the Wakuafi -- a change from nomadism to sedentarism.
[433] Agriculture is taking the place of animal husbandry. The ones
[361] deserting the "people" in this manner are founding settlements, in part self-sufficient, in part supported by Negro tribes, somewhat removed from the dry steppes, there where the watering is adequate for the laying out of plantings. No one expects them to prove to be particularly skilful as this; but Nature, which goes so far to meet her children in the tropics, helps here too. A moderate watering suffices to make the banana shoot sprouts in the virgin soil grow and produce tubers. Maize for the most part appears just as easily satisfied as advantageous. These then are the principal useful plants

/361 cont./

its effect. Hated as faithless and despised as agriculturists, the sedentary ones are constantly plagued by raids that not only cause them great loss in human lives, but also take away any possibility for them to arrive at any improvement in their way of life by keeping livestock for the attainment of the meat and milk diet so necessary for them. Moreover, the frequent intercourse with sedentary Negroes and caravan people leads to an increase in the cases of venereal diseases. Premature marriages of girls, which can not happen among the Maasi still living as nomads, is not rare among the sedentary ones and often enough leads to the death of the young woman who is scarcely more than a child and whose bony structure, despite her attained capability to conceive, is not yet developed. Finally, it must still be mentioned that no doubt the longing for the formerly free life in the broad steppes and the feeling of humiliation over having become a so deeply despised cultivator of the soil counsel are factors that have a wasting effect. The latter circumstances also belongs with it a decrease of national pride. The hunter that kept Negroes out of the community of the Maasi has fallen. A dwindling Negroes race mixture hunting the people is slowly taking place. Among the Wakuafi this process was more rapid to their period. At that time no European administration prevented their raiding expeditions to Negro regions, from which they brought home livestock and women experienced in agriculture.

In frequent -- almost daily -- intercourse that now springs up and then continues to exist between the Maasi who have become sedentary and the settled Negroes, the Maasi currently also share in the dwindling-ranges that /361/ come to the Negroes through the encounter of their lower culture with our higher one.

We have seen how many difficulties acculturation brings to the Maasi, and it is therefore not surprising that a part of those who have already become sedentary give up their fixed residences again after repeated failures. These then often join the Wandorobo, to live by hunting, and call themselves this.

/ya-nam-/

which is exactly the Semitic conjugation pattern transmitted from Arabic to the Cushitic languages (for example, Arabic *a-ban*, *ta-ban*, *ya-ban*, pl. *nabnu*, *tabbun*, *yabbun*). But otherwise, too, Amharic, even though its vocabulary /*ya-*/ and much of its grammar are so greatly Africanized, shows many traces pointing clearly to its ancient Arabian heritage. Among these I count the conjunctions *ya*, "and" (from *wa*), and the connective *ba*, "and, so, then," Hetzron, p. 100, which is exactly the difference, as characteristic for Arabic, between *wa* and *fa*, or the recession of a formation of singular nouns by the ending *-a* (*b-ukki*, *ukki*, *ab-ukki*, a single ox), Hetzron, p. xvii, or the double function of the particle *ma* (both "not," likewise in Somali, and also "that," cf. Arabic *mā*, "not" and "that which"), or also individual characteristic words that can scarcely be taken as later borrowings, but are to be regarded as ancient remnants, such as *ayrna*, navel, Arabic *ayrn*; *ana*, fawn, Arabic *ana*, kneeled camelsie (originally «young fawn»); *hamej*, blacksmith, Arabic *hatay* smart, sprun, Arabic *nuffy*; *mamu*, older man, husband, Arabic *mamu*; *ya*, to him, Arabic *yaw'a*; *ma* and day ten, (night and noon, on the other hand, *mam*.), cf. also Arabic *ḥawa*, not ten., and the expression *al-lel* *ya* '*a-mālā* (1).

1. *Mālā* is an old (now no longer recognized as such) feminine form of the form *fa'lā* from *ala*, "light"; *lel* is the masc. of *lelle* (older *ḫelel*) with the same meaning, "night."

(1) night and day, same as *al-lelen ya* '*a-mālā*. Pointing quite specifically to the South Arabian Modern languages (thus the dialects of Mehri-speaking Lesdi), from where so-called Ethiopian also comes, we some plural formations of the broken, such as *ang-ella* from *ang-el*, *ḫ-agella* from *al-aga*, etc. (Hetzle, p. 97), cf. to make *ahellum* (from *ahlel*, flies), *hadenum* (from *hadda*, early Ethiopian *ana* (fem.), "which," and blend *anna*, fem. of *ella*, as well as the feminine article *ya* (in contrast to masc. *al*). According to Hetzle, p. 171, the Finiaka are only six men among

124 Swahili. Many Masai in the area speak some Swahili, so
• [191] using Swahili and a limited number of Masai nouns we usually could converse with Masai throughout the study area. Occasionally we had the services of interpreters.

123 These Masai regard visitors in their country with
[609] interest and guarded suspicion. The suspicion is greatest if they believe the visitors are representatives of the Government. After we had lived on safari in Western Masailand for some months constantly moving from place to place the Masai appeared to accept us as a harmless, neutral, and occasionally interesting phenomenon.

Our status with them was helped by our work
[231] with grass and animals. Above all else the Masai appear
[181] concerned with animal husbandry. They have a lively interest in wild animals, appreciation for domestic livestock that is almost reverence, and an understanding of the importance of grass. Our work on these things therefore seemed understandable. Beyond the frequent initial query: were we with the Government, there was never any question of why we were working there. The Masai appear to accept without question that white men are prone to the strangest behavior. Movie companies and some tourists fortify this conviction.

Massai F1.12

192

[For the translation into English of various Massai grammatical terms, see category 193.]

Class III.

[193] This group consists of substantives which form their plural in *i*. In some instances *i* is simply added to the singular, in others *i* is preceded by a vowel, and in others again the last two or three letters of the singular are changed into *ch*, *sh*, or *k*. This class includes words indicating (*a*) status or calling, (*b*) parts of the body. A few other words also form their plural in the same manner. Examples of the first division:

Singular.	Plural.	English.
Ol-ainyani	Il-ainyanik	The man.
Ol-aiyoni	Il-aiyonik	The old man, the husband.
Il-ngorityiani	Il-ngorityiak	The woman, wife.
Ol-ainti	Il-aintik	The grandfather or grandson.
En-gitok	En-gitonik	The wife.
Ol-ayoni	Il-ayonik	The father or son-in-law.
Ol-[illegible]ani	Il-[illegible]nik	The chief.
Ol-ayewani	Il-ayewanik	The counsellor, spokesman.
Ol-aiboni	Il-aibonik	The medicine-man.
Ol-aimanani	Il-aimanik	The hunter.
Ol-ayanani	Il-ayanik	The Chief.
Ol-aigwenani	Il-aigwenik	The navigator.
Ol-aiarubani	Il-aiarunik	The barber.
Ol-aiitoni	Il-aiitonik	The poor man.
Ol-aaiboni	Il-aaibonik	The wizard.
Ol-aiiani	Il-aiiaik	The dancer, writer.
Ol-aiirkani	Il-aiirkik	The herdsman.
Ol-aenaiani	Il-aenaiik	The trapper.
Il-aiirkani	Il-aiirkik	The blind person.
Ol-aglani	Il-aglik	The destroyer, breaker.
Ol-aiiniiniani	Il-aiiniiniik	The dancer, prophet.
Eng-ayanani	Eng-ayanik	The widow.
En-ilaiiani	En-ilaiiik	The alleyling.

Examples of the second division:

Singular.	Plural.	English.
Ol-kiaujiko	Il-kiaujik	The finger, foot.
Eng-ulu	Eng-uik	The arm, hand.
En-gejo	En-gejik	The leg, foot.
Ol-kejo	Il-kejik	The chest.
Ol-ulu	Il-uik	The knee.
Il-ashu	Il-ashunik	The horn.
Eng-ulgo	Eng-uigik	The eye.

[194] * The thumb is called Ol-kiaujiko ilitok, *ol-kiaujiko ayanik*, or *ol-aiyoni ilitok* (the big or his finger, or the big ol-aiyoni); the first finger, Il-aaiboni or Ingoitokani (the wizard); the middle finger, Ol-kanai (the sling of goat's skin which is worn on this finger); the third finger, Ilpiri-Kiaujiko (Kiaujiko's sweetheart); the little finger, Ol-kiaujiko ol (the small finger), Kiaujiko or Ilo-ghilanik (people's country).

Nna, ten ili en-giyi-kenai, ntiten 'Ngitenye ake 'e-dikitin.

If a baby dies, its mother only lays aside her ornaments[1].

Il-ketja en 'l-enenkiga[2] loo-'l-enkiyanak, en 'l-enerin.

People's souls and spirits, and snakes[3].

Ten ainu en-nki el-tukpai, ediji ainu en-nnkiye el-ten lenye. Nna, ten ili el-tukpai, en ol olomi, nki ili el-ten lenye. Kiji ediji ainu 'e-gidin: nnitiki el-ten epin.

When a man is on the point of death, people say he is about to cut his heart; and when he dies and is eaten (by hyenas), his soul dies with him. It is believed that all is over as with the cattle, and that the soul does not come to life again[4].

Kake ten ili el-ilomi enki el-kerin, nenkuri, ene pe ekpetye e-emun lenye, ediji ainwin el-ten lenye, ainu el-nenui; nnin el-nenui eng-ekg en-'e-gere enyenu, tuilgenu.

But when a medicine-man or a rich person dies and is buried, his soul turns into a snake as soon as his body rots; and the snake goes to his children's kraal to look after them.

Ti-enki nnu ediji, pe nnter il-Kenna 'l-enerin lenye. Nna, ten ainl i-ilgurtyek el-nenui ti-ji, nnenki kulle, nnenij el-nenui, nnin.

The Masai in consequence do not kill their sacred snakes, and if a woman sees one in her hut, she pours some milk on the ground for it to lick, after which it will go away.

Ili 'l-enerin nnenk, nnu le'e-gidinai en-'l-ainer; nnu, ten ter ilkaa enii 'l-enpeny, ediji: "Kiser, anre 'l-kulenkig."

There is a black snake, which is sacred to the *Ainer* clan; and if a person of another clan were to strike the snake whilst the owners were present, they would tell him to desist as it belongs to them.

[1] The Dinka, Bari, and other Nilotic tribes follow similar customs (Kaufmann, *Anthropos*, pp. 190, 191; and *Beim Nubs in Central Africa*, p. 408, &c.).

[2] Ol-ken, the heart, mind, soul; el-nenkiyanak, the weapon, spirit, ghost.

[3] The Dinka, Bari, Latuka, and other Nilotic tribes, also pay reverence to snakes (Kaufmann, *loc. cit.*, pp. 191, 192; Schweinfurth, *The Heart of Africa*, vol. i, p. 271; Gessi, *Six Years*, p. 31; *Beim Nubs*, *loc. cit.*, p. 220, &c.). The Dinka hold that divine ancestral shades are embodied in certain large and harmless snakes, whom their human kinsfolk receive with kindly respect and propitiate with food (Tylor, *Primitive Culture*, vol. ii, pp. 8, 9).

[4] The Dinka and Bari likewise disbelieve in a life after death (Kaufmann, *loc. cit.*, pp. 194, 195).

9:Foebrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

and alien children; the latter frequently come to be regarded as tribesmen by this process.

First of all a Masai adopts any child born to his wife by anyone other than himself, including those born prior to marriage: in fact a betrothed girl is frequently left in her father's home until she bears a child. The child of one's own loins is called *enaiko*, that of another *engera olaitolak*. No distinction is made between the two, and the latter term is generally used playfully.

If a man has one wife with a number of children, and another who is barren, when the former gives birth to another child, there is a ceremony by which the latter may adopt this child. The adopting mother sits on the after-birth, and pays to the true mother a cow and calf called *nangaja*. She takes over the child as her own, and it is asserted that by stimulation of the breasts and special food, lactation can be artificially induced, even when the foster-mother has never given birth. The fact that a woman has adopted a child in this manner is seldom referred to afterwards — the child is regarded as though she herself had given birth to it.

In the olden days children were frequently captured in war and adopted into the tribe: such a child is referred to as *el arwati lenkera*. It was, and still is, not uncommon for a Masai to adopt an alien's child; at times this will occur when the Masai marries the alien's daughter and adopts a younger son; or in time of famine amongst aliens, the Masai may find an abandoned child, or be given one to look after; or he may give some cattle to the alien for the privilege of adopting the child. The use of the word 'purchase' has been deliberately avoided, for neither party looks on the transaction in this light. A son acquired in this manner is called *ainkerra*. These last two categories of adoption can inherit the cattle of their foster-mother's house, whilst their children can inherit the 'gate' like any other Masai.

A peculiar custom of adoption exists amongst the Engidong or Iaiser's clan. Any Masai, child or adult, can attach himself to a member of the clan, and such person must treat him as a son, giving him cattle, and arranging his circumcision and/or marriage. Such a person is called *el ooiti*, as also are the numerous Kikuyu received into the clan. The relationship is terminable at will, the adoptee sharing and departing, but leaving behind everything that he has been given. Though theoretically applicable to the whole clan, such adoptees usually only take place in the Iaiser's immediate family.

These notes on adoption are by no means full: they may, however, be sufficient to emphasise that it is a mistake to regard the Masai as being racially pure. If they came in time to accept new ideas as readily as they accept new blood, their rapid advancement would be assured.

It is important for a number of reasons to know who holds the pure-strage in a Masai family group, but it is a question to which no definite answer can be given. Rules, where they exist, are seldom followed — as each intimate family matters it is personality that counts.

The cattle which have been allocated to a woman to trust for her children are nominally in her control. The elder looks after the animal

When the time for the ceremony arrives, a very big village is built called *emuka*, and all the members of that age-grade which is to be transferred from the *Junior* to the *Senior Warriorhood* stage assemble here with their friends and relations. The warriors concerned all dress up in their very best finery, and live skins especially are in great demand; and for nine days they dance a special dance called *Kodoek* of *manas*. During the whole nine days of dancing a very great number of cattle are slaughtered, and there is great feasting and beer-drinking, but neither the dancing nor the feasting are the important part of the ceremony; they are merely incidentals, centred around the *dingiro*. [SL] [S35] [S34]

The Dingiro.—Away from the main village an enormous hut has been built which will accommodate anything up to four hundred men at a time. It is said to be round in plan, to have a pointed roof, and to take very many days to build. There are no partitions inside it, but in the centre is dug a circular pit. Outside the hut is a thorn fence with only one entrance. This hut is called *dingiro* (a word that has been borrowed by the neighbouring Kikuyu and applied to ordinary bachelor huts), and is the centre of the whole of the *Emuta* ceremony. During the whole of the nine days of the ceremony this *dingiro* is used as a "club-house" by the men of the age-group concerned with the ceremony, but there are certain restrictions, and it is these restrictions which give the key to the meaning of the whole ceremony. It is considered both ignoble and dishonourable for any man in the warrior groups—and more especially the junior warrior groups—to have any sexual relations with any but the uninitiated girls, but, of course, some do occur either openly (as Forced Marriage) or in private. Now all members of the age-group concerned must be present at the *Emuta* ceremony, but only those who have strictly observed the above regulation and have never had sexual relations with an initiated girl or married woman may enter the *dingiro*. In order that no one may do so under false pretences the entrance to the *dingiro* is bewitched by the elders, so that if anyone ineligible enters he will surely die. [SL] [S34] [S34]

The *dingiro* is not big enough for all the warriors concerned to use it simultaneously, and such day for the nine days there is a public ceremony when the various individual territorial groups are expected to enter. For this ceremony all the friends and relations of those who are expected to enter collect round the entrance and each individual as he enters is greeted with applause, as he has shown by entering that he has not dishonoured himself or his family. Those warriors who does not enter try to slink away unobserved, for they are disgraced. Inside the hut—as mentioned—is a large hole which is used as a cesspool, into which the men who enter the hut must urinate. This cesspool is also bewitched as an extra precaution, and anyone who has falsely entered and evaded the witchcraft of the entrance will certainly die upon urinating in the hole. All those who enter the *dingiro* on any given day during the ceremony sleep there that night, and also have milk and meat brought them for food, and sit and talk for hours. During [S34] [S34]

are often called *I-Sipolio* or *Loikerian* (see Hollis, p. 298, Pl. XXX). They shave as girls with wire-headed arrows, and a girl who is shot must then give the novice a ring, which is usually, if not always, of a special type, being very much coiled and twisted. The novices must observe the following rules :—

They must enter the village before the cattle every evening.

Must not drink blood or eat meat or touch it with the hand.

Must not wash.

Must not have sexual intercourse with girls (this is not kept entirely).

Must not fight or be struck by anyone. Anyone who strikes a novice must put milk on his head.

Must not go out in the day time without the head-dress of stuffed birds.

O-Sinpolio, plur. *I-Sinpolion*, is the general word for any dance. (H., p. 291.)

Warriorhood.—The Age-group system plays such a large part in the tribal organization that I will deal with it in detail.

A right-side circumcision is called *E-Murata o ntiow* = the circumcision of right. A left-side circumcision is *E-Murata o ledjanga* = the circumcision of left.[1]

Each of these groups is called *O-peen*, an age-group. Each age-group takes a temporary name soon after circumcision and receives a new one at its *E-Unato* ceremony. For example, the present age of Purko warriors was called *E-Tiapi* prior to their *E-Unato*, when they took the name of *E-Sulumak*.

A right and a left age-group together form a larger group, which I shall refer to as a generation in contradistinction to an age. The term for a generation is *Ol ayi*, but it is also often loosely designated as *O-peen*.

Speaking generally, each section has a different name for its senior age-groups. The exceptions are (a) Loita and Siria. (b) Kaputei, Il-Oldiani and Matapato, who respectively share a single *E-Unato* ceremony and therefore have age-names common to their respective groups.

The generation names remain from the Kisongo to Tanganyika Territory and are common to all the Masai. They are given now after the warriors of the combined age have become elders. Thereafter the age-names tend to fall into disuse and be replaced by the generation names.

A large number of names is given in Hollis, p. 302, but hence an indeterminate mixture of age- and generation-names.

In the following table I have confined myself to names in everyday use in order to avoid errors and make for simplicity.[2] It will be noted that several sections do not have a left-side circumcision. In the remaining sections the right side is more popular than the left.

[1] I do not know the origin of the terms "right" and "left."
[2] The other generation names are Masang, Sipie.

According to Hellie, p.278,
/yet cont./ the Pleiades are only six stars among
the Greeks. Likewise in the pictorial representations of South Arabian
[92] [93] [94] [95] [96] south inscriptions (in contrast to the seven circles of the Babylonian
Sargal symbol): the cross of the heaven of the religious tradition
of the Greeks, al-kiwan, coincides strikingly with the expression
for prison, hatib, in the old Minaean inscriptions of Tarem (?).

[97] 5. Quite remarkable also is the correspondence
of the Greek custom that when one is inside
with her he place his spear in front of the hut so
that another will not enter (Herlin, p. 110 and p.
104) with the Arabic custom among the southern
Arabs (here only staff instead of spear) given by
Grohs (Book 3). -- Also that the "speaker" stands
at the head of the warriors is consistent of South
Arabic (cf. hatt, chief, actually speaker, as well
as wajh, "voice," probably has the same
etymology, cf. Syriac wajhā, speech).

[98] [99] [100] The specifically Minaean word dawgal, "virgin" (originally prob-
ably "young woman" in general), is the same as the Greek ar-
dawgin, "young woman" (after the circumcision) tawg, al-
gawwam, in the Arabic al-hallim, and cowbell, ang-gawgu,
the Arabic al-gulgul, to-shem, spear, perhaps the Arabic al-tha-
mmin. The cause of the Greek species nagnagam, from which
the Greek take a fragrant wood for therapeutic purposes (Herlin,
p. 27 and cf. p. 104, al-nagnigiyam), a vanilla-scented perfume,
is very consistent of the South Arabian name for frankincense,
naqa. Just as in general the retention of the second half of a
word, popular among the Greek (for example, gabaldin, a /yet/
rare name, gindhadi, a dandy), is likewise in rare a peculiarity
of Minaean, where it is used especially for the formation of color
names (example, gaff-gawn : Hebrew yaqrak, karmidi, green,
but also [illegible], hawkim : hilu, and the Tigre plant names
gamdadi, [illegible], [illegible], and hamdagiga). All these
are indicate reason that Lucian Ancher's meaning of the Greek as
an originally Semitic old then, more specifically, an Arabian
people were fully justified.

/<u>will come</u>./

171
173

To come now to the early historian, it is to be emphasized at the outset that, for any Semitic people, every time we come to the early period, through linguistic comparison, research into names, and literary remains, we are already able to uncover a well-established mass of myths that come very close to the Biblical early history (dragon fight in connection with the creation of the world, tree of paradise and serpent, flow powers, flood) and furthermore, as religion, a mass cult (worship of the sun) to be described almost as henotheism. But we come across exactly the same

(215) thing, in its most original form, among our cattle nomads, the Mesel. Already it should further be noted that also among the oldest Semites, where we have to think of more as nomads than as agriculturists, cattle, as their mythology clearly reveals, must have played a great role, not perhaps the small livestock or the camel and the donkey, to say nothing of the horse, which only because known from Elam to the Semites here around 2000 B.C.

174
171
173
192

There is also the fact that among the Mesel we find a series of positively ancient traits that bring us close to the Ben Arabian original homeland of all West Semites, and which otherwise come to us most clearly only in the religion of the ancient Chaldeans (and then transformed into the more polytheistically merged one of the Babylonian). To these belong first of all the struggle of the deity with the dragon Tamarati on the morning of creation; when Becker compares the word for dragon, <u>ua-Tamarat</u> (Sem.), with the Babylonian <u>tiâmat</u> (some popular pronunciation somewhat like <u>tiamat</u>), it is certainly not merely an accidental homophony, since the word for paradise, <u>Janna</u>, also goes back to the Babylonian <u>ganû</u>, "garden," which in the Hammurabi period must still have sounded like the unconserved <u>Jana</u> (cf. similarly Babil Babu, or that class will <u>Babilu</u>, and many other examples) (1).

1. When in Mesel <u>ua-Tamarat</u> also means fever, malaya, Arabic again offers a striking analogy here: cf. Arabic <u>al-ghûl</u> (here <u>al-ghûlah</u>, "demon," but <u>al-ganâh</u>, "malaya."

/Flame./
the same El mult. Those who become mobmay, however, are designated by the Meet as El lumbus and also as El kaft -- probably because they constitute the main part of the old El kaft. The can-ua people, accordingly, call them Wakaft, while they make no distinction between El mult and Meet and even impose on the former the name of the latter.

In contrast to the El mult, who have received pow, the El lumbus of all the settlements are more or less strongly mixed. In places the degree of mixture is so great that at first glance one scarcely recognizes the mongolic features characteristic of the Meet people; in places, however, it is also still so slight that any mixture at all can only be determined by thorough investigation.

A few groups finally, because known, the El mbi. This is the sequel branch of the Wambulbu: the third and most recent, the El gmunb, arose from the Meet Ikonelvu, in that those dispossessed by Ilvanwk epidemics were forced to a new course of subsistence.

Even up to 17 years ago the Meet were the lords of the can mapper in German and British East Africa, where the European occupation brought about a change. The entire land inhabited by them is divided into three provinces. The Kimbuge Province embraces those mapper regions that lie south of the line, extending east-west, connecting the peaks of Kilimandscharo and Meru. South of this line the province of Lelea, and still farther north, embracing the region of Lake Nalewaiko, the province of Ol Bongo. In earlier times a part of Lake called Ik gendgeri seems (?) to have temporarily formed a province by itself. Each province (of earlier 'ko = a province) is divided into districts call gai ; the lands and these again into areas. Most of their names are proper names that can not be translated; others are chosen from local peculiarities, for example, springs, brooks, hills, mountains, rivers, etc. The inhabitants often name themselves after the individual provinces or districts and then speak of Kimbuge-Meet, Lelea-Meet, Gendgeri- or even Kimbu-, Mmbu-, Ikgeri-Meet, etc. Earlier travelers often mistakenly took this designation for tribal names. Similarly, the word of which has been misinterpreted.

[The reference is to the last group of the original Swift--Ami.ped.]

/A cont./

So that it was taken as a tribal name, and people spoke of at ellab-bimmi and at ellab-Wakuafi. El ellab (dep. of ellabbaa) means killers, rough, brutal persons, and is an invective with which the Wanderiko, Wakuafi, and the bimmi Ilarlamiko (of bamma) designate their opponents, the bimmi. Parker mistakenly translates the word as "owners of the land"; this, however, would be ellabi (of ella) [illegible].

The Wakuafi live in their colonies as more or less peaceful, sedentary cultivators. Whenever they found peaceful neighbors after their defeats, they too became calm. On the other hand, where they remained in close contact with the bimmi and were exposed to their contempt with, the old belligerency remained in them. An example of this is the population of Ismailwa /Ismailwa/ in the Great Ararata /Ararata/ and Meru areas. In spite of a very considerable mixture with Wadelaggo from nearby Ellimandelkum, they have completely kept their original character intact. Their impetuousness, vigority, and cunning equal that of the bimmi in revenge, on the other hand, they even surpass them. Their numerous attacks on the camps of Europeans and trade caravans reveal them as brigands. The relationship between Wakuafi and bimmi is in general not bad. The latter regard the former as fellow citizens, even though as inferior ones, because they work the soil and own only a little livestock. They are free one minute and friends the next. And both must always reconcile themselves to each other, for the bimmi cannot do without them as suppliers of vegetable foods, after the rinderpest at the end of the eighties again raged so destructively among their herds.

While among the Wakuafi one can still clearly recognize their ear-time power and greatness, this is no longer the case at all among the Ilali. Most of them, just like the El ellab, cunning and concealed in the bush of the steppes, live in miserable little grass and leaf huts which can be reached only by hidden paths. Their best weapons of game, which they kill with poisoned arrows and poisoned javelins, honey, agri-divinal products which they obtain in barter, various wild berries, roots, and bulbs. Where they dwell in the vicinity of the bimmi, they live in a certain

The 'L ende and Ø ollinjan to a certain sense stand in contrast to the Ø ondgana, whom they half-seriously, half-absolutely also call 'N dalara-gawk (1)

1. 'N dalara, glorious, ne gawk, the mouth; by putting the two words together the idea of the law is supposed to be unmodified.

ne ding-edji-ungli-ainl (2).

2. , the bones of the hard teeth; ungli a hard, ed ainl, the teeth.

and, in contradistinction to them, designate themselves as ding edji al ainl. As the reason for this, tradition relates that the Ø ondgana were once separated for a longer period of time from the other two tribes and, upon meeting, made a bad impression because they no longer observed the divine commandment forbidding the killing of bovine animals for consumption. This gave rise to the above nickname, which, freely translated, means "gravely glorious."

The Ø ledji and Ø gard are not subsequently designated as Ø ainglin, a name formed after that of a war leader, Ø ungli. As the reason for the combination, it was said that members of the two subtribes were once overtaken cattle thieves.

The most outstanding lineage, not only of the 'L ainu tribe, but of the whole island people, is the Ø gatsch, because both the family of the chief (ed ainul) and that of the seneschal (ed gatsch) belong to it. The designation "chief" is actually not quite correct, since the ed ainul does not rule directly and does not exercise any real executive power. He rules only indirectly: the free belief of his subjects in his prophetical and in his supernatural ability of secrecy gives him an influence over the decisions of the people. Despotism and cruelty, such as we find among all Negro tribes, are foreign to him. He is less a ruler than a national saint or a patriarch, to whom the 'Ainul and Ad ainl are dark beasts. The people speak of his ninety years in hushed awe, and no one would

/[illegible]/

[illegible] of [illegible], on which people sit to eat. The seat is made out of one piece. In that one first roughly hews the block with an ax and then carves it with the knife. A few cooking spoons [illegible] [illegible].

1. Formed from the Dahuggo /Chaggo/ word [illegible] the latest do not have a word of their own, since they were unfamiliar with spoons in former times.

[illegible] wooden for their porridge [illegible], [illegible], whisks (Fig. 15), 1 ax (Fig. 14) [illegible], 2 [illegible] and a couple of knives (Fig. 17) [illegible] complete the kitchen equipment. Nowadays

Ill. 14. Woman with pot's ladder.

spoons (formerly only the ladle and whisk) are also carved out of wood by older people. The whisk has various shapes: sometimes a number of a stick on whose lower end is stuck a varnish from a

of the fight, or until one party remains the victor two or more times in succession. The fight assumes greater dimensions if the two dwellers belonged to different lineages or even different tribes. Then

Ill. 70. Dance in the warrior kraal 1.

the two lineages or the two tribes unite one on each other insofar as they live in one district; a conflict that is equivalent to a small civil war arises. Members of these lineages or tribes who live in a more distant district do not take part in the fight.

A war in which Maasai stand against Maasai is called el mutai (pl. el mutaiti), nor ne ilkiri (o ilkiri) or a war between Maasai and foreign tribes is called.

/91/ In peacetime the warrior spends only the least time in his own kraal. For the most part he goes about on visits to neighboring ones, often several days' march away. Never may all leave the kraal together in peacetime: a guard of at least two men always remains at home for the protection of the girls and the livestock, while the rest may go visit or go el kaj (Maasai meal, see p.111 above) or with other people.

/[illegible]/

[illegible] A fellow reproaches his disbelieve child with the words ni [illegible] ni gulu, that is, you are like a piece of earth or dirt, or ni [illegible] ni gulu, dirty below, or ga [illegible] ni gulu, dirty mouth.

Insections and curses are:

[illegible] ni [illegible] (or ni [illegible]) = darkness, or question of a decayed corpse

ni na' [illegible] (Mg ni ni [illegible], which means may God give you the curses sickness "[illegible]")

ni [illegible] = dirt, dust, that is, if only one could sweep you out of the hut like the dirt;

ni [illegible] = fall down;

ni [illegible] Mg ni, that is, may Mg ni take you away;

ni [illegible] ni [illegible] = may the scale bite you;

ni [illegible] ni [illegible] = may the lion devour you;

ni [illegible] Mg [illegible] = go away along with the man;

ni [illegible] ni [illegible] = may your footprint be lost, that is, may you disappear entirely.

Swearing expressions that may sometimes be more rudely are used by boys and youths to one another:

/[illegible]/

ni [illegible] = [illegible] /[illegible]/;

ni [illegible] = [illegible] /[illegible]/;

[illegible] = [illegible] /[illegible]/;

[illegible] ni [illegible] = [illegible] /[illegible]/.

The last two are used teasingly both by young girls to the mention and the latter among themselves. Furthermore swearers to curse one another with ni [illegible] = [illegible] /[illegible]/ and ni [illegible] = [illegible] by the girls. ni [illegible] = [illegible] /[illegible]/, ni [illegible] = [illegible] /[illegible]/. If a married man were to see [illegible] the latter — according to the [illegible] of the people — would immediately take their daughter back and return the bride price to the [illegible].

/[illegible] man./

[illegible] 192. man. Poor young girls among themselves use terms: [illegible] = accusative part /one who lies with her father/, [illegible] = accusative [illegible] /one who lies with her brother/.

Used by women toward young girls: [illegible] = you, relative; [illegible] = you, sister.

Younger children both use mother

[illegible] = regular parents

[illegible] = based by 'big sis'

[illegible] = mother

[illegible] = my to find (when you get a beating)

[illegible] = expect father

[illegible] (or [illegible]) = you expect father (expect girl)

[illegible], [illegible], you are a blackbird

[illegible], you are a cowlily

[illegible], that is, you are indeed mad. The term [illegible] (114) [illegible], which have menses mothers, is formed from the blue-crested bird, the red-footed [illegible], one of the crazy species of the weaver birds native to East Africa. If one sees more than a calling on the wayne from the left side, it means good luck, but if it calls to the right of the traveler the latter will meet encounter a misfortune.

[illegible] 225

[illegible] are here, that is, she by so sense, [illegible] = of [illegible] = the of lovers; [illegible] = of the spirit sickness; [illegible] = of sweetpeas; [illegible] = of monarch or invertical sickness; [illegible] = any the those pick peas; [illegible] = any peas belly have from eating; [illegible] = because black; [illegible] = rogue, heretic; [illegible] = disobeys, gossipers; [illegible] = bad fellows; [illegible] = coward.

201 To express contempt one spits before the person concerned or at him.

192 The large number of inventions made in concert to a striking poverty in terms of endearment.

993 /[illegible]/ The mother designates her child as '[illegible] big sis' = child given me by God, as [illegible] = mouth of the mother, or as [illegible] = resting place of the mother. The father calls it [illegible] = child of the wife. Older brothers and sisters call kindly to younger ones with the term [illegible] = child of mother.

/[illegible]/

[illegible] When one so often sees how the warrior flirt with the girls and how the latter act lovingly with the lamas, one would expect an abundance of expressions of tenderness. But here, too, this does not turn out to be true. The only pet name that the warrior gives the girl is [illegible] = my darling, while the girl calls him [illegible] = my friend, or she says [illegible] = I love you very much, to which the warrior replies [illegible] = we shall see (literally [illegible] /I shall see or sight/).

[illegible]

[illegible]

The Mochanitis. -- Their own lands. -- Their social position. -- Attitude toward the Mochanitis. -- Workshop. -- Tools. -- Iron extraction. -- Technique. -- Mochanitis' products: their prices. -- Wire drawing.

[illegible] The lands of the Mochanitis lie isolated, apart from the true Mimmi lands. It is not correct to designate them as a Mochanitis tribe, since there are Mochanitis [illegible] in all three tribes and also in all lineages, except the Ki Mimmi, and neither a single tribe nor a single lineage consists exclusively of Mochanitis. They form a caste of their own and are the pariahs of the Mimmi, the despised and devoured, [illegible], whom one would prefer not to tolerate if one did not need them so urgently. From ancient times the trade has been handed down from father to son, who only practices the calling after his marriage, therefore as [illegible]. One cannot detach oneself from the caste by not practicing the trade; rather, one who comes from a Mochanitis family always remains [illegible], no matter whether he works as a Mochanitis or not. If, on the other hand -- which happens only very exceptionally -- a Mimmi who does not belong to the Mochanitis caste permanently or temporarily practices the Mochanitis's trade, he will, to be sure, also be regarded with scorn, but neither he himself nor his descendants will be despised as Mochanitis or counted in the Mochanitis caste. A Mochanitis head [illegible] in the vicinity of other heads brings the latter bad

/111 cont./

lark and would cause their inhabitants illness and death for man and beast. Even in an emergency one never claims the hospitality of a blacksmith, any more than one ever grants him guest privileges. The warriors coming from blacksmith families do not live in the ordinary warrior kraals, but in the smaller blacksmith warrior-kraal (ol mangera l ol mdoa l ol kononi) and only with daughters of blacksmiths. They do not set out for the battlefield with the other warriors either, but alone, and naturally being along, since they /112/ are few in number, only a little booty each time, which then often enough is simply taken away from them by the other warriors. Another Masai does not marry the daughter of an ol kononi, just as the latter's son does not desire in marriage the daughter of a man who does not belong to the despised blacksmith caste. Even the extra-marital association with a woman or girl belonging to the blacksmiths is regarded as disastrous for any other Masai. It is believed that he will sooner or later lose his mind, will never be able to become the father of a healthy child, or on the next field expedition he will be killed by the spear or arrow of an enemy. How despised the blacksmiths are is shown by the fact that a Masai does not dare to pronounce the word "ol kononi" after the onset of darkness (1).

1. More than once the people, when in camp, in the evening, I wanted to speak with them about the ol kononi, begged me to abstain from this, because otherwise some misfortune would befall us. Nevertheless it happened from time to time, and thus also on the evening of December 31, 1901, when I was camped near a Tatoga settlement on the steppe southwest of Mburu. A lion then penetrated into my camp in the night and took a man, whom we, despite prompt pursuit of the lion, could no longer rescue. The next morning the Masai made me responsible for this incident, "It would not have happened if you had not spoken about the ol kononi last evening: we have so often told you this."

/112 cont./

564 326 [192] [784] [578] because he thinks a misfortune will be conjured up by it: it is feared that a lion would get into the kraal or the camp at night or that the enemy would carry out an attack. To call someone "ol kumai" is regarded by the other Masai as a strongly insulting invective expressing contempt.

564 326 779 829 [783] The contempt toward blacksmiths is based on the view that the blacksmiths are unclean. God forbade human beings the shedding of blood. By making weapons, the chief product of the blacksmiths among primitive peoples, they induce transgression of the divine commandment, work against the latter. Hence they are condemned by God, and therefore they are regarded by their fellowmen as unclean, contemptible, bringing misfortune. Daily observation also teaches -- so the Masai say -- that God does not love blacksmiths, for a blacksmith actually never becomes prosperous: if he should happen to become wealthy, however, he would soon die, without being able to enjoy his property.

564 326 142 It should expressly be brought out here that, despite all the efforts devoted to it, I have not been able to determine the slightest somatic difference between blacksmiths and non-blacksmiths and that all non-blacksmiths questioned by me (there were several hundred) described the blacksmiths as pure, unmixed members of the Masai people, which the blacksmiths themselves also maintain without exception (2).

564 326 197 198 114 2. Obviously the Masai blacksmiths speak the Masai Language and not another one of their own, as had been supposed from the statement by C. Hollis in his book, The Masai, their language and folklore, Oxford, 1905, p. 331. Hollis says there /the quotation is in English/: "The smiths have their own language, which, although a corruption of Masai, is not understood by the ordinary Masai. Not all of /this footnote is continued on the next page in the original source/ them can speak this language: it is only a certain number of them who know it." This statement by Hollis is ex-

[563]

/156 cont./

802 after the other, from the little finger to the thumb, into the palm of the hand. While one then further counts in like manner on the fingers of the left hand, those of the right one remain closed and only its thumb is moved freely. After turning down the thumb of the left hand, the one counting raises both hands, now closed into fists, and says tumun (= 11). For counting further, one begins anew in the same way and does not continue, say, on the toes.

[801] [171] The Ikmani count neither human beings nor cattle. It is believed, as the Ineselites also did, according to Le Clous, 11, that the one counted would die. Thus, they correctly estimate larger multitudes of living creatures in round numbers, and small ones with quite great certainty. Only dead persons, for example, the fallen warriors, are counted individually.

• 192 824 [154] The names of the fingers might be mentioned here: thumb = ol mamu kitak, that is, the big old one. Index finger = ne ngutilai or ol mukunu, that is, the sorcerer; if one wants to make someone ill through sorcery, one spreads the magic medicine under the nail of the index finger and, murmuring a curse, one points with it at the person concerned. Middle finger = ol gedei, that is, actually the strip of skin worn ringlike on the middle finger. Fourth finger = ngane ol genenja, that is, mother of the little finger, which is called ol ginjenja or also ely tinda.

802 Ordinals: ol ainuiga = the first /masc./, ol iaré = the second /masc./, ol inguni = the third /masc./; el ainuiga = the first /fem./, el iaré = the second /fem./, el ngni = the third /fem./. The /masc./ (the /fem./) (general), ol (el) abaye the last in the meaning of the rearmost is called ol abaye ta gaana: the one standing on the right end of a row (to the right of the one judging) is called ol abaye t' el gaina ernaenae (el gaina = the hand, ernaenae = on the right), the one standing on the other end, ol abaye t' el gaina ebedileje (ebedileje = on the left).

Once is called nabo kata (or nabo gadé); twice, kat' aré; three times, kat' ugi, etc.

[illegible]

802 As for functional parts, the Hawai have a special word only for a half, e nanua, which at the same time also means half, for example, e nanua ali gonii = half a cow. One designates parts that are smaller than the half of a whole with ua dukani, which, like ua uelani, means roughly "a piece, a strip of it." These pieces are distinguished according to their size a large piece = ali dukani kinds, and a small piece = ali dukani kana. These words are probably only used in dividing up slaughtered livestock, since there is scarcely any other practical need for their use. Ua dukani is used when the whole is divided crosswise; ua uelani, when it is divided lengthwise. With the help of these designations and the number words [illegible] one forms fractions in the following manner: ua dukani ua (or ua uelani ua) means that the whole was divided into three parts; ua dukani ua o' ua (a contraction of nana ua) ua ua kahu = the whole is divided into three parts, I take every two, that leaves one = 1/3.

805 The time of day is estimated according to the position of the sun, more rarely by the length of the shadow. The following times of day are distinguished:

Four o'clock in the morning: ainaa ana ahiahia = not yet "early."

Five o'clock in the morning: ahiahia = early.

Somewhat later in ali pepeula = the rosy morning sky.

Break of day, about half past five: elaua ola olai = the sun is (still) down.

Sunrise: ainoloua ola olai = the sun appears a little, or alahea ola olai = the sun is coming up.

The time from eight to ten o'clock in the forenoon is called ainaa ainai ahiahia = still early yet.

Around eleven o'clock in the forenoon, one says: aia ola olai' ola olai = the sun does not yet stand straight overhead.

Twelve o'clock noon: ahiaa ola olai = the sun stands straight overhead.

[illegible]

Since the Masai do not eat game meat and hence do not pursue game in any way, it is usually very tame in the vicinity of the herds and often grazes along with the cattle. The author saw an unforgettably beautiful scene in mid-1967 in the circular valley of Ngorongoro, where large herds of gnu and zebras, as well as Grant's and Thomson's gazelles, were grazing calmly and without any trace of fear beside and among the cattle herds of the Masai.

From the extensive nomenclature for the livestock, only the most important words are given here:

l gwiko, cattle in general;

ol ñiboro (*ol ñiboki*) or (very rarely) *ol ñigwa*, bull;

ol gwesi (*ol ñesi*), ox;

ol gwesi (*l gwesi*), cow;

ol gwesi ñorgwe ñabo, cow that has calved once;

ol gwesi ñorkiti ñe, cow that has calved twice;

ol gwesi 'ñiboo, cow that has calved a number of times;

ol gwesi ñiñi, sterile cow;

ol gwiñet (*ol gwiñet*), small calf in general, which says near the herds;

ol ñoolod (*ol ñoolod*), older calf that is pastured farther away;

ol ñiñi (*ol ñiñi*), older calf that grows in the vicinity of the large livestock;

ol ñoiwi (*ol ñoiwiwi*), male calf;

ol ñoiwi or *ol ñiw* (*ol ñoiwi*, *ol ñiwi*), male calf;

en ñiw (*en ñiñiw*), female calf;

ñiñ ñoiwi (*ñi ñoiwi*), female calf;

en ñgiro (*en ñgiro*), donkey in general;

ol ñmiñ (*ol ñmiñiñ*), male donkey;

/illegible/ *en ñgiro ñiñi* (*en ñiñiñ*), castrated male donkey;

en ñgiro (*en ñgiro*), female donkey;

en ñgiro ñorgwe ñabo, female donkey that has foaled once;

en ñgiro ñiñoo, female donkey that has foaled several times;

ol gwesi (*ol gwesiñ*), male donkey foal;

ol gwesi (*l gwesiñ*), female donkey foal;

en ñiñiñ (*en ñiñiñ*), full-grown male head of small livestock;

[illegible]

Note.—Since writing the above I have heard from Mr. Arthur Freeman (the author of *Explorer Stanley in East Africa*), and a man whose knowledge of the El Dorobo is unrivalled. He tells me that he has discovered an isolated clan of these bushmen in some hills near the Guaso Nyiro, and north of Mount Kenia. These people call themselves the El Mugeyeto, and asserted that they were distinct from the Dorobo of Mau.

Mr. Freeman collected a small vocabulary, which I copied. I had hoped on the return of this research to discover that all the gipsy tribes would be found to speak an allied tongue, but most unlike that up to now this have been not gather much support.

The following is Mr. Freeman's vocabulary of the language of the Mugeyeto :—

Arrow	:	:	Legh.	Child (of either sex)	: : Lore.
Bad	:	:	Ebiech.	Day	: : Ruk.
Bird	:	:	Legeh.	Green	: : Tum.
Blood	:	:	Righ.	Cooking pot	: : Dorn.
Note.—In the language may occur four; in Tum-Lore four is dingo.				Cow	: : Gido.
				Dog	: : Kido.
Bow	:	:	Mendo.	Elephant	: : Ingoyeh.
Boy	:	:	Pilo.	Father	: : Ruch.
Bullock	:	:	Pilo.	Fire	: : Ro.

[illegible] Ekiyin, Ekiyin, Ekiyin,

[For data on Masai grammar, see category 124, pp. 9-102.]

Dr Hollis G-9 (ca. 1896-1904) 1905
FL12 Masai FL12

we have been primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, ancestors, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas,* in the unwittingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also revering snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called El-Kumon, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Dari, and Dinka, as far as differences of environment and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle tooth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

* It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully enquired.

1: Mellin G-9 (ca. 1896-1904) 1915
FL12 Masai FL12

rule the grammatical system of the Masai language coherent and clear. It has a marked love for lengthy formations, and until the article, relatives, verbal prefixes and affixes had been separated out it was impossible to discover not only roots, but even the simple forms of nouns and verbs. Much still remains to be done in dividing these forms into their essential parts and formative elements, but the general structure of the language appears to be established beyond doubt. 192 193

Except for the length of the words, the phonetics are simple and easy. Difficult groups of consonants and the harsher gutturals are absent, and the sibilants seem to be somewhat lenited, and in particular the pronunciation of the initials tends to be indistinct. The verb is clearly distinguished from the noun, and shows great luxuriance of formation, but has only moderate powers of expressing the categories of personality and time. A prefix indicates not only the subject but also the pronominal object; but the distinction is not always complete: thus Aanij means either I follow them, or they follow me; Kanij, thou followest me, they follow thee, or we follow him. Only present and past tense are clearly and regularly expressed. The future is sporadic. The imperative is not, as in so many languages, the simple verbal root, but a form analogous to the subjunctive. The negative is expressed by m or ni, but various circumlocutions are also used. There is a great wealth of derivative forms. These comprise an impersonal passive; forms denoting action to and from the speaker; a form indicating that the action is done in the interests of some one; another indicating the instrument with which or the place in which a thing is done; reflexive, causative, and center formations. 194 195

Unlike the verb, the noun shows very little power of inflexion, and can only indicate number. The plural is formed by a great variety of suffixes, such as a, i, o, ro, ta, tin, ale, ain, ni, n, k, &c., but it is noticeable that the singular is often formed from the plural, that is to say, a collective noun is individualized by the addition of a suffix, e.g. Il-Keyo, the Elgeyo tribe, Ol-Keyoni, one man of the tribe; il-ain, stars, but el-aina, a particular star. Not only are there no case inflexions, but prepositions are almost entirely absent, so that the possibility of indicating case relations in a substantive is very limited. The nominative and accusative are not distinguished except by position, even in pronouns. The genitive is expressed in various ways, usually with the help of the article and a particle of varying form, in which the

In Hallie G-9 (ca. 1994-1996) 1995
FL12 Mami FL12

195 letter *l* often occurs. Similar forms, but with *i* in the place of *l*, are used as a local case with the most various meanings, such as in, out, to, from, at, with, &c. These very definite modes of expression are supplemented by the use of the derivative forms of the verb which indicate motion to or from, action in the interest of a person or by means of a thing. After the verb, the vitality of the language appears to be concentrated in the article and the relative. The article (*ol*, masc. sing.; *il*, plural; *an*, fem. sing., *in* plural*) indicates number and gender. The latter is more analogous to the grammatical gender in German than to the simple distinction between male and female beings, of being used to denote what is big and strong, and on what is small and weak, so that side by side with instances of sexual distinction like *ol-mâm*, a male calf, *ang-mâm*, a female calf, we also have such pairs as *ol-ayrini*, a boy, *ang-ayrini*, a small boy; *ol-âbon*, the sword, *ang-âbon*, the knife. The power of expressing the positive and lowerive cases resides principally in the article, and as a rule a noun in unintelligible unless it is accompanied by it, the chief exception being abstract nouns which naturally are not conscious to the stage of mental development which the Masai have reached. It is noticeable that the article is more general in signification than either the definite or indefinite articles of other languages, and merely expresses the existence of individual objects or collective groups as separate entities. But that it is of the nature of an article and not a mere formative prefix is shown by the fact that the demonstrative, interrogative, and some other pronouns can be substituted for it (e.g. *ol-tuigani*, the man; *ilolo-tuigani*, that man; *kulo-tuigani*, what man?). Very remarkable is the use of the article with a genitive to form a substantival expression, equivalent to the use of an adjective as a noun in other languages, e.g. *ol-le'l-mani*, the-of-the-man, that is, the manni one or lion; *ol-le'l-kuiyuya*, the-of-the-head, the brain (cf. *kuiyuiyu*); *ol-le'l-ngiron*, the-of-the-head, the horned one, the elephant (cf. Swahili *kuniu*, an elephant, from *kuniu*, horn).

The relative which often many resemblance to the article, consists of the syllables *o*, *ai* in the masculine, and *na*, *nai* in the feminine. By prefixing it almost any part of the verb can be turned into an attributive or relative sentence. This neat and concise usage is an effective compensation for the scarcity of real adjectives and participles. Also the article

* Under conditions explained in the Grammar, the article becomes *o*, *e*, *ang*, and *ely* in the singular, and *i*, *ing*, and *ely* in the plural.

In Hallie G-5 (ca. 1936-1934) 1905
FL12 Mosai FL12

and the relative can be used together to form a noun: 193
ni-wendim, the-who-seen, that is, the seer.

As far as our limited knowledge of it permits us to judge, 199
Latuka is the language which most resembles Mami. It is spoken to the east of the Nile, about 4° N., rather to the north of Wamala. Unfortunately we have no account of the grammar, but from the *Dictionnaire des Bibélangis*, 1880, pp. 170-8, and Baker (*The Albert Nyanza*) have given some contributions towards a vocabulary. About a third of the words known are obviously the same as the Mami equivalents, and of the remainder many look as if they would prove identical when we have a better knowledge of the changes the consonants may undergo and can separate the roots and formative elements more accurately. This is a fair percentage of correspondences. If we consider how quickly unwritten languages change, and how often one member of a pair of related words may not be that in most general use. A traveller's vocabulary of English and German would probably give 'dog' and 'Hund' as corresponding words, and not mention 'hound.' An inspection of the Latuka words suggests that a, e, and o represent an artistic similar to that in Mami, but that the letter *i* is not used in this connexion. *Aber*, a male sheep, and *ndber*, a female sheep, corresponding to the Mami *ci-kiro* and *ni-gwo*, are significant.

The next nearest relative of Mami seems, if he Bari[1], spoken to the north-west of Latuka on both banks of the Nile. Friedrich Müller (*Grundriss der Sprachwissenschaft*, Band III, 1884) noticed the resemblance of this language both in grammar and vocabulary to Mami. The vocabulary would appear, however, to contain more than two elements, and a considerable proportion of the words are unlike Mami, and perhaps are West African in origin. The grammatical forms are less developed and inverted than in Mami, and hence the words are shorter, but the system seems essentially similar. The verb has an active and passive voice, and distinguishes a declarative, an aorist, and an imperative. The noun has a singular and plural formed by various affixes as in Mami, and the singular is sometimes the longer form, being derived from the plural by the addition of a syllable, indicative of individuality. There are a few prepositions, but not many, though more than in Mami. The pronouns are fairly like those in Mami, and there is an article, masculine *la*, feminine *na*, plural *ki*, but it is affixed to the substantive. It is possible, however, that a *k* which is sometimes found at the beginning

[1] Hinnebusch, *Les dialectes des Bari*, Brussa, 1904.

G: Hollis G-5 (ca. 1894-1906) 1905
FL.12 Masai FL.12

104 *w* or *y* follow *o*, without stopping in the middle of the word, the *w* and *y* are generally changed to *o* and *i*.

104 The accent, such as *ó* is, does not fall on the penultimate in the
105 following cases:
115

I. When the subject of a verb is the first person plural, the last syllable is always slightly accentuated. Examples:

E-ol-ij, we follow (him). E-i-to-ol-i-e, we have followed (him).

E-i-ol-ij-ó-ne ólíne, then followest me, or he or they follow them; and ki-to-ol-i-e, then hast followed me, or he or they have followed them.

II. Whenever one of two *o*'s falls out before *i* in verbs commencing with the latter letter, the remaining *o* is rather more strongly accented than the other syllables:

Á-ioj-o (for *ao-ioj-o*), I washed them, or he or they washed me.
E-ikpor-o-ioj (for *e-ikpor-oo-ioj*), they begin to wash (him).
E-ipiki-o-ioj-o (for *e-ipiki-oo-ioj-o*), they know how to wash (him).

Some confusion is at times caused by the subject or object not being expressed when it is a personal pronoun. For instance, the woman said to him, and he said to the woman, are both translated by *e-ti-ake e-kperiyiai*. The difference is marked by raising or lowering the voice at the end of the substantive, and the following rule is invariable.

If the subject is the substantive, the voice is raised as in asking a question; if the object is the pronoun, the voice is lowered as when finishing a sentence:

Thus: E-ti-ake e-kperiyi[ai] ololo, the woman said to him.
Whilst, E-ti-ake e-kperiyi[ai] ololo, he, she, or they said to the woman.

In the same way the difference between, for instance, I followed them, and he, she, or they followed me, is marked by raising or lowering the voice at the end of the word, e.g.:

Ae[ni], he, she, or they follow me. *Ae*[ni]. I follow them.
Ae-to-ioj[ni], he, she, or they followed me. *Ae-to-ioj*[ni], I followed them.
Á-ioj[ni], he, she, or they washed me. *Á-ioj*[ni], I washed them.

The same forms are used for the simple relative, whether it is employed as the subject or the object of the verb. When the

and-ye-him-see he-me-follows-hither.'

[1] Most animals have two or more names. An elephant is either ol-tōme, ol-le-'ng-aina, or ol-chañgito sapuk. [552]

[2] The dative form of a-iñgw-a, to leave thither or to come from, is formed irregularly. [193]

[3] The same affixes are used for the subjunctive of reflexive verbs as for the future.

[4] While he is pulling it.

[5] He runs away and leaves the elephant.

rings, called il-giso[1]. They also have chain bracelets.

No Masai elder may wear the earrings called 'surutya unless he has children who have been circumcised and become warriors and women; but he who has grown up children may wear 'surutya.

There is another thing, an arm-ring called ol-masangus, which is cut out of a buffalo horn or an elephant's tusk, and made to look beautiful.

No elder may wear this unless he has large herds of cattle and many children.

He who is well known to possess many head of cattle and also many children may wear this arm-ring as a sign of his wealth.

There is also an arm-clamp called e-rap, which the warriors wear, but they only put this on as an ornament[2].

576 En-girorōkīno oo-'l-Maasae.

Ten etumore ol-murani o likae, nājōki: 'Sōpai.' Neirukisho ol-likae, nājo: 'Hēpa[3].' Ten etumo 'l-muran kumok, nājo: 'Endasōpai 'l-muran,' neirukisho 'l-kulikae, nājo: 'Hēpa.'

Masai salutations.

When one warrior meets another, he says: 'Sopai'; and when several warriors meet, one party says: 'Endasopai, O warriors!' The reply to these greetings is 'Hepa.'

[1] Il-giso (sing. ol-gisoi) is also the word used for rings which young men, women, and children wear. They are made of iron or brass wire, and are frequently worn on the thumb as well as on the four fingers.

[2] A list of the warriors' ornaments, &c., is given on p. 294.

[3] The A is often omitted, and the word pronounced epa or eya.

[193]

12: Fox G-5 (192-1930) 1930 FL12 Masai FL12
Kenya

As stated above, *Ol Piron* means a firestick. I have been given a reason for the use of this term, but was notconvinced of its truth. The elders of the *Ol Piron* generation stand in a particular position of guardians to their juniors who recognize their authority to a far greater extent than they do that of elders of other generations. This relationship has considerable political as well as domestic importance. 561

Manyattas.—The *sirit* is the unit for a single *manyatta*, except when the whole age-group of a single area combine to form one *manyatta* for some ceremony, *e.g.* the *E-Unoto*. 561 361 648

For some years the policyof Government was directed towards suppressing the warrior system, and *manyattas*were prohibited, each warrior being supposed to live in his father's village. With increasing control and understanding of the tribe this rule has been somewhat relaxed, and the warriors are now commonly allowed to have *manyattas* provided that they continue to behave themselves before the law.

But the general effect of Government policy has profoundly modified the original customs with regard to warriorhood, and it is now rather difficult at times to know exactly what these were. Themain political effect is that warriorhood lasts for a much shorter period than formerly, and most men marry and become elders within four or five years of their circumcision. 561 177 361

Nowadays the parents aresomewhat unwilling that the girls should live in the *manyattas*, and so there are only a few of them to be seen there.

A *manyatta* usually differs structurally from an elder's village in that it is simply a circle of huts without the usual thorn hedge round it.

Sex Life.—The word writen by Mr. Leakey *tasiukiu* would perhaps best be spelt as two words *Tasioki iyok*. *Tasioki* is a second person singular imperative of a dative word (*see* Hollis, p. 77) which I have never heard except as described by Mr. Leakey. *Iyook* means "w" or "us." 836 [193] [114]

When a man has been accepted by a girl who has been so addressed he usually holds out his hand to her with the tips of his forefinger and thumb touching to form a circle. She is then supposed to break the circle so formed with her forefinger. This is regarded as making her acceptance binding. [201] [832]

It is a great disgrace for a warrior to cause an uninitiated girl to conceive, and he must kill an enemy in order to wipe it out. This is, in fact, the usual reason for the occasional murders of people of other tribes, frequently ascribed erroneously to a desire on the part of the murderer to "blood his spear." 842 154

The E-Unoto Ceremony.—Nowadays this takes place from three to five years after initiation. It is not a single ceremony for the whole of the Masai, but there are a number of separate ceremonies according to the groups enumerated in my age-group table above. 561 884

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12
Nandi FL13
TAtoga FN26

AN important point of difference between the languages of the Nandi group is the presence or absence of a secondary suffix or definite article, sing. *t*, plur. *k*, and the method of attaching it. Suk, Endo, and Marakuet do not possess the *t*/*k* suffix; in Tatoga it is often added direct to the stem without any connecting vowel; in Nandi there is often a connecting vowel, e.g., Suk *kuoay*, Tatoga *kuway-t*, Nandi *kuang-e-t*, "bow," in which the final *t* is the secondary suffix. In Masai, on the other hand, the "article" or gender-sign is prefixed, sing. *ol-*, fem. *en-*; pl. *il-*, fem. *in-*. The dialectal differences between the speech of the various Masai tribes are very slight, being in fact much less than occur in the Nandi dialect group, and for practical purposes Masai is a language without dialects. M N T 193 M 197

The Hadzapi speak a click language, related to one form of South African Bushman speech.[13] The Sandawe also speak a click language, apparently related to Nama Hottentot. The Iraqw and Gorowa languages are very closely related to each other, with a large common vocabulary, but it has not yet been possible to classify them. It may well be that some East African languages have survived as the speech of isolated tribes or tribal groups and will continue to defy attempts to classify them because the other languages to which they were once related have disappeared.[14] OOD

A poor form of Swahili, the official lingua franca of Kenya and Tanganyika, is spoken to a rather limited extent by the Nilo-Hamitic pastoral tribes, but even today many of the older and some of the younger people, especially those in remote country districts, know little of it. In 1925 less than 50% of the Nandi understood Swahili, though the percentage has since increased. Most of the Tatoga, Iraqw, and Hadzapi know very little Swahili, if any. M N T 198

[13] D. F. Bleek, "The Hadzapi or Watindega of Tanganyika Territory," *Africa*, 1931, IV, pp. 273 seq.

[14] No further details are given on language, since this subject is dealt with in the International African Institute's *Handbook of African Languages*, to which reference should be made. It may be noted that throughout I use *c* to represent *ch* (approximately) as in "church."

/vii cont./

104 For the spelling of Masai words the German pronunciation was generally decisive. Hence only the following signs remain to be explained:

e is the German ä sound in Wärme or in maison, to bear.
ạ is a middle sound between a and o.
oi as in Leu, boy.
y is a German j, fayance.
ṅ is the nasal n in Wange, allons.

[193] Concerning the grammar, it is to be noted that ol, el, en (eṅ, eng), n (ṅ, ng) are articles, the vowels of which, for the sake of euphony, may take on the most varied tone-color; ol and en are the articles of the singular, el and 'n those of the plural.

122 Before I conclude these lines, I have to pay a debt of gratitude. To His Highness, Duke Johann Albrecht of Mecklenburg, as the President of the Deutschen Kolonialgesellschaft /German Colonial Society/, I owe most humble thanks for the granting of a sum which made possible the printing of this book, and similarly
128 to the Director and Board of this Gesellschaft. Furthermore, I have to thank Herr Stabsarzt /staff physician/ Dr. Skrodzki for his kind assistance in the preparation of the material collected, Herr Marinestabsarzt (retired) Dr. L. Sander, who kindly supervised the reading of the proofs, which I was prevented from doing because of my return to German East Africa, as well as Herr Professor Volkens, who looked over the botanical appendix. I also extend heartfelt thanks to Herr C. G. Schillings and Herr Missionar Emil Müller, Herr Oberleutnant i. d. Sch. Fonck II, Herr Regierungsveterinärarzt /government veterinarian/ Brauer, and Herr Kaufmann /merchant/ Meimaridis (Moschi /Moshi/), who most obligingly lent me a large number of photographs for the explanatory illustrations.

In the purely Semitic syntax, too, the Masai language is in very close harmony with the Galla and Somali, whereas in this respect the other Cushitic languages (cf. on this point my Grundriss der Geographie und Geschichte des alten Orients /Outline of the Geography and History of the Ancient Orient/, pp. 154 f.) show far more Nuba influence. The pure Semitic substratum of the so-called pattern of the imperfect /Imperfektschemas/ can also be clearly shown as lying at the root of the entire Masai conjugation: one should compare:

193 which is exactly the Semitic conjugation pattern transmitted from
197 Arabia to the Cushitic languages (for example, Arabic a-kun,
174 ta-kun, ja-kun, pl. nakun, takûnû, jakûnû). But otherwise, too,
Masai, even though its vocabulary /xvi/ and much of its grammar
19 are so greatly Africanized, shows many traces pointing clearly to
174 its onetime Arabian homeland. Among these I count the conjunctions o, "and" (from wa), and the consecutive pe, "and, so that," Hollis, p. 100, which is exactly the difference, so characteristic for Arabic, between wa and fa, or the remnant of a formation of singular nouns by the ending -a (il-akir, stars, ol-akira, a single star, Hollis, p. xxi), or the double function of the particle ma (both "not," likewise in Somali, and also "that," cf. Arabic mâ, "not" and "that which"), or also individual characteristic words that can scarcely be taken as later loanwords, but are to be regarded as ancient remnants, such as sararua, navel, Arabic surra; sero, forest, Arabic sarw, forested mountains (originally cypress forest); kunoni, blacksmith, Arabic kain; remet, spear, Arabic rumh; moruo, older man, husband, Arabic maru'; ure, to fear, Arabic wara'a; sun and day fem. (night and moon, on the other hand, masc.), cf. also Arabic śams, sun fem., and the expression al-lail wa 'n-nahâr (1),

1. Nahâr is an old (later no longer recognized as such) feminine form of the form fa'âl from nûr, "light"; lail is the masc. of laila (older lailot) with the same meaning, "night."

193 night and day, next to al-jaum wa 'l-laila. Pointing quite
197 specifically to the South Arabian Mahra language (thus the dialects
174 of Frankincense Land), from where so-called Ethiopian also stems,
are some plural formations of the Masai, such as eng-aftin from eng-af, il-apaftin from ol-apa, etc. (Hollis, p. 25), cf. in Mahra ebelûten (from aybel, flint), haidenten (from haidên, ear); likewise Ethiopian enta (fem.), "which," and Masai enna, fem. of elle, as well as the feminine article en (in contrast to masc. ol).
000 According to Hollis, p. 275, the Pleiades are only six stars among

/157 cont./

805 Afternoon is designated in general with etuschugoti oibi, that is, the shadow is reversed; or tēlba. One also often hears this designation for the time from three to five o'clock in the afternoon. In particular the time from twelve to two is called ete gil eńg oloń = the sun is broken; the time from two to four erta tēlba = now afternoon; that from four to six, emutó = evening. Five o'clock in the afternoon is designated with erta doije eńg oloń = the sun is going down. The time during which the evening glow is still to be seen is called etimirua eńg oloń = the twilight follows the sun.

[513] With darkness setting in, the tárá begins and lasts until about eight o'clock, when one usually goes to rest.

Night is called eń gawarié; midnight, em bolos eń gawarié.

Today is called tída or títa, tomorrow taisēre or taisēri, yesterday ńgolé; the day before yesterday, as well as the day after tomorrow, is called eń aioloń. The days reckoned beyond the day before yesterday in the past and beyond the day after tomorrow in the future are designated as eńg aioloń edia matua, eńg aioloń e ungwan, etc. The latter is the fifth day from today reckoned both [193] in the future and in the past. The tense of the verb shows which of the two is meant.

With the help of these designations the days of the seven-day week (eń giruaha or eń giruascha, pl. eń giruaschat) are named. The names are the following:

First day = tída (today).

Second day = taisēre (tomorrow).

Third day = eńg aioloń.

Fourth day = eńg ailoń edia matua (more rarely eńg aioloń e uni).

Fifth day = eńg ailoń e uńgwan.

/158/ Sixth day = eńg aioloń e miēt.

Seventh day = guna l'oń Ile or essubat 'n oloń = the good day (1).

1. In this connection it should be noted that ósubat, fem. éssubat, means "good," "excellent," and uni, ungwan, miēt, Ile are the verbs for three, four, five, and six. H.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

made the grammatical system of the Masai language coherent and clear. It has a marked love for lengthy formations, and until the articles, relatives, verbal prefixes and affixes had been separated out it was impossible to discover not only roots, but even the simple forms of nouns and verbs. Much still remains to be done in dividing these forms into their essential parts and formative elements, but the general structure of the language appears to be established beyond doubt.

Except for the length of the words, the phonetics are simple and easy. Difficult groups of consonants and the harsher gutturals are absent, and the utterance seems to be somewhat languid, and in particular the pronunciation of the labials tends to be indistinct. The verb is clearly distinguished from the noun, and shows great luxuriance of formation, but has only moderate powers of expressing the categories of personality and time. A prefix indicates not only the subject but also the pronominal object; but the distinction is not always complete: thus Aasuj means either I follow thee, or they follow me; Kisuj, thou followest me, they follow thee, or we follow him. Only present and past times are clearly and regularly expressed. The future is sporadic. The imperative is not, as in so many languages, the simple verbal root, but a form analogous to the subjunctive. The negative is expressed by *m* or *mi*, but various circumlocutions are also used. There is a great wealth of derivative forms. These comprise an impersonal passive; forms denoting motion to and from the speaker; a form indicating that the action is done in the interests of some one; another indicating the instrument with which or the place in which a thing is done; reflexive, causative, and neuter formations.

Unlike the verb, the noun shows very little power of inflexion, and can only indicate number. The plural is formed by a great variety of suffixes, such as *a*, *i*, *o*, *ra*, *ta*, *tin*, *shi*, *shin*, *ni*, *n*, *k*, &c., but it is noticeable that the singular is often formed from the plural, that is to say, a collective noun is individualized by the addition of a suffix, e.g. Il-Keyu, the Elgeyo tribe, Ol-Keyuni, one man of the tribe; il-akir, stars, but ol-akira, a particular star. Not only are there no case inflexions, but prepositions are almost entirely absent, so that the possibility of indicating case relations in a substantive is very limited. The nominative and accusative are not distinguished except by position, even in pronouns. The genitive is expressed in various ways, usually with the help of the article and a particle of varying form, in which the

FL12 Masai FL12

[P. 1]

PART I

EN-GUTUK OO-'L-MAASAE
MASAI GRAMMAR

ALPHABET AND PRONUNCIATION.

Vowels.

194
104

A represents the English *a* in father.
E " " *a* in fate.
E " " *e* in benefit.
Á " " *a* in dare, but longer and more open.
I " " *i* in hit.
Í " " *i* in ravine.
O " " *o* in not.
Ô " " *o* in mote.
Ó " " *aw* in paw.
U " " *u* in bull.
Ú " " *u* in flute.
Ǎ " " *u* in but, *e* in tongue.
Ai " " *i* in ice, *ai* in aisle.

Ae is a diphthong similar to *ai*, but formed by a union of the vowels *a* and *e*.

Au represents the English *ow* in how.
Oi " " *oi* in oil.

Ei. These two letters are usually pronounced separately, but they are sometimes slurred over and are scarcely distinguishable from *ei* in eight or *ey* in they.

Whenever *ai* or *oi* are not pronounced as diphthongs, the *i* is marked by a diaeresis, thus, *aï*[1].

Vowels are only doubled when there is a distinct repetition of a single sound. Sometimes, however, sounds which when spoken slowly must be indicated by a double vowel, are contracted into a long single vowel when spoken quickly.

[1] Examples of *ai*, *aï*, and *ae*:—'Ng-ai, the bows; eng-aï, the god; eng-ae, the other.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

104

CONSONANTS.

B, *d*, *k* as in English.

G is hard, as in the English word go.

H is used as an aspirate only in a few interjections.

Gh is a *g* followed by an *h* as in log-hut, and resembles the *gh* in Sanskrit. It is not pronounced like the Arabic *ghain*.

J nearly resembles the English *j*, though it is sometimes pronounced like *dy*.

Ch as in church. It, however, is sometimes exchangeable with *j* or *dy*: e. g. ol-chani, the tree, may also be pronounced ol-*j*ani or ol-*dy*ani.

Sh, *l*, *m*, *n* as in English.

Ng has two separate sounds, the one hard as in the English word finger, the other as in singer. The latter sound is written *ng*.

Ny. This sound is similar to *ni* in the English word minion, or *ñ* in Spanish.

P is more explosive than in English.

R is always well pronounced or rolled on the tongue. The Northern Masai sometimes pronounce this sound like a burring *r*.

S, *t*, *w* as in English.

Ŵ. In a few words there appears to be a trace of a *w* which is only partially pronounced even when talking slowly: e.g. ŵa, come.

Hw represents the sound of *wh* in the Scotch why or wherefore.

β, *p*, *φ*, and *ψ* are pronounced in a lazy way by just opening the lips.

Y is a consonant, as in yard.

CHANGES OF LETTERS, AND REMARKS.

The Masai of Nairobi and Naivasha sometimes use *a* for *e*. Thus:

Ang-are (for eng-are), the water.

Before *i*, *ai* changes to an accentuated single *a*. Example:

Á-inj-i (for ai-inj-i), I am washed.

A and *e* are occasionally interchangeable. One hears, for instance:

En-aiyasha *or* en-aipesha, the lake.
Aligata *or* eligata, the plain.
Apa *or* epa, formerly.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

E and *i* when spoken rapidly often sound as if they were the same letter. It is in consequence sometimes difficult to distinguish between such words as e-gel, to choose, and e-gil, to break. 194 104

E is changed to *i* when followed by *a*. Examples:

Ol-figujine, the hyena;	Il-figujinia, the hyenas.
A-ure, to fear;	e-i-ure-a, I feared.

The Northern Masai frequently change *i* to *e* when the *i* is joined by a consonant to *a*. Examples:

Aidima *or* aidema, I was able.
Aidipa *or* aidepa, I finished.

When *i* is the first letter of a word it is usually dropped if preceded by another word ending in a vowel.

Aisho 'ndae (for aisho indae), I give you.
Aisho 'l-ayuk (for aisho il-ayuk), I give the boys.

I is also dropped whenever the sound permits at the beginning of sentences. Thus:

'N-ettain (for in-ettain), the stories.
'L-omon (for il-omon), the news.

When *i* is the last letter of a word and is followed by a vowel, *y* is often inserted to join the two vowels together. Examples:

En-gurai-y-ai (for en-gurai ai), my child.

Numerous changes take place in the spelling of verbs which commence with *i*. For a complete list *vide* page 53. It will be sufficient to give here the general rules.

I. The first letter of the verb (*i*) falls out whenever preceded by another *i* and followed by *i*, *l*, *n*, *ng*, *ny*, *r*, *s*, *w*, *m*, or *y*. Examples:

A-ilk, to clean (teeth);	i-'lk, thou cleanest (teeth).
A-ilep, to climb;	i-'lep, thou climbest.
A-inepu, to meet;	i-'nepu, thou meetest.
A-ingir, to look;	i-'ngir, thou lookest.
A-inyang-a, to buy;	i-'nyang-a, thou buyest.
A-irag, to sleep;	i-'rag, thou sleepest.
A-isiya, to touch;	i-'siya, thou touchest.
A-isuk, to lose;	i-'suk, thou loosest.
A-iwo-a, to catch blood in a vessel;	i-'wo-a, thou catchest blood in a vessel.
A-iyam, to marry;	i-'yam, thou marriest.

II. The *i* is changed to *u* whenever it is preceded by another *i* and followed by *d*, *g*, *k*, *t*, and *ch*. As will be shown shortly, the letters

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

194
104

k, *t*, and *sh* cannot follow *n*; these letters therefore change at the same time to *g*, *d*, and *j* respectively. Examples:

A-idím, to be able;	i-ndím, thou art able.
A-igany, to fill;	i-ngany, thou fillest.
A-iken, to count;	i-ngen, thou countest.
A-itobir, to prepare;	i-ndobir, thou preparest.
A-ishop, to wear;	i-njop, thou wearest.

III. The *i* is changed to *m* whenever it is preceded by another *i* and followed by *b*, *p*, *ꝑ*, or *ꝓ*. It will be shown presently that *p*, *ꝑ*, and *ꝓ* are interchangeable and cannot follow *n*; these letters are consequently changed at the same time to *b*. Examples:

A-ibelekeny, to turn over;	i-mbelekeny, thou turnest over.
A-ipot, *or* A-iꝑot, *or* A-iꝓot, to call;	i-mbot, thou callest.

I and *y* are interchangeable when followed by *e* or *o*. The Northern Masai generally use the former, the Southern the latter. Examples:

En-gewárie *or* en-gewárye, the night.
Tolíkio *or* tolíkyo, tell.

Ye sometimes becomes *ie* after *n*. Examples:

A-tonie (for a-tónye), to sit on.
A-iminie (for a-imínye), to lose.

O becomes *u* when joined by a consonant to *a*. Examples:

A-iko, to do;	a-iku-na, I did.
A-iñgor, to look;	a-iñgur-a, I looked.

The Northern Masai sometimes pronounce *u* like *o*, or like the German ö. Examples:

A-idor (for a-idur), to move. A-söj (for a-suj), to follow.

B and *k* are sometimes interchangeable. Examples:

En-garikōbo *or* en-garibōbo, the mongoose.
Kinōkop *or* Kinōbop, a district near Naivasha known to Europeans as Kinangop.

Gh and *k* are interchangeable. The former sound is more used by the Southern Masai than by the Northern, and the women of Nairobi and Naivasha employ it more frequently than the men.

Both *gh* and *k* change to *g* when following *n*:

Enna-kerai *or* enna-gherai, this child; en-gerai, the child.
Ol-kujita *or* en-gujita, the blade of grass.
A-iko *or* a-igho, to do; i-ngo, thou dost; i-ngōko *or* i-ngōgho, you do.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

194
104

P, *ꝑ*, and *ꝓ* are interchangeable. The Northern Masai generally use *p*, the Southern *ꝑ* or *ꝓ*. Examples:

Ol-poror, ol-ꝑoror, *or* ol-ꝓoror, the generation, age.
Pôkin, ꝑôkin, *or* ꝓôkin, all.

K is occasionally interchangeable with *p*, *ꝑ*, and *ꝓ*.

For instance, ol-pukuri (*or* ol-ꝑukuri *or* ol-ꝓukuri), the (large) gourd, is also sometimes expressed ol-kupuri (pl. il-pukurto *or* il-kupurto).

Before *p*, *ꝑ*, and *ꝓ*, *n* becomes *m*, and the *p*, *ꝑ*, or *ꝓ* changes to *b*. Examples:

Ol-pukuri (*or* ol-ꝑukuri *or* ol-ꝓukuri), the (large) gourd.
Em-bukuri, the (small) gourd.
I-mbiri, thou fliest, (from a-ipiri, to fly).

When *k* is the last letter of a verb, the root undergoes various changes in the formation of the past tense. For a complete list *vide* p. 56.

It will be sufficient to state here that the *k* is dropped unless the letter which precedes it is *i* or *u*. Examples:

A-lak, to unfasten; a-ta-la-a, I unfastened.
A-mok, to become accustomed to; a-ta-mo-o, I became accustomed to.

But A-rik, to take (a person); a-to-rik-o, I took (a person).
A-nunuk, to fold; a-tu-nunuk-o, I folded.

The Northern Masai also frequently omit *k* both at the end and in the body of a word. Examples:

Il-tuñgana (for il-tuñganak), the men.
Il-ñganaiyo (for il-ñganaiyok), the fruit.
Kitua (for kituak), big (pl.).
A-ikweniye (for a-ikwenikye), to laugh at.
Arai (for araki), or.

Sh can only be used after a vowel or at the commencement of a word. Examples:

A-isho, to give.
Shoo, the grazing ground.
Elle-shani *or* enna-shani, this tree.
Le-shoruet, na-shoruet, O (the) friend!

After *l*, *sh* becomes *ch*, and after *n*, *j*. Examples:

I-njo, thou givest.
Ol-chani *or* en-jani, the tree.
Ol-choruet *or* en-joruet, the friend.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

194
104

Ch can only be used after *l*.

J occasionally changes to *t* in the formation of past tenses of verbs. Examples:

A-ji-ōyo, not to return; a-ti-ōyo, I have not returned.
A-j-ōki, to say to; a-ti-aka, I said to.

The *l* of the masculine article (*vide* p. 10) is dropped before words beginning with *e*, *i*, *r*, *s*, and *y*. Examples:

O-engat (for ol-engat), the male wildebeest.
O-iarata (for ol-iarata), the valley.
O-rorei (for ol-rorei), the word.
O-sarge (for ol-sarge), the blood.
O-yōyai (for ol-yōyai), the porcupine.

It has been stated that before *r* and *s* the *l* of the masculine article is assimilated as in Arabic, and that the double consonant is heard. This is, however, not the case. When the syllables are spoken separately, the singular article is clearly pronounced *o*, not *or* or *os*; and in the plural the article drops out altogether, unless it follows a word ending in a consonant, when an *i* is used, not *ir* or *is*.

Gh, *k*, *t*, and *sh* change to *g*, *g*, *d*, and *j* respectively after *n*. Examples:

En-gīyo (for en-ghīyo), the daughter.
'N-gīshu (for 'n-kīshu), the cattle.
I-ngilikwan-u (for i-nkilikwan-u), ask!
En-dim (for en-tim), the wood.
I-ndash-o (for i-ntash-o), stand!
En-jōni (for en-shōni), the piece of hide.
I-njop-o (for i-nshop-o), wear!

The *n* of the feminine article (*vide* p. 10) falls out before nouns commencing with one of the following letters: *e*, *i*, *m*, *ñg*, *ny*, *r*, *s*, *u*, *w*, and *y*. Examples:

E-engat (for en-engat), the female wildebeest.
E-ilata (for en-ilata), the oil.
E-mōti (for en-mōti), the cooking pot.
E-ñgorōyōni (for en-ñgorōyōni), the woman.
E-nyalata (for en-nyalata), the cud.
E-rug (for en-rug), the hump.
E-siangiki (for en-siangiki), the young woman.
E-ūlūlu (for en-ūlūlu), the pit.
E-wargas (for en-wargas), the female Grant's gazelle.
E-yä (for en-yä), the male.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Before *b*, *n* becomes *m*, and before *p*, *ɣ*, or *ψ*, *n* becomes *m*, and the *p*, *ɣ*, or *ψ* changes to *b*: 194 104

Em-bae (for en-bae), the arrow.
I-mbelekeny-a (for i-nbelekeny-a), turn over!
Em-ḃoût (for en-poût, *or* en-ɣoût, *or* en-ψoût), the trench.
I-mḃot-o (for i-nṗot-o, *or* i-nɣot-o, *or* i-nψot-o), call!

Before substantives commencing with *l*, the *n* of the feminine article is assimilated, the double consonant being distinctly pronounced. Examples:

El-lusye (for en-lusye), the hole in the wall.
El-loñgo (for en-loñgo), the shield.

R must always be preceded by a vowel or another *r*. Examples:

Ol-orora, the crowd. 'N-gera, the children. 'N-gerra, the sheep.

R is sometimes omitted in the body of a noun to form diminutives, or is changed to *l* or *y*. Examples:

E-ñgorōyōni, the woman;	e-ñgooyōni, the female (used in a deprecatory sense).
En-gerai, the child;	en-gelai, the little child.
Ol-ōwaru, the beast of prey;	eng-ōwayu, the small beast of prey.

U and *w*, when followed by a vowel, are interchangeable, the former being used by the Northern, the latter by the Southern Masai. Examples:

Atua *or* atwa, I died *or* within.
Ol-móruo *or* ol-morwo, the old man.

Hw is occasionally substituted for *u* or *w*, otherwise it is not used. Examples:

E-hwēji (for e-wēji), the place.
E-hwaso (for e-uaso), the river.
Ol-osōhwan (for ol-osōwan), the buffalo.

THE ACCENT.

In most words all syllables are accentuated alike, a very slight stress being perhaps laid on the penultimate. This is more particularly noticeable when the last syllable but one contains a long vowel, e.g. ol-ayóni, 'n-jonito. 194

Should the accent fall on any other syllable but the penultimate, it is specially marked, thus: ol-móruo, kewárie.

These words are sometimes, and probably correctly, pronounced ol-morwo, kewarye; but owing possibly to the difficulty of making

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

194 *w* or *y* follow *r*, without stopping in the middle of the word, the *w* and *y* are generally changed to *u* and *i*.

194 193 The accent, such as it is, does not fall on the penultimate in the following cases:

I. When the subject of a verb is the first person plural, the last syllable is always slightly accentuated. Examples:

Ki-súj, we follow (him). Ki-tu-suj-á, we have followed (him).

Ki-suj means either, thou followest me, *or* he *or* they follow thee; and ki-tu-suj-a, thou hast followed me, *or* he *or* they have followed thee.

II. Whenever one of two *a*'s falls out before *i* in verbs commencing with the latter letter, the remaining *a* is rather more strongly sounded than the other syllables:

Á-isuj-a (for aa-isuj-a), I washed thee, *or* he *or* they washed me.
E-ñgas á-isuj (for e-ñgas aa-isuj), they begin to wash (him).
E-iyōlo á-isuj-a (for e-iyōlo aa-isuj-a), they know how to wash (him).

Some confusion is at times caused by the subject or object not being expressed when it is a personal pronoun. For instance, the woman said to him, *and* he said to the woman, are both translated by e-ti-aka e-ñgorōyōni. The difference is marked by raising or lowering the voice at the end of the substantive, and the following rule is invariable.

If the subject is the substantive, the voice is raised as in asking a question; if the subject is the pronoun, the voice is lowered as when finishing a sentence:

Thus: E-ti-aka e-ñgorōyō^{ni} means, the woman said to him.
Whilst, E-ti-aka e-ñgorōyō$_{ni}$ means, he, she, *or* they said to the woman.

In the same way the difference between, for instance, I followed thee, *and* he, she, *or* they followed me, is marked by raising or lowering the voice at the end of the word, e.g.:

Aa^{suj}, he, she, *or* they follow me. Aa$_{suj}$, I follow thee.
Aa-tu-suj-^{a}, he, she, *or* they followed me. Aa-tu-suj-$_{a}$, I followed thee.
Á-isuj-^{a}, he, she, *or* they washed me. Á-isuj-$_{a}$, I washed thee.

The same forms are used for the simple relative, whether it is employed as the subject or the object of the verb. When the

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

relative is the subject, however, the voice is raised at the end of the verb; when the object, it is lowered. 194 193*

Ol-tuñgani ō-tu-suj-$_a$, the man who followed him.
Ol-tuñgani ō-tu-suj-$_a$, the man whom he followed.

GENDER AND NUMBER.

The Masai language distinguishes by the article two genders or classes answering approximately to masculine and feminine. As a general rule the former signifies big, strong, and masculine; whilst the latter may be taken to mean something of a weak or feminine nature, and also of a diminutive or affectionate character. There are, it is true, exceptions to this rule, for whereas ol-origha, a small three-legged stool, il-kiyo, tears, and ol-kimōjīno, the finger or toe, are masculine, eng-aina, the arm or hand, en-geju, the leg or foot, e-muny, a rhinoceros, and en-gukuu or en-dyemasi, a devil or fantastic wild beast, which takes the place of the dragon in English fairy tales, are feminine. But on the whole it will be found to be correct, and the following list of examples will help to prove the theory: 193*

Masculine.	Feminine.
Ol-tuñgani, the man.	En-duñgani, the little man.
Ol-ayōni, the boy.	Eng-ayōni, the little boy.
Ol-dia, the dog.	En-dia, the bitch *or* pup.
O-sanja, the male lover.	E-sanja, the female lover.
Ol-karsis, the rich man.	En-garsis, the rich woman.
Ol-ashe, the bull calf.	Eng-ashe, the cow calf.
Ol-alem, the sword.	Eng-alem, the knife.
Il-kujit, the long, coarse grass.	'N-gujit, the short grass *or* turf.
Ol-kerr, the ram.	En-gerr, the ewe.
Ol-aputani, the father *or* son-in-law.	Eng-aputani, the mother *or* daughter-in-law.

One word, e-wēji, the place, although to all appearances feminine, might perhaps be classed by itself, as the demonstrative pronoun and some other parts of speech assume unusual forms when agreeing with it.

There are two numbers, singular and plural, which are marked by variations in the termination of nouns. In verbs and pronouns there are some indications of reduplication being used to indicate plurality. Nouns are not susceptible to any inflexions to mark the cases, or, with few exceptions, to mark the gender. In the following words the spelling of the nouns is slightly changed to denote something of a weak or diminutive nature.

PREFACE

THE Masai occupy a considerable part of the large plains which extend from about one degree north of the equator to six degrees south of it, situate in both British and German East Africa. Those living in British territory commonly call themselves Il-Maasae[1], whilst the 'German Masai' are to a large extent known as 'L-Oikop[2] or Il-Lumbwa[3]. In olden days the coast people termed them without discrimination Wa-Masái or Wa-Kwayi[4], names which have been perpetuated by Krapf and others. 101 [131]

Sir H. Johnston states[5], and probably correctly, that the Masai represent an early mixture between the Nilotic negro and the Hamite (Gala-Somali); and that this blend of peoples must have been isolated somewhere in the high mountains or plateaux which lie between the Nile and the Karamojo country. Certain it is that the Latuka, who are supposed to be descendants of the ancestral Masai, and who occupy this country, speak a language that is closely allied to the Masai tongue, and have many customs in common with the Masai. The accounts which have been published of the habits and 174 [144] [197] 114

[1] When spoken rapidly this word is sometimes pronounced Il-Mássae (for further particulars see also p. 29, note 4).

[2] 'L-Oikop is believed to signify the possessors of the land. It also means murder (see p. 27, note 3, and p. 311).

[3] Not to be confounded with the so-called Lumbwa (whose real name is Kip-sikisi), a tribe living near the Victoria Nyanza in British East Africa. These Lumbwa or Kip-sikisi are nearly related to the Nandi, and are believed to have migrated from north of Mount Elgon (Hobley, *Eastern Uganda*, p. 10). Lumbwa is a term of contempt, and signifies a pastoral people who have taken to agriculture.

[4] The meaning of Kwayi (*or* Kwapi) in Masai is countries *or* somewhere. Hildebrandt's suggestion (*Zeitschrift für Ethnologie*, 1878, p. 349) that Maasae is derived from the Masai word 'masaa, property, and that Kwayi is a corruption of kafi, the Swahili for paddle (given in allusion to their broad-bladed spears), is probably incorrect.

FL12 Masai FL12

INTRODUCTION

THE present work, by Mr. Hollis, Chief Secretary to the Administration of the East Africa Protectorate, treats of the language, traditions, and customs of the Masai, one of the most interesting and important tribes of those territories. I am not competent—and there must be few people in the world who are—to criticize by the light of independent knowledge the mass of material which he has brought together, and will merely attempt briefly to summarize the information about the race which we now possess. Mr. Hollis's previous contributions to anthropology, his opportunities for studying and daily conversing with the Masai, and his linguistic talents, which are well known to every one in East Africa, are a sufficient guarantee for the thoroughness and excellence of his work. 114

The Masai at present inhabit the inland districts of British and German East Africa from the equator to about 6° S. Few of them are found north of the Line, except an isolated settlement just south of Lake Rudolf, and they seem to avoid both the sea and the great central lakes. Many smaller pieces of water, such as Lakes Naivasha and Nakuru, are found in their haunts, but they neither use boats nor catch fish. They are divided at present into two sections, one of which, called 'L-Oikop, is agricultural and settled, while the other, or Masai proper, is entirely pastoral and nomadic. The difference between the two is evidently not ancient, for both speak practically the same language, and it is probable that the agriculturalists of the present time are nomads who have settled down. On the other hand, tradition does not carry the history of the tribe further back than a century at the most[1], and it would be rash to assume that the nomad pastoral state is primitive or very ancient. It is quite probable that there was a large agricultural settlement on the Uasin-Gishu plateau from which the more adventurous warriors detached themselves. 101 13 [501] [226] 101 [197] 173 174

In East Africa the Masai are clearly distinguished by their language, customs, and appearance from the Bantu races (although the latter often imitate them, and have received a certain proportion of Masai blood), and equally clearly 101 144

[1] The genealogy of the medicine men goes back about 200 years.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

101 related to the Suk-Turkana and Nandi-Lumbwa[1]. Somewhat
144 more distantly allied to the same stock are the inhabitants of South Kavirondo or Ja-luo. These races again show clear resemblances to some of the peoples who inhabit the banks of the Southern Nile, such as the Acholi, Bari, Latuka, Dinka, and Shilluk. The whole group are sometimes classed together as Nilotic, and have many peculiarities in common. Their
[197] languages show a considerable, though varying, degree of affinity; physically they are tall, thin men, with features
[142] which are not markedly negroid, and are sometimes almost Caucasian: several remarkable customs, such as the nudity of
[516] the male sex and the habit of resting standing on one leg, are found among them all. The closest connexion seems to be between the Acholi and the Ja-luo, and between the Masai, Latuka, and Bari. The Masai, Nandi, Lumbwa, Suk, and Turkana all possess in a more or less developed form a military organization which obliges all the male population, between the ages of about seventeen and thirty, to submit to a special discipline and constitute a warrior class. A similar organization does not seem to be recorded among the tribes who dwell along the Nile[2]. These latter are not a homogeneous group, so that the word Nilotic must be used with caution. The Madi, who occupy a large portion of the country between Lake Albert and Gondokoro and extend well to the east of the river, are linguistically different from their neighbours, and apparently represent an invasion from the west, though in customs they do not seem to differ markedly from the Bari.

174 A glance at the map will show that from the Rift Valley to
197 the Nile there runs in a north-westerly direction a broad belt of non-Bantu languages, more or less allied to one another, Masai, Nandi, Suk, Turkana, Karamojo, Latuka, Bari, and Dinka. The Karamojo appear to be Bantus who have been forced to accept an alien form of speech. This distribution of languages seems clearly to suggest a south-eastward movement from the country between the north of Lake Rudolf and
174 the Nile. The hypothesis is rendered more probable by the fact that in East Africa as elsewhere the course of invasions has been mainly from the north to the south. This is certainly

[1] The name Lumbwa is confusing. It is really a term of opprobrium applied by the nomadic warriors to agriculturalists of their own or allied races (not, apparently, to Bantus). Hence the 'L-Oikop are often called Lumbwa Masai. But the name is popularly and officially applied to a tribe closely allied to the Nandi who live to the south of the Nyando valley.

[2] Baker perhaps alludes to something similar among the Latuka whose young men, he says, live for fighting only.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

made the grammatical system of the Masai language coherent and clear. It has a marked love for lengthy formations, and until the articles, relatives, verbal prefixes and affixes had been separated out it was impossible to discover not only roots, but even the simple forms of nouns and verbs. Much still remains to be done in dividing these forms into their essential parts and formative elements, but the general structure of the language appears to be established beyond doubt.

Except for the length of the words, the phonetics are simple and easy. Difficult groups of consonants and the harsher gutturals are absent, and the utterance seems to be somewhat languid, and in particular the pronunciation of the labials tends to be indistinct. The verb is clearly distinguished from the noun, and shows great luxuriance of formation, but has only moderate powers of expressing the categories of personality and time. A prefix indicates not only the subject but also the pronominal object; but the distinction is not always complete: thus Aasuj means either I follow thee, or they follow me; Kisuj, thou followest me, they follow thee, or we follow him. Only present and past times are clearly and regularly expressed. The future is sporadic. The imperative is not, as in so many languages, the simple verbal root, but a form analogous to the subjunctive. The negative is expressed by *m* or *mi*, but various circumlocutions are also used. There is a great wealth of derivative forms. These comprise an impersonal passive; forms denoting motion to and from the speaker; a form indicating that the action is done in the interests of some one; another indicating the instrument with which or the place in which a thing is done; reflexive, causative, and neuter formations.

Unlike the verb, the noun shows very little power of inflexion, and can only indicate number. The plural is formed by a great variety of suffixes, such as *a*, *i*, *o*, *ra*, *ta*, *tin*, *shi*, *shin*, *ni*, *n*, *k*, &c., but it is noticeable that the singular is often formed from the plural, that is to say, a collective noun is individualized by the addition of a suffix, e.g. Il-Keyu, the Elgeyo tribe, Ol-Keyuni, one man of the tribe; il-akir, stars, but ol-akira, a particular star. Not only are there no case inflexions, but prepositions are almost entirely absent, so that the possibility of indicating case relations in a substantive is very limited. The nominative and accusative are not distinguished except by position, even in pronouns. The genitive is expressed in various ways, usually with the help of the article and a particle of varying form, in which the

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

and the relative can be used together to form a noun: 193
ol-o-unisho, the-who-sows, that is, the sower.

As far as our limited knowledge of it permits us to judge, 197
Latuka is the language which most resembles Masai. It is spoken to the east of the Nile, about 4° N., rather to the north of Nimule. Unfortunately we have no account of the grammar, but Emin Bey (*Zeitschrift für Ethnologie*, 1882, pp. 174–8), and Baker (*The Albert Nyanza*) have given some contributions towards a vocabulary. About a third of the words known are obviously the same as the Masai equivalents, and of the remainder many look as if they would prove identical when we have a better knowledge of the changes the consonants may undergo and can separate the roots and formative elements more accurately. This is a fair percentage of correspondences, if we consider how quickly unwritten languages change, and how often one member of a pair of related words may not be that in most general use. A traveller's vocabulary of English and German would probably give 'dog' and 'Hund' as corresponding words, and not mention 'hound.' An inspection of the Latuka words suggests that *a*, *e*, and *n* represent an article similar to that in Masai, but that the letter *l* is not used in this connexion. Aker, a male sheep, and naker, a female sheep, corresponding to the Masai ol-kerr and en-gerr, are significant.

The next nearest relative of Masai seems to be Bari[1], spoken to the north-west of Latuka on both banks of the Nile. Friedrich Müller (*Grundriss der Sprachwissenschaft*, Band III, 1884) noticed the resemblance of this language both in grammar and vocabulary to Masai. The vocabulary would appear, however, to contain more than one element, and a considerable proportion of the words are unlike Masai, and perhaps are West African in origin. The grammatical forms are less developed and luxuriant than in Masai, and hence the words are shorter, but the system seems essentially similar. The verb has an active and passive voice, and distinguishes a durative, an aorist, and an imperative. The noun has a singular and plural formed by various affixes as in Masai, and the singular is sometimes the longer form, being derived from the plural by the addition of a syllable indicative of individuality. There are a few prepositions, but not many, though more than in Masai. The pronouns are fairly like those in Masai, and there is an article, masculine *lo*, feminine *na*, plural *ti*, but it is suffixed to the substantive. It is possible, however, that a *k* which is sometimes found at the beginning

[1] Mitterrutzner, *Die Sprache der Bari*, Brixen, 1867.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

● 197 of words may be the remnant of an article. Compare, for instance, kolong, sun; kare, river; konge, eye; komong, face, with the Masai eng-oloñg, eng-are, eng-oñgu, eng-omom (cf. the vocatives with prefixed *K*, p. 15). A relative prefix like *o-*, *na-* seems not to be known, but we find adjectival phrases like ko kure, thirsty (with thirst), and lo-dit (masculine), na-dit (feminine), small, which recall Masai constructions.

The Dinka[1] language, spoken to the north of Bari, has, as Friedrich Müller points out, considerable resemblance to it. A good number of words can be reasonably compared with Masai forms, but superficially the likeness is not great, as the Dinka words are generally monosyllabic and rarely have more than two syllables. Lem (knife) seems to be the Masai eng-alem; mac (fire), en-gima; ton (man), ol-tuñgani; pey (moon), ol-apa, Bari yapa; kir (water), eng-are, Bari kare. It is not, however, probable that the Dinka forms are primitive, as they are capable of considerable changes which may be explicable by reference to older and fuller forms. For instance, lyeb, the tongue (? Masai ol-ñgejep), can become lyep, lyema, lyem, lip and lib; mac, fire, mañe, mañ, and mêc; tik, a woman, wife (? connected with en-dito, in-doiye), tine, tin, ting, dyar. Except for these changes which affect the plural (e.g. ran, a man, ror, men) and the word on which a genitive depends (tik, wife, tin e beyn did, wife of the great chief), Dinka resembles Bari in its general construction. It would seem that Bari is nearest to the common substratum of these languages, though it has been exposed to foreign influences. and that Masai (with which Latuka should perhaps be included) and Dinka represent modifications in two different directions, Masai having a profusion of formative elements which are heaped one on the other and result in very long words, while Dinka is prone to contraction, which produces irregular inflexions.

Turning to the East African languages I think that when the Nandi-Lumbwa and Suk-Turkana groups have been more fully investigated they will prove to be closely allied to Masai, and therefore to the languages with which the latter is connected. To the best of my belief, our only materials for the study of these tongues are Johnston's and Hobley's vocabularies, and our knowledge of the grammar is very defective. It is clear that there is a resemblance between simple words, particularly those denoting parts of the body (e.g. Eye: Masai, eng-oñgu; Nandi, konyak: Suk, koñ; Turkana, ekoñ. Mouth: Masai, en-gutuk; Nandi, kötet;

[1] Mitterrutzner, *Die Dinka Sprache*, Brixen, 1866.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Suk, kōte; Turkana, akotok). I think traces of articles can be detected, and Nandi certainly has many formative elements combined with the essential part of the word, such as *-t* and *-da* to mark the singular, and *k*, *nek*, and *wek* for the plural. When the precise force of these prefixes and affixes is known, the degree of relationship with Masai will be plainer. The verbal forms quoted from Nandi seem very similar to those in Masai. 197

Nandi.	compare	*Masai.*
Aonget ane, I know.		Asuj nanu, I follow.
Inget inye, thou knowest.		Isuj iye, thou followest.
Ingen ni, he knows.		Esuj ninye, he follows.
Kinget acek, we know.		Kisuj iyook, we follow.
Onget akwek, ye know.		Isujusuju 'ndae, you follow.
Inget iceke, they know.		Esuj ninje, they follow.
Maonget, I do not know.		Masuj, I do not follow.
Minget, thou knowest not.		Misuj, thou followest not.
Minget inne, he does not know.		Mesuj, he does not follow.
Mokinget, we do not know.		Mikisuj, we do not follow.
Nenyu mwonget, ye do not know.		Misujusuju, you do not follow.
Menget icek, they do not know.		Mesuj, they do not follow.

In Masai it is not necessary to express the personal pronoun except to avoid ambiguity. Suk, like Masai and Nandi, has *m* as a sign of the negative, but Turkana has *nye*.

It does not appear to me that these languages—Masai, Nandi-Lumbwa, Suk and Turkana—have any clear kinship with Somali and Galla. The coincidences in vocabulary seem explicable as loan words. The grammatical system of all is compatible with the view, if it can be supported by other arguments, that all can be traced back to one stock, that is to say, none of the languages show an essentially different method of forming words and constructing sentences, as does, for instance, the Bantu group. But the similarity consists in the absence of striking differences rather than in points of positive agreement. It may be noted, however, that Somali has an article; that the negative is *ma*; that there are some resemblances with Masai in both the personal and possessive pronouns, and that those verbs which take prefixes offer a general resemblance to the corresponding Masai formations (Somali: *a-qan*, *ta-qan*, *ya-qan*, *na-qan*, *ta-qan-in*, *ya-qan-in*, I know, you know, &c., compare Masai *a-suj*, *i-suj*, *e-suj*, *ki-suj*, *i-sujusuju*, *e-suj*).

It may be of interest as throwing light on the relationships of East African languages to give the numerals of those which have been mentioned, as well as of Ja-luo, Acholi, and Madi. 197 802

[1] *Ôudorj* and *ai*, the latter according to F. Müller, are also used for 9. Of the higher Masai numbers, *Tipilion* (20) seems to be the Galla *digdow*, *arion* (40), and *mom* (50), perhaps the Somali *afartan* and *konton*. *Gem* (90) is the same as the Suk word, and apparently connected with *Somali* (9).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

This list of numbers suggests the following reflections among others: (a) Madi is quite different from the other languages, and gives the impression more than Somali of belonging to a different group. (b) Somali has best numbers to Masai, Latuka, Nandi, Turkana, and Suk, but is otherwise distinct. (c) The remaining languages had originally separate numerals only up to 5. The higher numerals are expressed in Nandi and Masai by borrowed words or new formations, in the others by compounds which more or less clearly mean 5+1, 5+2, &c. It is remarkable that both in Bari and Dinka, as well as Ja-luo and Acholi, though they do not otherwise correspond in details, 7 and 9 are clearly 5+2 and 5+4, but 8 is not so plainly 5+3. (d) The numerals up to 5 show a fair correspondence. 4 is practically the same in all languages, and so is 2, except in Nandi and Suk, where it is replaced by a word which may possibly mean 'pair,' just as *ṯnu* is commonly used for 2 in Arabic dialects. For 5 there are at least two words: *mat* and *ímyet* in Nandi and Masai; *lumot* and *ólua* in Bari. Suk uses both. Possibly *wiéte* in Dinka and *ebíty* in Ja-luo represent variations of the first root, as may also the *Bu* in the Bari numerals from 6 to 9. 1 shows great variety, which may perhaps be paralleled in other families of languages, for instance, Aryan; but it is strange that there should be so little agreement as to 3. Masai and Turkana use *uwi*, Nandi and Suk *sonok*. *Jala* in Bari stands alone. Dinka, Ja-luo, and Acholi use some word like *dek*, which perhaps reappears in the Bari for 8, *budík* (=5+3). The general conclusion to be drawn is that all these languages (except of course Somali and Madi), while forming closer sub-groups among themselves, belong to a common stock, and that the nearest relation of Masai is Latuka, though they have been separated long enough for each to develop special features.

Mr. Hollis's book will appeal chiefly to the scientific world, and perhaps is, with the exception of Sir Harry Johnston and Krapf's works, the most valuable contribution which has yet been made to the anthropology and philology of the British possessions in East Africa. But it will also have, if used as it should be, a very great practical value. Experience gained in many parts of the world has impressed on me the obvious but much neglected truth that if one wishes to be on friendly terms with other races and to avoid misunderstandings, the first essential is to speak their language. There can be no doubt that in East Africa, as elsewhere, natives are delighted

FL12 Masai FL12

193*

Singular.	Plural.	English.
Ol-oisoto	Il-oisotok	The nail, claw.
Ol-oidolōki	Il-oidolok	The elbow.
El-lenywa	Il-lenyok	The long hairs of the tail of a wildebeest or zebra, &c.; the fan made of these hairs.

Examples of other words:

Ol-oiñgōni	Il-oiñgok	The bull, the strong man.
Eng-aji	Ing-ajijik	The family, hut.
Em-beneiyo	Im-benek	The leaf.
Ol-ñganaiyoi	Il-ñganaiyok	The fruit.
Ol-ōwaru	Il-ōwarak	The beast of prey.
E-mōdioi	I-mōdiok	The cow's dung.
Eng-are	Ing-áriak	The water.
Ol-mwoilsa	Il-mwoilak	The beetle.

Class IV.

According to another rule which applies fairly regularly to a large class of substantives, the singular appears to be formed from the plural by adding *i* or *ni*[1]. Comprised in this group are the names of tribes, a few communities of people, most insects, some birds and small animals, and a number of words which were probably first known in their collective form. Examples of names of tribes: 193* 552

Plural.	Singular.	English.
Il-Ashumba	Ol-Ashumbai	The Swahili.
Il-Teñgwal	Ol-Teñgwali	The Nandi.
Il-Kōyu	Ol-Kōyuni	The Elgeyo.
Il-Uasin-gishu	Ol-Uasin-gishui	The Gwas Ngishu Masai.
Il-Kume	Ol-Kumei	The Turkana.
Il-Turkana	Ol-Turkanai	
Il-Kamasya	Ol-Kamasyai	The Kamasia.
Il-Kakesan	Ol-Kakesani	The Lumbwa[2].
Il-Lumbwa	Ol-Lumbwani	
Il-Oikop	Ol-Oikopani	The Lumbwa Masai[3].
Il-Lumbwa	Ol-Lumbwani	

[1] This construction is by no means peculiar to the Masai. In Persian, for instance, *i* is added to a word to mean one individual, e.g. zan, woman, zani, one particular woman; bacha, a child, bachai, one particular child; bar, time, bari, one time, once. [197]

[2] A tribe living near the Lake Victoria, whose real name is Kip-sikisi.

[3] The Lumbwa Masai, who call themselves 'l-Oikop, and who are often referred to by the Masai proper as 'l-Oogul-ala (the hard teeth), live in German East Africa extending as far south as Mpapua. Their language is almost identical with that of the Masai in British territory, the chief difference being the pronunciation of one or two letters, *k* being spoken like *gk*, *p* being pronounced *p* or *φ*, and the vowels being softened. There is also a tribe of people called 'l-Oikop (Leukep or Lukob) living at the south end of Lake Rudolf who apparently speak Masai. They were met by Teleki and Höhnel (*The Discovery of Lake Rudolf and Stephanie*) and by Wellby (*'Twixt Sirdar and Menelik*). [101] [197]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

II – TRIBAL DIVISIONS AND OTHER SOCIAL ELEMENTS OF THE MASAI

101 619 The name Masai covers a group of related tribes in British East Africa. The linguistic classification of BRYAN (see Bibl.) distinguishes five Masai tribes:

1. *The Samburu*, north east of Lake Baringo, in the Rift Valley and Northern Frontier Provinces of Kenya. They are sometimes called Burkeneji, a derivative from *il-loo-iboor-keneji*, the people of the white goats. They are pastoral. We know very little of their social organisation as they have never been studied on the field.

2. *The Njamusi or Njemps*. They live close to Lake Baringo, and are mainly agricultural. DUNDAS,[1] states that "they are survivors of a Samburu tribe called Il Digio". What we know of the Njamusi is practically limited to the fact that they exist.

3. *The Kapiti or Kaputiei*. They live mainly in Kenya around Narok, Ngong and Kajiado. Some are found in Tanganyika. All are pastoral. HOLLIS' standard work on the Masai refers mainly to this tribe.

4. *The Kisongo*, found mainly in Tanganyika around Loliondo and Mondul. There are a few in Kenya. All are pastoral. The other standard work on the Masai by MERKER describes, for the most part, the Kisongo.

5. *The Lumbwa*. The name means "farmers", and is correctly applied only to the agricultural Masai. It is wrongly used also for the Kipsigis. The Lumbwa are found mainly in Tanganyika near Lake Natron, Lake Manyara, and around Arusha and Mt. Meru. They are called by the other Masai *Il-Oikop*, a name of despisal.[2]

● 197 According to BRYAN and TUCKER, all these Masai tribes are linguistically distinguished by "very slight dialectal differences".

[1] DUNDAS, *The Wamanga and other Tribes of the Elgon district, British East Africa* in *J. R. A. I.*, 43, 1913, p. 50.

[2] There are other names which do not indicate any special tribe, such as Il-Arusha, applied to the Masai living in or around Arusha. They are called Wa-Arusha by the neighbouring Bantu. Meru is the name for the Masai living on the slopes of Mt. Meru. They should be distinguished from the A-Meru of Kenya, Central Province. Kwafi is the Swahili term for the Masai, but it is especially applied to the Lumbwa of Kilosa District in Tanganyika. We may add that the Kikuyu and the A-Meru speak of the Masai (Mathai, Matao, respectively) as Okabi.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

On the whole, those two authorities stress the linguistic unity of all the Masai. 197

The great majority of the Masai are pastoral, only very few tribes having taken to agriculture. The pastoral tribes follow a semi-nomadic way of life. "They move", writes Lord HAILEY,[3] "with their herds in order to avail themselves of the seasonal variations in water supplies, so that in effect they practise a system of rotational grazing". The same writer,[4] reports "a recent estimate" of Masai herds in Kenya which puts "the number of cattle at over 700,000, with 800,000 sheep and a large number of donkeys". For Tanganyika he gives no figure. The above estimates show clearly enough how the attitude of the Masai to cattle is a paramount feature of their life. To own cattle is a privilege obtained through initiation, and large herds are a sign of outstanding social status. Cattle are the main economic interest and investment for the Masai.[5] 233 [221] 181 233 554

The total population of all the Masai may be reckoned at about 122,792. The 1948 census of Kenya's population (see Bibl.) gives for the Samburu an estimate of 20,000, and the following figures: Njemps 3,423, the other Masai 67,201. In 1931 the Tanganyika Masai were reckoned as 32, 168. 162 [161]

* * *

Under the present political situation, the Masai are not administered as a single unit, for they are divided into two sections by the border of Tanganyika Territory and Kenya Colony. 631

In Tanganyika the Masai form one of the four districts of the Territory's Northern Province (the Masai District). In Kenya the main group inhabits the reserve adjoining Tanganyika Masai District, and constitutes the Extra Provincial District (Masai District) of the Colony. The other group (Samburu and Njamusi) is incorporated with the Rift Valley Province (Samburu and Baringo District), and partly with the Northern Frontier Province. The geographical separation of the Samburu from the other Masai is the reason why the Samburu were considered, and are still considered, as a non-Masai tribe. But, as BEYAN remarks, they are true Masai. The splitting of Masailand and the separation of the Masai were made 631 634 [101] 175

FL12 Masai FL12

exposure; for the damp cold is singularly fatal to the coast natives, who, under its influence, drop down paralyzed, apparently utterly unable to make the slightest exertion to better themselves. On these occasions you may beat them with a stick till you are tired, but they will simply put their heads between their knees like an obstinate donkey, and whine out, "Si wezi," "Si wezi" (I am not able). On my return march at Mianzi-ni, to the east of Naivasha, one of these storms came on, accompanied with thunder and lightning of appalling fury and violence. The hail fell continuously for hours, and when it ceased the country was actually *white*, and remained so all night. If we had been caught out in that storm, without huts, I question very much if ten men would have survived. As it was, so utterly paralyzed were they that even in their huts they allowed their fires to go out, and they had literally to be compelled to bestir themselves. 132

So much for Masai Land. Let us now take up the deeply interesting subject of the inhabitants.

In dealing with the manners and customs of this remarkable race, I think I shall best picture them to the reader not by describing them in catalogue fashion, but by setting forth the prominent facts in the life history of a male and female Masai, tracing their career in the various epochs of their savage existence, and trying to understand their ideas of man and nature, and their sociological relations. 128

But first of all, let me say a few words more immediately descriptive of the Masai as a race. Learned philologists profess to have discovered from a study of the Masai language—and I suppose the theory may be accepted as correct—that it belongs to the Hamitic family, as does also the language spoken by the tribes of the Nile and North Africa. This seems to be the only clue to their family relationship, and it reveals very little. The reader, therefore, will clearly understand that the Masai are in no sense negroes, or allied to the Bantu tribes with which he is so familiar from the works of our most prominent later African travellers. In their cranial development, as in their language, they are widely different from the natives of Central and South Africa, occupying in the former respect a far higher position in the scale of humanity. 197 144

The Masai tribe is divided into about twelve principal clans or sub-tribes, with numerous smaller divisions. These have not all the same position in Masai society, some clans having more "blue" blood, and being reckoned of purer 614 565

The Masai and Nandi features are not merely similar, but often practically identical. Shields, spears, and swords, for example, are of the same shape and size, and indeed are peculiar to the Masai and Nandi, though the shapes have been imitated by some of the neighbouring Bantu, e.g., the Kikuyu and others. The ivory arm-clamp appears to be peculiar to this group, and has no early Hamitic prototype.[11] Masai and Nandi female dress is of the same general type, and in both the women wear a great deal of coiled wire on the arms and legs. The Hill Suk, however, are undoubtedly of Nandi stock, and speak a language of strong Nandi type; all the Suk also practise male and female circumcision,[12] which is not a custom of the Northern and Central Nilo-Hamites. Hut types differ in all three: Suk huts are little more than rough grass shelters, those of the Nandi being strongly built mud and wattle structures with obtuse-angled thatched roofs; but the huts of the Masai have flat roofs and straight walls plastered with dung, a shape which seems to be derived from the matting hut of such Hamites as the Somali. All members of the Nandi group, including the Dorobo, remove the two middle incisor teeth of the lower jaw. (Further details on Southern Nilo-Hamitic culture are given in the Ethnographic Survey of Africa, East Central Africa, Part VI, pp. 15–20.)

M N T 197

LANGUAGE

The Southern Nilo-Hamites speak two main types of language, which are closely related, Nandi and Masai. These languages exhibit the same traits as indicated under the Northern and Central Nilo-Hamitic languages, except that Nandi has no " L " and " N " in grammatical sex determination.

It now seems that the languages of the Nandi-speaking group may be divided into three separate languages: Suk, Tatog, and Nandi, which have developed from a common stock. Suk has the dialects of Endo and Marakuet, and Nandi the dialects of Kipsikis, Terik, Keyo, Tuken, Kony, Pok, and Sapei, as well as the various Dorobo dialects. Suk, Endo, and Marakuet are very close, and are mutually intelligible, as also are the Nandi and Dorobo dialects. Suk, though basically similar in structure and vocabulary to Nandi, has certain striking phonetic and grammatical differences which render the two languages mutually unintelligible unless learnt. Tatog, as exemplified by Barabaig, is unmistakably of Nandi stock, but in sound and much of its vocabulary would be utterly unintelligible to Nandi. An important

[11] The reference in H. Frankfort's paper " Modern survivors from Punt," in *Studies presented to F. Ll. Griffith*, 1932, pp. 445–53, is misleading on this point.

[12] I use the expression circumcision to include both the operation properly so called on males and the operation of clitoridectomy performed on women.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12
Nandi FL13
TAtoga FN26

AN important point of difference between the languages of the Nandi group is the presence or absence of a secondary suffix or definite article, sing. *t*, plur. *k*, and the method of attaching it. Suk, Endo, and Marakuet do not possess the *t*/*k* suffix; in Tatoga it is often added direct to the stem without any connecting vowel; in Nandi there is often a connecting vowel, e.g., Suk *kuoay*, Tatoga *kuway-t*, Nandi *kuang-e-t*, "bow," in which the final *t* is the secondary suffix. In Masai, on the other hand, the "article" or gender-sign is prefixed, sing. *ol-*, fem. *en-*; pl. *il-*, fem. *in-*. The dialectal differences between the speech of the various Masai tribes are very slight, being in fact much less than occur in the Nandi dialect group, and for practical purposes Masai is a language without dialects.

The Hadzapi speak a click language, related to one form of South African Bushman speech.[13] The Sandawe also speak a click language, apparently related to Nama Hottentot. The Iraqw and Gorowa languages are very closely related to each other, with a large common vocabulary, but it has not yet been possible to classify them. It may well be that some East African languages have survived as the speech of isolated tribes or tribal groups and will continue to defy attempts to classify them because the other languages to which they were once related have disappeared.[14]

A poor form of Swahili, the official lingua franca of Kenya and Tanganyika, is spoken to a rather limited extent by the Nilo-Hamitic pastoral tribes, but even today many of the older and some of the younger people, especially those in remote country districts, know little of it. In 1925 less than 50% of the Nandi understood Swahili, though the percentage has since increased. Most of the Tatoga, Iraqw, and Hadzapi know very little Swahili, if any.

[13] D. F. Bleek, "The Hadzapi or Watindega of Tanganyika Territory," *Africa*, 1931, IV, pp. 273 seq.

[14] No further details are given on language, since this subject is dealt with in the International African Institute's *Handbook of African Languages*, to which reference should be made. It may be noted that throughout I use *c* to represent *ch* (approximately) as in "church."

/xiv cont./

114 and their imageless worship of God ("they have definite prayers
776 and they petition the deity more frequently and fervently than
782 the surrounding tribes are known to do" /cited in English/), stand
113 unquestionably, just as generally a comparison of the book by Hollis, appearing shortly after Merker's book, with Merker's Masai is the best apologia for the reliability of Merker's ethnological as well as linguistic observations.

114 Another outstanding African scholar, the praiseworthy, well-
174 known linguist Carl Meinhof of Berlin (now Hamburg), has above all, and, to be sure, for linguistic reasons, turned against Merker's designation of the Masai as a "Semite people," and with that then also at the same time against their onetime ancestral home in Arabia (2).

[113] 2. Cf. his review in Zeitschr. f. Ethnol., 36, 1904, pp. 735-744.

But what the Arabist Schwally (in Giessen) said about the Masai traditions (Archiv für Rel.-Gesch., IX, 1906, p. 505), that here "features of Semitic origin are well grafted on African ones" (but "when and under what circumstances is hard to say"), also applies to the language, as I was able to convince myself by a thorough study of Hollis' book. Definite remains show that the Masai must once have been Semites, and, to be sure, Arabian Semites. This will be briefly discussed in what follows next.

174 Not only does their own tradition teach that they came from
• 197 the north, but this is also confirmed by a comparison of some of
[173] their number words with those /xv/ of the Cushitic languages
[113] (especially Somali and Galla) and of Nuba. One should compare
[80] the following lists, to which I have also further added the number words of Nandi, closely related to the Masai, from the new book by Hollis (The Nandi, their language and folklore, with Introduction by C. Eliot, Oxford, 1909):

M 174 • 197 802 S 197 802

M 193 174 197 S 193 197

In the purely Semitic syntax, too, the Masai language is in very close harmony with the Galla and Somali, whereas in this respect the other Cushitic languages (cf. on this point my Grundriss der Geographie und Geschichte des alten Orients /Outline of the Geography and History of the Ancient Orient/, pp. 154 f.) show far more Nuba influence. The pure Semitic substratum of the so-called pattern of the imperfect /Imperfektschemas/ can also be clearly shown as lying at the root of the entire Masai conjugation; one should compare:

M 193 197 174

1. sing. *e-sudsch*, I follow	pl. *ki-sudsch*, we follow
2. sing. *i-sudsch*, you follow	*i-sudschu-sudschu*, you follow
3. sing. *e-sudsch*, he follows	*e-sudsch*, they follow

where, in accordance with a phonetic change to be observed elsewhere in Masai, ti is reduced to i and ki has arisen from ni, so that we may therefore presume as the oldest forms

/xv cont./

193 which is exactly the Semitic conjugation pattern transmitted from
197 Arabia to the Cushitic languages (for example, Arabic a-kun,
174 ta-kun, ja-kun, pl. nakun, takûnû, jakûnû). But otherwise, too,
Masai, even though its vocabulary /xvi/ and much of its grammar
19 are so greatly Africanized, shows many traces pointing clearly to
174 its onetime Arabian homeland. Among these I count the conjunctions o, "and" (from wa), and the consecutive pe, "and, so that," Hollis, p. 100, which is exactly the difference, so characteristic for Arabic, between wa and fa, or the remnant of a formation of singular nouns by the ending -a (il-akir, stars, ol-akira, a single star, Hollis, p. xxi), or the double function of the particle ma (both "not," likewise in Somali, and also "that," cf. Arabic mâ, "not" and "that which"), or also individual characteristic words that can scarcely be taken as later loanwords, but are to be regarded as ancient remnants, such as sararua, navel, Arabic surra; sero, forest, Arabic sarw, forested mountains (originally cypress forest); kunoni, blacksmith, Arabic kain; remet, spear, Arabic rumh; moruo, older man, husband, Arabic maru'; ure, to fear, Arabic wara'a; sun and day fem. (night and moon, on the other hand, masc.), cf. also Arabic šams, sun fem., and the expression al-lail wa 'n-nahâr (1),

1. Nahâr is an old (later no longer recognized as such) feminine form of the form fa'âl from nûr, "light"; lail is the masc. of laila (older lailot) with the same meaning, "night."

193 night and day, next to al-jaum wa 'l-laila. Pointing quite
197 specifically to the South Arabian Mahra language (thus the dialects
174 of Frankincense Land), from where so-called Ethiopian also stems,
are some plural formations of the Masai, such as eng-affin from eng-af, il-apaffin from ol-apa, etc. (Hollis, p. 25), cf. in Mahra ebelîten (from aybel, flint), haidenten (from haidên, ear); likewise Ethiopian enta (fem.), "which," and Masai enna, fem. of elle, as well as the feminine article en (in contrast to masc. ol).
000 According to Hollis, p. 275, the Pleiades are only six stars among

According to Hollis, p.275,
/xvi cont./ the Pleiades are only six stars among
821 the Masai, likewise in the pictorial representations of South Arabian
171 tomb inscriptions (in contrast to the seven circles of the Babylonian
174 Nergal symbol); the name of the bearers of the religious tradition
192 of the Masai, el-kiboron, coincides strikingly with the expression for priest, kabîr, in the old Minaean inscriptions of Yemen (2).

[576] 2. Quite remarkable also is the correspondence of the Masai custom that when one is inside with her he plants his spear in front of the hut so that another will not enter (Merker, p. 109 and p. 158) with the similar custom among the southern Arabs (here only staff instead of spear) given by Strabo (Book 16). -- Also that the "speaker" stands at the head of the warriors is reminiscent of South Arabia (cf. kail, chief, actually speaker, as well as saijid, "master," probably has the same etymology, cf. Syrian sewîd, speech).

192 The specifically Ethiopian word dengel, "virgin" (originally prob-
• 197 ably "young woman" in general), is the same as the Masai en-
194 dangile, "young woman" (after the circumcision); tongs, el-garamet, is the Arabic el-kullîbat, and cowbell, eng-gurugur, the Arabic al-gulgul, en-abere, spear, perhaps the Arabic el-ibra, needle. The name of the liana species mogongora, from which the Masai take a fragrant wood for therapeutic purposes (Merker, p. 27 and cf. p. 196, ol-magirigirieni, a vanilla-scented perfume), is very reminiscent of the South Arabian name for frankincense, mugr, just as in general the reiteration of the second half of a word, popular among the Masai (for example, gadardar, a /xvii/ tree name, airaŝaraŝ, a shrub), is likewise in turn a peculiarity of Ethiopian, where it is used especially for the formation of color names (waraḳrîk, gold-green = Hebrew jeraḳraḳ, hamalmîl, green, but also dabarbîr, backlike = hill, and the Tigre plant names gondefdafe, endufduf, amferfaro, and handugdug). All these
[114] are definite traces that make Merker's naming of the Masai as an originally Semitic and then, more specifically, an Arabian people seem fully justified.

/15/ Even though, in general, one should be very careful in ethnology about drawing conclusions from linguistic bases, it seems permissible here, on behalf of the three branches' belonging to one people, to point to their language as well.

As a matter of fact, we find the same language among the Masai and Wakuafi, with the limitation that for the latter, with the great number of Masai dialects, sometimes this one, sometimes that one is their own, according to the location of their area, whereas the very widely ranging Masai probably understand almost all the dialects. In addition, for the Wakuafi, in places, according to the degree of their mixture with Negro tribes, a language of the latter's is more or less familiar. Of the Wandorobo, the El gamirek speak only the language of the Masai, whereas the Asá and

D
197

D 197 /15 cont./ the El asiti also have their own idiom, which will be briefly discussed at a later place.

M 197 802 184 D 197 802 D M 771 304 619 [191] D M 174 [844] [176] D M 614 613 D M 128 Corresponding to the uniformity in language, the number words are the same among the Masai and Wakuafi, whereas the Asá and El asiti have their own words for only a few numbers, but in general always make use of the ones used by the other two branches. One finds a complete correspondence for all three branches in their religious view, and the manner of circumcision customary among both sexes. The peculiar circumcision of the boys is practiced by no other people at all, with the exception of one lineage of the Tatoga, closely related to the Masai people. In birth and death, too, all three have the same customs, while in the rest of their customs one finds only unessential differences which are based solely on the difference in their external way of life. The most striking proof for the three branches' belonging together, however, lies in their descent.

The people as a whole are divided into three large tribes, the Laiser, the El mulelyan, and the El mengana, each of which is made up of a number of lineages, and every Asá, as well as every Ol kuafi and Ol massani, is a representative of one of these lineages.

If we now concern ourselves further with the ethnography of the Masai in particular, which is at the same time that of the Wakuafi, we are thereby including the ethnographic traits of the entire peoples the stressing of individual differences that have developed among the Wandorobo in the course of time and under the influence of changed conditions will be reserved for the third part.

/16/ Second Part

I.

000 Tribes, lineages, sublineages. -- The En gidon lineage. -- The chief: his rule and policy, magic medicines, genealogical tree, village, ceremonies, foods. -- The sorcerers. -- The El kiborōn lineage. -- The rainmakers.

M 614 613 Every tribe (en gischomi) is divided, as has already been mentioned, into a number of lineages (ol gelata, el gelat). Among these, in turn, one distinguishes principal lineages (ol gelata kitok)

/112 cont./

564 326 [192] [784] [578] because he thinks a misfortune will be conjured up by it; it is feared that a lion would get into the kraal or the camp at night or that the enemy would carry out an attack. To call someone "ol kononi" is regarded by the other Masai as a strongly insulting invective expressing contempt.

564 326 779 829 [783] The contempt toward blacksmiths is based on the view that the blacksmiths are unclean. God forbade human beings the shedding of blood. By making weapons, the chief product of the blacksmiths among primitive peoples, they induce transgression of the divine commandment, work against the latter. Hence they are condemned by God, and therefore they are regarded by their fellowmen as unclean, contemptible, bringing misfortune. Daily observation also teaches -- so the Masai say -- that God does not love blacksmiths, for a blacksmith actually never becomes prosperous; if he should happen to become wealthy, however, he would soon die, without being able to enjoy his property.

564 326 142 It should expressly be brought out here that, despite all the efforts devoted to it, I have not been able to determine the slightest somatic difference between blacksmiths and non-blacksmiths and that all non-blacksmiths questioned by me (there were several hundred) described the blacksmiths as pure, unmixed members of the Masai people, which the blacksmiths themselves also maintain without exception (2).

564 326 197 198 114 2. Obviously the Masai blacksmiths speak the Masai Language and not another one of their own, as had been supposed from the statement by C. Hollis in his book, The Masai, their language and folklore, Oxford, 1905, p. 331. Hollis says there /the quotation is in English/: "The smiths have their own language, which, although a corruption of Masai, is not understood by the ordinary Masai. Not all of /this footnote is continued on the next page in the original source/ them can speak this language: it is only a certain number of them [563] who know it." This statement by Hollis is ex-

/112 cont./

564 326 [197] [198] [114] [563]

/footnote 2 cont./ plained by the fact that a few El lumbua blacksmiths also live among the Masai blacksmiths. They speak their own dialect, which, of course, is unintelligible to the non-blacksmith El masai ("ordinary Masai," as Hollis designates them), who, indeed, scarcely come in contact with them.

564 326 461 [114] The opinion of many a European, that the /113/ relative diligence of the blacksmith might have brought to him the scorn of that type from the non-blacksmiths not inclined to work, is also a rude error. I have become acquainted with a large number of El konono who for about two decades have not had a hammer in their hands and very many who have not even made an attempt to learn the trade, but rather live entirely like other Masai. All these, however, were despised exactly the same as their forging fellow caste members.

564 326 783 Like the blacksmiths themselves, the products of their art, the weapons and utensils made by them, are regarded as unclean. In order to take the uncleanness from them, the Masai rubs with fat every new object fetched from the blacksmith's shop, as well as his hands which have touched the still unclean object.

564 326 Even the reputation that a few armorers enjoy, on account of the excellence of their products changes nothing in their low social position. The most famous at the moment, old left-handed Engussa from Ol brugga, an artist in his field, is just as despised as any other blacksmith. The Ol brugge people, however, jealously see to it that he does not also work for warriors of any other province or even for members of another people.

564 326 361 [314] [317] [347] [354] 326 314 While the other kraals, tied to the presence of good pastures, are always moved with the disappearance of the latter, the blacksmith kraals remain for a long time in the same localities. The el konono have only very little livestock, but for their craft they need charcoal and ferruginous sand. They establish their homes where both are to be found nearby. The workshop (ol guguet) is built close to the kraal. It consists of a grass roof resting on six to eight posts. In the center lies the hearth (en edoñschore). The smith makes his tools as well as his

NOTE.—Since writing the above I have heard from Mr. Arthur Neuman (the author of *Elephant Hunting in East Africa*, and a man whose knowledge of the El Dorobo is unrivalled). He tells me that he has discovered an isolated clan of these hunters in some hills near the Ensso Nyiro, and north of Mount Kenia. These people call themselves the El Mogogodo, and asserted that they were distinct from the Dorobo of Masai.

D
192

Mr. Neuman collected a small vocabulary, which I append. I had hoped at the outset of this research to discover that all the gipsy tribes would be found to speak an allied tongue, but must confess that up to now this view does not gather much support.

The following is Mr. Neuman's vocabulary of the language of the Mogogodo :—

Arrow	Lagh.
Bad	Etiteri.
Bird	Legei.
Blood	Soga.
NOTE.—In Ler language soga means bone; in Tho-Leo bone is chogu.	
Bone	Motobo.
Bow	Paba.
Buffalo	Piba.
Child (of either sex)	Leya.
Boy	Kuti.
Come	Yato.
Cooking pot	Duru.
Cow	Gwiti.
Dog	Kuba.
Elephant	Segomd.
Father	Abusi.
Fire	Ibu.

1: Hollis G-5 (ca. 1894-1904) 1905

Eata 'l-kunôno o-rorei lenye ol-loo-'l-Maasae, kake eitawai; lemeniŋg il-Maasae. Mma pôkin ooata, e-matwa ake naata.

is not considered correct. The smiths marry amongst themselves. 324 564

If a Masai takes in his hand a spear or sword or other thing which a smith has held, he first of all oils his hand for it is considered improper for him to take it in his bare hand. [576]

The smiths are not rich in cattle like other Masai. They have no luck with cattle. If you find one possessing forty head, it is a very large number. [233]

The smiths have their own language, which, although a corruption of Masai, is not understood by the ordinary Masai. Not all of them can speak this language: it is only a certain number of them who know it. [198]

'Môtio oo 'l-pukurto.

Ten epwo 'l-muran aayaŋg-iabo, nepik en-gine pe etum ôibuŋga.

Earthenware pots and gourds.

Some Masai women are able to make earthenware pots; others who are unable to make them buy them from savages. 323 [939]

Gourds are also bought, or they are collected in the deserted kraals. [915]

One pot can be purchased for a goat. [935]

When the Masai make pots they make them in two sizes, big and small; these pots are also provided with handles[1] by which they can be picked up.

When warriors go to the woods to slaughter cattle, they carry their cooking-pots by a strip of hide fastened to the handles[2]. [482] [237]

[1] Lit. nostrils. [2] For illustrations see Hinde, *The Last of the Masai*, p. 8p.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12
Nandi FL13
Tatoga FL26

Also important

point of difference between the languages of the Nandi group is the presence or absence of a secondary suffix or definite article, sing. *i*, plur. *k*, and the method of attaching it. Suk, Endo, and Marakwet do not possess the *i/k* suffix; in Tatoga it is often added direct to the stem without any connecting vowel; in Nandi there is often a connecting vowel, e.g., Suk *kosop*, Tatoga *kosop-i*, Nandi *kosop-i*, "bow," in which the final *i* is the secondary suffix. In Masai, on the other hand, the "article" or gender-sign is prefixed, sing. *ol-*, fem. *en-*; pl. *il-*, fem. *in-*. The dialectal differences between the speech of the various Masai tribes are very slight, being in fact much less than occur in the Nandi dialect group, and for practical purposes Masai is a language without dialects.

The Hadzapi speak a click language, related to one form of Sonth. African Bushmen speech.* The Sandawe also speak a click language, apparently related to Nama Hottentot. The Iraqw and Gorowa languages are very closely related to each other, with a large common vocabulary, but it has not yet been possible to classify them. It may well be that some East African languages have survived as the speech of isolated tribes or tribal groups and will continue to defy attempts to classify them because the other languages to which they were once related have disappeared.**

A pure form of Swahili, the official lingua franca of Kenya and Tanganyika, is spoken to a rather limited extent by the Nilo-Hamitic pastoral tribes, but even today many of the older and some of the younger people, especially those in remote country districts, know little of it. In 1925 less than 50% of the Nandi understood Swahili, though the percentage has since increased. Most of the Tatoga, Iraqw, and Hadzapi know very little Swahili, if any.

* D. F. Bleek, "The Hadzapi or Watindiga of Tanganyika Territory," *Africa*, 1931, IV, pp. 273 seq.

** No further details are given on language, since this subject is dealt with in the International African Institute's *Handbook of African Languages*, to which reference should be made. It may be noted that throughout I use *c* to represent *ch* (approximately) as in "church."

/112 cont./

564 326 198 784 578 because he thinks a misfortune will be conjured up by it: it is feared that a lion would get into the kraal or the camp at night or that the enemy would carry out an attack. To call someone "ol kononi" is regarded by the other Masai as a strongly insulting invective expressing contempt.

564 327 326 279 324 583 The contempt toward blacksmiths is based on the view that the blacksmiths are unclean. God forbade human beings the shedding of blood. By making weapons, the chief product of the blacksmiths among primitive peoples, they induce transgression of the divine commandment, work against the latter. Hence they are condemned by God, and therefore they are regarded by their fellowmen as unclean, contemptible, bringing misfortune. Daily observation also teaches -- so the Masai say -- that God does not love blacksmiths, for a blacksmith actually never becomes prosperous: if he should happen to become wealthy, however, he would soon die, without being able to enjoy his property.

564 327 326 142 It should expressly be brought out here that, despite all the efforts devoted to it, I have not been able to determine the slightest somatic difference between blacksmiths and non-blacksmiths and that all non-blacksmiths questioned by me (there were several hundred) described the blacksmiths as pure, unmixed members of the Masai people, which the blacksmiths themselves also maintain without exception (2).

564 326 199 198 114 2. Obviously the Masai blacksmiths speak the Masai Language and not another one of their own, as had been supposed from the statement by C. Hollis in his book, The Masai, their language and folklore, Oxford, 1905, p. 331. Hollis says there /the quotation is in English/: "The smiths have their own language, which, although a corruption of Masai, is not understood by the ordinary Masai. Not all of /this footnote is continued on the next page in the original source/ them can speak this language: it is only a certain number of them who know it." This statement by Hollis is ex-

While the other kraals, tied to the presence of good pastures, are always moved with the disappearance of the latter, the blacksmith kraals remain for a long time in the same localities. The el konono have only very little livestock, but for their craft they need charcoal and ferruginous sand. They establish their homes where both are to be found nearby. The workshop (ol ruguet) is built close to the kraal. It consists of a grass roof resting on six to eight posts. In the center lies the hearth (en edoñachore). The smith makes his tools as well as his

Spitting.

The Masai have two ways of spitting; one is used to show contempt, and the other astonishment. Besides this the medicine-men spit when they wish to heal people[1]. 201

If a Masai wishes to show his contempt for another man, he expectorates a small stream of saliva forcibly through the hole in his teeth into the man's face, and says at the same time: 'You are a dog.'

Formerly when the Masai saw Swahilis, they used to spit on the ground and say: 'These coast people stink like fowls.' They never went near them or touched them if they could help it. [177]

When a Masai sees a baby that he has never seen before, he spits on it slightly several times and says: 'Grow, become accustomed to the eyes of people.' 514 789 [856]

When he sees a child that he has never before beheld, he also spits on it slightly, and says: 'This child is bad.' To himself, however, he says: 'This child is good.' It is believed that if he praises a child it will fall ill. [753]

[1] Amongst the Dinkas it is also customary for the medicine-men to spit on their patients (Kaufmann, *Schilderungen*, p. 128). [171]

[2] The name by which the Swahili were formerly known.

514 576 201 Ten eñgasaki 'n-gera kutiti 'l-tuñganak tasati naleñg, nenotaki 'ng-amulak il-tasati, nějōki: 'Mikitajapa eng-AI.'

Naa, ten eñgasaki 'l-muran il-tuñganak kituak, nenotaki kulikae-kituak ing-amulak ing-aik.

If small children salute very old men[1], the latter spit on them, and say: 'May God give you long life and grey hairs like mine[2].'

Then, when warriors greet old men[3], the latter frequently spit in their hands before allowing the young men to grasp them.

821 514 789 Naa, ten edol ol-Maasani en-dōki neitu ae-oloñg edol, anaa ol-akira ōdōyo, nenotaa 'ng-amulak, nějo: 'I'usho! imbira 'l-mañgati!' nějo sii: 'Telekwaki.'

If a Masai sees something phenomenal, such as a shooting star, he spits several times and says: 'Be lost! go in the direction of the enemy!' after which he says: 'Stay away from me.'

514 789 [551] [DC3] Ore sii ten erikīno, neipot il-meneñga araki eng-arna o-'l-tuñgani ōtua, nenotaa 'ng-amulak. Ore sii ten eniñg il-omon torok injere etua ol-tuñgani ōje, nenotaa 'ng-amulak, nějo: 'I'usho, eng-AI, mikiatá 'n-giyaa.'

Again, should he forget, and call somebody who is dead, or mention the name of a deceased person, he spits. Should he hear any bad news, such as the death of some person, he spits, and says: 'Be lost, O God, we have no ears.'

514 179 Ore p' eiter aapwōnu 'l-Aisungun kunna-kwapi, pe edol il-Maasae, nenotaa 'ng-amulak, amu etějo: 'Eitu kidól il-tuñganak anaa kullo.' Něji sii: ''L-oibonok kituak kullo-tuñganak.' Ore pe epik ol-Aisungui ol-tuñgani ol-chani, nějōki ol-tuñgani: 'Tonotakaki 'ng-amulak p' aishiu.' Něji eng-arna 'l-Ōjuju amu eata 'l-papit kumok.

When the Europeans came to these countries and the Masai saw them for the first time, they used to spit, for they said: 'We have never seen people like these.' They also called them medicine-men, and if a European gave a Masai medicine, the latter asked him to spit on him to heal him. Europeans were formerly called 'L-Ojuju owing to their being hairy.

[1] *Vide* p. 287.

[191] [113] [2] It is customary amongst the Bari people for old men (fathers or grandfathers) to take children's heads between their knees and spit slightly on them to bless them (Mitterrutzner, *Die Sprache der Bari*, p. xvi).

[3] *Vide* p. 284.

789 another sale! Sometimes circumstances prevent the immediate use
791 of medicines obtained: a drought for instance might make it impossible to collect people for the ceremony; in such a case the charm might get old and lose its efficiency; or perhaps the object of its use may be forgotten. If this happens the medicine is conveniently mislaid or is thrown away, but if so a report must be made to the medicine man, for he will have seen what happened to his medicine and will be angry, if its fate is concealed from him.

561 After some years the boys are circumcised, and become moran warriors. As soon as most of them are circumcised the *ingopior* plan to form into separate companies in readiness for residence in warrior
[361] villages called *imanyab*. Messages are sent and the warriors of all clans are called together by means of an *ol-amal* just as the boys did before the *endungore* ceremony. The number of companies, called *i'sirit*, to be formed, also the names to be given to them are decided on beforehand by the *ingopiri* warriors. After discussion a division is decided upon. One warrior representing each company to be formed leaves the assembly, goes a little way and striking the haft of his
[201] spear with his club to attract attention, he calls: "*En alo Il Mirisho*" or "*En alo Il Tetiauri*"—"This way the Merisho, this way the Tetiuri." The warriors then rise and join the man calling the name of the company they wish to join.

Groups of five will go together, to join the same company. A company may include warriors of more than one clan though as a rule the majority are of the same clan.

If the warriors of one clan are too few to form a separate unit they join the unit of another clan. If the clan is a very big one, the warriors may form two or even more *sirits*. Having joined a *sirit* a
[578 warrior may retract at any time before that *sirit* forms the first warrior
627] village. Once the warrior villages are formed, any warrior who leaves his *sirit* to join another, incurs the bitter resentment of the others. In some cases a fine of cattle is inflicted.

The *sirits* once formed, the warriors now approach the *il-piron* elders with a view to holding the ceremony of drilling—without which the first warrior village or manyata of new age-group may not be erected.

The *enthurgori* ceremony or the breaking of the fire stick, though it effectively holds up the circumcising ceremonies, is not finally bind-
[791] ing. It sometimes happens that the medicine man decides that a left-hand circumcision shall be held, in which case all the boys, the *Il piron* planned to make their special care, will be lost to them, for the boys will be circumcised to form one age with the ——— or right-hand circumcision moran.

Kenya

561 place until the two senior groups move out together into the elders' class. The result of this arrangement is that no group which enters the warrior class as *muratogedienye* ever stays in the warrior class for as long as any *jangienobur* group.

56 62 59 361 634 *Manyattas.*—During their time of service in the warrior class the members of each age-group live in special villages built away from the main married men's villages. These villages are territorial, in that all the warriors of a single age-group in a single area live in one such village. Warriors of different age-groups never live in a single *manyatta*, as each *manyatta* is essentially the headquarters of the members of a single age-group in the warrior class in a given area. *Manyattas* are moved about from place to place when fresh grazing is necessary.

621 561 A *manyatta* consists of a number of huts each one of which is built, and lived in, by the mother (or another married woman relative) of one of the warriors of that *manyatta*. Normally each warrior has his own mother living in the *manyatta* and she is accompanied by her children, especially by some of the man's uninitiated sisters and half-sisters. The elder women are there to do the work of the *manyatta*, 462 such as milking, fuel gathering, water drawing, etc., and in this they are assisted to a certain extent by the girls, but the latter are chiefly in the *manyattas* as companions and lovers for the warriors. No girl can live at a *manyatta* at all unless her brother or half-brother is a member of that *manyatta*, and each warrior living at a *manyatta* is expected to bring two or three of his sisters or half-sisters to live at the *manyatta*, and if possible some of these should be fairly grown up and others quite children who will grow up at the *manyatta*.

836 561 *Sex Life.*—During the warrior stage no man may have sexual intercourse with any initiated girl or with married women, but on the other hand, there exists in the *manyattas* a system of sex life which is decidedly interesting. The warriors, whenever they feel like it (which, as my informant pointed out, is "very, very often"), invite one of the girls (sisters of the other men in the *Manyatta*) to sleep with them. 201 This is done by a method and formula which corresponds in some ways to the 832 *umbani* of the Kikuyu peoples, but has certain marked differences. 971

A group of warriors at any time of the day will stand outside the village and call to any of the girls whom they see about, and when they come they say to them *tasiukiu*, and the girls then each select one of the men, and say "I choose so-and-so," not mentioning the man by his own name but as "the son of so-and-so." By so doing the girl binds herself to go and sleep with the man so chosen that night. It is a point of honour and etiquette that no girl so called upon to choose a man may refuse to do so unless she is (*a*) actually at a menstruation period at the time, or (*b*) has already promised herself to another man for that night, but she may make her choice from any of those men who were in the group that called to her.

Kenya

As stated above, *Ol Piron* means a firestick. I have been given a reason for the use of this term, but was not convinced of its truth. The elders of the *Ol Piron* generation stand in a particular position of guardians to their juniors who recognize their authority to a far greater extent than they do that of elders of other generations. This relationship has considerable political as well as domestic importance. 561

Manyattas.—The *sirit* is the unit for a single *manyatta*, except when the whole age-group of a single area combine to form one *manyatta* for some ceremony, *e.g.* the *E-Unoto*. 561 361 648

For some years the policy of Government was directed towards suppressing the warrior system, and *manyattas* were prohibited, each warrior being supposed to live in his father's village. With increasing control and understanding of the tribe this rule has been somewhat relaxed, and the warriors are now commonly allowed to have *manyattas* provided that they continue to behave themselves before the law.

But the general effect of Government policy has profoundly modified the original customs with regard to warriorhood, and it is now rather difficult at times to know exactly what these were. The main political effect is that warriorhood lasts for a much shorter period than formerly, and most men marry and become elders within four or five years of their circumcision. 561 177 361

Nowadays the parents are somewhat unwilling that the girls should live in the *manyattas*, and so there are only a few of them to be seen there.

A *manyatta* usually differs structurally from an elder's village in that it is simply a circle of huts without the usual thorn hedge round it.

Sex Life.—The word written by Mr. Leakey *tasiukiu* would perhaps best be spelt as two words *Tasioki iyook*. *Tasioki* is a second person singular imperative of a dative word (*see* Hollis, p. 77) which I have never heard except as described by Mr. Leakey. *Iyook* means "we" or "us." 836 [193] [114]

When a man has been accepted by a girl who has been so addressed he usually holds out his hand to her with the tips of his forefinger and thumb touching to form a circle. She is then supposed to break the circle so formed with her forefinger. This is regarded as making her acceptance binding. [201] [832]

It is a great disgrace for a warrior to cause an uninitiated girl to conceive, and he must kill an enemy in order to wipe it out. This is, in fact, the usual reason for the occasional murders of people of other tribes, frequently ascribed erroneously to a desire on the part of the murderer to "blood his spear." 842 154

The E-Unoto Ceremony.—Nowadays this takes place from three to five years after initiation. It is not a single ceremony for the whole of the Masai, but there are a number of separate ceremonies according to the groups enumerated in my age-group table above. 561 884

/108/

576 521 [203] A brief conversation in which news is exchanged is added to the greeting as a rule. This explains how even in the barren steppes any news spreads with great speed. If strangers meet, the older man first questions the younger one, or the man the woman, about name, origin, etc. The first question always runs: "Where do you come from?" To this is added the following: era enia 'ń gischomi = to what tribe, era enia ol gelata kitok = to what principal lineage, era enia ol gelat' ate = to what sublineage do you belong? It is further asked: eń ai menje = who is your father, eń ai notonji = who is your mother, and kędja eń garnaino = what is your name? The one asked readily gives an answer, but generally does not question the other one; on the contrary he goes on without knowing with whom he spoke. Good breeding demands this.

576 574 If a stranger comes to a kraal whose owner he does not know, as a rule he asks one of the children playing in front. The reply then runs: My father (baba), and to the question who that might be, the little one looks at him astonished and asks: "Do you not know my father then?" To the further question as to where he might be, the child points to a hut in which it surmises the father to be. Only small children may [201] point with the finger in the direction of a married man; older ones and adults indicate the direction by turning the heads toward it and at the same time slightly pushing out the lower jaw or the lips or even their tongues. If the stranger has sought out the hut of the old man, he squats in front of it and waits until its owner comes out of his own accord or is called out by one of his people. Now he first questions the guest in the same way as at an encounter and then calls one of his wives or one of his children to bring milk. The gourd bottle is first handed to the host so that he can make sure it is generously filled. He then hands it on to the guest. When the latter has emptied it he is asked whether he would like still more; to answer in the negative would be an offense against good breeding. Hospitality is discussed in another place; it is only to be mentioned that the guest need not express any request. Though it is expected of him that he will feel quite at home, one nevertheless still specially offers him everything available.

/108 cont./

576 When an acquaintance wants to enter the hut, he calls -- corresponding to our knock -- "eh opěn eňg adji" = female owner of the hut, whereupon from inside, like "Come in!" comes the answer, "ja na ijōk" = "we are here." Thanks for a favor shown or a gift is hardly ever customary, only very rarely does one hear the [201] word ǐsché = thanks. A request is refused in that one "wams off" with the hand, the palm of which is turned toward the one making the request.

The farewell runs "aija amalo" if one person is going away, "aija amerda/109/kipo" if several take their leave, and means "I am going" or "we are going." It is used similarly by all people and only by uncircumcised children is not accompanied by the handshake. A friend taking his leave is requested to remain longer with "milo" = 521 "do not go." In conversation with their kind the Masai are very talkative. The warriors among themselves relate old and new war adventures, which are presented with lively gestures and in exaggerated embellishment. Usually a fellow tribesman or lineage member plays the leading role in it; the enemy is always cowardly or lets himself be outwitted. Together with the young girls, the conversation soon becomes unrestrained and launches into racy witticisms and bold jokes. In the kraal of the married, men and women sit in separate groups. The former speak quietly and often in subdued voices about memories of their youth, stock raising, etc.; the latter, on the other hand, laughing and with extraordinary glibness of tongue, converse about gossipy tales in which some slur is cast on Mr. or Mrs. So-and-So. But let it be said to the credit of the Masai that their gossip is childish and harmless. One does not find malicious scandalmongers of either sex among the Masai and probably not among the other so-called primitive peoples. They rather seem to be an attendant [157] phenomenon of a higher level of culture. In accordance with the lively, impulsive nature and especially also the abnormal irascibility of the younger men, one very often hears coarse and bantering invectives. Their coarseness probably sufficiently explains the peculiar [576] ethics of the Masai. Crude invectives may not be used by women toward men.

/110 cont./

578 192 man. From young girls among themselves one hears: eñ orobó menje = accumbens patri /one who lies with her father/, eñ orobó 'l alahe = accumbens fratri /one who lies with her brother/.

Used by warriors toward young girls: hai em ballsch = you, vulva; hai, e mówo = you, clitoris.

Younger children insult one another:

ñotonji eñ gomos = vagina matris;

ol agambai Eng ai = hated by 'Ng ai;

tababuá = stumble;

ol agaischiri Eng ai = cry to God (when you get a beating);

e mai = stupid fellow;

hai ol madai (or e madai) = you stupid fellow (stupid girl);

id' ol airirua, you are a blockhead;

id ol bua, you are a rowdy;

id' ol dillo endoi, that is, you are indeed mad. The term ol [136] dillo, which here means madman, is formed from the like-named bird, the red-headed Anaplectes melanotis, one of the many species of the weaver birds native to East Africa. If one en route hears it call- [777] ing on the steppe from the left side, it means good luck, but if it [825] calls to the right of the traveler the latter will soon encounter a misfortune.

Ol agatar' em baie, that is, die by an arrow, ol agawa ol gollug = die of fever; ol bebedo = of the upele sickness; ol minjaloi = of smallpox; eñ gohogge = of stomach or intestinal sickness; ol agataremo el gigaret = may the thorns prick you; ol agatarigi ol mairon = may your belly burst from eating; ol agairokischo = become black; ol agoibarra = rogue, brawler; e at' ol marenge = slanderer, gossiper; ol duñgani serseri = bad fellow; ol duñgani guret = coward.

• 201 To express contempt one spits before the person concerned or at him.

192 593 The large number of invectives stands in contrast to a striking poverty in terms of endearment.

/111/ The mother designates her child as 'l aischa 'Ng ai = child given me by God, as eñ gutok e jëjo = mouth of the mother, or as ol oib e jëjo = resting place of the mother. The father calls it ara ñgotonji = child of the wife. Older brothers and sisters talk fondly to younger ones with the term ara e jëjo = child of mother.

/121 cont./

181 If we summarize the traits outlined above, there results, on the one hand, the fact that the character of the Masai in general reveals the same virtues and vices as that of other primitive peoples, but then also that the Masai are definitely to be counted among the better half of these peoples.

181 609 The following little story, which a man from the Kilimandscharo area of Moschi once told me, shows how the Negroes illustrate the character of the Masai. "It was many years ago when we still fortified the area well with ditches and thorn hedges and the few approaches were both made hidden and well guarded. One day a couple of our people went into the steppe to see whether an elephant had fallen into the trap pit made there. There in the bush they found an old, sick Masai near starvation. Full of compassion, they took him home with them, where he gradually recovered. The convalescent seemed filled with gratitude and swore eternal friendship toward his benefactors when he departed to seek out his kraal again. A few days after his departure the war cry of our people suddenly resounded one night throughout the area. The Masai had come to make war on us, led by that old man who during his stay here had become familiar with the roads and bypaths and who owed his life to us."

• 201 152 Astonishment, depending on its degree, is expressed by a more or less wide opening of the eyes and the mouth, as well as by a simultaneous raising of the eyebrows.

[147] A feeling of shame is manifested by a darkening of the skin of the face and often also the throat, corresponding to the "blushing" of the white race. In order to express indignation one looks at the other with wide-open, staring eyes often cast slantwise. One observes the same in the case of obstinate children.

In reflection the forehead is wrinkled longitudinally and often also transversely in its middle section.

To express ill-humor, depression, anger because of loss, etc., one scratches the head bent to one side -- usually to the left -- with the right hand and thereby wrinkles the forehead transversely above the root of the nose.

/121 cont./

• 201 152 In contentment the eyes sparkle, and there is a happy expression on the face.

201 152 507 181 The stubborn one often presses his lips together tightly. In lying, especially in stiff-necked lying, the one concerned usually exhibits a well-played /122/ candor and the absence of any trace of consciousness of guilt, which often increases to the point of indignation, as though over an unjust suspicion. The Masai shows here a great talent for acting, which he probably has in common with most of the dark-skinned African races. Even when he sees himself convicted and has gained the impression that the judge or master is convinced of his guilt, he does not stop lying, but often persists for a long time in the behavior just described. More rarely his look gradually becomes uncertain, the eyes blink, the skin darkens somewhat, the voice becomes husky and somewhat hoarse and his facial expression says approximately: "Now nothing more will help!" [147]

201 152 As a sign of contempt one spits before the one held in contempt. More rarely among men, but commonly among women, the same feeling is expressed by pushing out the lips and lower jaw and simultaneously extending the head forward.

The feeling of disgust is manifested by spitting.

[147] An extreme degree of fear is shown by a blanching of the skin, especially of the face, trembling of the hands, trembling in the voice, blinking of the eyes, which move unsteadily toward the sides, whereby the head either stays still or is turned in the direction of the eyeballs.

[522] Laughter often increases to a pitch that brings tears to the eyes.

In order to indicate that one is not in a position to do or to prevent something, or to protect oneself or a friend from a loss, to convince someone of the truth of one's words, one shrugs one's shoulders, turns the elbows inward, spreads the hands out, and opens the palms while raising the eyebrows.

Petulant children make a face as though they intended to start to cry.

/122 cont./

201 152 An expression of guilt, cunning, or jealousy can be recognized. If these feelings are very intense, the one conscious of guilt often holds one hand bent into a loose fist, in front of his mouth in such a way that the lower joint of the index finger lies crosswise below the root of the nose, whereas the jealous one appears surly and silent before he turns to violence. One who through cunning wishes to lure into a trap, to deceive, or to lie to another looks at him as little as possible; only now and then he gives him a more or less shy glance. The European will observe this especially often.

201 A low whistle is regarded as a sign to observe absolute silence; a blinking with the eyes admonishes the initiate to keep a secret. Warriors, for example, use the former during a night attack, brigands when a victim is approaching, thieves, etc., when there is danger in delay. One can often observe the latter in the case of one accused, when he is confronted with witnesses, and one also sees it not infrequently on other occasions when one /123/ questions a Masai and another one standing nearby wants the former to give false or no information.

Affirmation is expressed by a single, brief tossing back of the head and a simultaneous lowering of the eyelids. As a sign of negation the head is shaken laterally.

It has already been mentioned that one does not point at a person with the finger, but rather indicates the direction concerned with thrust-out tongue or lips or lower jaw. The index finger is [789] precisely the finger under the nail of which one may apply the magic medicine. This thought is also the basis of the threat with the index finger -- which is done as among us. -- The threat is therefore merely an ostentative display or holding of the finger, which can bring danger to the one threatened. One points to animals and inanimate objects, with the right arm extended, with the hand, while index finger and the middle finger are outstretched, whereby the tip of the latter rests on the nail of the former.

/123 cont./

201 152 A threatening with blows, just like the energy of a blow is indicated with a smacking sound that the index finger snapping down on closed thumb and middle finger of the right hand produces, a movement that is executed from the wrist and to a lesser extent also from the elbow and is sometimes observed among us as an involuntary reaction after taking hold of an unpleasantly hot object, or also among snuffers after taking a pinch. Besides this gesture one also finds another, the snapping of the middle finger from the tip of the thumb on the ball of it, common among us. Often this expresses a higher degree of threat, a threatening with weapons. On the other hand, however, one also finds it as an expression of embarrassment, whereby at the same time the shoulders are drawn up.

If the Masai wishes to emphasize emphatically that something is altogether at an end or gone, that nothing is left of it any more, he runs his thumbnail directly behind the edge of his upper incisors and pushes it quickly forward with a snapping sound.

201 861 I observed repeatedly how mothers reprimanded their naughty children, in that they accompany their eno el aigoschobo eñ abiak, that is, go, or things will go badly with you! with a motion of the hands, which consisted of her rapidly passing the palms of her hands, turned toward each other, half clapping, half grazing, and, to be sure, the right hand, chiefly active in this, would be snapped forward from behind.

151 /124/ The strength of vision of the Masai, like that of other primitive peoples, is very good. Often they already saw objects in the landscape at distances at which a normal-sighted European could not yet discern anything. The author was particularly struck by the fact that the people were able to recognize an object seen at great distances better than the European, even such whose eyes, through many years' residence in the country, were accustomed to the peculiar forms of vegetation and lighting effects in the steppe. When the latter was in doubt as to whether it was a matter of, for example, a man or a tree stump, or of a termite hill or a large antelope, the Masai's power of recognition always proceeds to be the better one. [804] That they have at their disposal a tolerable judgment of distance is

/218 cont./

692 only in putting forward property claims, and then only in the rare cases in which self-help is not preferred to legal procedure. The prosecution of a punishable deed does not take place by official action, but only on the basis of a complaint raised by the injured party. Judicial proceedings are generally customary.

685 The procedure in the penal case of a livestock theft, which occurs frequently, is to be shown. It is to be assumed that an ox has been stolen in the pasture. If the boy tending the livestock observed the theft, he notifies the owner of the herd (father or brother of the herdsman) upon coming home in the evening. Otherwise the wives of the owner, in looking over the livestock, immediately notice the loss, since they know every head precisely. All the conversation in the kraal only revolves around the theft, and through that it becomes known on that same evening, not only in the home kraal, but also in the neighboring ones. The friends of the one robbed declare themselves ready to pursue the thief and track down the stolen head of cattle. If their investigation leads [692] to their discovering the ox or parts of it, so that the thief can be convicted, there are as a rule no judicial preceedings, since the perpetrator and his accomplices usually immediately declare themselves ready to pay the customary fine. If, however, the investi- [787] gation is without success, the person robbed turns to a sorcerer [694] (ol goiatiki), who, on the basis of an oracle (en gidoñ), gives him a description of the appearance of the thief, whereupon the one robbed will accuse of the theft a man who fits this description. The 695 one so accused appears in the following proceedings as defendant, 685 in the same way as, say, one who is charged on circumstantial evidence. The one robbed selects as leader of the proceedings a [693] respected old man who must have formerly once been speaker of the warriors. This man determines /219/ the day and place of the [202] [237] proceedings and has this announced by a crier, who goes to the neighboring kraals, draws attention to himself by blowing a kudu or oryx horn, and informs the approaching people about the matter. Further, the judge summons plaintiff, defendant, and possibly witnesses by messengers. If the defendant refuses to appear, he is forcefully led up by friends of the plaintiff. Anyone may appear a as a witness. Relatives of the defendant may refuse both to give

/288 cont./

*539 The plagues had created a hitherto unknown contrast of rich and poor. In order to alleviate this, to bring the impoverished back to well-being, Gulale arranged that the people of a larger circle gather together at the new moon of the seventh month, the ol ogunj' airodjerod. In this way he succeeded in having the tribal and lineage members meet at least once a year, become better acquainted and more closely joined. Apart from the fact that with the strengthening of the feeling of solidarity the sympathy for the fate of the impoverished tribal members grew, the new arrangement was primarily supposed to facilitate the kind of support prescribed in the sixth of the commandments imparted by Ol dirima. This feast on the seventh new moon of each year is called kitok n oloń esubaté. Messengers of the ol aigwenani announced the approach of the day in the individual districts, within which the people were then called together by the sound of the antelope horns serving as trumpets, as is still customary now for every gathering.

[202] [534]

Getobua gave birth to the boy Lengutok (engutok = mouth), who later, as a youth, was distinguished by great physical strength; if a lion approached the herd, he leaped upon it and strangled it with his hands. As a brave warrior, still young in years, he fell because of an arrow shot in battle against the el meg. Shortly before, he had married Lahaine, who had been named after a like-named mountain. After Lengutok's death she married an adopted son of Getobua, named Ngamnin, one of those orphaned children, and she bore him first a daughter, Nairenna. She was named this because at her birth the umbilical cord was wound around her neck (= os sotua erĩhaginno e murt). Nairenna later became the first midwife. Afterwards Getobua gave birth to the boy Gariuńgi. He invented the draw well (1).

1. ol gesimet, el gesimeti.

OOO There remain to be mentioned a few reminiscences from the primeval age of the Masai, which cannot be classified in any definite place in the foregoing chronological account of their tradition.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

881 561 tive unit, and class, leaders are carefully selected and practically trained. It is from the outstanding senior members of the class, i. e. from those who have come to the fore since the very beginning, that leaders, whatever their function in Masai society, emerge.

881 561 203 The messengers (*ol asai* – message) wear warriors' garments and decorations but no arms. "Their quest is a peaceful one" (WHITEHOUSE). [*]

Only two of the deputation will be introduced to the class-leader (*oiqwenan*) by some of the elders. The message is delivered on behalf [431] of all class candidates to the leader with some presents of honey. The matter is discussed by the leader and his council, and the messengers are advised of the date for the feast.

881 561 It is at this point that, according to WHITEHOUSE, *Endungore* is performed.

The ceremony is started by a dance (*Engibata*) in full array [*] followed by a prayer to God (*Ngai Narok* – the black God) for the candidates. The elders then take the candidates apart and instruct them on their duties towards the elders and their seniors generally. As soon as this is over, a fire-stick, a male circumcision knife, and a small dead bird (other than a dove) are produced. The elders break the stick, pierce the eyes of the bird and break its legs, and lay a curse on the knife. "In this way, the elders formally lay claim to the sponsorship of a new agegroup. From that time the boys refer to their sponsors as *Il Piron* whilst the elders refer to the boys as *Il-Piron*" (WHITEHOUSE). Indeed, it should be noted, as FOSBROOKE points out, that though the term *il piron* is frequently used with reference to the elders, it is a reciprocal term expressing a mutual relationship.

The symbolism of the *Endungore* ceremony is plain: the ceremony closes an initiation period.

When the *Endungore* is over, some of the elders (presumably the *oiqwenani*) and three or four of the candidates go with presents to inform the prophet that the firesticks have been broken. They say – *Ol piron lang ole, kiro wale.* "This is our fire stick, we are one", which probably means that a new firestick is used to produce

[*] It is not clear whether the number of boy messengers is fixed. LEAKEY states that the *asai*-boys number from six to twelve, DUWEZE 10, FOSBROOKE 5. Probably no significance is attached to the actual figure.

[*] Three rows are formed, each distinguished by proper decoration, the first wears ostrich-feathers, the second wears lion-mane head-dresses, and all the members of the third have their bodies decorated with white stripes.

/51 cont./

845 wife of her husband: often, however, the sire cures both herself.
[301] Soon after birth the twins receive a leather cord trimmed with cowrie shells hung around their necks, as expression of paternal pride, so that everyone will immediately recognize the child as belonging to a pair of twins. To be sure, the Masai living in a circle of two to
• [303] three days' march are well acquainted with each other and are immediately informed of every bit of news through the constant intercourse between the individual kraals. Every Masai coming from farther away, however, upon seeing a child unknown to him, always asks first of all: "Who is his father?" The birth of triplets is said not to occur. After the birth of a deformed or dead child, the young mother is beaten by the women of the kraal and the father overwhelmed with abuse from the other men. The woman is punished
[843] because it is assumed that she practiced sexual intercourse in her advanced pregnancy and through that injured the fetus. For
[789] unnatural birth or a stillbirth is also regarded as a punishment of God for a sin, especially as one directed against a relative, a fellow lineage or tribal member, be it through inflicting an injury or
847 neglecting a bond of friendship or love. They admit the killing of newborn children only in case the child comes into the world very frail or was conceived out of wedlock by an old, sick man. There can be no doubt, however, but that they also kill deformed children immediately after birth, for one never sees cripples among them.

844 During the birth process the women of the neighborhood have assembled together in front of the hut of the woman in childbed, in order to bring her milk or also flour. Five of all the other wives of
[826] her husband leave there, as well as the women of her kin, her lineage or tribe. Good /711/ breeding demands it of them and they comply in order not to be subjected to the mockery and abusive language of the others. When the child is brought into the world, the women of the kraal sing and dance, in order to thank Ngai for the successful birth, for which they receive an ox from the father of the newborn child, which they immediately consume outside the kraal. The next day a second ox is slaughtered, at the consumption of which
606 any guest is welcome. In the lineage of the El kimolo every newborn

576
521
[203]

A brief conversation in which news is exchanged is added to the greeting as a rule. This explains how even in the barren steppes any news spreads with great speed. If strangers meet, the older man first questions the younger one, or the man the woman, about name, origin, etc. The first question always runs: "Where do you come from?" To this is added the following: ere enia 'i ginhoni = to what tribe, ere enia ol gilata kinok = to what principal lineage, ere enia ol gulat' gin = to what sublineage do you belong? It is further asked: ed ai menje = who is your father, ed ai ntonji = who is your mother, and ldile ol gerainge = what is your name? The one asked readily gives an answer, but generally does not question the other one: on the contrary he goes on without knowing with whom he spoke. Good breeding demands this.

576
574

If a stranger comes to a kraal whose owner he does not know, as a rule he asks one of the children playing in front. The reply then runs: My father (baba), and to the question who that might be, the little one looks at him astonished and asks: "Do you not know my father that?" To the further question as to where he might be, the child points to a hut in which it surmises the father to be. Only small children may [201] point with the finger in the direction of a married man: older ones and adults indicate the direction by turning the heads toward it and at the same time slightly pushing out the lower jaw or the lips or even their tongues. If the stranger has sought out the hut of the old man, he squats in front of it and waits until its owner comes out of his own accord or is called out by one of his people. Now he first questions the guest in the same way as at an encounter and then calls one of his wives or one of his children to bring milk. The gourd bottle is first handed to the host so that he can make sure it is generously filled. He then hands it on to the guest. When the latter has emptied it he is asked whether he would like still more: to answer in the negative would be an offense against good breeding. Hospitality is discussed in another place: it is only to be mentioned that the guest need not express any request. Though it is expected of him that he will feel quite at home, one nevertheless still specially offers him everything available.

/124 cont./

151 proved by the fact that they prepare the ground plan of the huts, the
[204] wire spirals and wire rings serving for adornment, etc., without mechanical measuring devices. For the same reason one recognizes their sense of symmetry in their weapons.

151 Following the Holmgren zephyr-yarn procedure, I examined 87
125 Masai, and, to be sure, 46 men and 41 women, on their sense of color. The test showed that of all only one man had "weak color sense," all the others, on the other hand, had "normal color sense."
[122] Here too the symbolic significance of the colors should be considered: black = calm seriousness, red (blood) = war, green = peace, variegated, and, to be sure, especially in the combination of red and white, expresses joy, gaiety, but also frivolity and fickleness.

Photographs of objects known by them they perceived correctly, those of persons known by them not at once, but always only after longer observation. Often the perspective foreshortening of an object in the photograph was incomprehensible to them: they regarded such a one as incomplete.

153 Their powers of orientation in the region and their memory for
151 paths once taken or stretches of land traversed are excellent. Their
153 memory for numbers seems to be better than that of most tribes in the
[102] interior of East Africa, since, unlike the latter, they do not use
[211] mechanical aids such as notches in sticks, knots in string, etc. Their power of conceiving numbers does not seem to go beyond five: only a few could recognize at a glance the correct number of more than five objects placed before them.

53 Their feeling for plastic art is shown by the rich and not unhand-
619 some adornment, the handsome forms of their weapons, the painting of the shields, the decoration with cowrie shells and beads on utilitarian objects and clothing. Representational art is unknown to them. A feeling for music is completely lacking: their singing is arbitrary and without rules, the main thing in it is the text and the alternation in the vocal execution. They do not have musical instruments, for the antelope horn of the summoner to legal proceedings serves only to attract the attention of the people through loud noises. The following is a
533 common song to accompany the dance (1):

1. Recorded by Herr Stabsarzt /staff physician/ Dr. Sandaki.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Some years ago this body conceived the idea of educating at their central station at Freretown, near Mombasa, a few of the most promising of their up-country converts. When sufficiently advanced, these boys or men are sent back to their homes and become teachers of the Gospel. Thus, one Ol-omeni[1], a member of the Oikop or Lumbwa Masai, who had spent some years under the able tuition of the Rev. A. R. Steggall at Taveta, was baptized under the name of Justin, and completed his education at the coast. He is now one of the principal supports of the Society in Southern Masailand. To the kindness of the Society in lending me Justin Ol-omeni's services, and to the diligence of Justin Ol-omeni himself, I am in a large measure indebted for the material contained in this book. Philologists will possibly be interested to hear that there exist Masai (and possibly members of other tribes whose language has ever been a closed book) who are able to correspond with one another in their mother tongue. I have in my possession, for instance, several letters written in Masai.

As a well-wisher of the Masai and one who has known them for a decade, I consider that every support should be given to the Church Missionary Society and to the other Missions engaged in proselytizing in their midst, for it is only by the gradual and peaceful civilization of the tribe that they can be saved from extinction. The encroachments of civilization are beginning to be felt in East Africa; and the famous Rift Valley and the high plateaux where the fierce, bloodthirsty Masai once reigned supreme, are now becoming colonized by the white settler. It has often been proved in other parts of the globe that the native, on the advent of the white man, alters his habits or ceases to exist, and it is to be hoped that the Masai will choose the first of these alternatives.

A. C. HOLLIS.

Nairobi,
East Africa Protectorate,
May, 1904.

[1] Ol-omeni means He who is despised. When this name was given him, he was a small, sickly child, and not expected to live.

Agricultural Masai

439 whose warlike qualities appeal to the Masai. Honey, honey-wine, and ivory are got from the Dorobo. Ivory was used in the old days for trading with the Swahili caravans for cloth, beads, wire, and so forth. Trade outside Masailand is conducted [726] mostly by the women, for by mutual arrangement they were allowed to pass unharmed from tribe to tribe even during the progress of a war.

Hunting

224 Though the Masai do not hunt habitually, and despise those who do, they used occasionally to kill wild animals—elephants for their tusks, buffalo and eland for the meat and hides, ostriches for their feathers, and lion and leopard to protect their cattle.

Labour

46 Although deprived of their only real occupation, fighting, the Masai have not yet as a people accepted any substitute for it, being, as Sandford noted, "too proud to work," i.e., for wages. A small number have accepted employment as herdsmen on farms, and some have done good service in the Police and K.A.R., though even in a military capacity most of them are still unwilling to submit to a form of discipline that is not their own. Though a few have taken to cultivation, the majority have not yet consented to stoop to what they consider labour unworthy of a Masai.

THE AGRICULTURAL MASAI

101 The agricultural Masai, the I-Lumpua (Lumbwa) and Il-Oikop of former days, 175 are people of Masai stock who, having lost their cattle through disease or defeat, were forced to take up agriculture in order to survive, and by so doing earned the [178] lasting contempt of the pastoral Masai. It is in most cases uncertain how long the various groups of Il-Oikop have been agriculturalists; some of the southern Masai, for example, were defeated by the Gogo early in the 19th century and took to agriculture. Fischer in 1882 reported groups of "Wakuavi," as he called them, living on the southern edge of the Mau; at Ndaseriani (Ndare serian), 15 miles south-west of Narosura; in the region known as Nguruman (*in-kurman*, "the farms") for about 30 miles north of Lake Natron; at the southern foot of Mt. Meru; and at Kahe.[9] Von Höhnel adds Ndasekera, 20 miles north-west of Lake Natron.[9] Another group is named by Thomson and von Höhnel[10] at Taveta; while the map in Hollis's *The Masai* shows them as extending for about 100 miles south-south-east of Lake Manyara. The best known, however, are the northern group called Il-Tiamus or En-jemusi (Njemps) near Lake Baringo, concerning whom we have (such as it is) the fullest information.

184 With the exception of the Taveta group, the agricultural Masai in general resemble the pastoral Masai in appearance, dress, and general culture, and though 22 they cultivate the ground, still have the acquisition of cattle as their chief ambition. Those of Taveta have mingled with the Taveta,[11] and have become the most successful cultivators among the Masai; the rest of the agricultural Masai in the days of Thomson and Teleki grew mainly eleusine and millet, while the Il-Tiamus grew also pumpkins, and tried unsuccessfully to grow maize. Most of the agricultural Masai supplemented their diet by hunting, bee-keeping, and, where possible, by fishing.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

On the whole, those two authorities stress the linguistic unity of all the Masai. 197

The great majority of the Masai are pastoral, only very few tribes having taken to agriculture. The pastoral tribes follow a semi-nomadic way of life. "They move", writes Lord HAILEY, [3] "with their herds in order to avail themselves of the seasonal variations in water supplies, so that in effect they practise a system of rotational grazing". The same writer, [4] reports "a recent estimate" of Masai herds in Kenya which puts "the number of cattle at over 700,000, with 800,000 sheep and a large number of donkeys". For Tanganyika he gives no figure. The above estimates show clearly enough how the attitude of the Masai to cattle is a paramount feature of their life. To own cattle is a privilege obtained through initiation, and large herds are a sign of outstanding social status. Cattle are the main economic interest and investment for the Masai. [5]

233 [221] 181 233 554

The total population of all the Masai may be reckoned at about 122,792. The 1948 census of Kenya's population (see Bibl.) gives for the Samburu an estimate of 20,000, and the following figures: Njemps 3,423, the other Masai 67,201. In 1931 the Tanganyika Masai were reckoned as 32, 168.

162 [161]

* * *

Under the present political situation, the Masai are not administered as a single unit, for they are divided into two sections by the border of Tanganyika Territory and Kenya Colony. 631

In Tanganyika the Masai form one of the four districts of the Territory's Northern Province (the Masai District). In Kenya the main group inhabits the reserve adjoining Tanganyika Masai District, and constitutes the Extra Provincial District (Masai District) of the Colony. The other group (Samburu and Njamusi) is incorporated with the Rift Valley Province (Samburu and Baringo District), and partly with the Northern Frontier Province. The geographical separation of the Samburu from the other Masai is the reason why the Samburu were considered, and are still considered, as a non-Masai tribe. But, as BRYAN remarks, they are true Masai. The splitting of Masailand and the separation of the Masai were made

791

position in connection with the nature of the major and minor territorial sections is questionable. FOSBROOKE has put into evidence the marginal significance of the *laibon* for Masai social organisation. He has also shown how wrong it is to ascribe to the prophet's institution a political function. The prophet can only obtain a personal political influence which is his, and not of his office. Now, to describe the *laibon's* institution as the point of allegiance of territorial sections' members is tantamount to making the prophet a central political authority which he is certainly not. The important point in the nature of the territorial sections is members' consciousness of their strength and sufficiency as to be entitled to keep tribal ceremonies of their own.[13] In studying the Laitayok minor section FOSBROOKE brings that home: "in some areas they (the Laitayok) have been absorbed by the section amongst whom they resided, and thus eventually they came to be regarded as a clan; in other areas they were sufficiently numerous to enable them to retain their own grazing grounds, and to justify their holding tribal ceremonies of their own". FOSBROOKE insists on the fortuitous origin of the territorial minor sections. The point becomes obvious if the nomadism of the Masai and the abselce of any centralised authority are kept in mind. People remain in a definite place only for as long as [221] they find good grazing and water for their cattle, but they move as soon as these fail, thus breaking up their territorial allegiance.

634
101
619

The following is a tentative list of minor territorial sections deducted from the literature:

SAMBURU.	1. Pusigishu	4. L'Orogishu	7. Longeli
	2. Masola	5. Doiju	8. Nyabarei
	3. Lukumai	6. Mwesi	9. Loimusi

NJAMUSI. According to DUNDAS,[14] there are only two villages: Njemps Kubwa or Njemps Liabori – down stream; and Njemps Ndogo or Njemps Lekepir – up stream.

KAPITI.	1. Kaputiei or Kapiti	3. Ladokilarsi	6. Purko
		4. Kakonyuke	7. Loita
	2. Damat	5. Dalalakotok	8. Matapatu

[13] One should note here that tribal ceremonies are ceremonies connected with the institution of age-sets, a fact wich sleds light on the integrating power of the age-system. See BERNARDI, *The age-system of the Nilo-Hamitic Peoples*, in *Africa*, 22, 1952, pp. 316 ss.

[14] DUNDAS, *Notes on the Tribes inhabitating the Baring district*, in *J. R. A. I.*, 1910, p. 49.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

divided into two sections, the agricultural ('l-oikop) and the pastoral Masai, there now remains in Tanganyika little vestige of the former.[1] A few scattered plots are cultivated by Masai, but it is with the help of alien labour. For the rest, there a little cultivation by the small Sonjo Tribe (3,521 in the 1948 Census), a people living below the Rift Wall who have not been assimilated by the Masai. The only other tribe in the District, the Dorobo (believed to number about 1,500), who are known traditionally as the "hunting people," are possibly a survival of the original inhabitants, and have become practically a servile class to the Masai.

As a pastoral people the Masai are semi-nomadic in the sense that they move with their herds in order to avail themselves of the seasonal variations in water supplies, so that they in effect practise a system of rotational grazing. They are credited with the possession of three-quarters of a million cattle and large herds of sheep and goats, but the number of their stock is subject to large and rapid variation in times of drought, and moreover East Coast fever, rinderpest and other diseases take a heavy toll of them. In the late 'eighties a combination of drought and disease almost wiped out their cattle and greatly reduced the numbers of the people themselves. Though like many other African pastoral tribes they make a cult of their cattle, they show little interest in improving their quality, and in the past have been prepared to dispose of them only in so far as they might need cash for their Poll Tax or for the few articles of food required to satisfy a people whose ordinary diet is limited to milk, meat and blood. To some extent, this position was improved during the recent War, which provided a stimulus to production of beasts for sale.

From an economic point of view therefore the Masai present a difficult problem, since the contribution they make to the economy of the Territory does little to justify their occupation of so extensive an area as twelve million acres. From a social point of view they are also a problem, owing to their reluctance to avail themselves of facilities for education. And as will be further explained in the following pages, they present an equally difficult problem of native administration, for their social system is still reminiscent of a period when their chief concern was in fighting or raiding at the expense of their neighbours.

THE FORMATION OF THE SYSTEM OF NATIVE AUTHORITIES

As already indicated, the diverse social and economic conditions prevailing in different parts of the Province have been reflected in the variety of forms taken by the Native Authorities as now constituted. Before, however, proceeding to describe these in detail, it will be convenient to give here a statement which summarizes their chief features. See page 284.

THE MOSHI NATIVE AUTHORITIES

In the Moshi District the present formation of the Chagga Native Authorities is the result of a somewhat radical reorganization carried out in 1946. Up to that time the Chagga had been split up over nineteen chiefdoms, divided from each other not only physically by the deep ravines of the mountain side, but also politically by the obstinate clan feuds and jealousies of past days. These chiefdoms were all treated as of equal standing, though their jurisdiction varied from 11,500 taxpayers in the Machame chiefdom to 400 in the Mrao. They were united in a Council of Chagga Chiefs, which was conspicuous mainly

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

175 Kiteto, some 50 miles south of Kibaya in Tanganyika. The most northerly Masai
131 were (and still are) the Sanbur, who in 1888 extended more than 120 miles north-
wards towards Lake Stefanie. This vast country, with an area amounting to some
13 80,000 square miles, now reduced to one-half its original size, has great varieties of
altitude, climate, rainfall, and vegetation. There are three vegetation zones: the
first or northern has desert scrub and a desert type of grass; the second or medium
zone has thorn bush and medium grass; the third or highland zone has evergreen
forest, parkland, and tall grass. In Kenya, the altitude of Masailand ranges from
5,000 to 8,000 ft., though in the highlands which lie between Mounts Kenya and
Elgon in zone 3 the land in some places rises to 10,000 ft. Most of the present
Masai Land Unit is in zone 2; part of the extreme northern territory of pre-European
times is in zone 1. In Tanganyika, the Masai territory is at a lower altitude, ranging
from 6,000 to 4,000 ft. and including the isolated mountains Kilimanjaro and Meru.
Much of this country is unfertile, and belongs to zone 2. In Tanganyika Masailand,
there is one permanent river, the Ruvu or Pangani, on the eastern boundary; there
are a few seasonal rivers, but for their main water supply the Masai depend on wells,
water-holes, and springs. Since only the third zone is well watered, and most of
the Masai live in zone 2, their life is conditioned to a great extent by the water
quest, and in the worst areas a form of transhumance is practised. In the present
Masai Land Unit in Kenya, the rivers are few, and the rainfall low. Most of the
few large rivers run close together in bush country useless for grazing; the main
rivers, too, rise in the Mau and unite less than halfway across the Land Unit in one
stream, the E-wuaso Nyiro. There are no lakes except the soda lakes Magadi, Natron,
and Manyara, though in the northern part formerly occupied by the Masai is the
chain of lakes Baringo, Hannington (salt), Solai, Nakuru (salt), Elmenteita, and
Naivasha. The Rift Valley, in which these lakes lie, runs right through Masailand
from south to north. In many places the floor of the valley is a wide grassy plain;
in others, as in the Kerio Valley, it is narrow with high precipitous walls. The rain-
fall is low, the average for the eight years 1915–17 and 1930–4 at Narok being
18 ins., with a range of 47 ins. to 12 ins. It is recorded that at Longido in one year
there fell only 8 ins., three of them in one night. With such a rainfall, grazing
cannot be anything but scanty. The average rainfall recorded by three gauges in
the Masai steppe between Kibaya and Arusha for nine years is 24.4 ins. There are
two seasons, the dry weather from June to November, followed by short rains in
November and December, after which there may be rain in January and February
(January: 1915, 0.00 in.; 916, 4.20 ins.; 1917, 9.44 ins.; February: 1915, 1.48 ins.;
1916, 5.09 ins.; 1917, 5.2 ins.; though in 1918—a dry year in Kenya—there was
only 0.28 in. in February). The dry weather is called "the months of hunger" by
the Masai. The recognized wet season is from March to May, "the months of
plenty," though small amounts of rain may fall in other months, notably June to
August, which are called "the months of showers." The figures given for Kenya
refer only to Narok, and in the more arid parts there is not only less rainfall, but
the small precipitation out of season has little effect on grazing or water supply.
Except in the highland zone, where there is some seasonal variation, day tempera-
tures vary only between 60° and 65° F.

123 beside a trail near a Masai village. In the early morning
921 a party of Africans from nearby Sukamaland raided the Masai village, killing at least one man and making off with the cattle. At dawn the Masai discovered their loss and ran off in full war regalia to intercept the raiders. Their route took them right through our camp where we were eating breakfast. Coming at a full run with spears and shields they looked rather fearsome, but as they passed they all waved and shouted greetings. Shortly thereafter they caught the raiders and bloodily recovered their stock.

123 Being in the position of neutral, nomadic
124 residents it seemed perfectly appropriate and natural for us to casually discuss mutual interests including livestock, grasses, weather and wildlife with passing Masai, and vice versa. Consequently our status in the area helped us greatly in obtaining information. What we were told by the Masai agreed with our own observations, and was often at variance with what they told visiting anthropologists and others.

*233 <u>Social Organization</u>: The Masai in the study

Building a large boma entails cutting a large number of trees (Fig. 22). Where trees are thick in Western Masailand there are tsetse flies (Fig. 23). Consequently the bomas are constructed away from them in more open country, in open grassland near to hills or watercourses or in open parkland. Under such conditions a large boma can result in the clearance of larger woody growth -- for initial construction, subsequent repair, and for fires -- from an area ranging from about several dozen acres to a square mile.

361
*233
• 221

Fosbrooke (1948), Grant (1957), and Page-Jones (1948) have noted that the Masai normally placed their dry season bomas within about five miles of permanent water. One day they graze the animals to and from water, letting them drink. The second day they graze the opposite direction, and on the third day they return to water. Thus a rough circle with diameter of ten miles is grazed around each boma. In the wet season the Masai leave the boma, either setting up a new one in an area of good [887] grazing, or making temporary camps (Ibid.). Occasionally old people with a few milk cows are left behind in the main dry season boma. Under the present conditions in Western Masailand we saw very few large bomas that were 342 not located at permanent water. It may be that increases 343 in stock, or decreases in available water, or some other *233

Animal Husbandry

*233 It is widely believed that since the Masai are a pastoral people whose life revolves around their livestock, they are, therefore, experts in the arts of animal husbandry. If the success of an[illegible]l husbandry is judged by the numbers of animal[illegible] during years of good rainfall and forage, a[illegible]portance attached to those animals then the M[illegible] successful in animal husbandry. If, however, success is judged on the quality of the animals, their survival in drought years, and management of the range so that productivity is not lowered through overgrazing, then from the evidence we have seen the animal husbandry of the Masai is very poor.

Prior to European times the grazing pattern of the Masai livestock must have been very similar to that of the migratory wild ungulates. In the wet seasons when there was plenty of water they could graze over a wide area. In the dry seasons they retreated to permanent water. The numbers of livestock a Masai could keep were limited by disease, predation, raiding by other Masai or Africans of different tribes, water, and food supply. *221 *233 The Masai were nomadic, in that they moved about following forage and water for their animals. From the evidence of Fosbrooke, Grant, and others, this movement of the

221 #233 Masai was not an unoriented wandering but it was instead a regular seasonal movement <u>from</u> one established area <u>to</u> another, and back. In this sense the movements of the Masai fit the definition of animal migration -- "seasonal and regular passages..." given by Bourlière (1955:203). Each social group apparently had a dry season water supply near which they maintained homes, as described above. In the wet seasons some of the tribe took the livestock away to take advantage of the more abundant (619) grass, and water in other areas. Since there were well defined areas belonging to or controlled by different clans or sections (Hollis, 1905), the wet season movements of the individual Masai must have been relatively circumscribed. This is the case at present in Western Masailand. Each village has an area where it sends its livestock during the wet season in addition (628) to the water near the base home. Although these wet season areas may be changed periodically, there is some sort of agreement between different villages regarding division of available grazing, and disputes arise when one village's area is invaded by another.

#232 It appears to us that both in former times and at present the absolute limits to the numbers of livestock a Masai could keep and the pattern of his grazing

FL12 Masai FL12

Ore 'n-gulye-tikitin náinoṣi.

in gourds. Some drink it pure; others mix it with milk[1].

There are a few other things which the Masai eat.

Enyasi il-mórnak oo 'ngorṭyok ol-kumbu áitushu-laki e-makat o ol-kumbu loo-'l-murran. Netii 'l-oook too-'n-gumeshi ol-kumbu oidoágu, ntji en-giangi. Netii sii kulikae oook too-'l-mótio.

Some old men and women chew tobacco mixed with salt and *Ostrum ensee*, whilst others sniff ground tobacco up their nostrils: this latter is called snuff. Others again smoke pipes.

Ěok sii 'l-murran, kake mtok pókin. Menyasi ninje 'l-eyok arraki 'n-doiye ol-kumbu, nemtok; etoni aka.

Those of the warriors who like it also take snuff. The boys and girls, however, neither take snuff nor chew tobacco[2].

Metumii-Maasae ol-kumbu, anu meiytio aatuturu; kake ainyaágu too-'l-mook, áinoeye eng-erno oo 'n-dare taasti.

The Masai do not grow tobacco themselves, for they do not know how to dig. They buy it from savages, exchanging it for butter and lean goats.

Memiyaki 'l-Maasae 'l-mook in-giaku eupati, 'n-giaku oiupin aka oo nemasta kulia, oo náiba 'l-eabo, ninje aka emiyaki 'l-mook, oo 'n-dare mórnak oo 'n-dasati.

The Masai do not sell good cattle to the savages; they only give them barren cows, or those which have no milk, or which do not care for their calves. These and old or lean goats and sheep are the only animals they part with.

Ntok sii 'l-mórnak in-aiabi, neinyaágu 'l-marran o en-jai too-'l-mook.

The old men drink honey-wine, and they purchase from the savages two kinds of beer, called Ol-marra and En-jai.

'N-gera aka náinoe en-aiabo najon. Piiki en-diki naiaae il-mórnak te-'n-aiabo najon il-changaro aka.

It is only the children who like wild honey: old men eat the comb full of grubs[3].

[1] This custom is also common among the Bari (Kandinaaa, Schöbberaaa, p. 190).

[2] In olden days it was the privilege of rich old men and their chief wives only to take tobacco, which was called ol-chani loo-'lag-eyok, the eye medicine.

[3] The Masai obtain their honey by following the Honey Indicator bird.

/100 cont./

619 After a battle of the Masai among themselves, the conclusion of
728 peace is that the speakers, in the presence of a number of warriors of both parties, exchange their skin capes and sandal thongs. This is called <u>enabachage engitia</u> -- exchange of skin capes.

726 The length of the stretches covered on war expeditions, in com-
701 parison to that of their neighbors carrying on agriculture, is often
484 astonishing. Performances of 60 to 80 kilometers a day, three or four days in succession, are by no means exceptions. If one considers,
[702] however, that the training of warriors consists only of marching, that,
[276] aside from their weapons, they carry nothing heavy, and before their marches, as well as during them, they partake copiously of stimulants, their performances in no way exceed those of a German infantry
701 troop. The tales of the caravan people relate miraculous things about
182 the speed and endurance of the Masai warriors, and even European
147 travelers have contributed to the spread of this legend in that they
271 compare the physical performances of the Masai with those of the Europeans in the tropics. The untenableness of such a comparison is obvious. One also often hears how the Masai are admired for their alleged ability to be able to give up the drinking of water on their marches. Presumably this rumor arose from the fact that these people, in contrast to other tribes, never carry a gourd bottle of water on their
701 long migrations. The Masai, however, knows perfectly every little
182 spot of the steppes, he knows every rocky basin, every tiny spring,
271 he also knows where an apparently dry brook bed carries subterranean
[223] water. Where water has collected in old hollow trees, and especially in buckets, this is accessible to him through a series of reeds made
[224] out of foot-long caps bored in horizontally. Finally, there are a number of water-rich roots and tubers, which, chewed, are very well suited
701 by their water content to quench thirst. They serve him, /104/ just as
[182] the wild honey, not infrequent in the steppes, also serves as food on the
• 222 march. A cuckoo bird, the honey indicator (<u>Cuculus indicator</u>, called
[225] <u>ol jakuni</u> by the Masai), leads the Masai to the concealed honey holes.
036] As soon as it sees human beings it calls with a strident sound and then flies slowly to the nearest honey place, to which the people follow it in order to take out the honey. If the amount found is still not sufficient
[225] for the warriors, they bury the chewed comb, whereupon the bird, after

701 /104 cont./
182 a little while, will then lead them further. Otherwise they leave it
• 222 the war.
(225)

When the warriors of an *ol hanar* notice that their bones are
701 growing old and the *ol hanar* surpass them in strength, they agree
561 that it is now time to think of marriage. After they have obtained
582 the permission of the speaker and then that of the chief, one after the other leaves the warrior association, each one shortly before his
701 wedding. He announces his retirement by means of a feast, the *ol*
561 *gnoh i ol bil*, that is, an slaughtering with a tournament. To this
574 all the inhabitants of the nearest kraals are invited and are shown hospitality with the meat of one or several head of cattle. As soon as these are killed, each warrior cuts off a piece of meat for himself and devours it behind a bush standing somewhat apart. Then each of these present receives his share, while the remainder is strung on sticks two metres high. For these the warriors fight with the girls and women in a game in which the latter vigorously swing the sticks, before which the former lay more fear than the women, somewhat accustomed to beatings. Then the younger men amuse themselves
(526) and play, for instance, tag (*tamaiga*). Before there is thought of de-
(591) parture, about five o'clock in the afternoon, a married man and his principal wife go to the best and make the following speech: '*ngimi mengar ion ol mendi dada ir ol mérem, ibara i gimbi inem, i gera inem, ibara nainé, ishaia 'ishes ol mérem, ish tada ol mérem, ishaia y dagiria 'ilgin ol mérem, ish tada ol mérem*': in translation I say, you are no longer Ol mendi, but Ol mérem, take care of your cattle and your goats and sheep and watch over them well, leave the occupation of the warrior, now you are ol mérem, refrain from all things of the warrior, now you are ol mérem.

701 After this feast it is up to the warrior whether he takes part more
561 or less regularly in the expeditions of war. As a rule he sees martial
(582) and lives with his wife either in the father's kraal or in the warrior
(591) kraal until all his contemporaries are married. Only then are they
(145) considered *ol mérem*: each one builds his own kraal and removes clothing, ornaments, and hair of the warrior. He is now at the end of the twenties, his best strength has been spent. In general the Maasai, just like all members of the black race, spend their lives very quickly, they age early, without ever attaining a really advanced age.

Figure 38.

See text. There are usually sets of 2 cylinder of Gas stand or stand in position with enclosed ends. To get the heavy the glacier light a smokey fire underneath which drives off most of the bees.

MASA: FL12

Mau is the source of all the rivers watering the western half of Masailand, Kipsigis and part of the Rift Valley. The birthplace of innumerable streams, it is, in theory, protected by its status as a forest reserve.

Looking out from the small yellow aircraft expertly handled by June Wright, one of the best commercial pilots in East Africa, one could quickly see how different theory was from practice, here as elsewhere. In a forest reserve no one is allowed to fell trees, cultivate, start fires or graze livestock. In less than half an hour, I counted seventeen active fires and saw the shambles created by innumerable others. Whole ridgebacks of the mountain, sticking up like black spines, were as bare as slag-heaps and already rutted and creased by gully erosion. Older fires were still smoking in some of these devastated areas; one could see the forest being eaten into like a great fur pelt attacked by moths.

As sure as fate, one day there will be no more water for cattle in the streams below. 'God is punishing us,' will say the Masai: but it will not be God, it will be themselves. The streams are already shrinking and the Masai are driving their herds farther into the hills to find grazing. They cannot take cattle into forest and so they burn a way in. They are creeping upwards, spreading destruction as they go in order to escape the consequences of destruction they have already caused.

Other fires are started by honey-hunters who burn down trees to smoke out the bees. Often, in the forest, you can see blackened hollow cedars and olives killed by fires tucked into the roots. If the foliage is dry and the wind right, the fire will spread and get out of hand.

And then there are 'accepteer': a clumsy term given to men of other tribes who are settling in Masailand, family by family, with the permission of Masai elders. They are tenants: but it is very unlikely that they will ever go.

In South Nyanza and in Kipsigis it is reckoned that upwards of two thousand families a year are crossing the southern border into Masailand and Tanganyika. In recent years a good many Masai have married Kikuyu or Kamba wives because so many of their own women are sterile; at one time there was quite a trade in Kikuyu girl-children, exchanged for cattle.

hide on which is the blood is carried by the boy and placed on his bed.

When the boys have all been circumcised they are called 'Ilpilin (recluse).

They remain at home for four days, and bows are prepared for them.

They then sally forth and shoot at the young girls, their arrows being blunted with a piece of honey-comb so that they cannot penetrate into the girls' bodies.

They also shoot small birds[1], which they wear round their heads together with ostrich feathers.

The Ilpilin like to appear as women and wear the ereretya earrings and garments reaching to the ground. They also paint their faces with chalk.

When they have all recovered, they are shaved again and become Il-lerrat (the shaved ones). They then discard the long garments and wear warriors' skins and ornaments.

After this their hair is allowed to grow, and as soon as it has grown long enough to plait, they are called Il-mnrna (warriors)[2].

The warriors are fond of the titles 'L-eingnk (the bulls) and 'N-gnnirini (the generous people), for they may then wear bells or a bracelet called Il-lnrnngan.

Now to become one of the Oingnk, a warrior must kill many nrnngan,

[136] [1] The bird which the Ilpilin wear round their heads is the nenen bird (Hetera albicauda, Shelley). Boys who behaved in a cowardly manner during the operation are not allowed to shoot these birds.

[2] This word is commonly but incorrectly written Elmoran.

Kenya

¶ As only those candidates who belong to a given village may be operated on in that village, it is seldom that there is more than one circumcised at a time, but should there be two or three candidates belonging to a single village they would be circumcised together on the same day at the same time. There is no elaborate ceremonial accompanying the operation or preparatory to it. A boy will continue herding his cattle until the late afternoon of the day before that fixed for his circumcision. He is then fetched back to the village and has his hair shaved off by his [300] [302] mother, and has new sandals and a new skin dress given to him. This dress must be made of the skins of four rams sewn together, and will be worn the following day during the operation. The actual operation takes place next day, either early in the morning or in the middle of the day. If it is in the morning, the cattle are kept in the yard until the ceremony is over, but if it is in the middle of the day the cattle must be brought into the yard and kept there during the ceremony, for it is [301] absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony. Sheep and goats are not included in this rule. The boy (or boys) sits on an ox-skin in the courtyard in front of his mother's hut wearing his new [304] ram-skin dress and sandals, and the operator performs the operation with a special [313] small knife without any elaborate ceremonial. The boy then retires to his hut to convalesce. A fat ram is killed for the patient, who is fed on meat boiled in fat and [342] on plain cold fat, "so that he may get well quickly." After about five or six days the other boys in the district who have already been circumcised and have recovered, call for the boy, and he joins their band for the period of their novitiate.

¶¶ 561 *The Novitiate.*—The period of novitiatehood varies in length of time, as a boy must remain in the novice stage from the time that he is circumcised until every other candidate has been circumcised too. Usually a period of about two years elapses between the time of the bull-swing ceremony and the time when the last candidate [319] has been operated upon. Then the group undergoes the hair-shaving ceremony which marks their transfer from the novice stage to the warrior stage; thus, the last few to be circumcised may only have a few weeks in the novice stage, while others may be about two years in that stage. During the novitiate, there are certain rules and regulations which must be observed by the novices. They wander about the country in bands armed with bows and bird-arrows visiting more especially those villages where they hear that fresh candidates have just been circumcised, and enlisting them in their groups. During the whole [324] novitiate period the novices must not cut their hair at all, nor may they indulge in [300] any form of sexual intercourse, nor may they use red ochre, but only plain fat on their bodies. They are required to shoot as many birds as they can, and to [323] skin these and stuff them roughly with grass, and tie them to their hair as a [301] decoration. More and more skins are added to this head-dress as the weeks go [321] by, until at length a boy has a complete wig of stuffed bird skins. Certain birds must on no account be so used, notably birds such as pigeons, doves, and

881 /83 cont./
[624] trample underfoot. The one now scorned had also wanted /84/ to
[152] regale guests with it on that day, but no one came to him whose son
showed himself to be a olchaf. While the old people, as long as
[535] there is something to eat and drink, are only interested in that, the
[533] warriors, already early in the afternoon, start to dance and sing
with the young girls and amuse themselves in this way into the night.
Not until about ten o'clock do they go back to their kraal, to which
the girls presently follow them, after they have begged for a little
more milk, which they take along to their lovers. /Ill. 18 appears
here./

[758] The circumcised boys, soon after the completed operation, went
into the huts of their mothers and stayed there for seven days, until a
superficial healing of the wound has taken place. In order to hasten
this, they are particularly well cared for and are given only milk,
[411] blood, and meat. During the following period, until complete
healing, they roam in small bands with bow and arrow -- they do not
[223] use the ordinary bows, but ones only about half as long, made only
for this occasion; the arrows used with them have a wax ball at the
tip -- through meppe /85/ and forest, in order to shoot small birds,
the skins of which they string by the beaks on a cord, which they
place garland-like around forehead and occiput. Between the bird
[301] skins the en ulbelip (sing. en ulbell) -- as the newly circumcised ones
[302] are called during their recuperation -- stick an ostrich feather on
each side of their heads and paint their faces with white clay (en
dempu). On the first day they go out, they slaughter a white goat-
[262] buck on the meppe. After they have roasted and eaten its meat,
they throw the gnawed bones into the fire. This meal is called ol
glee i ol lenek (ol glee = the goat buck, ol lenek means the tree
with whose branches they make the fire). Every evening after their
excursions they return to the kraal and to the huts of their mothers.

881
911 As soon as the young girl, who until then has lived in the warrior
kraal in the most unrestricted freedom, concludes from certain

[TEXT CONTINUED ON PAGE 86]

44 warriors also carry a narrow oval shield made of buffalo or giraffe hide on a wooden frame, and painted with insignia including the warrior's age grade and clan.

561 Originally during the period of warriorhood
701 the moironi were not expected to do any work except
[712] fight. They lived in a separate village, called a
[542] manyatta, and were generally taken care of by the
[836] unmarried girls of the tribe. Discipline was reputed to have been extremely good. The warriors had older advisers whom they obeyed.

224 Ostrichs were hunted to obtain feathers
[223] for ornaments, buffalo and giraffe for shields, and lion
[300] for the highly prized mane. Traditionally the moran
[401] was expected to blood his spear on a lion. The dramatic
177 Masai lion hunts are famous (Simon, 1962). At
178 present warfare and lion hunting are illegal. The obvious
561 result is a large body of young men with absolutely
701 nothing to do for a period of up to 15 years of what
224 could be the most energetic period of their lives.
721 They tend the livestock some, but much of the time there
[233] is nothing for them to do. As a consequence discipline is breaking down. The elders apparently have much less influence or control over the moroni than they did

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

1: Hollis G-5 (ca. 1894-1904) 1905

[411] Lastly, if a rhinoceros is killed, its horn is taken and carved into clubs, which are used for beating the he-goats and bulls with. The counsellors' clubs are also made of rhinoceros horn.

Lello-shaŝgit entaye 'l-Maasai en-giaa.

These are the wild animals of which the Masai make use.

224 Naa, ten enye ol-ŝwaru 'n-giahu arukí 'n-dara, pe ashi il-Maasai, ntwr, aana ŝjo: 'Eiuoo in-giahu aŝg.' Ore 'l-ŝwarak eainoo in-giahu oo 'n-dara, ol-ŝgatuny, e ol-kuri, e ol-ŝgujiua, e en-darash.

A Masai will also kill a beast of prey if he sees it eating cattle or goats, for he says: 'It has eaten our cattle.' The beasts of prey which eat cattle and goats are lions, leopards, hyenas, and jackals.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12
Agricultural Masai

439 whose warlike qualities appeal to the Masai. Honey, honey-wine, and ivory are
got from the Dorobo. Ivory was used in the old days for trading with the Swahili
caravans for cloth, beads, wire, and so forth. Trade outside Masailand is conducted
[126] mostly by the women, for by mutual arrangement they were allowed to pass
unharmed from tribe to tribe even during the progress of a war.

Hunting

224 Though the Masai do not hunt habitually, and despise those who do, they used
occasionally to kill wild animals—elephants for their tusks, buffalo and eland for
the meat and hides, ostriches for their feathers, and lion and leopard to protect their
cattle.

Labour

441 Although deprived of their only real occupation, fighting, the Masai have not
yet as a people accepted any substitute for it, being, as Sandford noted, "too proud
to work," i.e., for wages. A small number have accepted employment as herdsmen
on farms, and some have done good service in the Police and K.A.R., though even
in a military capacity most of them are still unwilling to submit to a form of discipline
that is not their own. Though a few have taken to cultivation, the majority have
not yet consented to stoop to what they consider labour unworthy of a Masai.

Sources: Thomson, 1885; Hollis, 1905; Johnston, 1902; Merker, 1910; Sandford, 1919; Fosbrooke, 1948, and personal communication.

THE AGRICULTURAL MASAI

101 The agricultural Masai, the I-Lumpua (Lumbwa) and Il-Oikop of former days,
175 are people of Masai stock who, having lost their cattle through disease or defeat,
[178] were forced to take up agriculture in order to survive, and by so doing earned the
lasting contempt of the pastoral Masai. It is in most cases uncertain how long the
various groups of Il-Oikop have been agriculturalists; some of the southern Masai,
for example, were defeated by the Gogo early in the 19th century and took to
agriculture. Fischer in 1882 reported groups of "Wakawi," as he called them,
living on the southern edge of the Mau; at Ndawetani (Ndare ortian), 15 miles south-
west of Naivasha; in the region known as Ngurumen (in-kurman, "the farm")
for about 30 miles north of Lake Natron; at the southern foot of Mt. Meru; and at
Kahe.* Von Höhnel adds Ndawkers, 20 miles north-west of Lake Natron.* Another
group is named by Thomson and von Höhnel** at Tavetta; while the map in Hollis's
The Masai shows them as extending for about 100 miles south-south-east of Lake
Manyara. The best known, however, are the northern group called Il-Tiamus or
En-ponsi (Njempsi) near Lake Baringo, concerning whom we have (such as it is)
the fullest information.

184 With the exception of the Tavetta group, the agricultural Masai in general
22 resemble the pastoral Masai in appearance, dress, and general culture, and though
they cultivate the ground, still have the acquisition of cattle as their chief ambition.
Those of Tavetta have mingled with the Tavetta,** and have become the most successful cultivators among the Masai; the rest of the agricultural Masai in the days of Thomson and Teleki grew mainly sorghum and millet, while the Il-Tiamus grew also pumpkins, and tried unsuccessfully to grow maize. Most of the agricultural Masai supplemented their diet by hunting, bee-keeping, and, where possible, by fishing.

[Warrior Kraal]

224 701 /91 cont./ A few intrepid warriors also leave the kraal, spear in hand, in order to attack the lion, but as a rule soon return unsuccessful.

721 If peace has lasted for a couple of months, the warriors long for war and, becoming more and more violent, express their wish to the speaker (ol alguenani). The warriors of a few neighboring kraals have already /92/ promised their participation and have also pressed their speakers, who then all together go to the ol aunoni with whose consent the war becomes a settled matter, for the waging of which only the permission of the ol oibonI is still lacking. The consultations and decisions for undertaking a war expedition, however, do not always proceed so smoothly, and they are most heated when they have for a subject the repetition of an expedition that has already ended one or several times with a defeat for the Masai. Naturally then the opinions about the success of the expedition are greatly divided, and the speakers and leaders often have great difficulty gaining a majority for the undertaking (1).

[626] 1. In an extreme case -- if, for example, the war is urgent on economic-political grounds, because the opponent threatens to become so powerful that he will be a serious danger to the Masai themselves or a competitor to them in the plundering of other tribes -- the ol aunoni or one of the speakers lets himself be carried away to secure a majority for the war by calling the vacillating ones ol kenono, [578] that is, blacksmiths. He always achieves the desired result with this, but in the following days may leave his hut only under the protection of influential warriors, in order to avoid assaults on the part of the reviled ones.

721 If they have finally succeeded, however, the leaders of the majority 726 make an end to further debate by invoking the en dawai, a sort of 714 Rütli oath. /Rütli, a meadow in Switzerland where the first league of the three cantons was formed in 1307./ Then every warrior of the kraals concerned has to put on immediately the visible sign of the

Spear, sword, shield, and club are the weapons of the warriors. [187] [714] Old people never carried the shield, rarely a small, to some extent cast-off spear, or an old sword, but for the most part only club and bow with arrows. They need bows and poisoned arrows for the defense of their own kraal or against predatory animals. The Masai impoverished through cattle epidemics, who live apart from the [184] [224] [illegible] usually call themselves el dombo, also hunt game with them. The bows (Fig. 36) are two-shanked, simply curved.

/175 cont./

136 Since the Masai do not eat game meat and hence do not pursue
[262] game in any way, it is usually very tame in the vicinity of the
• [224] kraals and often grazes along with the cattle. The author saw an
unforgettably beautiful scene in mid-1897 in the circular valley of
Ngoongono, where large herds of gnus and zebras, as well as Grant's
and Thomson's gazelles, were grazing quietly and without any trace
of fear beside and among the cattle herds of the Masai.

192 From the extensive nomenclature for the livestock, only the
234 most important words are given here:

ɛ́ giachu, cattle in general;

ol oiłóni (*el oiłóik*) or (very rarely) *ol mógira*, bull;

ol geted (*el modí*), ox;

ed geted (*ɛ́ giachu*), cow;

ed geted naigaso nabo, cow that has calved once;

ed geted naroiłach ane, cow that has calved twice;

ed geted 'lebon, cow that has calved a number of times;

ed geted olohí, sterile cow;

ol gedari (*el gedari*), small calf in general, which stays near the kraal;

ol medimí (*el medimí*), older calf that is pastured farther away;

ol ɛ́ram (*el eramí*), older calf that grazes in the vicinity of the large livestock;

ol boiał (*el boiałkug*), male calf;

ol aache or *ol ahe* (*el aache*, *el ahe*), male calf;

en dáau (*en dáiłue*), female calf;

ɛ́ng aache (*ɛ́g aache*), female calf;

ɛn ɛ́giria (*en ɛ́ngun*), donkey in general;

ol amoł (*el amołchi*), male donkey;

/176/ *en ɛ́giria oiłeł* (*en oiłełuk*), castrated male donkey;

en ɛ́giria (*en ɛ́ngun*), female donkey;

en ɛ́giria naigaso nabo, female donkey that has foaled once;

en ɛ́giria elebok, female donkey that has foaled several times;

ol gurari (*el gurarianí*), male donkey foal;

ed gurari (*ɛ́ gurarianí*), female donkey foal;

en ɛ́łimá (*en ɛ́łimáin*), full-grown male head of small livestock;

#136 the western form was found at Lake Natron, it seemingly
• [224] [698] has been replaced by immigrants from the east. At the time of their visit the land to the south-east of Lake Natron was a German game reserve from which the Masai had been excluded. I have flown over that area and even today, after fifty years of Masai over-use, it appears perfectly feasible as a route of passage for large antelope, at least in the wet season.

Percival (1928) notes that an occasional old bull will "come up" -- presumably to the Nairobi area -- from the Rift near Lake Magadi, which is adjacent to the area mapped by Roosevelt and Heller.

To my knowledge, none of the Roosevelt and Heller party visited the Lake Natron area. The map must have been drawn from second hand reports representing the best sources of information available at the time. It seems probable, then, that the wildebeests in the Rift near Lake Natron were then what they are now, representatives of the eastern race.

If this were so, although the Rift well precluded movement west, why did these wildebeests not move further north? As passed the Rift between the Natron area and the vicinity of Mt. Suswa is hot, waterless, forbidding

*136 to most kinds of life, and certainly a barrier to normal wildebeest movements. If this area were less dessicated in previous times, it probably would have been the only point of contact between the eastern and western races of wildebeest. The Roosevelt collections from the Busso area, however, would indicate that there had not been significant mixing of the races there, implying that any recent contact would have been on a small scale and any significant connection had been in the far past.

*136 *139 *233 (244) *Wa wildebeests remain in the northern area of the Rift. There are fenced ranches now south of Lake Baringo and in the Rift adjoining the Busso area. The remaining wild animals (kongoni, gazelles, etc.) are hunted on some of these ranches as food for labor. It appears that after the former wildebeest population of this area became isolated from the populations farther west (through Masai overgrazing in the Mwaiso area) it was gradually hunted out. Kongoni and Thomson's gazelles are still found in this area.

Summary

*13 Mwailand is centrally located in the system of grassland belts of Africa. The grassland ecosystems of Mwailand are typical of the most biologically productive

9/13 648 656 659 Kenya border. The only significant area lost by the Masai was the Maru Kopjes area. This was used occasionally during the dry seasons because of the springs and good grazing found there. By about 1956, however, the last spring appeared to have dried up because of destruction of the vegetation by the Masai.

9/13 189 The status of the Masai in Narok District has remained relatively constant compared with that of the Tanganyika Masai to the south. Since 1911 the only changes have been slight enlargements of the area and fluctuations in the land infested with tsetse fly.

9/13 648 225 65 The part of Western Masailand immediately to the north of the Serengeti National Park and east of the Rift Escarpment (Fig. 3) is Kenya's finest game area. Following the Second World War part of this area, the triangle formed by the Mara River, the Rift Escarpment, and the Tanganyika border, was made a National Reserve. This action protected the area from hunting but did not affect the Masai. In 1961, due largely to the efforts of Major Temple-Boreham, Senior Game Warden of the area, and Mr. C. Gordon, District Commissioner of Narok, an agreement was made between the Narok District African District Council and the Kenya Government to establish a Masai Mara Game Reserve. The reserve covers some 700

square miles adjoining the Serengeti National Park and including the Ngoro Crater. The African District Council has appointed a warden and subsidiary staff to the area, and has passed by-laws for its management including control of hunting and grazing. A section of the reserve of roughly 250 square miles adjoining the Serengeti National Park has been set aside as a Game Reserve Developed Area in which no grazing nor entry is allowed except by permit of the warden. With Government help they have built roads and a lodge, and the proceeds from visitors' fees go to the Masai. This is, in effect, a true national park run on a local basis by the Masai.

48 warriors also carry a narrow oval shield made of buffalo or giraffe hide on a wooden frame, and painted with insignia including the warrior's age grade and clan.

56(70([712] [542] [234] Originally during the period of warriorhood the moiaani were not expected to do any work except fight. They lived in a separate village, called a Rutanga, and were generally taken care of by the unmarried girls of the tribe. Discipline was reported to have been extremely good. The warriors had older advisors whom they obeyed.

• 229 [229] [300] [90] Outside were hunted to obtain feathers for ornaments, buffalo and giraffe for shields, and lion for the highly prized mane. Traditionally the warrior was expected to kill his spear on a lion. The dramatic Masai lion hunts are famous (Simon, 1963). 80 percent warfare and lion hunting are illegal. The obvious result is a large body of young men with absolutely nothing to do for a period of up to 20 years of what could be the most energetic period of their lives. 177 178 56(70(229 72(•[233] They have the liveliest men, but much of the time there is nothing for them to do. As a consequence discipline is breaking down. The elders apparently have much less influence or control over the warrior than they did

previously. There is a considerable amount of raiding to steal stock from surrounding tribes. This precipitated several minor wars when we were there, and administrative action prevented one major war with thousands of combatants. Some lines are still blood, and the moran have been bleeding their spears on a variety of other animals, most notably others.

Following the period of service as warriors, each age class goes through another ceremony. Two age classes, a right hand and left hand together, take the ceremony and they then receive another age grade name which they retain the rest of their lives. Thus these older age grades each span a period of about 15 years (Brown, 1957).

Periodically the administration has tried to discourage the moran system. In late years some of the elders have also tried to change the system in order to maintain better control over the young men. The system still continues in Western Masailand but it is much less regular than previously.

When a warrior becomes circumcised he may take the mother with him to the warriors' manyatta, so he may leave her home or apparently even stay home himself.

every opportunity. Once the purpose is probably to clear the grazing land. During the 20 months of our major study period, an area in eight of the Kau forest (at the foot of the Kau Escarpment) on least twice a month, often in the rains, and only once did we not see smoke from a fire burning in the zones or South.

Boundaries and Mobility

The most significant influence the Masai have exerted upon the wildlife is their penetration through excluding hunting tribes from Kwalland. The Gandorobo are an exception, but there are indications as the Gandorobo that they have little effect. The areas of East Africa where the finest concentrations of protected wildlife still exist are those in Kwalland.

The wildlife Masai hunt or have hunted include buffalo for wildlife and possibly food, eland for food and elephants for ivory. The Masai call hunts the carnivore guards and foxes, according to Willett, 1960). Lions and sometimes leopard for defense and for their dances, and ostriches for horns and to spite national park authorities (particularly in the past decade). In times of drought the Masai may spear various animals for defense or to avoid compensation for crops eaten. They also spear elephants at such times (Grant, 1960).

*213
*134
*216

Dead gecko and young Gecko Keyser are feeding wildest, possibly to test their skill, but this probably involves potentially few attacks to total. It does affect the animals' reactions to the Dead. A Dead driving same lizards, even one now, is apparently virtually ignored by most wild animals. We watched one Dead drive a lone ram through a herd of 200 wildebeests and 100 zebras. The herd edged about 10m at a distance of 30 to 40 yards, and for about a mile he appeared almost a part of the herd, all moving along at about ten to three miles per hour. We often see wild animals grazing in close proximity to Dead lizards and tortoise. A lone Dead with a spear and no lizards is something else again, and most animals will stay nearly 100 yards away from such a person.

197 Dead boys play a game "hunting" wild animals. They key to catch young of various species and watch the game in the same manner as they deal their cattle. Later, after observing the same normal animal they say that it is "my animal." We captured a wildebeest with notched ears in Ngorongoro Crater and a nearby Dead said that it was his wildebeest so he had cut the animal's ears when it was a calf.

[illegible] We noted above Dead boy in small wildebeests

*/136 In aggregate, the animals killed by the above factors -- predation, disease and accidents -- do not come near the numbers of animals that are born into the ungulate population. There must, therefore, be some other limiting factors. In the case of the wildebeests, the age structure of the population (Fig. 48) shows that the greatest mortality is in the calf population during the first few months of life. The mortality here is caused primarily by cows becoming separated from their calves in the milling-about of large herds. This is a function of herd size, the larger the herd the greater the loss of calves. The size of herd is influenced by a complex of environmental conditions, described in detail in Talbot and Talbot, 1963b. Thus, the primary limiting factor in the wildebeest population appears to be environmental, acting through herd size.

It would appear that with other species also, the effective limiting factors involve environmental controls of one kind or another, or, in effect, the carrying capacity of the grassland ecosystem. This is not necessarily a self-regulating system, however. The balance that formerly existed included native hunting. This now has been largely stopped. One result of this protection has been the increase in giraffes. In the

TEXT CONTINUED ON PAGE 309

#136 Mara giraffes have been effectively protected for about
15 years. According to personal accounts, they have
#13 increased greatly in numbers. The appearance of the
vegetation confirms this belief. The trees preferred
by the giraffes have a grazing line about 20 feet up.
Virtually no green leaves exist below the line, although
there are many dead or leafless limbs lower, indicating
that in the recent past leaves did grow lower. Almost
no reproduction of the preferred trees can be found.

#136 178 224 Elephants are another example of a species
formerly limited by hunting, and increasing with that
cause of mortality removed. They have been protected
along the Mara River since about 1900, and by 1918 the
increase in their numbers was notable (Kenya Game Dept.,
1918). This increase has continued. It is due in part
to natural increase within the area, and part to
immigration from outside areas where hunting is allowed.
#[137] Tree destruction by elephants is significant in the
area and was obviously increasing.

An increase in the populations of giraffes and
elephants is readily apparent because of their obvious
impact on the landscape. Such increases on the part
of other smaller ungulates would be much harder to
detect without periodic accurate censuses. There has only

FL12 Masai FL12

INTRODUCTION

THE present work, by Mr. Hollis, Chief Secretary to the Administration of the East Africa Protectorate, treats of the language, traditions, and customs of the Masai, one of the most interesting and important tribes of those territories. I am not competent—and there must be few people in the world who are—to criticise by the light of independent knowledge the mass of material which he has brought together, and will merely attempt briefly to summarise the information about the race which we now possess. Mr. Hollis's previous contributions to anthropology, his opportunities for studying and daily conversing with the Masai, and his linguistic talents, which are well known to every one in East Africa, are a sufficient guarantee for the thoroughness and excellence of his work.

The Masai at present inhabit the inland districts of British and German East Africa from the equator to about 6° S. Few of them are found north of the Line, except an isolated settlement just south of Lake Rudolf, and they seem to avoid both the sea and the great central lakes. Many smaller pieces of water, such as Lakes Naivasha and Nakuru, are found in their haunts, but they neither use boats nor catch fish. They are divided at present into two sections, one of which, called Il-Oikop, is agricultural and settled, while the other, or Masai proper, is entirely pastoral and nomadic. The difference between the two is evidently not ancient, for both speak practically the same language, and it is probable that the agriculturalists of the present time are nomads who have settled down. On the other hand, tradition does not carry the history of the tribe further back than a century at the most*, and it would be rash to assume that the armed pastoral state is primitive or very ancient. It is quite probable that there was a large agricultural settlement on the Uasin-Gishu plateau from which the more adventurous warriors detached themselves.

In East Africa the Masai are clearly distinguished by their language, customs, and appearance from the Bantu race (although the latter often imitate them, and have received a certain proportion of Masai blood), and equally clearly

ranetye — which-he-got
Ol-le-'e-gipika — The-of-En-gipika
te-'nilkgani. — in-the-deserted-kraal.

You have got what the son of En-gipika got in the deserted kraal, i.e. you are in a fix.

[The story told of the son of En-gipika is as follows. One day he was eating meat in the slaughter-house when the place was suddenly attacked by the 'kraony. He managed to escape with his life and meat, but without his weapons, and he fled, hotly pursued by the enemy. He outstripped them, however, and after running some distance, entered a deserted kraal where he proposed to hide. But he soon discovered that he was not the only occupant, and a lion growled savagely at being disturbed. Thinking it more prudent under the circumstances to leave the deserted kraal, the son of En-gipika turned round to continue his flight, when he was horrified to see an enormous serpent coiled round the post of the gate, which was the only exit, darting out its head and tongue in his direction. In the distance too he could see the enemy rapidly approaching his hiding-place. It is not related how the son of En-gipika escaped from the dilemma in which he found himself.]

No. 54. Iro — Ye-are
ngeni — clever (or sharp)
enna — like
Kenyek. — Kenyek.

You are as clever as Kenyek.

[Kenyek's biography was briefly sketched in the story entitled 'L-enno le-Kenyek ne Ilenye-Kenyek. The Masai are fond of referring to him whenever anything 'slim' or of a cunning or clever nature has been performed. The constructor of the Uganda Railway, for instance, has been referred to as being on a par with him.]

[571] "ask the boy (candidate) various questions as to his past behaviour, and he is put on oath to answer truly".* Apparently no special ordeal such as we find among the Kipsigis is attached to this testing.

5) The operation may be performed "in the morning or the evening according to the particular custom of the family concerned" (Fox). Generally it takes place only in the morning. The operator
[572] is said never to be a Masai. Generally he is a Dorobo, and sometimes a Kikuyu (Fox). This peculiarity is worth noting, especially if it is compared with the great care observed in selecting all other leaders or officers out of the pure Masai.*

[573] Before the operation is performed, the candidates take a cold bath in order to make their body insensible, or remain "shivering in a state of nudity until the sun rises" (Rawson).* Candidates are then operated upon, outside the village near the right-hand post of the gate. The patient must not betray any sign of suffering. That would disgrace him and all his family. A few elders assist and support the patient during the operation, and help him to his mother's house after the wound has been washed. Once inside he is given food (fresh blood) and a special beverage, called *ong olipoto*, after which he is allowed to speak.

[574] The circumcised youth is presented by his mother's brother with new sandals, and henceforth he is not supposed to make use of any garment were before the ceremony. A procession by four girls (cfr. Fox), waving branches takes place to the entrance of the
[575] boy's hut. The elders are again entertained with meat and beer;

[576] wife of a man has her independent house where she lives with her children and cattle. But the whole homestead belongs to the father, and it would be quite correct, though not so precise, to say: the house of the candidate's father.

* We may assume that these questions are concerned with the candidate's moral and social behaviour. Fosbrooke states that "prior to circumcision no youth may have intercourse with a circumcised woman. This is a rule most strictly adhered to". The same custom is observed among the Pastoral-speaking peoples.

[577] * Cfr. the elections of the *Oi-Oi* spokesmen, the *Ibulolomi*, of the *ol-oiyot* boys, the *oiyoiyot*, and the *mojoyoiyot* of the *Kulangaro-Sogholoi*, of the *ol-oiyoiyot* of the south.

[578] * Lenart states that it is "absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony". No further details are given, nor are reasons offered for this fact which is not mentioned by any of our Masai authorities. Moreover, it shows that circumcision is not related to the cattle aspect of Masai culture.

2: Bernardi E, M-4 (no date) 1955 FL12 Maasai FL12

[illegible] c) That the killing of the bull is a religious sacrifice is shown by the fact that the bull is killed in a ceremonial way, i. e. by suffocation.[illegible] Prayers are also offered to God, and ceremonial kidneys from the bull's skin are distributed to all those present.

d) At first sight the ceremonial fire gives the impression of being inconsistent with this ritual pattern. It serves to destroy the horns of the sacrificed bull, and it is also produced at the foundation of the village of the initiates (*oumpalo*). The importance of this ritual element, however, becomes evident if we compare it with the so called *piron* relationship. *Il-piron* is the firestick used for producing new fire. The breaking of a similar stick by the *piron*-elders is the main rite of *Eudungore*, and the elders and candidates when they visit the prophet say: " This is our fire-stick, we are one ".[illegible]

[illegible] Against the background of the above patterns, individual initiation, in the way it is now performed, i. e. by circumcision, seems to stand apart and follow a pattern of its own. This discord is somewhat striking, and one may be permitted to hazard the opinion that circumcision as such is foreign to the age-system of the Masai. Indeed, the structure of the age-system as such has no direct connection with individual initiation.

[illegible] *The Overlapping Rhythm.* Discussing the interval between the various ceremonies which institute the age-units we accepted the period of seven years as a good though vague, approximation. On that basis we may now assume that fifteen years is a parallel approximation of the interval between the institution of two age-classes.

The inaccuracy of any numerical computation with regard to Masai age-system is emphasized by what we call the *overlapping rhythm*.

Up to this point the age-class has been considered absolutely, i. e. without relation to preceding or succeeding classes. In fact the actual institution of a class is related to other classes, and especially to that class immediately preceding and the one which follows immediately. Similarly one age-unit is related to the unit next above it and the one next below it. Let us consider the phenomenon by focusing attention on the left-hand unit. This is the senior of the two units of a class, and the junior of the two. *Ar*

G4

division to necessitate or render advisable a departure on their behalf from the general policy to be pursued in dealing with the tribe as a whole.

The Tribal Divisions of the Bassi as they are recognized for the purposes of the administration of the tribe are as follows:—

Parbu — The Parbu is the largest and most important division. They number about 10,000 and of these some 10,000 were from Lubinjia. There are rather more than 6,000 Bassi, who inhabit five large villages. The names of the "Barka" are 1 Kiaurapi, 2 Mutaba, 3 Ishan, 4 Bayadi and 5 Pelyaki. In 1910, the Kiaurapi Parbu Bassi decided to divide, and while one part retained the name of Kiaurapi, the other adopted the name of "2 Kiaurapi." In 1921, the Parbu were estimated to possess 274,000 head of cattle, 1,000,000 sheep and 6,000 donkeys. They live in the country known as Ngaiai and in 10 Gedada.

Lubu — The population of the Lubu Division is about 6,000 of whom some 700 are Bassi. The division formerly lived near Ngaiai but when Sudan, slave-soldiers were quartered with Lomaia, they moved into German territory returning subsequently to the Lubu Hills where they now are. The Bassi "Barka" are known as 1 Pangara and 2 Kiaurapi. The Lubu are estimated to possess 40,000 head of cattle, 200,000 sheep and 700 donkeys.

1 Pangara — A small division known as the 1 Pangara inhabits the same region as the Lubu. They number about 800 of whom 40 are Bassi. They are said to possess 1,000 head of cattle, 10,000 sheep and 100 donkeys. A small number of 1 Pangara also live in German East Africa.

Kuta — The members of the Kuta Division generally inhabit the Lubu Country and they recognize Sandey as their Lubwa. Their population is assessed at 800 of whom about 40 are Bassi. They possess 6,000 head of cattle, 10,000 sheep and 100 donkeys. A small portion of the Kuta have amalgamated with the 2 Ole Ilbari.

Gwa — The Gwa Division also recognizes Sandey as Lubwa. They inhabit the Gedada country, number about 1,000 of whom 50 are Bassi, and possess 10,000 head of cattle, 40,000 sheep and 50 donkeys.

2 Gwaso — The 2 Gwaso have one location with Parbu for whom they were recognized some years ago. They are to be found on the Lubu Plains and number 800 of of whom 40 are Bassi. They are estimated to possess 6,000 head of cattle, 20,000 sheep and 100 donkeys (see p. 21).

Kiaurapi — The members of the Kiaurapi Division number 6,000, of whom 500 are Bassi, and possess 30,000 head of cattle, 300,000 sheep and 1,000 donkeys. They inhabit the country known as 2 Mabi and Bassi, and the neighbourhood of Bassi Juma. The "Barka" of the Bassi are named 1 Bayadi, 2 Pangara and 3 Kiaurapi.

1 Ole Ilbari — The 1 Ole Ilbari Division inhabits the country near the German border north of Lake Magadi. The population numbers 1,000 of whom 40 are Bassi, and they possess 10,000 head of cattle, 30,000 sheep and 100 donkeys. The Bassi are divided into two "Barka" both known as 2 Kiaurapi.

Kiaurapi — The Kiaurapi have a survival of the old agricultural Bassi, but they have abandoned agriculture and now live in the same manner as the pastoralists. They inhabit the country near the south of the Uaso Nyiro River. They number 400, of whom 40 are Bassi, and possess 1,000 head of cattle, 10,000 sheep and 40 donkeys.

Mutaba — The Mutaba number 6,000, possess 40,000 head of cattle, 170,000 sheep and 400 donkeys. Their Bassi number 100 and are divided into three "Barka" named 1 Ishan, 2 Tokaja and Bassi, and they inhabit the country between Kajiado and the German border.

The Ogiamat of the [illegible] inhabit the country to the neighbourhood of the Spring Hills and the Dalgoro Ranges. To this division belong the [illegible] tribe of the [illegible] Clans, of which Sagal is now the chief. The Division is estimated to possess a population of [illegible] of whom [illegible] are Women, [illegible] head of cattle, [illegible] sheep and [illegible] donkeys.

The [illegible] Lokoroi came from Lodwigo in [illegible] and are sometimes known as the Great Rumo. They have a considerable admixture of Elkoro blood in them. Their habitat generally the neighbourhood of the Dalgoro Ranges and their population is estimated at [illegible], including some [illegible] Women. They are said to possess [illegible] head of cattle, [illegible] sheep and [illegible] donkeys. Their Women are divided into two "Sorts" namely [illegible] Tumbo and Sengo.

The Kapedel are to be found in the neighbourhood of the Great Desert. Their population is estimated at [illegible] including [illegible] Women, and their possession at [illegible] head of cattle, [illegible] sheep and [illegible] donkeys. Their Women are divided into four "Sorts" whose names are [illegible], [illegible], [illegible] and [illegible].

The Ogiamat of Lotodrick inhabit the country to the north of [illegible], which country is owned by the Ongoro Ongoro, [illegible], Kumamoro, [illegible] and Kordor streams. The population of this division is estimated to number about [illegible] of whom [illegible] are Women. There are divided into two "Sorts" namely [illegible] and [illegible]. The livestock possessions are said to number [illegible] head of cattle, [illegible] sheep and [illegible] donkeys.

In addition to the Masai, there are considerable numbers of Wandorobo ("[illegible] People") living in the Masai Reserve. These numbers are probably not less than three or four thousand, and many of them possess considerable herds of cattle, and live the life of ordinary Masai, from which it is difficult to distinguish them. They may be conveniently divided into two classes, namely, those who live in the bush and forest, and those who possess cattle. The former possess little or no livestock, and subsist almost entirely upon wild animals and fruits, while the latter live in villages and subsist only to a very limited extent on game.

The former are to be found mostly in the neighbourhood of the Rift, but small parties of them are also met on the Uaso Nyiro, on the Lower Mara River, along the Isiolo border, and in the Trans-Mara region. They live on raw animals and the smaller game animals, in rough shelters in the forests, or in the huts in some of the Masai villages.

The latter are to be found on the Uaso Nyiro, in the neighbourhood of Ol Donyo and Ol Doinyo Sadok, on the western bank of the Mara River, and in the Mara country. In all, they probably number about [illegible].

There exists in the reserve a special tribe of nomadic scavenger similar to the Wandorobo, called [illegible], who hold no weapons, but are treated as subjects, and are not allowed to marry Masai women.

To enlightenment, the Masai are a lazy, conservative, doubtful people, nominally governed by Council of Elders, who often themselves to be little better than the rank and file of everyone whose report [illegible] and disagreeable, but who are still sufficiently businesslike to render sufficient the interests of their country. They have been concentrated in one area, where they have amassed enormous herds of cattle of a poor quality and scarcely thriving. No notable amount of employment has as yet been found for the males of the tribe as a whole, though they are capable in the case of stock, and were formerly fighting material of a savage nature, which spread the terror of their name far and wide. They have considerable lower powers of organization, alertness and ability, but these are largely discounted owing to their unreliability. They have always evaded the [illegible] to be paid to the British Government, and have never been responsible for any serious disturbance, being too proud to work, and old enough to disregard them. They are probably the most backward educational entity extant in the East Africa Protectorate.

[illegible]

[illegible]

Reserve the King and Sun, if they were prevailed to serve, they would be allowed to proceed directly. After this, the treaty was translated and fully explained to them, and the Band affixed their marks to the presence of the Principal officers. The treaty was then sent to Portsmouth to accordance of Shedroch and each of the old men in turn was asked to attend the meeting or signing appointed of the treaty.

The agreement, as drafted, was submitted to the Secretary of State, who approved of its terms for relegation, on the 24th of May, and by Augusta on the 8th of June, 1871.

[illegible]

The Band was accordingly informed that the Government had agreed to their moving from the Northern Reserve into an extended Southern Reserve. The move was arranged to prevent doing from some throughout June, July and August. No compulsion of any kind was used, and administrative and constabulary officers were detailed to escort the under of units across the European Settlers.

One of the routes, which proceeded for Lake Nipissing, was straight into the extended Southern Reserve, and those Band who travelled by this route were reached the Lake Nipissing. The other have made overnight on the top of the Bay was "The Promised Land." The first Band to arrive on the planned were right through to their destination, but the succeeding parties, finding the growing good, unpleasant, carried their loads, and decided not to push forward into the plains before. Unfortunately, no provisions were taken to enable them to leave the plains, and there was consequently a great congestion at the new settlement of the Sacred Band, which usually fell on the Bay towards the end of August and in September. The work became impossible, and the people and stock suffered from cold and deprivation. They accordingly returned to the European Settlers lying between Nipissing and Mattawa Stations on the Canada Railway.

[illegible]

In consequence of this check, the Secretary for Native Affairs and the Director of Agriculture were sent, in August 1871, to investigate the situation, and they reported that there was nothing to show that the work was other than temporarily checked. In fact, however, considerable offence the views of some of the people, and a double opposition, were particularly on the part of Legislators, to return to the north.

[illegible]

So it was impossible for the Band to remain on European Soil over the Winter, for and Sought of Grey, the Governor issued directions for them to be sent back to the northern part of Lakeside, and to the land belonging to the Sun Africa Syndicate, adjacent to the Sacred Northern Band Reserve. The carrying out of the necessary arrangements were entrusted to Mr. John Simpson, Provincial Commissioner, Ontario, who sent the Band representative at Sheen, Grey and Dalhousie early in September. Mr. J. S. Dill placed 100,000 acres of Syndicate land at the disposal of the settlers, and the work commenced into this land was completed by September 1871.

[illegible]

The check was unfortunately the result of the Band having proceeded too quickly. They passed forward over other which for Europeans Settlers through Sheen Sacred they were greeting in Dill land, the Sacred King Sachem of Kyung at open up a route with them. No police measures of any kind were adopted, relying to the voluntary character of the work. It appears that the Band did not hesitate to any control for the journey, and the land appeared were those which would naturally take place in large movements of stock.

[illegible]

The work had brought to light new modes of transitions, practices and [illegible] of the number of stock possessed by the Northern Band had been greatly underestimated, and the probable figure has compared as 30,000 cattle and 8,000,000 sheep, a large increase over the original estimate, made in 1871, of 10,000 cattle and 1,000,000 sheep. This work no more should have been made in consequence but for the expenditure equipment of the Band to the meeting of any of their stock.

[illegible]

Various matters were discussed at the meeting. The Council recorded their views that they were opposed to the location system, as applied to the others, though they were willing to accept the idea as applied to the Women. The abolition of certain sites selected for the erection of more cells on Lambeyan occupation Estate was agreed to by the Council, who also approved the small balance of any further visiting centres at places where the Government considered these advisable. Deputy prohibition of self-supports was decided to represent the position to the Council when the latter should be unable to attend.

In regard to the local administration of the Board, the Council considered that the "Hole" system should be continued for the coming age of Women, as this system made for better control, but agreed that the "Hole" should be small and that the Women should not change their "Hole" after these had once been made up. The coming Women were to be forbidden to carry on the practice of cohabitation with young girls, and the Council agreed that it would be beneficial for a number of Women, according to the size of each "Hole," to go out to work, either as hawks, or as cobwebs. At the same time, they confirmed that they could not authorize such a division unless and were opposed to the idea of purely casual labour.

(4) Others.

The two most serious evils Damage which are encountered in the Boad reserve are Bad Cage Boys and Photographers. A number of other Damage which the Boda and Boda-in-waiting Boys, but these two are responsible for a higher mortality than any of the others.

That Boad work should be largely subject to Damage is only to be expected, in consideration of the enormous accident of cells and deep hewed in the reserve, and of the consequent congestion in the grazing areas. Treatment of the Damage has not yet been undertaken to any comprehensive extent, though it has been suggested and approved in the case of some of them. But the necessity for making any treatment arrangement successfully applicable throughout the reserve, if necessity is to be obviated, has to arise, can evolved the staff available insufficient to cope with the number of Boda that would require treatment, and but little actual progress has been made. It is readily recognized that the provision of veterinary facilities for Boad work is among the most important tasks now before the administration, but owing to the impossibility of providing the necessary increase of personnel, material and funds while war conditions prevail, it is also recognized that this work must wait until the conclusion of hostilities.

At the end of 1941 and the beginning of 1942, the Officer-in-Charge sent in frequent reports of Damage which were affecting Boad in the Boad Reserve. He estimated that between May, 1941, and March, 1942, the Boad had lost by Damage more than one hundred thousand head of cattle and about one million sheep. Bad Cage Boys, Photographers, Jubbers, Hole-ponymen, Fire and Hawk Women and other Damage were, in all, responsible in varying degrees for almost all parts of the reserve.

In a number of the Damage affecting Boad cattle and sheep some of an obscure nature, it was decided that careful investigation would be necessary to ascertain their causes and, if possible, to devise methods of prevention and treatment. A beach laboratory in Jubbers, now in course of construction near Boda, and it is hoped that it will be possible to carry out research work

[illegible]

Mr. Kennedy's visit, August, 1917.

On August 20th, Mr. Sheppard expressed a desire to modify his previous statement that no great difficulty would be experienced in the collection of the inoculation fees. The fee proposed was higher than he had anticipated and it appeared improbable that the Masai could procure Rs. 400,000 for payment of such fees in cash. The cattle market was closed, as their cattle were unsaleable, and the collection would be rendered more difficult by the absence of legal machinery to enforce it. He advocated a reduction in the fee and suggested the promulgation of a special rule providing for the compulsory inoculation of all Masai cattle and for the recovery of fees. In the alternative, he thought that the imposition of a cattle tax would obviate the necessity for charging inoculation fees in addition. He considered that it would not be impracticable to induce the Masai to inoculate their own cattle, which course, though open to certain drawbacks, would possess the advantage of dealing quickly with the outbreak.

Captain Bradshaw's visit, August, 1917.

As a result of his visit to the Masai Reserve in August, 1917, Captain Bradshaw formed recommendations, mainly of an administrative nature, which included proposals for the erection of fences a quarter of a mile apart across transport roads on the reserve boundary, necessary to prevent the infringement of quarantine restrictions by persons in charge of ox-transport, an increase in the police force in the reserve, and the marking out of a neutral zone two or three miles wide, surrounding the reserve, in which no cattle should be allowed except on authorized routes. Measures should be taken to prevent cattle in the reserve belonging to traders from leaving the reserve, and he suggested that all movement of cattle both into and out of the reserve should be prohibited.

Mr. Kennedy's visit, September, 1917.

Early in September, Mr. Kennedy, the Acting Chief Veterinary Officer, visited the reserve and, with Mr. Sheppard, interviewed several Masai chiefs. He gathered that the natives were opposed to steps being taken to combat the disease. The cattle in the reserve numbered approximately 710,000 and, to complete the inoculation within a period of twelve to fifteen months, he estimated that a staff of eight Veterinary Officers, fifty Stock Inspectors and seven hundred and fifty natives would be necessary.

Quotation from report of Mr. Kennedy.

In the course of his report, dated the 11th of September, Mr. Kennedy wrote:—

"It has been our experience that, when well-known diseases come under notice in this country, they exhibit peculiar variations in virulence, symptoms and course, and do not strictly conform to the standards laid down for them in other countries. Bearing this in mind, it is apparent that, before any definite action is taken with regard to general inoculation against bovine pleuro-pneumonia, it is very desirable that the disease be fully investigated.

"As an example of the difficulties to be overcome as regards inoculation, I may mention that the Acting Assistant Veterinary Pathologist has been making post-mortem examinations of infected animals during the past three weeks without once finding lymph suitable for inoculation.

"No definite scheme for inoculation can therefore be suggested until the results of Mr. Bradshaw's investigations come to hand."

Mr. Kennedy's recommendations.

The Director of Agriculture, however, considered that inoculation should be commenced without delay, to such an extent as the available staff allowed. He recommended an appeal to the military authorities for the release from military service of all Veterinary Officers recorded therein, and suggested that application be made to the Redundancy Protectorate for the loan of the services of Mr. Chase for a period of six months. These steps were taken, but it was found impossible to spare Mr. Chase from Redundancy, and the military authorities regretted that the Veterinary Officers could not then be released from their military units.

Mr. Kennedy's report.

Towards the end of September a report was received from the Acting Veterinary Pathologist on the subject of the cattle disease in the Masai country considered to be pleuro-pneumonia. Difficulties had been experienced in obtaining cases typical of pleuro-pneumonia, experiments had been conducted with the

material brought to Naivk, and six animals had been inoculated with large doses with practically no result. Mr. Kearney, therefore, was led to conclude from the evidence that it would be undesirable to attempt any inoculations on a large scale until the nature of the disease had been clearly established. Such precautionary action might cause heavy losses with alien bacteria, and afford no immunity to the existent disease. In view of the danger of introducing the disease into a clean area, he considered it inadvisable to conduct further experiments at Kabete, and, as it was necessary thoroughly to investigate the pathology of the Masai disease, he was of the opinion that further research should be conducted in the Masai Reserve, where abundant material for investigation was at hand. He therefore recommended the early erection and equipment of a Field Station within the reserve. Two thousand pounds would be required to erect and equip a laboratory for the preliminary investigation, while subsequent development and investigation would depend upon the results obtained.

Mr. Kearney's proposals received the support of the Governor-in-Council, and his suggestions were reported to the Colonial Office by despatch on the 11th of October, 1917.

On the 16th of October, a rule under the Diseases of Animals Ordinance was signed, prohibiting the introduction of any trade cattle into the Masai Reserve.

A site suitable for the branch laboratory was selected on the left bank of the Uaso Narok, some three miles down-stream from Naivk Station, and an area of 200 acres was to be reserved there as a site for so long as the laboratory was necessary. Work was commenced in January, 1918, and Mr. Swaldaw proceeded to the reserve to superintend.

On October 22nd, 1917, Mr. Hemsted submitted a memorandum on the general question of pleuro-pneumonia in the Masai Reserve. He insisted that the Masai would not welcome inoculation or any other steps that might be taken for the eradication of pleuro-pneumonia from amongst their cattle, but, although no assistance could be expected from the Masai, he saw no reason to suppose that any actual opposition to inoculation would be encountered. Their losses had not been very heavy and the disease had practically run its course. The cattle of the Siria Masai in the west and those of the Sighirari of Laikipiak in the east of the reserve had escaped infection, being entirely isolated from other herds. Mr. Hemsted thought that the estimates given by Mr. Kearney of the staff required for the inoculation, and of the time which the undertaking would take, were too low, and he understood that the inoculation was only effective for a period of two years. The presence of large herds of buffalo and other game would have the effect of perpetuating the disease. He again advocated the imposition of a cattle tax, in preference to the levying of inoculation fees. The establishment of additional police posts on the borders of the reserve would diminish the chances of the infection spreading outside. He was of the opinion that, inasmuch as the Masai stock was run under almost natural conditions, the methods employed in respect of European stock could only be applied with difficulty, both as regards its management and preventive measures against disease. The position resolved itself into that of the natural struggle for existence, and the Masai herds would eventually overrun Africa, if increase were unimpeded by disease or restrictions of grazing. Grazing was, however, restricted and the reserve, he said, was stocked to its fullest capacity; no benefit would therefore accrue to the Masai by saving from pleuro-pneumonia cattle, which would probably die subsequently of starvation or some other disease. The eradication of pleuro-pneumonia could only be considered in conjunction with questions affecting the general development of the Masai as a stock-producing asset to the Protectorate, and but small results would be achieved by confining our energies solely to the inoculation of Masai cattle against that disease. He warmly welcomed the proposal to erect a branch laboratory in the reserve which would deal with all forms of stock disease.

In November, 1917, Mr. Hemsted reported the presence of anthrax and rinderpest in most parts of the Masai Reserve, the latter having broken out in a very severe form and leading him to think that the previous immunity to rinderpest attained by the Masai cattle had been impaired by pleuro-pneumonia.

Re-entry of Wanai cattle from Kamiriba area.

In the same month, the question arose of the advisability of moving the Wanai cattle back from the Kamiriba and Rivers to some area well removed from the European farms. It had been agreed that these cattle should not be removed until they had been inoculated against plague-pneumonia, but, in view of the results obtained by Mr. Hendelson, it appeared probable that some considerable time would elapse before a satisfactory method of inoculation could be arrived at, and it was considered that if inoculation were attempted with unsatisfactory results a bad effect would be produced on the native mind. Mr. Kennedy therefore suggested the immediate removal of these cattle, but Mr. Hemsted contended that herding would be caused to the Wanai by depriving them of grazing grounds, and also that it would be unkind to move these herds into an infected area without endeavoring immunity by inoculation. The decision given by Government in the matter was that, as the disease appeared to be decreasing, no area should be de-stocked, but that the Officer-in-Charge should order the Wanai whose herds were about to take every precaution, and that any rise of disease appearing amongst their herds should be immediately reported.

Renewed disappearance of plague-pneumonia.

In May, 1918, the Officer-in-Charge reported that he had been unable to find any case of plague-pneumonia during a recent tour in parts of the Rumbi and Hera districts, and that the Wanai in the areas visited had informed him that the disease was entirely non-existent among their cattle. He therefore recommended that the quarantine restrictions be withdrawn, but the Chief Veterinary Officer was unable to support this recommendation until a careful veterinary survey of all the cattle in that area had been carried out. The daughter of cows, purchased for military requirements in July, 1918, gave evidence that the disease was still prevalent in parts of the reserve.

(3) East Coast Fever.

In August, 1914, East Coast fever in the Wanai Reserve was confined to the neighbourhood of Ngong Station, to the country near the Sotik border, and to the Lake Nero District. Wanai cattle appeared to have had a certain degree of immunity to the disease, but the Officer-in-Charge was inclined to think that the cattle which had come from Laikipia were less immune than those which had previously resided in the Northern Reserve.

In June, 1918, the Wanai complained of the losses they had suffered from East Coast fever in the Nero region and in Olokejuri country.

In November, 1917, reports were received that this disease was spreading rapidly along the east bank of the Nero River, in the Lesuit Valley, and along the Sotik border. Steps were taken to place the infected herds in local quarantine, but these were unsuccessful, and in March, 1918, the Officer-in-Charge reported that the disease had spread to parts of the reserve previously free from it. It had appeared at Narok, in the Lolo Hills and Plains, in the neighbourhood of Kiu, at Kajiado, Ewil and Nanyuga, and the infected area in the Nero district had increased considerably. In view of the fact that Wanai cattle are highly susceptible to East Coast fever, Mr. Hemsted recommended that a dipping scheme should be devised as soon as possible in order that a commencement might be made towards the control of the disease. The Chief Veterinary Officer agreed that such steps should be taken by erecting cattle dips and encouraging the Wanai to use them. He supported a proposal by Mr. Hemsted that some dipping tanks, in addition to that already in use at Ngong, should be erected in the vicinity of the Government stations in the reserve, where they would be under constant supervision, and that the Wanai should be encouraged to use them. As he considered it probable that some time would elapse before the Wanai became convinced of the benefits derived from this treatment, he suggested that immediate steps be taken to commence dipping demonstrations, but it was pointed out by the Governor that a necessary preliminary to the provision of dipping facilities would be the carrying out of improvements in the water supply, and that this question was dependent on the effect of the cattle tax proposed for imposition on the Wanai (vide Section 8).

It is possible that much of the mortality attributed to East Coast fever is really the death of a disease known as heart water, which is described as a fatal tick disease, very similar to East Coast fever. There is as yet no evidence to support this idea.

East Coast fever appears to be the only cattle disease which the Masai really fear, and it, in fact, the disease which results by far the highest mortality among their herds. Nevertheless, they have not come forward very readily to make use of the cattle dip which was erected at Ngong in 1914, and it is evident that, in addition to the opposition which prevents them from taking advantage of such an innovation, they are also too dull and lethargic to go to the trouble of making the treatment a matter of regular routine. In time, however, it is to be hoped that they will come to appreciate more fully the immunity which dipping confers upon their stock, and, when this realization has been arrived at, it will follow that large tracts of otherwise suitable grazing areas will become available within their reserve for them and their stock, thus tending to relieve the congestion which is now noticeable in those parts of the reserve which are considered by the Boma to be suitable for their cattle.

(3) Foot and Mouth Disease.

Foot and mouth disease has not given serious cause for anxiety to the Masai Reserve. No outbreak was reported in June, 1917; and in February, 1919, it was said to be very prevalent in the majority of the villages situated in the Kajiado and Naivasha districts. Accordingly, in that month, the Chief Veterinary Officer prohibited the removal of stock from the reserve.

The direct mortality from this disease is slight, but it very seriously affects the milk supply, and indirectly it causes a certain amount of loss, as infected animals, being in a weak state, are unable to move about sufficiently to obtain the necessary and adequate grazing, and, as a consequence, they may die of starvation.

The disease was reported in May, 1924, to have practically died out.

(4) Trypanosomiasis.

Trypanosomiasis has been endemic in the Masai Reserve for many years and the majority of adult Masai cattle are immune. It was rife in the Northern Masai Reserve from 1907 until the completion of the cattle in 1908, and several outbreaks in both the Northern and Southern Reserves were reported between November, 1918, and January, 1919.

Anti-trypanosomiasis inoculation was carried out where practicable and a large number of Masai cattle were thereby protected, with the result that the mortality was very low.

For the next few years trypanosomiasis was more or less dormant, but it became generally prevalent early in 1924, and heavy mortality ensued among the calves, of which it was estimated that about fifty per cent. of the annual increase succumbed.

The Masai have proved to be opposed to the treatment of their cattle for inoculation against trypanosomiasis, so they prefer that immunity shall be obtained by the natural process of the survival of the fittest.

(5) Tsetse Fly.

During the tour undertaken in October, 1911, by the Director of Agriculture, accompanied by Messrs. Hill and Chaplin, the Director of Public Works and the District Commissioner, South Kavirondo, no signs of tsetse fly were seen along the route traversed, and the cattle met with did not appear to be troubled by the ordinary biting fly. On a previous visit the Director of Agriculture had noticed a number of "Stomoxys," and he stated that this fly was fairly common all over the Protectorate, but that so far as was known it did not carry any cattle disease.

Tsetse to the Director of Agriculture.

[illegible]

In March, 1915, no specimens of tsetse fly had been received from the Northern Rhodesia Executive, but reports had come in that the Bush round Abercorn during portions of the year been certain districts where fly was numerous in size.

The Commissioner.

In response to a request from the Secretary of State for further information on the subject, Mr. Anderson, the Government entomologist, toured parts of the reserve during the months of April and May, 1916. His report dealt centrally with the different parts of the region examined.

I.—The Upper Kafue Valley.

A few average tsetse of samples, from one to three miles wide and covered with forest bush and hill, covered, with grass, low on the western side of the Upper Kafue between the river and a high escarpment. Both Glossina palpalis and Glossina longipennis were found all over this region.

Glossina palpalis was not confined to the banks of the river but was distributed over the whole area, and specimens were taken at all hours of the day.

Glossina longipennis was found to be fairly common on the outer swamp fringe and on the banks of the river and was very active in the region.

II.—From the Upper Kafue to the Mwera River.

Both species of tsetse fly were taken on the slopes of the escarpment and for six or seven miles in a westerly direction from the escarpment. Glossina palpalis was found at an elevation of nearly 4,000 feet above sea level. No fly was found in the Lungwebungu, Mwinilunga, Kasempa, Mumbwa and Northern Chisamba regions.

III.—The Valley of the Mwera River.

Unfavourable weather conditions hindered investigations in this neighbourhood and no tsetse fly were found.

IV.—The Mupai or Gwai River.

No trace of fly was found in the small portion of the Gwai Valley which was examined and the presence of large numbers of cattle and donkeys indicated that the valley was free from fly.

V.—From the Mwera River to Fwimbo.

No fly were were discovered in this region.

Dr. Kinghorn's visit to the Mwera River.

Dr. D. D. Wenyon, who accompanied Mr. Henry Duffield on his tour in the Bamangwato in June, 1916, spent several days investigating the presence of tsetse fly in the Mwera River Valley. Only one specimen of Glossina was discovered during his visit, but from observations made and from reports of the Bush inhabitants he believed that a species of Glossina existed on the Mwera River below the bridge, mostly on the western bank, in an altitude of 4,000 feet above sea level. He did not consider the presence of this fly to be of much importance, as cattle with their cattle had been living for many years in close proximity to the fly area without any serious loss of stock.

The Gwai Valley.

The Gwai Valley country is fairly free from fly, but one or two places are known to be infested, notably in the valley of the Gwaisibe stream, on the Lower Shagwi, Lutsiwa (Upper) and Shagwe Bangle Rivers.

Mr. Anderson's visit.

Mr. Anderson's reports were forwarded to the Secretary of State who replied then, while Mr. Anderson had covered much of the ground, a considerable amount of investigation was still required as to the prevalence of tsetse fly in the reserve, and requested that arrangements be made for a further investigation of the region at the first suitable opportunity. Mr. Anderson expressed that owing to climatic conditions July was the most favourable month for carrying his inspection, and his subsequent tour was accordingly fixed for July, 1916. During that month, however, he was engaged on other important investigations on Kalonga, and his tour was indefinitely postponed in August, 1916, owing to the outbreak of war.

[illegible]

In June, 1911, the Provincial Commissioner, Salisbury (Mr. Lane) remarked that no tribes in the Salisbury Province with the exception of the Hema and the Cattle Tribe Hema were in a position to pay an increased hut tax. Mr. Lane would very much like to see a cattle tax imposed on the Hema instead of a hut tax.

On the 21st of March, 1912, a circular was addressed to Provincial Commissioners asking for their views on the possibility of increasing the direct taxation of natives in any part of the Protectorate.

Mr. Griffiths, Acting Provincial Commissioner, Salisbury, replied that the Hema were increasing rapidly either owing to the increase in their stock, which increase was largely due to veterinary advice coupled with the privilege of hut tax, or because the increase per annum in Hema tribes was not as great as it was in years past. The Hema could certainly stand a large increase in their taxes, and he advocated the imposition of a hut tax or hut tax only a fair amount to return for the increase assistance they had received from the scientific knowledge placed at their disposal by the Government.

Mr. Unsworth considered that pastoral tribes in reserves should be subject to either a cattle tax, or a grazing tax, or a cattle house tax. If a cattle tax, he suggested collection at the rate of one copper per cow per annum, fifty cents per bull or ox, and six cents per sheep or goat. If a grazing tax, one copper per head per annum, and, if a cattle house tax, eighty cents per head of full grown stock per annum (sheep and goats not being taxed), together with a tax of Rs. 5 on each House living in huts over and above an allowance of two Hemas per 50 head of stock. He quoted the case of the Cattle Tribe Hema who had about 20,000 head of big stock in North Gwelo district, whose population was about 2,000 souls and who paid taxes to all concerning to Rs. 2,000 only. He considered the Hema in the Hema Reserve to be a glaring instance of the necessity of a revised form of taxation in connection with pastoral tribes.

Mr. Tate considered that a native livestock tax was justifiable because (1) the centering herds in the hands of pastoralists was largely the result of the Pax Britannica, brought about by the expenditure of money on the part of the Home Government; and (2) costly experiments had been and were still being made on the health of stock in the Protectorate, part of the cost of which it was only fair to ask the native stockowners to contribute since they profited enormously by the results of these experiments. He considered that a tax of one per cent. per annum on all stock was the simplest and would be readily understood by the natives.

Mr. Hulme was in favour of the imposition of a stock tax on the Hema. He contended that there was nothing in the system of taxation then in force which affected the stockowners, who were the wealthiest natives in the Protectorate. There were numbers of persons belonging to the pastoral tribes on whom the incidence of the hut tax did not fall fairly, for though they often possessed many thousands of pounds worth of cattle and occupied vast areas of grazing land, they substituted only one or two huts and paid accordingly.

In February, 1912, Mr. Hemmond represented that the present form of taxation on the Hema was unsatisfactory and inadequate but he put forward certain objections to the imposition of a cattle tax. Such a tax would be difficult to assess, as the same owners usually kept their cattle in different villages; it would cause a great deal of dissatisfaction, as all natives disliked having their cattle counted; the revenue accruing would be subject to large fluctuations; and it would hardly be fair to impose such a tax only on the Hema.

He would prefer to see the introduction of a poll tax of Rs. 10 on each adult male, together with a further tax of Rs. 10 to be collected in proportion directly benefiting the Hema. Such a tax would be easier to collect and would tend to check the unnecessary increase of Hema. It would bring in some [illegible] or [illegible] annually.

[illegible]

In his reply, dated the 3rd of December, 1904, the Secretary of State observed that in his opinion the time had not yet arrived when it was either necessary or desirable to impose a cattle tax on the Masai which ought to brought by them to be the object of a consequence of the Masai wars.

In a despatch to the Secretary of State, dated the 6th of March, 1905, the Governor intimated that a review of the present system of native taxation would be desirable or necessary in the near future, but he considered that this was not a matter of urgency and might profitably be held over until the organisation of native administration had been effected. The Secretary of State agreed that the question might well be deferred.

On the 28th of July, 1905, Sir Henry Galbraith wrote that he considered the time had come when a tax should be imposed on the cattle belonging to the pastoral tribes on the ground that the precautions taken by Government to prevent the spread of disease had resulted then in largely increase the number of their herds. He stated that the incidence of taxation should be such as to encourage agricultural industry and discourage pastoral production. He therefore appointed a Committee, consisting of Mr. Ainsworth (Chairman), Mr. Gibbons, Mr. W. Dawson and Tomkinson, to consider the subject. Owing, however, to the outbreak of war, the sittings of this Committee were delayed and were in fact never held.

Mr. Ainsworth considered the question in December, 1906, and the first three months of 1907, and submitted a report on the general question of native taxation on the 29th of April, 1907. In that part of his report which dealt with the Masai Reserve, he considered that the Masai in the Masai Reserve presented, as regards occupant and location, a totally different problem from that encountered in considering the case among agricultural tribes in the Protectorate. The Masai were pastoralists, whose needs of life, customs and requirements differed from those of agricultural natives. They required much more land than agriculturists, and had many times inhabitants to the square mile.

Statistics of the Masai Reserve estimated the population at 50,000 souls, the number of horned stock at 600,000 head, and of sheep and goats at 2,000,000 head, while the area of the reserve was approximately 4,000,000 acres. The annual rents paid by the Masai amounted to Rs. 40,000 only. Mr. Ainsworth quoted, in comparison, the case of three agricultural districts, whose total area was 6,000,000 acres, whose population was 600,000 souls, and which paid Rs. 600,000 in hut and gall tax.

The capitalised value of Masai stock was so large as to make the annual rent about Rs. 800 per man, woman and child, and, supposing that the capital amount turned out to 2 per cent. per annum, the annual average of the tribe would be worth Rs. 40 per head. The total personal rents were very small, while they paid less than one rupee each in annual taxes. It was therefore evident that the Masai did not contribute their fair share to the Protectorate revenue, and that some readjustment was necessary in their case.

In regard to the manner in which the Masai should be taxed, Mr. Ainsworth observed that their nomadic habits and mode of building huts rendered the method of collecting revenue under a hut assessment a far more difficult matter than it was in the case of agricultural tribes. He also considered that any system of poll tax on able-bodied males would be equally unsatisfactory. He therefore proposed a scheme which had been put forward by Mr. Dawson and which he outlined as follows :—

In order to find out the approximate taxable value of the Masai, the tax should be worked out as a percentage, based on the assumed unimproved value of the land. The amount due would be collected in the form of a cattle tax (ignoring sheep and goats). The acreage of the reserve being nine million acres, the unimproved value being assumed to be Rs. 2 per acre, a tax of 1 per cent. on the unimproved value would produce a revenue of Rs. 270,000. This amount would be divided amongst the total number of cattle estimated, and would amount to Rs. [illegible] per head on half a million head of cattle. Mr. Ainsworth considered that there would be considerable difficulty in counting the cattle, and suggested

It is hoped, in time, as also the conditions in the Tana Reserve as to water shall with increase in East Coast fever, and steps are now being taken to establish a branch veterinary laboratory at Kenth where a more thorough investigation will be made into the characteristics and peculiarities of the diseases to which Tana cattle are subject.

One of the difficulties which will have to be met, when the requisite staff has been obtained, is again the conservation of the Tana. They consider the stock they now possess to be better suited to the reserve than any others, and they prefer to based immunity to disease by taking a disease rate in preference to seeking immunity through inoculation or the application of veterinary science. It will require considerable pressure to secure the performance of a continuous treatment of cattle such as dipping, the Tana themselves being too lazy and fickle to possess the necessary tendency to fully determine to the contrary, and an attitude of passive resistance in all that Tana may experience can be expected of them. In spite of such difficulties, however, it is possible to hope for an improvement in the stock conditions of the reserve which will eventually enable not only certain inferior stock to be utilized, but will also render the Tana reserve free of a danger to the stock industry of the Protectorate.

A great deal can still be done in improving the watering and grazing properties of the area. The reserve is on the whole by no means badly supplied with springs and streams, but many of these are practically useless for watering large herds of cattle owing to their inaccessibility or to the unsatisfactory nature of the approaches to them. Streams frequently cut down a hill side to disappear into the ground within a few yards of the foot of the hill, and small springs become so trampled that it is impossible for cattle to drink at them. The ground becomes swampy, the supply of water gradually decreases, and at times the spring becomes useless.

A peculiar feature of the Tana Reserve is that the large rivers flow within a few miles of each other, frequently through dense bush or forest country where there is no grass available for cattle and their usefulness is thus materially impaired. The Tana River, Tana Creek, Hyabbi and other considerable streams flow close together on the flats and flow through forest glades practically parallel to each other until they eventually meet and leave the district by a deep gorge. But the western portion of the reserve possesses this advantage: all the large rivers have their courses at a considerable altitude of from seven to nine thousand feet, and it would be an engineering feat of no great difficulty to conduct water from these rivers into the low-lying grazing areas at the foot of the hills, some two thousand feet below. This project has been much under discussion and may be expected to eventuate, in conjunction with other development schemes, when funds and staff are available. The dams which have been erected across certain of the streams have not proved the success it was hoped, as they are liable to damage by floods and are continually requiring labour and expenditure for repairs, but the provision of pipe-lines and troughs seems to offer every prospect of a solution of the difficult problem of conducting the numerous grazing areas in the Lotta Plateau capable of being utilized at all times of the year to carry an much stock as their acreage will hold. There is no doubt that when these water-works have been constructed any shortage of grazing for the amount of stock now in the reserve will have ceased to exist.

As a direct result of these disabilities of disease and shortage of water and grazing the Masai have maintained that the kind of cattle they possess is better suited to the conditions encountered in the reserve than any imported grade stock. In this matter also their conservatism comes into play, but it is probable that, in this case, their contention is supported by fact. A pure-bred bull was recently purchased for use with the Masai cows in an attempt to present a better and more marketable kind of stock, but this animal died before sufficient evidence had been obtained to prove or disprove the Masai contentions, and the problem has still to be dealt with. The Masai cattle are undersized and ill-bred, and present in their existing state no prospect of becoming of value to the outside market. The potential asset to the Protectorate represented by a capital of 111,000 head of cattle, with an annual increase of about 30,000 head, is thus wasted, and the most

essential problem before the Government at the present time is dealing with the Masai is how to turn this central herdsman into a cultivated man. The proposals for imposing upon the Masai a tax of two rupees per head of cattle per annum, supported by the Governor in January, 1918, fell through mainly owing to the impossibility of procuring a market for the quantities of almost worthless stock that would have been produced in payment, and it is difficult to see how the objection is to be overcome unless some much more marketable commodity is produced. Purchase by local authorities and farms of the kind of things stock that would come to as a result of the imposition of such a tax would in all probability be very limited in extent, and as business has not even forward with progress in the taking over such stock for canning or export to other areas. It has not yet been proved or disproved that such Masai stock is marketable for the purposes of human consumption, but it is a fact that much of the stock from the Masai Reserve purchased for slaughter by the military authorities was returned as unsuitable, and while it is extremely improbable that the Masai would be able to pay their tax in cash, it is only reasonable to expect that the more stock would be paid in in lieu of cash where that was unmarketable.

Problem of Revenue

The problem, therefore, appears to be as follows. If the necessary staff is provided, a tax can be collected from the Masai at the rate approved which will bring in such amount at present annually. (If the money method, [illegible] is to be devoted to works in the Masai Reserve which will so improve the conditions there as will not only render it capable of maintaining a larger number of stock, but will also so alter the conditions as to make it probable that a higher grade of cattle could be supported in the reserve. Where this last step has been effected, it may reasonably be assumed that a number will be forthcoming for the cattle paid in as a tax, but it is not yet proved that it will be possible to realise the value of the stock collected in the earlier years. A trial alone can demonstrate this.

#4/96 Stock in excess of [illegible] Protectorate.

Enough may now have been said on the subject of the generalities of the reserve, but it must also be borne in mind that, of the proposed cattle tax, one half of the proceeds are to be paid into the general revenue of the Protectorate and that it is a matter of concern not only to the reserve, but to the Protectorate as a whole that the proceeds of the tax should be forthcoming in the shape of a material asset as soon as opportunity occurs. The Masai have hitherto paid a hut tax at the rate of three rupees per hut, which was amounting to [illegible] per annum, but not covered the cost of their administration, but the proposed tax will not only cover the cost of the administration of the reserve, but will leave a considerable balance for the general development of the Protectorate, while the needs of the Masai Reserve can be attended to to the fullest extent of which the staff is capable.

[51]

#4/1 #4/1 Masai working in the reserve.

Of the Masai residing within the reserve, the most that can be expected of those who are not herding cattle is that they will help in the performance of the public works which are destined to be undertaken therein. Hitherto they have not been employed on such works as natural labour does not appeal to them, and it is indeed doubtful if such a change will be brought about in their temperament as to induce them to perform this. That the position may not be hopeless is perhaps suggested by the fact that certain sections of the Samburu tribe who had until recently maintained an attitude similar to that adopted by the Masai, commenced natural labour last year, and a corresponding change for the better may still occur among the Masai.

107 [91] Power of the Masai

Conditions have so greatly altered in the Masai Reserve during the last few years that the power of the medicine-men as a class has greatly decreased. The business on education for the Masai may further enlighten them, may undermine their conservatism, and may encourage them to discard their prejudices. An organised movement to show the Masai the development that is going on around them and to drive home to them the fact that unless they progress they are bound to disappear in the circumstances attendant on the introduction of civilisation may have the effect in eventually bringing them to a conception of their duty. The Masai problem has not yet been tackled, but the prospect of rendering these useful citizens of the Empire is not entirely without hope.

[illegible]

Prior to the meeting, Mr. Sulte visited the Uaste Gulas Native Reserve and secured of the attending Indians and obtained the following information. The Uaste Gulas Band of this tribe numbered in all between 1,000 and 1,200 souls and paid [illegible] annuities. They possessed [illegible] head of cattle and [illegible] sheep and goats. [illegible] head of these cattle were in the hands of grazing on lease to Gregory to Captain Gregory who received all in indians at [illegible] of 1 per cent per annum. There were [illegible] on Lord Delaware's land, numbering [illegible] head of cattle, which were allowed this privilege without payment. The remaining [illegible] or [illegible] cattle were for the most part in the Native Reserve.

[illegible]

The two reserves occupied by the Uaste Gulas Band in Delaware, [illegible] were separated by a strip of absolutely land, and strips were taken to accommodate parts of adjacent farms belonging to Captain Gregory which would pass through [illegible] and farm one native chiefs having an area of some [illegible] acres. The Band were informed that, when the reserve had been allotted to them, they must regard the opinions of Inspectors as definitely settled. They were also given to understand that, in lieu of land, they would be required to pay a rental fee of [illegible] per head or a much fee of one bushel out of every bushel of [illegible] cattle, sheep or goats.

[illegible]

In July, [illegible], the Provincial Commissioner, Ferrydale, reported that the [illegible] had crossed between Chief Lordmen and the boundary Indians, Wah-Kah, leading away to the Band Reserve. Lordmen had been constituted Chief by Mr. Jack Ho Pookerty, Inspector when he was stationed at Darrow and had received a considerable following. Charges of witchcraft had been brought against Wah-Kah, with the result that he requested permission to move, with the other Band, from Lordmen into the Ferrydale Band Reserve. The following represented a claim to prerogative fate. It seemed however, that such a movement could be the cause of trouble between the Uaste Gulas and the other Band, who have little in common, and it was decided to hold the matter over, at any rate until the Band Hove was an accomplished fact.

[illegible]

In May, [illegible], the sanction of the Secretary of State was requested to an exchange of land held by Captain Gregory in the Ferrydale Province for an area on the Ada Plains. Captain Gregory was willing to exchange [illegible] acres, to be used for an extension of the Uaste Gulas Band Reserve, for [illegible] acres on the Ada Plains. The Secretary of State approved this arrangement in June, [illegible], and the Provincial Commissioner, Ferrydale, was instructed to take steps to mark out the extended Uaste Gulas Band Reserve.

[illegible]

A description of the Uaste Gulas Band Native Reserve was accordingly drawn up, and read as follows:—

[illegible]

"The reserve is divided into three parts:

"No. 1. Commencing at the point where the Dakota Ellaine Barrow Road crosses the Kaamaaro (or Diamond) River the boundary follows the right bank of this river down stream to the junction with the Gaagai (or Sagai) River; thence along the left bank of the Gaagai River up stream to the point where it is crossed by the Dakota Ellaine Barrow Road; thence along this road in the direction of Ellaine Barrow to the point of commencement.

"No. 2. Commencing at the point where the Gaagai River is crossed by the Dakota Ellaine Barrow Road the boundary follows that road in the direction of Ellaine to the most northerly corner of portion L.O. [illegible]; thence in south-easterly direction along the western boundary of L.O. [illegible] to the intersection with the western boundary to L.O. [illegible]; thence southerly and westerly along the western and northern boundaries of portion L.O. [illegible] to the Gaagai River; thence along the right bank of the Gaagai River down stream to the point of commencement.

"No. 3. Commencing at the most westerly corner of portion L.O. No. [illegible] on the Ellaine Barrow Road the boundary follows the western boundaries of L.O. [illegible], [illegible], [illegible], [illegible] in a north-westerly direction to the most westerly corner of the latter (which is also the western corner of L.O. [illegible]); thence in a south-westerly direction along the northern boundary of L.O. [illegible] to the [illegible] River;

arm. A beaded belt confines it round the waist, leaving only one limb partly exposed. Frequently it is slipped off the shoulder, and depends entirely from the waist, leaving the bosom exposed. Their ornaments are of a very remarkable nature. Round the legs from the ankles to the knees telegraph wire is coiled closely in spiral fashion. So awkward is this ornament that the wearer cannot walk properly, she cannot sit down or rise up like any other human being, and she cannot run. Round the arms she has wire similarly coiled both above and below the elbow. Round the neck more iron wire is coiled—in this case, however, horizontally—till the head seems to sit on an inverted iron salver. When the leg-ornaments are once on they must remain till finally taken off, as it requires many days of painful work to fit them into their places. They chafe the ankles excessively, and evidently give much pain. As they are put on when very young, the calf is not allowed to develop, and the consequence is, that when grown up the legs remain at a uniform thickness from ankle to knee—mere animated stilts, in fact. The weight of this armour varies according to the wealth of the parties, up to thirty pounds. Besides the iron wire, great quantities of beads and iron chains are disposed in various ways round the neck. 291 301

Such, then, were the people that now greeted Moran, who, being a novice, had to suffer a good deal of chaff from both sexes. He was, however, soon initiated into the mysteries of a warrior kraal, and had seen a bit of life. The strictest diet imaginable was the rule. He had to be content with absolutely nothing but meat and milk. Tobacco or snuff, beer or spirits, vegetable food of all kinds, even the flesh of all animals except cattle, sheep, and goats, were alike eschewed. To eat any of those articles was to be degraded—to lose caste; to be offered them was to be insulted in the deepest manner. As if these rules were not strict enough, he must needs not be seen eating meat in the kraal, neither must he take it along with milk. So many days were devoted entirely to the drinking of new milk, and then, when carnivorous longings came over him, he had to retire with a bullock to a lonely place in the forest, accompanied by some of his comrades, and a Ditto to act as cook. Having scrupulously made certain that there was no trace of milk left on their stomachs by partaking of an extremely powerful purgative, they killed the bullock either with a blow from a rungu or by stabbing it in the back of the neck. They then 262 884 [578] [757] [231]

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

776 In connection with the decided belief of the Masai in a God, it may be noted that they have also some minor deity called Neiterkob—apparently, as far as I could learn, an [754] earth spirit. They have faith in witchcraft, though the efficacy of the lybon, or medicine-man, lies not in any innate ability of his own, but in his power of intercession with Ngăi, who works through him, and imparts magical virtues to various objects. Their conception of the Deity seems to be marvellously vague. I was Ngăi. My lamp was Ngăi. Ngăi was in the steaming holes. His house was in the eternal snows of Kilimanjaro. In fact, whatever struck them as strange or incomprehensible, that they at once assumed had [782] some connection with Ngăi. Their prayers to him were incessant. Nothing could be done without hours of howling, whether it was to seek direction where to slaughter their 824 enemies, or to ward off a disease. The most sacred thing among 778 them is the grass. Held in the hand, or tied in a sprig to the dress, it is a sign of welcome and peace. Thrown at any one, or into some mysterious place, it is an invocation for a blessing on the person, or a propitiatory offering. Next to the 272 grass comes the milk. No liberties may be taken with it. 778 The milk must be drawn into calabashes specially reserved for its reception, into which water is not allowed to enter—*cleanliness* being ensured by woodashes. To boil it is a heinous offence, and would be accounted a sufficient reason for massacring a caravan. It is believed that the cattle would [231] cease to give milk. The cows, it may be remarked, are never milked except in the dark.

885 Moran found married life sadly dull after his warrior experiences, and to kill time he accompanied one or two war-parties. But that was exceptional. His time henceforward was chiefly occupied in eternal and interminable discussions on the most trivial questions, or wandering long distances on visits to his friends, while his wife stayed at home to milk the cattle, or occasionally made journeys to neighbouring hostile tribes to buy grain. She, however, was in her element when a caravan came round, and then she enjoyed the double pleasure of an intrigue and a lovely present of iron wire and beads.

595 In time Moran's first wife became old and ugly, and he took to himself a second—the former being stripped of all her iron wire for the purpose of decking the new comer. At last the 764 day closed for both of them, and one after the other, they formed the subject of horrible hyenas' laughter. These fierce

881 As only those candidates who belong to a given village may be operated on in that village, it is seldom that there is more than one circumcised at a time, but should there be two or three candidates belonging to a single village they would be circumcised together on the same day at the same time. There is no elaborate ceremonial accompanying the operation or preparatory to it. A boy will continue herding his cattle until the late afternoon of the day before that fixed for his circumcision. He is then fetched back to the village and has his hair shaved off by his mother, and has new sandals and a new skin dress given to him. This dress must be made of the skins of four rams sewn together, and will be worn the following day during the operation. The actual operation takes place next day, either early in the morning or in the middle of the day. If it is in the morning, the cattle are kept in the yard until the ceremony is over, but if it is in the middle of the day the cattle must be brought into the yard and kept there during the ceremony, for it is absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony. Sheep and goats are not included in this rule. The boy (or boys) sits on an ox-skin in the courtyard in front of his mother's hut wearing his new ram-skin dress and sandals, and the operator performs the operation with a special small knife without any elaborate ceremonial. The boy then retires to his hut to convalesce. A fat ram is killed for the patient, who is fed on meat boiled in fat and on plain cold fat, "so that he may get well quickly." After about five or six days the other boys in the district who have already been circumcised and have recovered, call for the boy, and he joins their band for the period of their novitiate.

[308] [392] [231] [304] [413] [212]

881 *The Novitiate.*—The period of novicehood varies in length of time, as a boy must remain in the novice stage from the time that he is circumcised until every other candidate has been circumcised too. Usually a period of about two years elapses between the time of the bull-seizing ceremony and the time when the last candidate has been operated upon. Then the group undergoes the hair-shaving ceremony which marks their transfer from the novice stage to the warrior stage; thus, the last few to be circumcised may only have a few weeks in the novice stage, while others may be about two years in that stage. During the novitiate, there are certain rules and regulations which must be observed by the novices. They wander about the country in bands armed with bows and bird-arrows visiting more especially those villages where they hear that fresh candidates have just been circumcised, and enlisting them in their groups. During the whole novitiate period the novices must not cut their hair at all, nor may they indulge in any form of sexual intercourse, nor may they use red ochre, but only plain fat on their bodies. They are required to shoot as many birds as they can, and to skin them and stuff them roughly with grass, and tie them to their hair as a decoration. More and more skins are added to this head-dress as the weeks go by, until at length a boy has a complete wig of stuffed bird skins. Certain birds must on no account be so used, notably birds such as pigeons, doves, and

561 [834] [302] [323] [301] [237]

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

233 villages the shields are removed to allow mating to take place with the owner's
232 own cows. The same method of preventing mating is used with rams, but to a much lesser extent. If a man has several good rams he keeps shields on a few of them at a time in order to use his rams in rotation.

233 *Blood-letting.*—Among the Masai, blood is a staple article of diet. It is either
[262] drunk hot and fresh, or cooked with bits of fat and meat into a "black-pudding," or else mixed with fresh milk and allowed to curdle.

In order to obtain blood every sheep and every head of cattle is bled at intervals. Cattle are bled by one method and sheep by another. In the case of cattle, the animal is seized and held, and a thong is then tied round its neck until the vein at the side of the neck swells up under the pressure of the blood. The vein is then
[413] punctured by means of a special instrument which may be termed a "blood-letting arrow." The blood-letting arrow consists of a small stocky shaft into the end of which a *small* flat blade is inserted. This blade has a curved edge and is very sharp. This arrow is used with a special bow which is always small and usually very roughly made. The arrow is not shot from a distance, but *placed against* the swollen vein. The bow string is only pulled back very slightly and when released drives the arrow just far
[415] enough to open the vein. The blood is caught in a gourd and the animal released.

Sheep are bled by a different method; the animal is held and a small incision is made just above one eye and blood drawn off.

262 *Meat-feasts.*—Young men and old alike indulge in frequent meat-feasts, meat
527 being a staple article of diet. No men may eat meat inside the villages, so meat-feasts take place either in special huts built at a little distance from the villages, or in a cave if there is one near-by.

There are certain rules and regulations concerning meat-feasts, as follows :—

(1) No man may eat meat that has been touched by a woman.

[231] (2) No Masai man may slaughter cattle himself. In every case a man of the
[563] Wandorobo tribe must be called in to kill the animal, and he must be rewarded by being given a part of a foreleg.

(3) The neck, stomach and some of the intestines are always given to the women, who may come and fetch them. The breast must be given to the man to whom the slaughtered animal belonged.

(4) During a meat-feast, some at least of the feasters must sleep in the hut or cave where the meat is, and it is usual for all to do so. If by any chance the fire should go right out in the course of the night, it would be considered a very serious matter indeed. In such a case no one inside the hut may go out by the normal entrance, but must break through the walls (in the case of a cave they must break through the brushwood screen which is invariably built across part of the entrance to the mouth of the cave), and all the meat that is left over must be deserted and left to the hyenas. The breaking of this rule is said to result invariably in the death of the miscreant.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

The 1948 census gives the following figures: 161

		Male	Female	Total
Kenya	Narok	17,055	17,755	34,810
	Kajiado	12,553	12,925	25,478
	Sambur	9,800*	10,200*	20,000*
	Il-Tiamus	1,734	1,689	3,423
		41,142	42,569	83,711

* Estimated.

		Male	Female	Total
Tanganyika Districts	Arusha	24,710	27,310	52,020
	Masai	23,271	24,005	47,276
	Mpwapwa	728	740	1,468
	Handeni	435	537	972
	Pare	826	747	1,573
		49,970	53,339	103,309
Total for Masailand		91,112	95,908	187,020

This shows only a small increase over the 1941 estimate for the Kenya Masai, when 10,000 Sambur are deducted; but it doubles the previous estimate for the Sambur and shows a substantial increase in the Tanganyika Masai.

The livestock estimates for the Kenya Masai are: 231 233

	Cattle	Goats and sheep	Donkeys
1919	750,000	2,000,000	10,000
1930	700,000 to 1,000,000	1,000,000	170,000

The figures for cattle among the Tanganyika Masai are 500,000,[3] but these may be underestimated. They vary in fact from about 600,000 to 750,000 according to season and other factors.[4]

The total area of Masailand in Kenya and Tanganyika is about 41,000 square miles or 26,240,000 acres (15,000 square miles or 9,600,000 acres in Kenya, and 26,000 square miles or 16,640,000 acres in Tanganyika). After deducting 3,000 square miles or 2,000,000 acres from the Kenya Land Unit as being useless on account of bush or tsetse fly, the Kenya Masai have about three acres per head of stock which is shared with sheep and goats; whereas in country such as theirs cattle alone require anything from three to five acres per head, owing to the low rainfall, poor grazing, scarcity of rivers, and frequent droughts. Their Land Unit is also a Game Reserve. 131 311

SOURCES: Sandford, 1919; E.A. Census, 1948.

PHYSICAL ENVIRONMENT

At the height of their power in the middle of the 19th century the Masai occupied a stretch of country which covered some 500 miles from north to south, and, at its widest, 150 miles from east to west. The northern limit was approximately Lake Sukuta (now mud flats), 20 miles south of Lake Rudolf; the southern, Lenjoge, near 175 131

000 against the former. The El kuafi recognized the chief (ol oiboni)
174 of the Masai as also their own and seem for a long time to have
184 been on the best of terms with them. Then -- so the tradition
669 tells -- a girl named Matangó, from the family of the ol oiboni
619 Sitonik -- she is usually designated as his sister, more rarely as
726 his aunt -- took a fancy to a member of a legation of El kuafi
[173] warriors sent to Sitonik and went away with her lover. When she bore him a son, the El kuafi proclaimed him their ol oiboni and at the same time refused to obey Sitonik. With this the wars began between Masai and El kuafi. They lasted -- so it seems -- the entire first half of the nineteenth century and occurred sporadically even in the second half of it. One of the decisive battles was at Kisongo, a six-hour march west of Meruberg /Mt. Meru/, where later on the chiefs of the Masai took up their permanent /8/ residence. The ones driven away went into the rugged forests of
[466] Meruberg, where they lived for a long time in constant strife with the Masai, until the chief Mbatyan completely subjugated them and forced them into compulsory service. Other battles took place near Ngurumán, north of Lake Natron; the rest of those conquered still live there, mixed with Wasegedju from nearby Sonjo. The
[361] remnants of the ones defeated in the Serengeti steppe are still to be found in Taveta, Kahe, Aruscha-tschini. The first battles between Masai and El kuafi probably took place in the vicinity of Kenia /Mt. Kenya/, and led to making the latter sedentary.

One of the last great clashes was in the steppe area Sogonoi; the ones conquered fled to Ngujuka and then farther to Useguha and Mahga, where they founded a settlement under the chief 'Lemá.

174 The Masai took a few individuals from among the defeated
184 into their community. The rest split up. One -- larger -- part
619 became sedentary and formed some colonies in the vicinity of
[361] foreign tribes or merged with other tribes. Another -- smaller --
[721] part at first made a living for a time from hunting, until it
[231] succeeded, by means of raids against sedentary peoples, in coming
[101] into the possession of livestock again. Today they again live wholly as before and are distinguished from the Masai only by

M /9 cont./
192 in that it was taken as a tribal name, and people spoke of ol oikob-
101 Masai and ol oikob-Wakuafi. El oikob (sing. ol oikobani) means killers, rough, brutal persons, and is an invective with which the Wandoróbo, Wakuafi, and the Masai blacksmiths (el konono) designate their oppressors, the Masai. Fischer mistakenly translates the word as "owners of the land"; this, however, would be called: ol opén l eń gob.

M The Wakuafi live in their colonies as more or less peaceful,
619 sedentary cultivators. Wherever they found peaceful neighbors after
184 their defeats, they too became calm. On the other hand, where
181 they remained in close contact with the Masai and were exposed to their constant raids, the old bellicosity remained in them. An example of this is the population of Meruberg /Mt. Meru/ in the Great Aruscha /Arusha/ and Meru areas. In spite of a very con-
M [144] siderable mixture with Wadschagga from nearby Kilimandscharo, they have completely kept their original character traits. Their imperiousness, rapacity, and cunning equal that of the Masai; in
M [648] courage, on the other hand, they even surpass them. Their numerous attacks on the camps of Europeans and trade caravans reveal them as brigands. The relationship between Wakuafi and Masai
M is in general not bad. The latter regard the former as fellow tribes-
829 men, even though as inferior ones, because they work the soil
619 and own only a little livestock. They are foes one minute and
[241] friends the next! And both must always reconcile themselves to
[231] each other, for the Masai cannot do without them as suppliers of
[438] vegetable foods, after the rinderpest at the end of the eighties
[731] again raged so destructively among their herds.

D While among the Wakuafi one can still clearly recognize
105 their one-time power and greatness, this is no longer the case at all among the Asá. Most of them, just like the El asiti, timidly and concealed in the bush of the steppes, live in miserable little grass and leaf huts which can be reached only by hidden paths. Their food consists of game, which they kill with poisoned arrows and poisoned javelins, honey, agricultural products which they obtain in barter, various wild berries, roots, and herbs. Where they dwell in the vicinity of the Masai, they live in a certain

262 Albizzia anthelmintica) always used in the cooking of meat is
272 supposed to cause severe diarrhea. Therefore milk that is offered
[153] is often refused in the hope that a meal of meat will be obtained
[263] on the same day. One who wishes to partake of both foods in one day -- and where is there a Masai who could resist an invitation to a meal of meat?! -- vomits first before eating the meat, for which he produces the necessary stimulus by means of a blade of grass stuck in the throat. If one has eaten cooked meat today, then /34/ one first drinks some blood in the morning before the milk, not out of considerations of health, but rather because it is believed that the livestock would give less milk as a consequence of neglecting this custom. Bringing milk into contact with meat
• [231] is most scrupulously avoided, because, according to the general view, through that the udder of the cow from whom that milk came would become permanently diseased. For this reason the

/61 cont./

881 question for the next circumcision period. These choose for this, as the site of the festival, a recently built family kraal, which is then designated as eňg aň 'n aibage 'l aijok. Decked out with a [292] [535] [533] costume in imitation of the warriors, but without weapons and, instead, a long stick in the right hand, the boys amuse themselves with dance and song in the vicinity of the kraal. When they crowd into the kraal after the first dance, in order to moisten their parched throats with milk, they are /62/ sprinkled with honey beer by an old man standing at the entrance and congratulated with the words: en dobollo, en daret ijōk, en dabo loscho, that is, roughly: may you become ever more numerous, make us rich, and bring prosperity to the country. During the festival the boys choose a spokesman or speaker (ol aigwenani) from their midst, whose task is to train them in comradeship and corps spirit. When the festival has lasted two days, the boys move into the various neighboring areas in order to repeat it there. In this way an eň gebāta often lasts a month. It is 881 also to be mentioned that very many women appear at these festi- 842 vals, and especially all who have up to then remained barren. The former appear in part as mothers of the celebrating boys, in part as companions of the barren ones, and the latter for their part come in order to have themselves pelted by the boys with -- fresh cattle dung, because through that they will become fruitful, according to a con- 881 viction prevailing generally among the Masai. In each of the following four to five circumcisionless years ('l ari otudunyeki 'l aijok) a similar festival is celebrated. It should be mentioned further that the [231] cattle whose meat is used to feed the participants at the eň gebāta festival are not killed, as is customary, by a stab in the neck, but rather by suffocation.

Let us now consider the circumcision festival:

[301] A few weeks beforehand one already sees the boys, adorned with as much ornamentation as possible, singing and dancing every day in their own and the neighboring kraals, through which they express their joy over soon being able to enter the privileged standing of the [302] warriors. On the day before the operation the boy's head is shaved, and the hair is thrown under the bed of the children in the maternal [292] hut. The boy takes off his skin cape and ornaments and dresses himself

/163 cont./

232 Bulls that develop unfavorably and seem unsuitable for breeding are castrated by the smashing of the spermatic cords with the club between the wood and string of a bow (a-idôn). The testicles are not removed, but are left to atrophy. In the same /164/ way one proceeds to castrate goats, sheep, and donkeys, but the latter always [825] not until they are fully grown. Bulls and bucks with unnatural sexual [777] instincts are slaughtered as soon as the vice is noticed, since they [784] are regarded as bringing bad luck. It is believed that, as a result of [731] their behavior, they bring the punishment of God upon the herd in the form of an epidemic.

• 231 The donkeys are small, square-built, strong, and steadfast. With nicely arched cruppers, a rounded neck, firm and fleshy shanks, they are very similar in shape to the zebra. Their coloring is a uniform light gray with a black cross over the back and shoulders. [492] They serve only to carry burdens, whereas oxen are only rarely used.

233

C.G. Schillings phot.

Ill. 54. Masai goats and sheep.

/164 cont./

231 Two breeds are distinguished, a shorter and stockier one and a longer-
[613] legged, thinner one. The latter is allegedly found only among the El barsegero lineages.

233 Among the goats a small breed and a large one can be distin-
[621] guished. The Masai have obtained the latter only through raiding expeditions in Pare, Unyamwesi, etc.; the true Masai goats are small. All have medium long, smooth hair, a markedly projecting forehead, and lop ears. The horns are usually only an inch long and have tips turned back somewhat. Among bucks they are larger, but also only rarely seven to eight inches. /165/ The sheep are only medium-sized compared to European ones. They have curly, coarse hair. Three breeds are distinguished, a large one (eń ger sabug = large sheep) with fat rump, a medium-sized one (eń ger kětě = small sheep), white with black head and medium-long fat tail, and a small (eń ger kiberoto; kiberoto = poor, paltry) breed and with a
[232] long fat tail. Among the young female animals of the last two breeds the fat tail is cropped for fear it might be obstructive to the buck during coition.

The black-headed breed is stronger in North Africa and probably degenerated here, just like the last of the three breeds, which might

231 [492] [177] /167/ Where the Masai are neighbors of the Somali (in British East Africa), the camel has also found entry among them as a beast of burden. They do not, however, generally share the passion of their neighbors, for whose palate the meat of these animals is a special delicacy. The Masai do not keep chickens, ducks, pigeons, etc. The attachment of the Masai to their cattle, especially to the cows, makes them seem to them like companions and friends. Thus, their habit of giving their animals names, especially considering the extravagance that the people indulge in with proper names, does not seem at all surprising. The /Ill. 58 appears here/ name Sudjaro means that the cow has come from a distance. Rimogeno was captured in the vicinity. Nondoje is a cow given as bride price. Sotoa is one such that was received as a gift from an uncle or aunt. A cow paid as fine is called Njamu. Each of the five cows that the

(the G [= Government] on the hind leg is not part of it, but would have been branded on the animal when it came to the fiscal herd.)

233 capturer of the first head of cattle on a war expedition receives as
552 a reward is called Aberí. Other names for cows are: Narok-gonjék, blackeye, En doblá, brown one, Mge, cream-colored one, Erok-logunja, blackhead, Na-njugi, red one. A male calf dropped by the cow Sódjaro is called Le-Sódjaro, while a female calf is simply given its mother's name.

• 231 /168/ Cattle, donkeys, and small livestock bear ownership
233 marks. These consist of cuts or brand lines on one or both ears
422 and of lines and curves burned on the left side of the body. The
[613] marks ([Plates 3 and 4] ol mebere, el meberen, if put on the body: ol bonto, el bonor, if on the ears) on the cattle and donkeys

/168 cont./

231 233 422 show to what lineage or sublineage the owner belongs: those on the small livestock the owner chooses for himself. Probably every lineage has several distinct marks. A glance at history will explain this. [613] [17] In the immigration of the Masai people, accomplished little by little, each of the many bands originally formed a closed whole, which each lineage represented in it adopted a particular mark in order to make its property known. So it was natural that later on different ownership marks existed in connection with one and the same lineage, each according to the affiliation with this or that band. Besides this some that belong only to individual -- very wealthy and widely ramified -- families are also known, and then they are applied in place of the others, not together with them. The marks on the cattle are the same as those on the donkeys, although the latter bear the ear marks almost exclusively, only very rarely also those on the body. If a [613] head of breeding cattle passes to an owner belonging to another lineage, it is usually given a new mark, and, to be sure, this one 233 then on the right side of the body. Besides the 531 ownership marks, cattle often have still other signs burned in as adornment, especially [232] circles or a sentry-box type of design. A [412] circle around the root of the tail and, on either side of it, one or two concentric rings on the hind legs are found especially 233 frequently among bulls. In addition to these 232 cut and brand scars, which are therefore supposed to serve in part for identification, in part for beautification purposes, there is also a third type, which arises from operations that are performed with a red-hot iron (Fig. 75) for the curing of swellings on joints and tendons. These lines, usually lattice-shaped, are also found among goats and sheep. On female calves the horn attachments are often cauterized, so that they can not butt later on. This operation further brings about, in the view of the Masai, an enlargement of the belly, desirable for leather production.

Fig. 75

/168 cont./

233 At births manual help is given. As soon as the cow lies down,
232 she is held firmly by a few people; others grasp the legs of the calf coming forth and pull it out. Then it is struck against the belly of the cow a few times, so that "she will love it," and then struck on the forehead with the palm of the hand, so that "it will quickly go to the udder and suck."

233 Swellings on cattle, for healing, are smoked with the glowing
232 stalks of en dulele en gace (Solanum spec.).

[237] Injuries to the feet of the cattle and goats are treated by a thorough washing with hot water and subsequent embrocation with cattle urine, as is a sort of foot rot (en jalin), which /169/ frequently appears when the cattle stand for a long time in mud and dirt during
[231] the rainy season. One tries to cure ailments of donkey hoofs by placing the hoof on a stone heated very hot and holding it there for a few moments.

In describing the internal ailments of livestock I am relying chiefly on the statements of the Masai, since only exceptionally did I have an opportunity to make observations on cause, course, etc.

[237] For coughs (eng ilroget) the cattle are given a thin soup consisting of milk and pulverized, charred neat-skin. Ol ebitiro bark cures diarrhea in cattle. The infusion of a decoction of ol ojengalani bark (Sesbania aegyptica) for cattle acts beneficially on the afterbirth and curatively on the birth organs. To hasten the afterbirth after a miscarriage, one gives the cow an infusion of a root decoction from the ol jogi i ol aitori (a Euphorbia).

For eye inflammation one spits milk into the eye of the neat and rubs it in it, or one drips into the eye the juice of the ol aisegerai kitok (Heliotropium Steudneri Vtke).

An epidemic disease among young calves, which is supposed to lead rapidly to death, is called ol diñana or ol digina by the Masai.
[824] As the cause of the ailment they cite the eating of a certain bush en jaro (Pennisetum ciliare) and as symptom swelling of the lymph glands, which they often try to heal by cauterization (1).

1. In all the meat and fatty parts of the stricken

/173/

233 The foliage of the ol jani l el sirgon tree (Cadaba farinosa),
232 that is, tree of the donkeys, is regarded as poison for donkeys.
231 Besides a horsefly, ol gimbai l ol sirgon, from whose bite the
824 donkeys (bitten in the penis) are stricken beyond recovery, the Masai
136 also fear for donkeys and cattle the tsetse fly (Glossina morsitans), which they call en dorobbo. The latter is allegedly only dangerous to cattle if it bites them in the tip of the tongue. One seeks a cure by cauterizing the spot bitten, but the result is very doubtful.

For getting rid of fleas, one washes young livestock with an extract from the crushed plants of ol osidja gutok (Asystasia gangetica L.) or from ol abai (Microglossa spec.).

The powdered root of ol girigir (Acacia pennata Willd.) is blown into the nose of calves and small livestock, in order to drive out the maggots of the throat fly /warble fly/.

233 Cowbells (Fig. 77) in the form customary in Europe are found
934 generally, but here they are hung especially on oxen and only on those cows that do not tolerate their calves. Smaller bells, often

Fig. 77. (1/4) Fig. 78. (1/4)

of wood or sheep horn with wooden clappers, are worn by castrated
233 sheep and goats. As adornment one hangs around the neck of castrated calves clapper-shaped pieces of ivory (Fig. 78) or, for especially handsomely developed cattle, a leather band or a cord stitched with cowrie shells.

/173 cont./

233 [857] Small livestock and donkeys are tended by little boys, cattle by older boys, under the supervision of a few old men. Dogs are no longer used for this now; rather the livestock heeds the whistle or call of the herdsmen. To what extent this is the case is best demonstrated when Masai flee with herds of livestock. A number of men, shouting and whistling, run before and behind the herd, which rages across the steppe in a mad chase. In former times the herdsmen quite generally used dogs. The dogs did not serve so much to keep the herd together, but more for guarding. They announce the approach of predatory animals by barking or by hastening to the herdsmen. [231] [178]

231 [862] [272] /174/ As has already been mentioned above, fresh livestock blood alone or mixed with milk forms a food prized as quite particularly nourishing. The blood for this is drawn off the living cattle and goats in the following manner: A strap is tied around the animal's neck in such a way that the blood returning to the heart in the large vein is blocked by it and breathing is not affected. Then a man shoots an arrow (Fig. 76) with a bulb-shaped, thick tip (ol horet), from which projects a scale-shaped sharp piece of sheet iron six to eight millimeters long and equally wide, into the swollen vein, whereupon the blood squirts out in a stream and is caught in a gourd bottle (ol buguri). The bleeding is stopped by a simple untying of the strap after the operation is finished. From a strong bull or ox approximately four to five liters of blood are drawn at one time, from a cow only half as much, and this is repeated every month. No blood is drawn from good milch cows and cows with young calves. Blood is drawn from sheep by means of an incision in the depression above the eyes or between the eye and the middle of the forehead. The slaughtering of cattle is done by a stab in the neck after the front and hind legs have been fettered; goats and sheep are suffocated by having their mouths and noses held shut. Cows are never slaughtered, not even when they are too old to be used for breeding. [411] [415]

231 242 561 Livestock that has died is eaten. As soon as the animal is dead, one removes the skin from the neck, severs the neck veins, and catches the blood flowing out in the skin. The cutting up of a head of cattle is done with the greatest care; almost every single muscle is carved

/174 cont./

231 262 561 [593] out, since special food laws determine to which class of people this or that piece will fall. From a head of cattle slaughtered during the meateating in the bush the warrior will send his father a shoulder-blade (ol ñárebuscha) and for the wives of his father the head (ol ogunja), paunch (eñ gonjori), the entrails (mener), feet (el oilelek), as well as the hind leg without the rear half (eñ gubés), and to the girls, the lateral belly-piece (e murté). The warriors eat all the rest of the meat. If they have visits from other warriors, the latter are entitled to the long, straight belly muscle (eñ gelemiân) and rear hocks (el oreschéta). On the other hand, if a head of cattle of a married man is slaughtered at the kraal, the warriors get nothing. From the cut-up animal there is put aside first for the other married men: the tongue (ol ñajeb), a shoulderblade (ol ñarebuscha), a rear hock, the rear part of the hind leg (ol móuo), the long belly-muscle; for the uncircumcised boys, the ribs (el eres), a rear hock, the filet (os sondi), the "flache /flat/ Roastbeef" -- as my cookbook calls it -- (ol oró), the heart (ol dáu). The rest of the meat is given to the women, who give the girls the lateral belly-piece and the neck (e murt) from it. The principal wife of the one to whom the slaughtered animal belongs is given the tail piece.

/175/ If the warrior slaughters a goat, the married men are given half the liver (e mónjua), the wives the paunch and head, the girls the back (en gorioñ) and the feet. If a married man slaughters a goat, he gives the wives the paunch, the rennet bag, spleen, entrails, and head, the girls back and feet, the boys a side of ribs, breast (ol oigoló), lungs (el kibiuk), heart, and a hind leg (eñ gedju muró), while he himself keeps the rest.

[593] From a warrors's sheep, the father gets the neck; the wives of the father, paunch, rennet bag, entrails, and liver; the sisters, feet and back. If a married man slaughters a sheep, the distribution to the women and girls is the same, and the boys receive the same pieces as from the father's goat. Of the individual pieces of meat, one boils [252] the bones for soup, furthermore the filets, the carved-out cutlets, the dark meat on the hind leg, and the heart. Everything else is roasted at the open fire. Brains and spinal marrow are not eaten, but thrown away. Bone marrow is sucked raw out of the smashed bones.

/175 cont./

136 [262] [224] Since the Masai do not eat game meat and hence do not pursue game in any way, it is usually very tame in the vicinity of the kraals and often grazes along with the cattle. The author saw an unforgettably beautiful scene in mid-1897 in the circular valley of Ngorongoro, where large herds of gnus and zebras, as well as Grant's and Thomson's gazelles, were grazing quietly and without any trace of fear beside and among the cattle herds of the Masai.

192 • 231 From the extensive nomencalture for the livestock, only the most important words are given here:

ń gischu, cattle in general;

ol oiñoni (el oiñok) or (very rarely) ol mögira, bull;

ol geteń (el moñi), ox;

eń geteń (ń gischu), cow;

eń geteń naigauo nabo, cow that has calved once;

eń geteń natobch are, cow that has calved twice;

eń geteń 'lebon, cow that has calved a number of times;

eń geteń olobí, sterile cow;

ol gedari (el gedari), small calf in general, which stays near the kraal;

ol medimí (el medímí), older calf that is pastureed farther away;

ol arám (el aramí), older calf that grazes in the vicinity of the large livestock;

ol boñai (el boñaikog), male calf;

ol asche or ol ahe (el asche, el ahe), male calf;

en dáuo (en dáũno), female calf;

eñg asche (ńg asche), female calf;

os sigiria (es sirgon), donkey in general;

ol amuč (el amuschí), male donkey;

/176/ os sigiria oidoń (es oidoño), castrated male donkey;

es sigiria (es sirgon), female donkey;

es sigiria naigauo nabo, female donkey that has foaled once;

es sigiria eleboń, female donkey that has foaled several times;

ol gurarú (ěí guraruaní), male donkey foal;

eń gurarú (ń guraruaní), female donkey foal;

os sitimá (es sitimán), full-grown male head of small livestock;

/176 cont./

231 192 es suben (es subeni), full-grown female head of small livestock;
ol balélo (el balelón), young male head of small livestock;
em balélo (m balelón), young female head of small livestock;
ol eléruē (el eleru), head of small livestock only a few days old;
ol óro (el orol), goat buck;
ol gíne (el gínedji), castrated goat buck;
en gíne (eń ginedji), she-goat;
eń gine eleboń, she-goat that has dropped young several times;
es suben eń gine, she-goat that has not yet dropped young;
olńbalelo l eń gine, male kid;
em balel' en gine, female kid;
ol meregésch (el meregeschi), ram;
ol gér (el gerá), castrated ram;
eń ger (ń gera), sheep;
eń ger eleboń, sheep that has dropped young several times;
es suben eń ger, sheep that has not yet dropped young;
ol balelo l eń ger, male lamb;
em balel' eń ger, female lamb.

233 311 [823] The far greater part of the steppes offers excellent pasture; only smaller or larger isolated stretches are quite unsuitable for this. The Masai know these precisely and scrupulously avoid them. What makes them unusable is first of all the occurrence of grasses that bring about digestive disorders and the lack of salt in sufficient quantities, through which a similar effect is brought about. In good pasturing places one [135] always finds salt licks. The rain water standing in a depression in the ground has leached out the very saliferous earth and, after evaporation, [825] has left behind a more or less strong, gray crust of salt. It is self-evident that one avoids those places about which the presence of the above-mentioned harmful insects is known. It is striking, however, that ticks are not feared at all.

361 233 When the pasture around the kraal has been grazed off, a change of dwelling is decided upon, which takes place as soon as a new pasture ground has been found by a few people sent out. Then there is activity in the kraal long before daybreak. After the cows have been milked, the cattle moves off as the first party. Then the herds of goats and sheep follows, and after these /177/ the calves. Young

/337 cont./

*539 *773 *171 *121 Biblical author merely inserted into the traditional framework of the primeval-age lawgiving the laws that were modified or had become necessary as a consequence of the sedentation, the changes way of life and outlook, with at the same time omission of the commandments that were lost for the same reason or pushed out of the favored position as a consequence of their reduced significance.

Some Further Points of Contact

In a mythical account the Masai show why dogs are regarded as unclean and live only on disgusting food; God himself condemned them to this.

*539 *773 *171 *121 • 231 In view of this, it seems noteworthy that the authors of the Jahve /Yahweh/ and Elohim doucments, that is, precisely probably the oldest sources of the Pentateuch, put into the mouth of God utteranees through which dogs are represented as disgusting animals. Thus, the Jahvist /Yahwist/ reports in 2nd Moses /Exodus/ 11, 7: And Jahve said to Moses: "But against any of the children of Israel shall not a dog point his tongue, from man to livestock, that ye may know that Jahve makes a distinction between Egypt and Israel." And the Elohim Document states, 2nd Moses /Exodus/ 22, 30 /sic; see 22, 31/: "And ye shall be holy men unto me, and ye shall not eat flesh torn off in the field; ye shall cast it to the dogs (1)."

1. Cf. also 5th Moses /Deuteronomy/ 23, 59 /sic; see 23, 18/ male whores = dogs. F. Hommel.

*539 *773 *171 *121 [184] Just as 'Ng ai punishes the Masai who transgress his commands by epidemics, so it is also Jahve's /Yahweh's/ nature to send plagues if the human beings otherwise do not want to submit to his will and complain about him. From the time before the lawgiving we know of the ten plagues by which Jahve forces the Egyptians to let the Israelites depart. Then later the wrath of God is turned against Israel. 4th Moses /Numbers/ 11 tells of a great fire in the camp at the place Tabera /Taberah/, as well as a great disaster among the people in Kibroth Hatthaawa /Kibroth-hattaavah/, the place of the graves of

124 Swahili. Many Masai in the area speak some Swahili, so
[191] using Swahili and a limited number of Masai nouns we usually could converse with Masai throughout the study area. Occasionally we had the services of interpreters.

123 These Masai regard visitors in their country with
[609] interest and guarded suspicion. The suspicion is greatest if they believe the visitors are representatives of the Government. After we had lived on safari in Western Masailand for some months constantly moving from place to place the Masai appeared to accept us as a harmless, neutral, and occasionally interesting phenomenon.

Our status with them was helped by our work
[231] with grass and animals. Above all else the Masai appear
[181] concerned with animal husbandry. They have a lively interest in wild animals, appreciation for domestic livestock that is almost reverence, and an understanding of the importance of grass. Our work on these things therefore seemed understandable. Beyond the frequent initial query: were we with the Government, there was never any question of why we were working there. The Masai appear to accept without question that white men are prone to the strangest behavior. Movie companies and some tourists fortify this conviction.

Their[i]
*233 livestock, described below, consist of herds of cattle,
• [231] sheep, goats and donkeys. The Masai way of life revolves around the grazing and water requirements of their livestock.

621
561 Their principal units of social organization, as they affect this discussion, are sections, age grades,
614 villages, and families. Clans have an important place
177 in ethnological discussions and in some areas they
178 determine matters such as water rights (Fosbrooke, 1948). Our impression is that throughout most of Western Masailand the concept of clans is of more ethnological than ecological interest. One basic reason for this is the effect of the Government administration in Western Masailand.

With the physical and social upheavels in both Kenya and Tanganyika from the 1880's through about 1920, the establishment of African District Councils (District-wide governing bodies), creation of the park and conservation unit, and various development projects, the clan and other social units have been greatly disrupted. Grant (1954, 1957) describes this effect in some detail for the Masai in the former boundaries of the Serengeti National Park.

[i] [i.e., the Masai.--Analyst]

595 and so on. The wife is given a specified number of cattle to keep in trust for her son, and she and the children also tend young animals in the herds.

342 These huts are about five feet high and of varying dimensions, but usually roughly square and 10 to 20 feet across. The door is very low. Just inside the door there is normally a baffle wall of loosely woven twigs. Beyond that there are often two or three rooms, each divided from the others by a low open wall of [231] [513] twigs. Young livestock are brought into one of the rooms and the others serve for sleeping and cooking. [352] [354] Usually the beds are platforms of twigs and grass covered by hides. The cooking fire is in a far corner and is very small, normally with three stones around it to support pots. There is no smoke hole in the roof. The outer walls and roof are an open mesh of wattle often interwoven with coarse grass and shrubs. Support comes from larger branches and small logs up to about six inches in diameter. The exterior and walls and roof, and the insides of the door opening are plastered with [184] [462] a mixture of mud, cattle dung, and short grasses. Hut design varies slightly from area to area. Constructing the huts is women's work. Men occasionally help in collecting larger trees and bushes.

562 eat meat from wildebeests and gazelles. When I shot an elephant near one boma the Masai women turned out in [252] force. They spent most of the day cutting off strips of [462] subcutaneous fat and some flesh. A few elders joined [825] the women in the cutting. Several Masai requested fat from a lion I had shot (which had been raiding their boma), but they said that their use was for medicine rather than food. We have records, therefore, of Masai eating (or taking to eat) wildebeest, Grant's gazelle, Thomson's gazelle, elephant, buffalo, eland, and kongoni.

Cattle are usually eaten when they die. Cows are rarely slaughtered, although bullocks sometimes are killed for food and prize ones are killed and eaten [562] by men at ceremonies. We have watched women picking up the remains after livestock have been slaughtered, and Millais (1920) spoke of Masai women eating offal and other remains of oxen or sheep after the men were through eating.

231 272 Bleeding of cows and sheep is accomplished by tying a thong about the animal's neck so the jugular swells, then shooting a partially blocked arrow into the jugular vein and catching the spurting blood in a gourd.

231 272 When they have enough blood, the thong is released and the small wound covered with mud or dung, and the animal runs off apparently none the worse for wear. The blood is drunk warm, or mixed with milk.

146 Although they are thin, the Masai appear adequately nourished, and they have great physical endurance. The Ministry of Health doctors told us that Masailand was the only part of East Africa in their experience where the children did not show signs of Kwashiorkor or the other diseases of malnutition that are so common with Africans. Gale (1960) noted that the greatest defect in the diet of the East Africans is lack of animal protein, but this is true of the Masai only in times of extreme drought.

291 [386] <u>Clothing</u>, <u>Jewelry</u> <u>and</u> <u>Utensils</u>: The traditional clothing of Masai men and women is an ochre colored cloak of cloth, usually gathered over one shoulder. Some wear (292) skins, usually of sheep. A cow hide is used for a rain coat. Most Masai men wear sandals made from heavy leather or old rubber automobile tires. Very little else is worn by either Masai men or women, except near missions where the women occasionally wear more concealing cloaks.

178 above made it difficult to amass large herds for any
*233 long period of time. The cattle numbers probably fluctuated greatly, depending on factors such as disease and drought. The English administration has provided excellent veterinary services, all but eliminating most diseases. They have provided water holes in otherwise dry areas to spread the grazing pressure. Predators have been killed wherever they
[721] molest Masai livestock. Cattle raiding has been considerably reduced, and in Western Masailand most of the raiding is by Masai augmenting their herds from neighboring tribes, rather than vice versa.

With the other natural limiting factors largely removed and no artificial ones imposed in their place there has been nothing to stop the increase in herds but the carrying capacity of their rangelands.

*233 In Narok District, for example, in April
• 231 1956 the cattle population was about 330,000 head (Dept. Vet. Services, 1958). By April 1958 the population had risen to about 378,000 head (Ibid.), and in May of 1960 it was reported at 450,000 head (Mann, 1960). This represented an increase of over 36 per cent in four years.

*233
• 231 In 1904 the cattle numbers in Masailand of Kenya were estimated at about 50,000, and there were an estimated 600,000 sheep (Simon, 1962). By 1961 the Kenya Masai had a population of 973,000 head of cattle, 660,000 sheep and goats, and a large number of donkeys, "at least double the quantity that their land will carry during normal conditions" (Glover and Gwynne, 1961).

*233
232
182 Range Management of the Masai: Grass is recognized by the Masai as being important to their livestock. But in general those in Western Masailand appeared to have surprisingly little appreciation of the types of grass that were preferred by their livestock or of the effect of varying grazing pressures on the grasses. There are Masai names for a number of the grasses. Yet many Masai in the study area only know a few of the more common ones. When discussing grass foods the Masai almost invariably say that the cattle eat grass, as do the wild animals. There appears to be little appreciation of the differing diets or well defined preferences exhibited by these animals (see below). When inquiring about the names or characteristics of various grasses the typical answer we recieved was to the effect that we were fundis (experts) on grasses, while they were fundis on livestock. They would then point out that in a herd of several hundred animals they knew

*233
*13
232
731
182

A several years' drought culminated in 1961, and as a result of the extreme overgrazing in Eastern Masailand, thousands of cattle and many Masai died. As was evident on the ground, and as clearly pointed out by many -- even veterinary officers (Waddington, 1961) -- the mortality was due to starvation on range depleted by overgrazing before the drought. There was plenty of water for the animals to drink. The mortality in the cattle of Eastern Masailand ran from 300,000 to over 400,000 head, and I was told that over 1,000 Masai starved to death also. In spite of this dramatic illustration, the Masai to whom I talked in 1962 blamed their difficulties on the will of God or the Europeans who appropriated their land.

*136
*233
• 231

Masai Livestock: The Masai cattle of Western Masailand today are a mixture of breeds with short-horned zebu (Bos indicus) predominating. The Masai highly prize longer horned animals, and occasional herds will have a massive-horned Hamitic Ankole bull. It has been suggested (Payne, and Masai, verbal) that before the rinderpest epidemic of the 1890's the Masai cattle were predominantly long-horned. The rinderpest epidemic wiped out most of these animals, and the short-horn zebu, with its greater resistence to rinderpest, took their place. The short-horn zebu was introduced from

*233
*136 Southern Asia by both Arab and Indian traders following
231 the Arab invasion of A.D. 669 and it is still spreading (Williamson and Payne, 1959).

The present cattle represent what the Masai have bought, traded, or stolen since the 1890's. Since these processes, especially the latter, are still going on, the cattle appear very mixed. One can even see an occasional Holstein among the mixed zebu in Masai herds.

*233
231
577
721 I should be pointed out, however, that stealing is a relative term. According to the Masai, all cattle in the world belong to them, or at least were created for them. It appears that in their way of looking at things, it is not wrong to steal if the object is a cow; they are merely rectifying an obvious administrative error. Doubtless also the excitement and danger involved in a raid appeals to bored moran who have been brought up on stories of the glories of warfare.

*136 Occasional prize steers will weigh over 1,000 pounds,
231
*233 but because of the animal husbandry practices the average weight of Masai range cattle is nearer 350 pounds. These animals require five to seven years to reach adult weight. The average liveweight gain per day is in the neighborhood of 0.3 pounds (Ledger, et. al., 1961). The cows will breed when about three and a half years old. These

*233
*136
• 231

same animals when removed from Masai care and put on good forage may almost double their weight and growth rate.

Masai goats are of the long-legged meat goat type described by Williamson and Payne (1959). The average liveweight of adult Masai goats is probably between 40 and 45 pounds. The largest we saw weighed at the Narok slaughter house weighed 44 pounds. They attain their maximum weight at around 18 months.

Masai sheep are a fat-tailed, coarse-wooled animal whose color varies but dark browns predominate. Adult weights average around 44 pounds, but with better feeding they may attain 100 pounds. The largest we saw weighed was 85 pounds. On good forage they put on a liveweight gain of about 0.12 pounds a day for about 18 months. On satisfactory forage these sheep can have their first oestrus at about 9 months of age (Williamson and Payne, op.cit.)

Large numbers of donkeys are kept by the Masai
[492] in addition to their other livestock. The reason given for keeping them is for use as pack animals when bomas are moved. Occasionally they are used for carrying fire wood when the sources of wood are distant from the boma.

*233
• 231 We had the feeling, however, that donkeys just as other
554 livestock are a measure of success and security, and regardless of the need some donkeys would be maintained.

*136 These donkeys are small animals whose weight
231 is probably less than half that of a wildebeest (i.e.
*233 under 200 pounds). They are quite independent. We often saw the small herds of donkeys leave a boma unherded and go to a water hole, then graze back to the boma. This practice probably would not be followed in areas where predators were common, but in the peripheral areas it appeared to be the rule.

178 Large numbers of donkeys appear to have been
231 the rule for some time. Joelson in a general discussion
*233 of East Africa in 1928 referred (p.61) to the "Masai, who graze immense herds of cattle, small stock, and especially donkeys..."

*233
182 Burning
232 The Masai burn grass whenever it is dry enough
824 to ignite. The reasons they give for burning include the following: It produces a flush of new grass that is particularly palatable, nutritious and easily available for their livestock. It clears the woody growth and makes new grazingland. It clears or reduces ticks, tsetse fly, and disease.

*233
*136
• 231

Of the ten species of grass which make up 90 per cent of the wildebeests' diet as calculated in Table 16, only two, Themeda triandra and Cynodon dactylon are also important forage for domestic livestock. Themeda triandra is excellent forage while Cynodon dactylon varies widely in its palatability for livestock (Bogdan, 1958; Heady, 1960). Themeda triandra rapidly disappears from overgrazed ranges. Cynodon dactylon, however, thrives on disturbed ground and is more tolerant of heavy grazing than Themeda. The other grasses which are important in the wildebeests' diet are rarely eaten by domestic livestock. On overgrazed ranges in the study area they become dominant after the grasses such as Themeda which are more palatable to livestock are grazed out (Heady, 1960; Talbot, 1960c). In general, these other grasses "are low producing plants of poor palatability [for domestic livestock, L.T.] and their dominance indicates poor condition ranges." (Heady, 1960:13).

Therefore there is direct competition between wildebeests and domestic livestock for only two species of grasses; one of these, however, is the most important single item in the wildebeests' diet. It also is one of the first grasses to disappear under heavy

*233
*136 livestock grazing. Consequently, overgrazing by domestic livestock
* 231 can seriously reduce the carrying capacity of rangeland for wildebeests, even though there is relatively little direct competition between them in terms of total numbers of grass species involved.

*136 (b) Other Ungulates: In addition to the
*125 wildebeest data, we have stomach sample analyses from 130 other animals of ten species: Thomson's gazelle, Grant's gazelle, topi, kongoni, impala, zebra, buffalo, dik dik, giraffe, and rhinoceros. We also have observational data from elephants, giraffes and rhinos whose food habits, unlike the plainsland grazers, are possible to identify from observation alone.

*136 The results of these studies show that each ungulate species has a preferred diet which is to a large degree complementary to -- not duplicating -- the diets of the other ungulates. These diets are maintained throughout the year, where necessary the animals traveling long distances to find their preferred foods at the preferred stage of growth. The diets involve different classes of food (e.g. trees, shrubs, forbs, grasses), different species of food plant within a class, and different stages of growth of the same food plant.

#136 been one overall accurate census of the region. Indirect evidence of increases in the numbers of smaller ungulates would come from overgrazing. The areas most heavily overgrazed are those grazed by domestic livestock. In Kenya the areas not available to domestic livestock do not show overgrazing, but in parts of Western Masailand in Tanganyika there is local overgrazing in such areas.

#13
• 231
#233

#136 As discussed above, the predation at its present level does not appear to be a limiting factor. In past years, however, the predator populations were far higher. Wild dogs are rare in the area at present. We estimated their population at between 75 and 150 for the entire Western Masailand. For years it has been the custom of white hunters and many game and park wardens to shoot the animals. Monty Moore, the game warden who lived at Banagi in the 1930's, killed every one he could, and told of one case where he killed 90 out of a pack of 92.

Lions were considered vermin until recent years and literally thousands were killed. As noted above, almost 300 were legally killed in the Mara between 1946 and 1948. Individual hunters such as S.E. White could and did

*13

UNGULATE BIOMASS

For calculations of biomass, we obtained the numbers of animals and their sex and age ratios as described above. The weight data from our own work and that of our cooperators enabled us to establish average figures for males, females, and various age groups in the populations and to use these specific weights -- instead of arbitrary averages -- to determine biomass.

Table 35 presents the yearlong biomass data for the study area. The actual ungulate habitat within the study area covers about 10,660 square miles. Of this, about 3,144 square miles are open grassland and 7,515 square miles are bush. There is a relatively low population of animals resident in the bush country, including elephants, buffaloes, impalas, waterbucks, giraffes, rhinoceros, and some topis and kongonis.

The yearlong biomass from these animals is about 3,000 pounds per square mile. The bulk of the wild animals are migratory, and these include Thomson's gazelles, wildebeests, zebras, elands, and some topis and kongonis. These animals spend the wet seasons in the open grasslands and the dry seasons in the bush. Domestic livestock, Masai cattle, goats, sheep and donkeys also graze the

Table 25. YEARLONG STANDING CROPS OF DOMESTIC LIVESTOCK AND WILD UNGULATES IN THE SERENGETI-MARA STUDY AREA

Type of Range	Approximate Area square miles	Animals	Approximate Yearlong Standing Crop pounds / square mile
Grassland, savanna, and bush	10,700	12 wild ungulates(2) 4 domestic ungulates(3)	30,200(2)
Bush	7,500	12 wild ungulates(2) 4 domestic ungulates(3)	23,300(2)
Open grassland	3,150	6 wild ungulates(2) 4 domestic ungulates(3)	46,800(2)
Savanna(1)	1,000 - 2,000	12 wild ungulates(2)	70,000 - 100,000(2)
Bush(1)	2,000 - 3,000	12 wild ungulates(2)	30,000(2)

(1) Ungrazed by domestic livestock, generally within about five miles of water.

(2) Fifteen additional species of ungulates are present in the area, but they are either smaller or rarer than the 12 included and their numbers are not known, so their biomass is not included. Therefore the biomass figures as given are low.

(3) Cattle, sheep, goats, and donkeys grazed by the Masai tribes.

*13 open plains during the wet seasons. Some of them follow
• 231 the wildlife into the bush country during the dry seasons,
*233 and some leave the region, moving to grazing lands in
*13 the adjacent highlands. For roughly six months each year the open grasslands support a biomass of about 93,545 pounds per square mile, and for the remaining six months they are virtually empty of ungulates. The yearlong average biomass, then, is about 46,773 pounds per square mile.

During the six dry season months the bush country supports a biomass of 37,549 pounds per square mile, made up of the migratory animals plus the few resident ones. The average yearlong biomass in the bush country is about 23,299 pounds per square mile.

*13 The overall average yearlong biomass, i.e.
231 the weights of the average wildlife and domestic livestock
*233 populations divided by the square miles of the area, has been 30,214 pounds per square mile of which 80.2 per cent is wildlife and 19.8 per cent domestic livestock.(1)

---

(1) These figures refer to conditions up to about 1960, when livestock was removed from part of the area in Tanganyika through changes in regulations affecting grazing.

*13 These overall figures, however, do not necessarily reflect the true carrying capacity of the landscape. Much of the area provides virtually no food for the ungulates, and serves largely as areas of transit, travel routes. Other areas, especially those within about five miles of reliable water supplies and those not grazed by domestic livestock, support extremely high yearlong biomass. In the realtively well watered savanna country midway between the vast open grasslands and the true bush the yearlong ungulate biomass ranges from around 70,000 to 100,000 pounds per square mile, and even in the bush country, within about five miles of water the yearlong average is well over 30,000 pounds per square mile. There is no evidence of overgrazing with these stocking rates.

*13
• 231
*233 The average biomass obtained from cattle, goats and sheep under native herding is about 11,000 to 16,000 pounds per square mile in the equivalent savanna, and 2,000 to 8,000 pounds per square mile in the bush. Under this degree of grazing intensity the habitat shows evidence of moderate to severe overgrazing.

*13 An even more striking comparison can be made with European cattle ranches in equivalent high savanna. In these areas, with careful management including fencing

GRAZING

*137 Domestic Livestock

- 231
*233

Domestic livestock show clear preferences for certain grasses in the study area (Heady, 1960; Talbot, 1960; and above). The preferences of cattle, sheep, goats, and donkeys largely overlap. Although goats are reputed to be browsers, in the study area they graze with the sheep and their preferences appear the same. When preferred grasses are not available livestock will resort to whatever plants are left, but before resorting to second choice foods they will seek out and eat

*137 most of the first choice ones. If grazing pressure is too great the preferred grasses will be eaten out and will remain only as occasional relic plants protected from grazing by thorn bushes and rocks. Heavier grazing pressure will remove second choice foods leaving only the least palatable plants and those protected by spines or similar growth.

*[136] Different species of wild ungulates have clear preferences in food plants also, as described above. Thus, by analysis of the grass composition of an area, it should be possible to determine its recent grazing history.

*137 Part of Dr. Heady's grassland research in East Africa
*114 involved this type of determination, and a summary of

Figure 67.

Themdea grassland grazed seasonally by cattle for one year and sheep and goats for about four years. The species composition has been changed, basal cover reduced, and since fires have been excluded by heavy grazing, shrubs are invading.

*137 *[136] by tsetse fly -- so must have been relatively open.

[101] [231] *[233] 1850-1890: This appears to have been a period of increased burning, expansion of the Masai into the lands north of the Serengeti up to the Mara Plains, and increasing numbers of livestock. The open grasslands reached their greatest extent during this period, and the area between the Serengeti Plain and the Mara became open grassland with riverine forest and scattered thickets, much like the present southern Mara Plains (Fig. 79a).

*134 *137 [101] The Masai apparently extended their grazing and particularly burning far up into the Mau Escarpment. Spectacular erosion can be seen over much of the Mau Escarpment north and east of the Loita Plain. Virtually no top soil can be seen over hundreds of square miles at the lower elevations, and where some does remain it may be 10 to 14 feet above the present ground level, on top of a pedestal of earth held against erosion by the roots of a few surviving cedar trees. Trees growing in the bottom of these erosion scars in 1960 were dated as being 50 to 80 years old which would put the period of recovery in the late 1800's at or after [101] the disasters of the Masai. During the period of dry years culminating in 1961 the Masai extended their

*137 similar growth invaded the grasslands. Subsequent burning, modified by the grazing of wild ungulates, has somewhat stabilized the invading thorn trees in a thin bush or woodland which fills the former open grassland surrounding the thickets, riverine forest and taller woodland. To some extent the invading thorn trees have been cleared from the flats near the watercourses. As described above, such areas tend to support hotter fires. Most of these areas did have Acacias since stumps are frequent.

• [234] [178] *[233] With the increasing numbers of their livestock, the Masai have tried to clear as much land as possible for pasture. Their extensive burning, plus elephant damage in the Mara area, has been rapidly reducing the woody vegetation during the past 20 years or so. Their burning has been restricting the range of the tsetse fly in the north. Yet while they are reducing the larger woody growth, the smaller growth such as Whistling Thorn is rapidly increasing on many of their grazing lands. On the Mau Escarpment their fire-created increases in grazing land at the expense of the cedar forest are being off set by expansion of the land covered by leleshwa bush, which invades overgrazed, underburned grassland in cedar forest areas in much the same way Whistling Thorn invades lower grasslands.

*13 [231] *[233] Also as the herds of domestic livestock have increased the entire area available for their grazing has become seriously overgrazed. Every area of tall grass plains available to the Masai has been overgrazed into short grass plains, weedlands, brushlands, or semi-desert.

The movements of the migratory wild ungulates through the area are strongly affected by the effects of fire and grazing. When the area south of the Mara Plains does not burn, the strip of tall dry grass provides a barrier for most forms of wildlife and the Kenya animals are effectively separated from the Tanganyika ones. During the pre 1890 period there was probably a much freer movement of wildlife through the then-open lands between the Mara and the Serengeti Plains.

The overgrazing-induced short grass plains have affected some animals' distributions. We have found that topi, for example, are limited to tall grass plains. Their present distribution in Western Masailand is precisely limited to the tall grass areas. Yet in the early 1900's White (1915) recorded them in the Loita Plateau, around and west of Loliondo, and east of the Guaso Nyiro River.

imbecility—or perhaps not remarkable, since nothing has been more characteristic of the half-century of European intervention in Africa than the slap-happy introduction of bright, well-meaning ideas by enthusiasts of all kinds, without any regard for their long-term consequences.

Anyway, vets controlled diseases, livestock multiplied and their hoofs and mouths destroyed the precarious grass cover of the plains. The result is that, except where the tsetse fly remains in control, the Masai are living in country poised upon the edge of deserthood. Some of it has gone over the edge, some hovers on the borderline, some has not reached it yet. And so pressure mounts upon those regions that are still protected by the tsetse fly.

Overcrowded people outside want to get in, overstocked Masai themselves want to take their herds where grazing is still rich and deep. If either succeed, unless they adopt very different methods, they will destroy those regions as surely as they have damaged their present inheritance. Agricolas and vets do not want to see these last remaining areas opened up without strict control. But governments are terrified of controlling anyone by what may be represented as harsh measures, and administrators have inclined to caution since the Masai speared to death a D.C. who was persuading them to sell some steers. So the matter, like many others, rests in a state of suspended flux, and everyone hopes for good rains.

III

Down on the Kenya–Tanganyika border, not so very long ago, there lived an Englishman who kept in touch with the world by carrier-pigeon. For three or four months of the year no vehicle could reach him, and even in the dry weather it was a long, hard, bumpy seventy-mile journey from Narok, where the road ends. The aeroplane has changed all that. An hour's pleasant flight from Nairobi brought us comfortably to rest beside a tributary of the Mara river.

First we flew over the Mau, that range of mountains forming the south-western wall of the Rift Valley. Covered with forests of cedars and olives and, higher up, of bamboos, the

Masai form of oath.

If a Masai man says something, and it is believed to be a lie, it is

[113] [1] A description of the operation was given in *The Veterinarian* (Stordy), October, 1900.

An important factor in the tribal system of the Masai is the presence of medicine-men whose duties are in general connected with the divination of future events, with the administration of drugs, and with the practice of witchcraft. There appear to be three grades of medicine-men, whose spheres of influence are divided into these three categories, but, for practical purposes, it is only necessary to consider the position of the first grade, represented by the person of the Laibon, or "Ol-oiboni," who is the Chief Medicine-Man of the tribe. The history of the Laibons is recorded in Mr. Hollis' book on the Masai, pp. 324–330, and it is unnecessary to enter into it here, but it may be mentioned that Mbatian, who died about 1890, and Lenana, his son and successor, acquired such great influence over all sections of the Masai that the position of Laibon came to be regarded by certain of the European officers who had not carefully investigated the facts of the case, as synonymous with that of a paramount chief. It does not appear, however, that the Laibons have ever attempted to assume a position resembling that of kings of native tribes, and the appointment by Government of Lenana, and, at his death, of his son Seggi, to the office of Paramount Chief of the Masai was, in fact, the result of a misunderstanding of the normal state of affairs which steps have now been taken to rectify.

The medicine-men. 791

The Laibon.

The prowess displayed by the pastoral Masai "Muran" in raids on surrounding tribes combined with their ceaseless activity in following this pursuit made their name dreaded throughout East Africa and hindered for many years the passage of caravans by the direct route from Uganda to the Coast. When eventually Europeans penetrated the highlands of British East Africa, they found the Masai with their flocks and herds scattered over a wide area. The story of how they were eventually concentrated in one reserve is told in Chapter III., but it is necessary to draw attention here to the effect which this concentration, combined with the introduction of veterinary skill and the cessation of raiding by and against them, had on the Masai. In 1904, before any administrative limit had been placed on the movements of the tribe, it was estimated that the Masai possessed 50,000 head of cattle. In 1911, 80,000 head were said to be in the Northern Reserve alone, and this estimate was subsequently increased to 200,000 when the mobs which were attempting to move south had been more thoroughly examined. 50,000 head of cattle moved south in 1911, but in the final move from Laikipia in 1912 and 1913, nearly 200,000 head were counted. By March 1914, all the Masai herds being located in one reserve, the total estimate for the tribe had leaped up to 600,000 and the number of cattle in the possession of the Masai is now supposed to be in the neighbourhood of three-quarters of a million. These latter figures are the estimates of Mr. R. W. Hemsted, who has been the Officer-in-Charge of the Masai Reserve for more than five years, and, in spite of the objection taken by the Masai on superstitious grounds to the counting of their stock, they must be taken to be substantially accurate. It is scarcely reasonable to suppose that the earlier figures, particularly the first two mentioned, are in any way so exact, but, after allowances have been made for this, it is obvious that an enormous increase in stock has taken place. In addition to this cattle, the Masai are said to possess something over two million sheep and ten thousand donkeys. The stock-carrying capacity of the 14,600 square miles included within the borders of the Masai Reserve, is limited to a certain extent by the aversion shown by the natives to grazing cattle in areas which from past experience they believe to be infected by disease, and, in parts of the Reserve, land which appears to be admirably suited for stock remains untenanted on that account, no attempt having been made to utilize veterinary skill and treatment in rendering their cattle immune from the disease. With the exception of these areas, the Reserve may fairly be said to be stocked to its fullest capacity, and the Masai, who number all told about 43,000 souls, possess capital to an average amount of rather more than £110 per head. They are thus, in all probability, the richest uncivilised tribe in the world. It is not surprising, therefore, considering their conception of manual labour as degrading, the limitations of their personal requirements and their immense wealth in livestock, to find that they are unwilling to work for wages as do the members of other tribes. Their national diet is meat and milk, both of which they have in plenty, and they can procure any other food or commodity they desire by sale or barter of stock.

The Masai as a stockman. 233 [921] [648]x [232]● [131] [161] [934] [971] [961]

181 464 561 **Employment of the "Muran."**

More particularly does this argument apply to the "Muran" who are of the ages at which the members of agricultural tribes are expected to work. No suitable employment has as yet been found for them as a body, though a small number have been known to reside as herds on the farms of sympathetic European stock-owners who are willing to pay a high wage for a modicum of service and who will not insist on their performance of any uncongenial labour. A very few also have proved efficient in the Police Force and K.A.R., while numbers of them, employed in the capacity of native levies have frequently proved of assistance in punitive expeditions against other tribes,* but for the majority, all attempts to find a suitable form of employment have failed, and they continue to lead their idle life in the Reserve, where their attitude is one of conceited conservatism combined with opulent apathy. The discipline formerly necessary to their existance as a fighting race is rapidly falling into disuse, and the good qualities they once possessed are fast deteriorating. Many of them have confessed to a feeling of boredom with their idle life but few have had the moral courage to change it for one of labour. This manner of existance is having a disastrous effect both physically and mentally on the Masai as a tribe, and it is stated that the average height of the "Muran" has decreased by three or four inches during the last fifteen years.

181 232 233 197 **Masai conservatism respecting cattle.**

It has been said that the Masai Reserve is already, with certain reservations, stocked to its fullest capacity. Mr. Hemsted has estimated the natural increase in cattle at 15 per cent. or approximately 100,000 per head per annum. It follows therefore, that a similar number must be disposed of or perish annually; but this is an argument which does not appeal to the Masai. They have not only shown a marked reluctance to sell their stock, but they have made no serious attempt to accept the assistance of science in improving the grazing conditions of their country, and, being satisfied as a result of the few experiments they have made that the class of stock they possess—a small, degenerate, in-bred animal—is best suited to withstand the ardous conditions prevailing in the Reserve, they are unwilling to permit a cross-breeding with pure-bred or grade stock which might materially increase the value of their herds in the world's markets, and which would, by the introduction of fresh blood, obviate the ill-effects of in-breeding which has been rendered necessary by the cessation of raids. The wealth of the Masai, therefore, is turned to no good purpose; their style of living does not change; they are still content to live in low buildings constructed of poles, grass and mud, in conditions of filth that defy description; and, although an improvement has been noticeable in recent years, they have shown no great desire to utilize their wealth in the purchase of imported articles and in the improvement of their diet.

623 561 **Councils of Elders.**

Another aspect of the character of the Masai "Muran" which deserves consideration is the disregard which they evince for the authority of their own native administration as represented by the Councils of Elders. These Councils exist according to native custom, but have never been in the past, nor are they now, efficient to enforce the decisions they may give in respect of the young warriors. It may be said that serious crime in the Masai Reserve is rare, and that there are not more than three or four cases on record, since European administration was established, when the attitude of the "Muran" gave cause for anxiety and in no one of these cases did a disturbance of such magnitude occur as to render necessary a recourse to armed force to quell it. Politically, the Masai have remained loyal to the British Government since they first encountered it, and except for isolated instances where certain sections attempted to help the allied cause and to increase their herds by the despatch of raiding expeditions against German territory, their conduct throughout the trying period when the war in East Africa was on their borders was exemplary. Nevertheless, a catalogue of the misdeeds of the Masai will show a not inconsiderable number of instances

[674] **Crime in the Masai Reserve.**

648 674

---

* The Masai have rendered assistance in the capacity of native levies on the following occasions:—

(1) Nandi Expedition, 1899. 40 Muran.
(2) Nandi Expedition, 1900. 400 Muran.
(3) Maruka Patrol, 1902. 300 Muran.
(4) Tetu Operations, 1902-03. 300 Muran.
(5) Irissi Patrol. 490 Muran.
(6) Kabwaren Patrol, 1904. 100 Masai and Nandi.
(7) Sotik Expedition, 1905. 400 Muran.
(8) Kisii Patrol, 1905.
(9) Nandi Expedition, 1905-06. 600 Muran.
(10) Present Turkana operations.

Reports on the work of these levies have on the whole been highly satisfactory, except in the present Turkana operations where it is doubtful if the pastoral Masai have been used, and in the Kabwaren patrol, where it was found that the Masai spearmen were of little use against the Nandi in forest country.

permitted to take their cattle to the Kinangop Reserve, but, although the Masai living in the Loita Plains were informed that they themselves might go to Kinangop, they were forbidden to take their cattle with them for fear of infecting, with East Coast fever, the stock belonging to the European farmers through whose lands they would have to pass, and of carrying this disease to the Northern Reserve. 648* 31 166 561

By December, the Northern Masai, with 10,000 cattle but unaccompanied by their principal chiefs, Masikondi and Legalishu, had moved to Kinangop, but the ceremonies were commenced prematurely, for Lenana, on hearing that the Southern Purko might not take their cattle with them, withheld his sanction, which is necessary, according to the custom of the tribe, before a start can be made. On January 14th, 1910, he sent orders to Kinangop for the warriors to proceed with their cattle to the Southern Reserve in order to hold the ceremony at Ngong. At the same time he appealed to the Governor and pointed out that, unless his authority were recognized and his instructions obeyed, he feared a disruption between the two sections of the tribe.

On February 2nd, Sir Percy Girouard held a meeting at Nairobi, at which were present Lenana and those elders of the Northern Reserve that were taking part in the ceremony on Kinangop. Lenana made a direct appeal to the Governor, and stated that the condition of affairs which had arisen since the last E-Unoto ceremony, whereby free inter-communication between the two sections of the tribe had become impossible, was gradually but surely disintegrating his authority, a matter of great regret both to himself and to his people. It was, he explained, an unheard of thing that there should be two ceremonies for one section of the tribe, one on Kinangop and the other at Ngong, and, since the Southern Masai were forbidden to take their cattle to Kinangop, he desired the Northern Masai to proceed to Ngong to hold the cermony there. He further stated that it was his most earnest wish that all the Northern Masai should move from Laikipia and inhabit the proposed extended Southern Reserve. The Governor informed Lenana that he could not sanction the move of all the Masai without consulting Masikondi and Legalishu, but, as regards the ceremony, he was quite willing that it should be held at Ngong if that was Lenana's wish and if he could arrange matters with the people concerned. The Masai elders then proceeded to Lenana's kraal to discuss the matter with him there, with the result that they returned to Kinangop, and, having collected their cattle, proceeded with the warriors to the Southern Reserve. It was, fortunately, unnecessary for the Government actively to intervene in support of the Laibon.

Meeting at Kiserian.

On February 24th, 1910, a second meeting was held at a camp known as Kiserian, close to Lenana's kraal near Ngong, with the Masai. At this meeting there were present, besides Lenana, Masikondi and Legalishu, respectively the senior elder and the spokesman of the senior warriors (who are generally referred to as the two chiefs) of the Northern Masai. These two representatives of the Northern Reserve not only agreed to the suggested move but expressed themselves in favour of it. It was accordingly proposed to carry it out as soon after the rains had commenced as practicable. 648* 31 166

The preliminary move.

Mr. Collyer, the District Commissioner of the Northern Reserve, was appointed Special Commissioner for the move, and, as several Provinces and interests were affected, he was directed to correspond with the Secretary for Native Affairs, who was to arrange the details, and submit recommendations for the displacement of the white settlers from the Southern Uaso Nyiro.

Everything went well. The majority of settlers were public spirited enough to consent to the Masai passing over their farms, and four separate routes were arranged. Special officers were deputed to accompany the mobs of cattle and a survey was commenced on Laikipia for farms to which the settlers from the Southern Uaso Nyiro might proceed.

In April, gastro-enteritis, which for some time past had been prevalent all along the line from Naivasha to Kisumu as well as in the northern Masai Reserve, broke out among the Masai herds in epidemic form. It is possible that this had [232]

*648
311
166
[282]

something to do with the readiness of the Masai to move, for their methods of quarantine are to quit foul ground and drive their herds on to fresh pastures. Be that as it may, the Masai started towards the middle of April of their own accord, and before the Government was really ready, those from the extreme north of the reserve pressing south, and those on the southern boundaries leaving the reserve by the routes that had been arranged. The drought may have expedited their movements, for no rain had fallen in the Northern Masai Reserve whilst there had been a plentiful quantity on the Loita Plains, on Mau, and near the railway.

The Move Suspended.

On April 20th, 1910, a telegram was received from the Secretary of State ordering the move to be suspended and before the end of the month, steps had to be taken to send the Masai back to their reserve. The Secretary of State's telegram was followed by a despatch, dated April 22nd, 1910, intimating that, inasmuch as the agreement signed in 1904 was solemn and binding, it could not be cancelled without the clearest proof that the proposed agreement was in accordance with the wishes of the Masai and especially of the northern section. A document must be procured of equal formality with that of 1904 and must be signed by an equally representative body of Masai. Owing to the severe form which the cattle disease had taken, it is probable that the move could not have been undertaken in any case for fear of infecting the stock on European farms and in the Loita Plains, and this was made the excuse for the postponement. But the Masai were neither willing nor, indeed, able to remain in their reserve, for there was very little grazing owing to the drought and the ground was foul; and before many weeks were past, between twenty and thirty thousand cattle had been driven across the Northern Uaso Nyiro. Permission was afterwards granted to the Masai to occupy the 200 square miles between the Rivers Nyiro and Nanyokye.

The Meeting of May 30, 1910.

On May 30th another meeting was held at Ngong, and a provisional agreement was entered into between the Governor and the Masai, according to the terms of which the tribesmen, being satisfied that it was to their best interests that the Masai people should inhabit one area, and not be divided into two sections, as must arise under the treaty of 1904, agreed to move from Laikipia to the Loita Plains, when the Governor should notify them. There were present, as representatives of the Masai, Lenana, Masikondi, and Legalishu, Saburi (whose position in the Southern Reserve was analogous to Masikondi's in the Northern Reserve), the heads of clans, *i.e.*, the principal elders, of the Northern Reserve, and the spokesmen of the senior, the junior, and the coming age-groups of warriors. The Governor was supported by Messrs. Hobley and Lane, Provincial Commissioners, Mr. Combe, Crown Advocate, Mr. Hollis, Secretary for Native Affairs, and Mr. Collyer, the District Commissioner of the Northern Reserve. The Rev. Dr. Scott was also present as an independent witness. The agreement, which was entered into by the Masai of their own free will, was translated and fully explained to them. There was, however, one dissentient voice, and, during the discussion which preceded the signing of the agreement, Legalishu said he did not consider the new area large enough. The Governor informed the Masai that the move, if it was to take place at all, must be a voluntary one, and he asked Lenana, Masikondi, and Legalishu to depute representatives to visit the country with Mr. Collyer. He further promised the Masai that, if they did not wish to move, they need not do so, and that if they did move, and the area was found to be too small, the country across the Mara River towards Kisii would be included in their territory. Before a final agreement could be entered into, the return of the party that would go and inspect the land would be awaited, and their report considered.

Mr. Collyer's visit to the Loita country.

Mr. Collyer spent two months in the Loita Plains, on Mau, and Ngatet, and in the Il-Melili country. The two men from the Northern Reserve who accompanied the party were both nominated by Legalishu, and, when they returned to Laikipia in August, they reported that the proposed area was too small, that there was an insufficiency of water, and that the Sotik would steal their cattle. This report was accepted by the chiefs and elders of the northern section, and a large gathering, led by Masikondi and Legalishu, met at Rumuruti, on August 27th, 1910, to

It is possible that much of the mortality attributed to East Coast fever is really the result of a disease known as heart water, which is described as a tick-borne disease, very similar to East Coast fever. There is as yet no evidence to support this idea. [illegible] 648* 231

East Coast fever appears to be the only cattle disease which the Masai really fear, and is, in fact, the disease which causes by far the highest mortality among their herds. Nevertheless, they have not come forward very readily to make use of the cattle dip which was erected at Ngong in 1914, and it is evident that, in addition to the superstition which prevents them from taking advantage of such an innovation, they are also too slack and listless to go to the trouble of making the treatment a matter of regular routine. In time, however, it is to be hoped that they will come to appreciate more fully the immunity which dipping confers upon their stock, and, when this realisation has been arrived at, it will follow that large tracts of otherwise suitable grazing areas will become available within their reserve for them and their stock, thus tending to relieve the congestion which is now noticeable in those parts of the reserve which are considered by the Masai to be suitable for their cattle. [181]

(E) Foot and Mouth Disease.

Foot and mouth disease has not given serious cause for anxiety in the Masai Reserve. An outbreak was reported in June, 1917; and in February, 1919, it was said to be very prevalent in the majority of the villages situated in the Narok and Mara districts. Accordingly, in that month, the Chief Veterinary Officer prohibited the removal of sheep from the reserve.

The direct mortality from this disease is slight, but it very seriously affects the milk supply, and indirectly it causes a certain amount of loss, as infected animals, being in a weak state, are unable to move about sufficiently to obtain the necessary and adequate grazing, and, as a consequence, they may die of starvation.

The disease was reported in May, 1918, to have practically died out.

(F) Rinderpest.

Rinderpest has been enzootic in the Masai Reserve for many years and the majority of adult Masai cattle are immune. It was rife in the Northern Masai Reserve from 1910 until the completion of the move in 1913, and several outbreaks in both the Northern and Southern Reserves were reported between November, 1912, and January, 1913.

Anti-rinderpest inoculation was carried out where practicable and a large number of Masai cattle were thereby protected, with the result that the mortality was very low.

For the next five years rinderpest lay more or less dormant, but it became unusually prevalent early in 1918, and heavy mortality ensued among the calves, of which it was estimated that about fifty per cent. of the annual increase succumbed.

The Masai have proved to be opposed to the treatment of their cattle by inoculation against rinderpest, as they prefer that immunity shall be obtained by the natural process of the survival of the fittest. [32] [177]

(G) Tsetse Fly.

During this tour undertaken in October, 1911, by the Director of Agriculture, accompanied by Messrs. Hill and Chaplin, the Director of Public Works and the District Commissioner, South Kavirondo, no signs of tsetse fly were seen along the route traversed, and the cattle met with did not appear to be troubled by the ordinary biting fly. On a previous visit the Director of Agriculture had noticed a number of "Stymoxys," and he stated that this fly was fairly common all over the Protectorate, but that so far as was known it did not carry any cattle disease. Tsetse by the Director of Agriculture.

649*

In June, 1911, the Provincial Commissioner, Naivasha (Mr. Leys), remarked that no tribes in the Naivasha Province with the exception of the Masai and the Uasin Gishu Masai were in a position to pay an increased hut tax. Mr. Leys would very much like to see a cattle tax imposed on the Masai instead of a hut tax.

On the 21st of March, 1912, a circular was addressed to Provincial Commissioners asking for their views on the possibility of increasing the direct taxation of natives in any part of the Protectorate.

Mr. McGillan, then Provincial Commissioner, Naivasha, replied that the Masai were increasing rapidly richer owing to the enormous increase in their stock, which increase was largely due to veterinary advice coupled with the privilege of free trade. He stated that the increase per annum in Masai calves was now 50 per cent. greater than in years past. The Masai could certainly stand a large increase in their taxes, and he advocated the imposition of a heavier tax as being only a fair demand in return for the immense assistance they had received from the scientific knowledge placed at their disposal by the Government.

Mr. Ainsworth considered that pastoral tribes in reserves should be subject to either a cattle tax, or a grazing tax, or a cattle house tax. If a cattle tax, he suggested collection at the rate of one rupee per cow per annum, fifty cents per bull or ox, and six cents per sheep or goat; if a grazing tax, one rupee per free acres; and, if a cattle house tax, eighty cents per head of full grown stock per annum (sheep and goats not being taxed), together with a tax of Rs. 3 on each House living in huts over and above an allowance of two Huts per 50 head of stock. He quoted the case of the Uasin Gishu Masai who had about 20,000 head of big stock in North Kavirondo district, whose population was about 3,000 souls and who paid taxes in all amounting to Rs. 2,400 only. He considered the Masai in the Masai Reserve to be a glaring instance of the necessity of a revised form of taxation in connection with pastoral tribes.

Mr. Tate considered that a native livestock tax was justifiable because (1) the enormous herds in the hands of pastoralists was largely the result of the Pax Britannica, brought about by the expenditure of money on the part of the Home Government; and (2) costly experiments had been and were still being made for the benefit of stockowners in the Protectorate, part of the cost of which it was only fair to ask the native stockowners to reimburse since they profited enormously by the results of these experiments. He considered that a tax of one per cent. per annum on all stock was the simplest and would be readily understood by the natives.

Mr. Hollis was in favour of the imposition of a stock tax on the Masai. He mentioned that there was nothing in the system of taxation then in force which affected the stockowners, who were the wealthiest natives in the Protectorate. There were numbers of persons belonging to the pastoral tribes on whom the incidence of the hut tax did not fall fairly, for, though they often possessed many thousands of pounds worth of cattle and occupied vast areas of grazing land, they inhabited only one or two huts and paid accordingly.

In February, 1913, Mr. Hemsted represented that the present form of taxation on the Masai was unsatisfactory and inadequate but he put forward certain objections to the imposition of a cattle tax. Such a tax would be difficult to assess, as the same owners usually kept their cattle in different villages; it would create a great deal of dissatisfaction, as all natives disliked having their cattle counted; the revenue accruing would be subject to large fluctuations; and it seemed hardly fair to impose such a tax only on the Masai.

He would prefer to see the introduction of a poll tax of Rs. 10 on each adult male, together with a further tax of Rs. 10 to be utilized in improvements directly benefiting the Masai. Such a tax would be easier to collect and would tend to check the unauthorized movement of Masai. It would bring in some £8,000 or £7,000 annually.

[illegible]

698*
231

It is hoped, in time, as after the conditions in the Maori Reserve as to render their cattle immune to East Coast fever, good steps are now being taken to establish a branch veterinary laboratory at Rotorua where a more thorough investigation will be made into the characteristics and peculiarities of the diseases to which Maori cattle are subject.

698*
231
[232]

One of the difficulties which will have to be met, after the requisite staff has been obtained, is, again, the conservatism of the Maori. They consider the stock they now possess to be better suited to the reserve than any other, and they prefer to breed immunity to disease by letting a disease run the course rather than by procuring immunity through treatment or the application of veterinary science. It will require perpetual perseverance to ensure the performance of a continuous treatment of cattle such as dipping, the Maori themselves being too lazy and loftier to possess the knowledge necessary to help themselves in the matter, and an attitude of passive resistance to all that, from past experience, can be expected of them. In spite of such difficulties, however, it is possible to hope for an improvement in the stock conditions of the reserve which will eventually enable not only certain selected areas to be utilized, but will also render the Maori reserve free of a danger to the stock industry of the Protectorate.

312

A great deal can still be done in improving the watering and grazing properties of the area. The reserve is on the whole by no means badly supplied with springs and rivers, but many of these are practically useless for watering large herds of cattle owing to their inaccessibility or to the unsatisfactory nature of the approaches to them. Springs frequently rush down a hill-side to disappear into the ground within a few yards of the foot of the hill, and small springs become so trampled that it is impossible for cattle to drink at them. The ground becomes swampy, the supply of water gradually decreases, and at times the spring becomes extinct.

A peculiar feature of the Maori Reserve is that the large rivers flow within a few miles of each other, frequently through dense bush or forest country where there is no grass available for cattle and their condition is thus materially impaired. The Uawa River, Uawa Marsh, Hyslop and other considerable streams rise close together on the Rua and flow through broad glades practically parallel to each other until they eventually meet and thence flow through a deep gorge. But the western portion of the reserve possesses this advantage: all the large rivers have their sources at a considerable altitude of from seven to nine thousand feet, and it would be an engineering feat of no great difficulty to conduct water from these rivers into the low-lying grazing areas at the foot of the hills, some two thousand feet below. This project has been much under discussion and may be expected to eventuate, in common with other development schemes, when funds and staff are available. The dams which have been started across certain of the streams have not proved the success it was hoped, as they are liable to damage by floods and are continually requiring labour and expenditure for repairs, but the provision of pipe-lines and troughs seems to offer every prospect of a solution of the difficult problem of rendering the numerous grazing areas in the Lake Plains capable of being utilized at all times of the year to carry as much stock as their acreage will hold. There is no doubt that when these water-works have been constructed any shortage of grazing for the amount of stock now in the reserve will have ceased to exist.

698*
231
[232]

As a direct result of these disabilities of disease and shortage of water and grazing the Maori have maintained that the kind of cattle they possess is better suited to the conditions encountered in the reserve than any imported grade-stock. In this matter also their conservatism comes into play, but it is probable that, in this case, their contention is supported by fact. A pure-bred bull was recently purchased for use with the Maori cows in an attempt to procure a better and more marketable kind of stock, but this animal died before sufficient evidence had been obtained to prove or disprove the Maori contention, and the problem has still to be dealt with. The Maori cattle are undersized and in bad, and present in their existing state no prospect of becoming of value to the outside market. The potential asset to the Protectorate represented by a capital of 711,000 head of cattle, with an annual increase of about 40,000 head, is thus wasted, and the most

Kenya

Protecting Lost Cattle and Sheep.—If during the day cattle or sheep stray and cannot be found before nightfall, the following interesting ceremony is performed. There are certain men and women (they are not necessarily anything to do with medicine men or witch doctors), who have the power to protect straying cattle, and as soon as a herdsman discovers that some of his animals are lost and cannot be found before dark, he sends with all haste to one of these individuals. If possible the messenger should be a small boy, and he takes with him the staff that the herdsman of the lost cattle was carrying at the time. This staff is handed over to the person who is to perform the protecting ceremony, which is as follows:—The staff is taken and tied up with a leather thong removed from the "Protector's" waist, and is then placed at the head of the "Protector's" bed until the following morning. As an alternative, if there is no staff available, a cinder is taken from the fire and is placed in a cooking pot, the mouth of which is then covered with a skin dress belonging to the "Protector," and the skin dress tied down with the leather thong. In either case, while the tying is being done certain fixed formulæ are uttered by the "Protector." These may be translated as follows: "I tie the hyena's mouth," "I tie the lion's mouth," "I tie the leopard's mouth," "I blind the thief's eyes," etc. Once this ceremony is performed the lost animals are considered safe from all dangerous animals and from thieves. In fact, even the owner would pass right by them and not notice them, for they have become invisible. 233 789

Next morning the animals are "released" by the "Protector" and the owner can go out and find them at once. There is no fee paid to the "Protector" for performing this ceremony, but he (or she) should be given a little snuff. [431]

[illegible] same "Protectors" is sent for to perform a "driving-out" ceremony. All the cattle and sheep of the infected village are brought together into the cattle enclosure and a ceremony called "*Chomo tomanangiaku*" is performed. The "Protector" selects a young bull and a young heifer of about the same size and of the same colour (these two animals must be of a single colour and not pied or spotted in any way). He also chooses a small boy and a small girl. He then instructs these two children to drive the two animals slowly right round the outside of the enclosure and back through the entrance to the cattle again. This "going round" ceremony is accompanied by appropriate sentences by the "Protector" bidding the disease depart, and the ceremony ends. The "Protector" is given beer as a fee. After such a ceremony any cattle disease is supposed to die out quickly.

Preventing Mating.—Among the Masai it is a common custom to put a special shield on to bulls to prevent indiscriminate mating. This shield consists of a square flap of leather which is fastened just behind the animals' forelegs by thongs which come up over the ribs and are tied in the region of the animal's back. This practice is especially common when cattle from several villages are being herded together during the day. Then when the cattle return in the evening to their respective 233 232

233 villages the shields are removed to allow mating to take place with the owner's
232 own cows. The same method of preventing mating is used with rams, but to a much lesser extent. If a man has several good rams he keeps shields on a few of them at a time in order to use his rams in rotation.

233 *Blood-letting.*—Among the Masai, blood is a staple article of diet. It is either
[262] drunk hot and fresh, or cooked with bits of fat and meat into a "black-pudding," or else mixed with fresh milk and allowed to curdle.

In order to obtain blood every sheep and every head of cattle is bled at intervals. Cattle are bled by one method and sheep by another. In the case of cattle, the animal is seized and held, and a thong is then tied round its neck until the vein at the side of the neck swells up under the pressure of the blood. The vein is then
[413] punctured by means of a special instrument which may be termed a "blood-letting arrow." The blood-letting arrow consists of a small stocky shaft into the end of which a *small* flat blade is inserted. This blade has a curved edge and is very sharp. This arrow is used with a special bow which is always small and usually very roughly made. The *arrow* is not shot from a distance, but *placed against* the swollen vein. The bow string is only pulled back very slightly and when released drives the arrow just far
[415] enough to open the vein. The blood is caught in a gourd and the animal released.

Sheep are bled by a different method; the animal is held and a small incision is made just above one eye and blood drawn off.

262 *Meat-feasts.*—Young men and old alike indulge in frequent meat-feasts, meat
[20] being a staple article of diet. No men may eat meat inside the villages, so meat-feasts take place either in special huts built at a little distance from the villages, or in a cave if there is one near-by.

There are certain rules and regulations concerning meat-feasts, as follows :—

(1) No man may eat meat that has been touched by a woman.

[231] (2) No Masai man may slaughter cattle himself. In every case a man of the
[563] Wanlorobo tribe must be called in to kill the animal, and he must be rewarded by being given a part of a fowlog.

(3) The neck, stomach and some of the intestines are always given to the women, who may come and fetch them. The lowest must be given to the man to whom the slaughtered animal belonged.

(4) During a meat-feast, some at least of the feasters must sleep in the hut or cave where the meat is, and it is usual for all to do so. If by any chance the fire should go right out in the course of the night, it would be considered a very serious matter indeed. In such a case no one inside the hut may go out by the normal entrance, but must break through the walls (in the case of a cave they must break through the brushwood screen which is invariably built across part of the entrance to the mouth of the cave), and all the meat that is left over must be deserted and left to the hyenas. The breaking of this rule is said to result invariably in the death of the miscreant.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

233 of cattle to a family (*kishomi*) in 1948 was between 100 and 200 head. There
[171] appears to be no such system as the Nandi *kaptic* or Kipsikis *kimanahan*. (See above, p. 21.) Milking is done by girls and women into gourds; the calf is allowed
[234] to suck, and if it dies the skin, sometimes stuffed with grass and called *ol-kutu*, is presented to the cow at each milking. The milk yield is about three pints a day. Cattle are bled in the same way as by the Nandi, with a blocked arrow, *ol-yoret*, shot into the jugular vein, and the blood is caught in a gourd. Sheep also are bled. Cattle are branded with marks on the rump or flank which indicate the owner's clan or sub-clan, with sometimes a private mark as well; the ears are also clipped for the same purpose. Salt for cattle is obtained by driving the herds to a salt-lick,
232 *em-bolioi*. The Masai are said to have effective remedies for diseases of cattle, but their efficacy has never been enough to prevent heavy loss during epidemics of rinderpest and pleuro-pneumonia.

Donkeys

492 The Masai keep large numbers of donkeys (*i-sirkon*, sing. *o-sikiria*) which are used for carrying their goods when they move house (*idur*). Donkeys are marked by slitting the ears in different ways.

The Status of Cattle

422 The status of cattle as regards ownership is uncertain. Merker says that warriors may own cattle; Thomson says they may not, and on such a point the statements of a traveller are open to question. Fosbrooke says that they may.[6] But further investigation of cattle as property, and of their status in the light of ritual value is required.

Inheritance of Cattle

492 There does not seem to be any clear account of the rules which control the [illegible] among his sons. The guiding principle is that the eldest son of the senior wife gets the largest share, inheriting not only the cattle given in trust to his mother, but also those which his father had kept for his own use. Inheritance is affected also by the "gate" (*kishomi*) arrangement in the kraal[7] for cattle may not pass from one side to the other. If a wife on the left side dies without sons, her cattle may not go to a man on the right side so long as there are any sons by other wives on the left side. This subject also needs further investigation.

Grazing and Water Rights

423 Land is not owned by individuals, but by the sub-tribe (*ol-osho*), and grazing rights are acquired by residence. Water rights are controlled by the clan. In the old days, when the Masai occupied new territory, each warrior, according to tradition, claimed a well, spring, or water-hole on behalf of his clan. Individual rights over water are thus ruled out by tradition, and the senior member of a clan living at the water decides, after consultation with other clansmen, the order in which people take their cattle to water. But a Masai when actually on the move with cattle may claim, and must be given, priority over local cattle at any well or spring. Where water is plentiful, however, as in a river, possession is communal.

Division of Labour

592 In a purely pastoral society like that of the Masai the expression "economic
593 unit" has little meaning, but so far as it can be said to exist, it is the family. It must be remembered, however, that the normal practice is for families to be divided between the father's kraal, *enk-ay*, and the warriors' kraal, *e-manyata*, and that the

recovery from their pains. Mbatyan earned outstanding merit through the discovery of a protective vaccination against lung disease of cattle. According to the corresponding accounts of Zendeo and four old Masai, Mbatyan, several years before his death, had already prophesied the appearance of rinderpest that did not take place until after it and the subsequent subduing of the Masai by Europeans. In the outward appearance of this man nothing divulged his power. On a thin, average-sized figure sat an ugly head whose face was disfigured more particularly by the lack of one eye -- allegedly a birth defect. This latter circumstance led to the origin of the legend that the chief must always be one-eyed and that the father should destroy in childhood one eye of the son later following him. The face was even more repulsive because of a scanty, slightly gray full beard.
[826]
[302]
That is, in contrast to the other men, neither the ol oiboni nor the el goiatek and el kiborón mentioned farther below may pluck out their beards, because they would lose their supernatural power through the removal of the beard hairs.

791
621
[361]
[595]
[623]
The chief's village consists of a large number of kraals lying close together, several of which serve as the dwelling of the ol oiboni with his numerous wives. Mbatyan had about 200 wives; the still young Zendeo has only 20 of them. No strange man may enter these dwelling kraals of the chief and his wives or appear in their immediate vicinity. Close by are found the rest of the kraals, one of which is intended for conferences and receptions and in which a few older men close to the chief as helpers and advisers (el duñganak oirorié ol oiboni) live with their families, whereas the others are occupied by warriors who form the defense of the village and, on the marches of the chief, his bodyguard. In his last years of life, when Mbatyan was mentally disturbed, he often spent months on the open steppes in a small hut made of branches, around which the warriors accompanying
791
576
609
him camped in a large circle. The ceremony in the chief's camp is very simple. One of the men wandering about idly in the village leads the newcomer into the conference kraal, where he waits for the chief. As soon as the latter appears, the stranger

233 /161 cont./ The cattle are zebus (Bos indicus) among
[136] which one can distinguish a stocky, short-horned breed and a thinner, long-horned one. One almost never comes across pure representatives of either, however, rather, as a result of plunder and crossbreeding, all the types occurring in East Africa are represented among them. The actual Masai cattle (ń gischu el masai) scarcely exceed in size the average East African cattle. The foreign, that is, stolen, cattle especially prized are: on account of its considerably larger size, the livestock from Irangi and vicinity (ń gischu ol datua), that from Unyamwesi and Usukuma (ń gischu ol moibaro), and further the large-horned ń gischu e kiteto, named after the steppe area of Kiteto, west of the area of Nguru. Among all the udders are relatively small and the yield of milk is consequently little. An exception to this is a low, stocky breed with short horns, which produces a double quantity of milk and about which the Masai maintain that they are quite pure descendants of the old Wakuafi cattle (ń gischu el lumbua). The Masai call descendants maňgă. Since the calves
234 are not permanently separated from the cows, the women try to avoid the natural restlessness at the milking by bringing the calf close to the cow during the milking. They place themselves astride it and hold its head firmly with the knees. The cow licks the calf, believes that it is sucking, /162/ /Ills. 51 and 52 appear here/ /163/ and is quiet. If the calf dies, one deceives the cow about its presence by hanging the freshly dried /Fig. 74 appears here/ skin over a stick. The cows are milked twice a day, morning and evening, and each time give about one and a half liters of milk. They are never milked completely; rather one leaves the calves with them afterwards. Until the calf is two months old, it is given the milk from
• 232 two tits, while the other two are milked. The principles of breeding and selection in general are well known to the Masai (Fig. 74). Male calves that are not to be used for breeding later on are castrated
[412] at the age of 14 days (a-gelĕm). With a sharpened /Ill. 53 appears here/ piece of sheet iron, such as is used for shaving, a cut is made in the scrotum, then each testicle is grasped with the hand and pulled out, together with the spermatic cords. "So that the wound may heal more quickly," one sticks in a dead fly and ties one of the removed testicles around the left foreleg of the calf operated on.

/163 cont./

232 Bulls that develop unfavorably and seem unsuitable for breeding are castrated by the smashing of the spermatic cords with the club between the wood and string of a bow (a-idon). The testicles are not removed, but are left to atrophy. In the same /164/ way one proceeds to castrate goats, sheep, and donkeys, but the latter always [825] not until they are fully grown. Bulls and bucks with unnatural sexual [777] instincts are slaughtered as soon as the vice is noticed, since they [784] are regarded as bringing bad luck. It is believed that, as a result of [731] their behavior, they bring the punishment of God upon the herd in the form of an epidemic.

231 The donkeys are small, square-built, strong, and steadfast. With nicely arched cruppers, a rounded neck, firm and fleshy shanks, they are very similar in shape to the zebra. Their coloring is a uniform light gray with a black cross over the back and shoulders. [492] They serve only to carry burdens, whereas oxen are only rarely used.

233

C. G. Schillings phot.

Ill. 54. Masai goats and sheep.

/164 cont./

231 Two breeds are distinguished, a shorter and stockier one and a longer-
[613] legged, thinner one. The latter is allegedly found only among the El barsegero lineages.

233 Among the goats a small breed and a large one can be distin-
[621] guished. The Masai have obtained the latter only through raiding expeditions in Pare, Unyamwesi, etc.; the true Masai goats are small. All have medium long, smooth hair, a markedly projecting forehead, and lop ears. The horns are usually only an inch long and have tips turned back somewhat. Among bucks they are larger, but also only rarely seven to eight inches. /165/ The sheep are only medium-sized compared to European ones. They have curly, coarse hair. Three breeds are distinguished, a large one (eṅ ger sabug = large sheep) with fat rump, a medium-sized one (eṅ ger kětě = small sheep), white with black head and medium-long fat tail, and a small (eṅ ger kiberoto; kiberoto = poor, paltry) breed and with a
[232] long fat tail. Among the young female animals of the last two breeds the fat tail is cropped for fear it might be obstructive to the buck during coition.

The black-headed breed is stronger in North Africa and probably degenerated here, just like the last of the three breeds, which might

/168 cont./

231 show to what lineage or sublineage the owner belongs: those on the
233 small livestock the owner chooses for himself. Probably every lineage
422 has several distinct marks. A glance at history will explain this.
[613] In the immigration of the Masai people, accomplished little by little,
[17] each of the many bands originally formed a closed whole, which each lineage represented in it adopted a particular mark in order to make its property known. So it was natural that later on different ownership marks existed in connection with one and the same lineage, each according to the affiliation with this or that band. Besides this some that belong only to individual -- very wealthy and widely ramified -- families are also known, and then they are applied in place of the others, not together with them. The marks on the cattle are the same as those on the donkeys, although the latter bear the ear marks almost exclusively,
[613] only very rarely also those on the body. If a head of breeding cattle passes to an owner belonging to another lineage, it is usually given a new mark, and, to be sure, this one
233 then on the right side of the body. Besides the
531 ownership marks, cattle often have still other signs burned in as adornment, especially
[232] circles or a sentry-box type of design. A
[412] circle around the root of the tail and, on either side of it, one or two concentric rings on the hind legs are found especially
233 frequently among bulls. In addition to these
232 cut and brand scars, which are therefore supposed to serve in part for identification, in part for beautification purposes, there is also a third type, which arises from operations that are performed with a red-hot iron (Fig. 75) for the curing of swellings on joints and tendons. These lines, usually lattice-shaped, are also found among goats and sheep. On female calves the horn attachments are often cauterized, so that they can not butt later on. This operation further brings about, in the view of the Masai, an enlargement of the belly, desirable for leather production.

Fig. 75.

/168 cont./

233 At births manual help is given. As soon as the cow lies down,
232 she is held firmly by a few people; others grasp the legs of the calf coming forth and pull it out. Then it is struck against the belly of the cow a few times, so that "she will love it," and then struck on the forehead with the palm of the hand, so that "it will quickly go to the udder and suck."

233 Swellings on cattle, for healing, are smoked with the glowing
232 stalks of en dulele en gare (Solanum spec.).

[237] Injuries to the feet of the cattle and goats are treated by a thorough washing with hot water and subsequent embrocation with cattle urine, as is a sort of foot rot (en jalán), which /169/ frequently appears when the cattle stand for a long time in mud and dirt during
[231] the rainy season. One tries to cure ailments of donkey hoofs by placing the hoof on a stone heated very hot and holding it there for a few moments.

In describing the internal ailments of livestock I am relying chiefly on the statements of the Masai, since only exceptionally did I have an opportunity to make observations on cause, course, etc.

[237] For coughs (eng erroget) the cattle are given a thin soup consisting of milk and pulverized, charred neat-skin. Ol ebitiro bark cures diarrhea in cattle. The infusion of a decoction of ol ojengalani bark (Sesbania aegyptica) for cattle acts beneficially on the afterbirth and curatively on the birth organs. To hasten the afterbirth after a miscarriage, one gives the cow an infusion of a root decoction from the ol jogi l ol aiteri (a Euphorbia).

For eye inflammation one spits milk into the eye of the neat and rubs it in it, or one drips into the eye the juice of the ol aisegerai kitok (Heliotropium Steudneri Vtke).

An epidemic disease among young calves, which is supposed to lead rapidly to death, is called ol diñana or ol digana by the Masai.
[824] As the cause of the ailment they cite the eating of a certain bush en jarú (Pennisetum ciliare) and as sympton swelling of the lymph glands, which they often try to heal by cauterization (1).

1. In all the meat and fatty parts of the stricken

/169 cont./

233
• 232

/footnote 1 continued/ animals there are said to be found heavy hemorrhaging and in the entrails a greenish, watery fluid.

Another frequent ailment of calves is called eng amonjani and consists of a rash, predominantly on the head. The individual spots are gray and dry and are the size of a mark or a taler piece. The Masai know nothing about their cause. From time to time one gives the sick animal an infusion of fresh beef blood. The ailment is usually cured within a few months and is supposed to disappear at the latest after complete weaning.

For fever one gives the cattle an infusion of an extract from the pounded stalk of en goloscho (Capparis galeata Fres.) and sprinkles wood ashes on their fodder. Calves are given an extract of the pounded bulb of ol gíne (Scilla spec.) to drink.

Ol ogereger is a cattle ailment that usually leads to death overnight and, in the opinion of the people, arises through swallowing dust in the dry season. This ailment is recognized by the fact that the animals tremble all over their bodies. Drinking is supposed to hasten death, whereas the refusal of water shows that the animal will recover.

They know of no remedy against rinderpest. If the epidemic appears in the vicinity, they flee as far away as possible, and then, as soon as /170/ suspicious signs of sickness are observed in their own herd, the wild flight is resumed with the healthy animals, while the infected animals, which soon lose flesh, remain behind and die by the wayside. They call rinderpest ol odoa (1)

1. Pronounced 'lodoa or also 'lotoa.

= the gall, in whose morbid change they see the chief symptoms of the sickness.

On the other hand, they are familiar with a protective inoculation against tuberculosis (ol gibíël) (2)

2. Also ol kibiëi.

/170 cont./

233 and first used it successfully on a large scale at the end of the eighties.
• 232 One or several cuts are made with a knife in the underskin of the bridge of the nose of the animal to be inoculated, so that blood flows copiously from the wound. At the same time the chest cavity of an animal

Ill. 59.
Cow inoculated on the bridge of the nose against tuberculosis.

Fig. 76.

that has just died is opened and from it is taken a fist-sized piece of the lung, greatly swollen and filled with a watery fluid. One rubs the wound thoroughly with this piece, so that the fluid penetrates well. Soon after the operation the nose swells considerably and mucus flows copiously from the nostrils. The sickness comes out of the nose, the people say. The healing of the external wound is sometimes connected with a considerable ulceration, which not so rarely leads to a purulent inflammation of one eye, indeed to the complete loss of it. The ulcer heals with the formation of a thick,

/170 cont./

232 233 horny scar often five centimeters high, /171/ through which the inoculated animals, which are now supposed to be protected against becoming sick with tuberculosis, are permanently marked. Numerous observations in this direction showed me the justification of this view. [176] [791] The ol oiboni Mbatyan is regarded as the inventor of the inoculation method.

[136] In some years, and, to be sure, in the rainy season, great multitudes of dark green caterpillars one to one and a half inches long are found in the grasses of the steppe. Cattle that eat the caterpillars are stricken with eng ea el gurt (ol gurto = the caterpillar). As symptoms of the sickness I observed: first a few hoarse coughing sounds, then giddiness, which rapidly mounts and makes the animal stagger as though out of drunkenness; soon it lies down and is brought to a standing position only with difficulty, only to lie down again after a few minutes, whereupon death occurs often after only half [411] an hour. The treatment consists of bloodletting by an arrow shot (Fig. 76) into the jugular vein, whereby one to one and a half liters of blood is emptied out. Through that recovery is reached after just a few hours, as I observed in over 100 cases (1).

1. The microscopic examination of blood slides (ear, heart, spleen) of sick and dead animals gave a negative finding (Oberarzt /staff physician/ Dr. Grothusen). I observed the appearance of masses of the caterpillars in March, 1898, in the steppe south of Kilimandscharo, in December, 1902, in the steppe southwest of Kilimandscharo, in the entire region between the latter and Lake Manyara, and in April, 1905, in Daressalam /Dar es Salaam/.

[177] In another case, out of four head of cattle, after two had already died of the sickness, the other two, through the infusion of an emetic consisting of a mixture of sugar-cane beer and a tobacco extract, which was given upon the advice of the Wapare in Manamata on the southern end of Lake Jipe, could be cured.

/171 cont./

233 Manamata on the southern end of Lake Jipe, could be cured.
• 232 Grazing cattle do not also eat the caterpillars, but first blow them away; thus, on the march, one should drive them slowly through a region infested with these caterpillars, so the blowing away is possible for them.

The Masai designate as em bujangat a cattle sickness that most probably is pulmonary anthrax, caused by the inhalation of dust containing anthrax spores. As a remedy they give the cattle a leaf extract of ol gitelegi mixed with a little milk.

Volvulus (e manjit) is treated by a vigorous blowing of air into
[415] the anus. One applies for this a wooden tube (ol gidoñ), which otherwise is used to store the ostrich feathers of the warriors' head ornaments. It is regarded as a symptom of volvulus when the sick animal, without showing any desire to eat, often lies down and rolls about.

With the en dara sickness of the cattle the sick animal is said to emit often a strong carrion-odor; the lymph glands are swollen, the belly is distended. As the cause of the sickness popular belief names a large snake that has contaminated the pasture grass. A cure is not known; experiments, however, have shown us that in the first stages of the sickness a laxative (a bottle of salad oil or sour native beer would be given as such) brings speedy recovery.

/172/ The e' ehgatin sickness, also called eñ gutuke on janit, is recognized by the fact that balls of gnu hair are found in the stomachs of the stricken animals. The only symptom of the sickness, which, however, it has in common with many others, is the refusal of fodder. The people believe concerning the cause of the sickness that the neat ate the grass, contaminated with uterine blood and hair, from a spot where a gnu dropped young.

For the eng ea om benek of the cattle the Masai give the sick animal the strongly laxative extract from the pounded leaves and fruits of ol gebarnja (Combretum spec.) to drink. As the cause of the sickness they assume that the animal ate the grass on which a buffalo cow dropped her calf. According to their statements, mucus flows from the nose of the sick animal, it trembles over its whole body, and the dung has a ponceau-red coloring.

/172 cont./

232 233 For the hoof and mouth disease of cattle (ol gilluk), which is recognized by sores on hoofs, in the mouth, and on the tongue, one limits himself to treating the hoof sores in the manner described above.

[824] A morbid elongation of the hoofs -- ol airascharasch sickness -- the Masai trace to the fact that the sick animals have eaten the ol aiascharasch bush (Crotalaria labumifolia). In the hot season this bush dries up, and the cattle do not eat it any more, whereupon then the tips of the hoofs are said to drop off soon by themselves.

For coughing (eng erroget), goats and sheep are given a decoction of os sogonoi bark to drink.

The eng ea nairogua (eng ea = sickness; irogua, nairogua = hot) of goats and sheep is a sickness rapidly leading to death, whose symptoms are fever, weak breathing, and a distended belly. No remedy is known. The microscopic examination (1)

1. By Gouvernementstierarzt /government veterinarian/ Dr. Brauer.

of blood slides showed that it is a matter of pulmonary anthrax caused by the inhalation of dust containing anthrax spores.

One tries to cure -- usually in vain -- a pocklike rash of goats and sheep (eng ea narre) by means of two brand strokes that go from the nose along both sides of the body to the anus. With dissection pustule ulcers are found in the stomach.

With eng ea en goilin (en goilin is any small antelope), which afflicts only goats, the eyes stand out strongly. For the cure one makes incisions in the temples and drips hot fat into the eyes. Popular belief opines concerning the cause that the animals, during sniffing searches for fodder plants, had breathed in the dried excrement of these antelopes.

For severe flatulence, from which goats and sheep often suffer after an excessive eating of fresh grass, one punctures the belly with a sewing awl to let out the gases.

/173/

233 The foliage of the ol jani l el sirgon tree (Cadaba farinosa),
232 that is, tree of the donkeys, is regarded as poison for donkeys.
231 Besides a horsefly, ol gimbai l ol sirgon, from whose bite the
824 donkeys (bitten in the penis) are stricken beyond recovery, the Masai
136 also fear for donkeys and cattle the tsetse fly (Glossina morsitans), which they call en dorobbo. The latter is allegedly only dangerous to cattle if it bites them in the tip of the tongue. One seeks a cure by cauterizing the spot bitten, but the result is very doubtful.

For getting rid of fleas, one washes young livestock with an extract from the crushed plants of ol osidja gutok (Asystasia gangetica L.) or from ol abai (Microglossa spec.).

The powdered root of ol girigir (Acacia pennata Willd.) is blown into the nose of calves and small livestock, in order to drive out the maggots of the throat fly /warble fly/.

233 Cowbells (Fig. 77) in the form customary in Europe are found
534 generally, but here they are hung especially on oxen and only on those cows that do not tolerate their calves. Smaller bells, often

Fig. 77. (1/4) Fig. 78. (1/4)

of wood or sheep horn with wooden clappers, are worn by castrated
233 sheep and goats. As adornment one hangs around the neck of castrated calves clapper-shaped pieces of ivory (Fig. 78) or, for especially handsomely developed cattle, a leather band or a cord stitched with cowrie shells.

/187 cont./

External Ailments

759 [232] Surgery is the domain of special surgeons (ol ahani, ol ahani) who extend their practice both to human beings and to cattle, goats, sheep, and donkeys. The calling as a rule is handed down from father to son. One cannot speak of a special caste here, however, since the surgeons occupy no special social position -- either in a good or a bad sense. Only the son of an ol ahani who knows how to practice the art is ol ahani, and, to be sure, only so long as he practices it. If, by way of exception, someone whose father is not a surgeon learns the art, he thereby becomes a surgeon. The surgeon thus practices a open calling.

As payment for help rendered, the ol ahani receives, according to the difficulty of the case or the amount of work done by him, a head of livestock, from a head of cattle down to a young goat or a lamb. One should also mention the remarkable arrangement that he can make a claim regarding the payment only if his treatment has had the desired result, and the patient /188/ need not pay before the resulting complete cure. An established custom determines what falls in the department of the surgeon. The ol ahani stays within these prescribed limits under all circumstances. If this is not conducive to progress, it has the result, on the other hand, that every Masai, when necessary, entrusts himself immediately to the surgeon without hesitation. He knows that the latter will not undertake an operation on him which he cannot safely perform, but rather that whatever he does, he has often seen and has done with an older colleague or alone. No narcotic agents are available to the surgeon, [752] but his patients have command over very "strong nerves," over an enviable mental sturdiness.

752 The juice of ol gilwiri (Acacia abyssinica), chewed out and spat into the wound, and the charcoal powder of ol dulgui bark (Harrisonia abyssinica Oliv.) are used as astringent remedies.

Arteries have ligatures applied, if necessary, and, to be sure, by means of a leather strap placed around the limb, which is tightened by a short stick. The cut ends of the artery are then sewed together as quickly as possible with awl and tendon cord, after they

[13] management were determined primarily by water and disease. Of these two factors, water appears far the more important.

Water: It is clear that water is basic to the survival of the Masai and their livestock. There is an upper limit to the number of animals that any one water source can supply, and it is the dry season water source that is the primary limiting factor here. The Masai believe it essential to water their livestock at least every other day, except in times of extreme emergency (Pope-Jones, 1948; Grant, 1957). This belief is widely held throughout the European ranching community in East Africa also. The location of boma, much of the Masai mode of life, and their animal husbandry is organized on and around this assumption.

[13] [13] Experiments carried out by the East African Agricultural and Forestry Research Organization under the direction of Dr. W. Pope are showing that in Masailand, cattle which are provided water only once each three days and which walk up to about 15 miles to get that water can survive drought conditions as well or better than those which are given water each one or two days near their forage.[1]

---

[1] A preliminary report on this work was presented by Pope, Boother, Bazin, Hutchison, MacFarlane, and Matsumoto at the 6th International Congress on Animal Production in

231 Hamburg, Germany, but I do not have the reference available. The experiment was outlined by Payne (1961) and part of the results presented by Livingston, Payne and Fetene (1962).

If the Masai were indeed good animal husbandmen, it is surprising that they have not discovered this fact in the 400 or more years they have been herding cattle in East Africa. The fact that they apparently 233 have not is probably due to their intense conservatism, particularly as it affects their cattle. Evidence such as this points to the deep seated conservatism [illegible] last century, to which Fosbrooke (1948) and others have credited present Masai conservatism.

233 Water supersedes all other considerations in Masai grazing management. In periods of extreme drought the Masai will take their cattle into areas infested with tsetse fly if water is there, preferring to accept some mortality from disease than greater mortality from thirst. The same consideration governs their moving stock into areas where the grazing rights belong to other groups or tribes, or into areas where the danger of wild predators is greatest.

232 Diseases: Diseases periodically decimated Masai livestock even before the introduction of rinderpest.

232 Thomson (1885) describes visiting an area where some cattle disease had killed many of the cattle. The Masai recognize several cattle diseases and reportedly (Grant, 1957) had their own methods of dealing with them before the introduction of modern veterinaries. In the case of rinderpest, when one village has a mild outbreak, Masai from other villages allowed their cattle to catch the disease to innoculate them. Most other veterinary medicine appears to have been preventive.

Snotsiekte, or bovine malignant catarrhal fever is a disease known world wide which causes high mortality in domestic cattle. The Masai believe that their cattle will contact this disease if they graze where wildebeests have calved. They say that the disease comes from the afterbirth of the wildebeests, or the short baby hair that is shed when a wildebeest calf is several weeks old. Work was undertaken at the East African Veterinary Research Organization to define the causal agent of the disease, its characteristics, and the relationship between the wildebeests and the disease (Plowright, et. al., 1960). This work has shown that the wildebeests do serve as a reservoir of the disease, which is caused by a virus, but that the disease does not appear to affect the wildebeests themselves (Ibid.).

231 The method of the Masai to prevent the disease is to move their stock away from the areas where wildebeests are calving. They also occasionally attempt to drive the wildebeests away from the cattle, or keep them out of areas occupied by cattle. Grant (1957) has noted the latter, and at the time of wildebeests' calving we observed Masai driving herds of wildebeests away from their cattle.

"Nagana disease" or trypanosomiasis is carried by tsetse flies. The flies carrying this disease have been such an important factor in the ecology of the area that they are discussed at greater length below in a separate chapter. Areas occupied by the fly are avoided by Masai when grazing their cattle, although sheep and goats are not affected by the disease and they are grazed in such areas. The Masai method of coping with the disease is simply to avoid it. They also alter the flies' distribution through burning (see below) but it is questionable to what degree this effect is intentional. The veterinary departments are now providing the Masai with anti-trypanosomiasis drugs which to some degree allow them to graze in areas previously denied them.

232 East Coast fever is a tick-born disease of cattle. It is widespread throughout East Africa. In European ranching areas the cattle are dipped weekly to remove ticks. This is not possible with most of the cattle in Western Masailand, hence the Masai avoid the areas where the danger of the disease is heaviest. The disease appears to flare up at irregular periods, and certain areas are known to be particularly dangerous. One such is the lower slope of the Ngorongoro Highlands near Endulen. The Masai believe that the disease is caused by infected grass (Grant, 1957) and they fight the disease by burning the grass and grazing sheep and goats intensively.

Various other diseases periodically affect Masai livestock. In most cases the reaction of the Masai to diseases of livestock is first to avoid the area involved, if at all possible, and secondly to burn.

233 Herding and Control of Livestock: Masai livestock are herded and grazed in characteristic tightly packed groups (Fig. 24 and 25). The compactness of these herds makes for easier distinction between domestic livestock and wildlife when seen at a distance. Presumably a tightly packed herd is easier for the herder to control and possibly a little less vulnerable to predators.

*233
231 In 1904 the cattle numbers in Masailand of Kenya were estimated at about 50,000, and there were an estimated 600,000 sheep (Simon, 1962). By 1961 the Kenya Masai had a population of 973,000 head of cattle, 660,000 sheep and goats, and a large number of donkeys, "at least double the quantity that their land will carry during normal conditions" (Glover and Gwynne, 1961).

*233
* 232
42 Range Management of the Masai: Grass is recognized by the Masai as being important to their livestock. But in general those in Western Masailand appeared to have surprisingly little appreciation of the types of grass that were preferred by their livestock or of the effect of varying grazing pressures on the grasses. There are Masai names for a number of the grasses. Yet many Masai in the study area only know a few of the more common ones. When discussing grass foods the Masai almost invariably say that the cattle eat grass, as do the wild animals. There appears to be little appreciation of the differing diets or well defined preferences exhibited by these animals (see below). When inquiring about the names or characteristics of various grasses the typical answer we recieved was to the effect that we were fundis (experts) on grasses, while they were fundis on livestock. They would then point out that in a herd of several hundred animals they knew

*233
232 each one. This example, in fact, provides an insight
182 into the emotional nature of animal husbandry of the Masai.

*13 The Masai realize that bush is encroaching in
232 many areas and that the forage is not as good as it
182 used to be, but this is explained as a <u>sheuri ya Mungu</u>,
*233 a matter of God's will, not man's. They will leave their animals grazing on an area where there is water as long as there is any grass left. The idea that overgrazing can weaken or kill grass plants appears to be either foreign to them, or it is outweighed by other considerations unknown to us.

232 With the exception of burning, discussed below,
182 we did not see a single example of any range management
*233 activity that was not directly based on water or disease.

*13 The original pattern of migratory or nomadic
*233 grazing followed by the Masai duplicated that of the
182 wild animals. Under the environmental conditions of Masailand it was and is probably the most efficient and potentially most productive way to use the rangeland. As will be discussed below, under the semi-arid conditions of Masailand many grasses cannot support heavy year-long grazing while they can thrive under periodic

*233
*13
• 232
731
182

A several years' drought culminated in 1961, and as a result of the extreme overgrazing in Eastern Masailand, thousands of cattle and many Masai died. As was evident on the ground, and as clearly pointed out by many -- even veterinary officers (Waddington, 1961) -- the mortality was due to starvation on range depleted by overgrazing before the drought. There was plenty of water for the animals to drink. The mortality in the cattle of Eastern Masailand ran from 300,000 to over 400,000 head, and I was told that over 1,000 Masai starved to death also. In spite of this dramatic illustration, the Masai to whom I talked in 1962 blamed their difficulties on the will of God or the Europeans who appropriated their land.

*136
*233
231

<u>Masai Livestock</u>: The Masai cattle of Western Masailand today are a mixture of breeds with short-horned zebu (<u>Bos indicus</u>) predominating. The Masai highly prize longer horned animals, and occasional herds will have a massive-horned Hamitic Ankole bull. It has been suggested (Payne, and Masai, verbal) that before the rinderpest epidemic of the 1890's the Masai cattle were predominantly long-horned. The rinderpest epidemic wiped out most of these animals, and the short-horn zebu, with its greater resistence to rinderpest, took their place. The short-horn zebu was introduced from

*233
231 We had the feeling, however, that donkeys just as other
554 livestock are a measure of success and security, and regardless of the need some donkeys would be maintained.

*136 These donkeys are small animals whose weight
231 is probably less than half that of a wildebeest (i.e.
*233 under 200 pounds). They are quite independent. We often saw the small herds of donkeys leave a boma unherded and go to a water hole, then graze back to the boma. This practice probably would not be followed in areas where predators were common, but in the peripheral areas it appeared to be the rule.

178 Large numbers of donkeys appear to have been
231 the rule for some time. Joelson in a general discussion
*233 of East Africa in 1928 referred (p.61) to the "Masai, who graze immense herds of cattle, small stock, and especially donkeys..."

*233
182 <u>Burning</u>
232 The Masai burn grass whenever it is dry enough
824 to ignite. The reasons they give for burning include the following: It produces a flush of new grass that is particularly palatable, nutritious and easily available for their livestock. It clears the woody growth and makes new grazingland. It clears or reduces ticks, tsetse fly, and disease.

182 177 372 [182] easier to light more fires are lit, just as in the case of hunting tribes who have received firearms; with game easier to kill, more game is killed. Control in these matters appears to be enforced by availability of tools and difficulty of accomplishment, not by any conservation ethic.

132 We questioned Masai, other Africans, and Europeans about lightning fires and never found the slightest evidence of lightning causing fires in the savanna country. There is no doubt that it ignites some fires in rim-rock or mountain areas, but we never even saw a lightning-struck tree in the study area. All the lightning we observed in storms was high, it occurred in heavy rain storms, or it was low in the region of Lake Victoria.

182 232 824 *233 There does not seem to be any discipline or organization to the burning by the Masai. Fires are started in dry grass when herds leave an area, but they are also lit when herds arrive in an area, if the grass is dry enough. They are even lit in pauses during rain storms.

The forest country on the hills is also burned at

*233
182 every opportunity. There the purpose is primarily to
• 232 clear new grazing land. During the 30 months of our
824 major study period, we were in sight of the Mau forest (at the foot of the Mau Escarpment) at least twice a month, often in the rains, and only once did we not see smoke from a fire burning in the trees or brush.

*13 Relations with Wildlife
648

The most significant influence the Masai have exerted upon the wildlife is their protection through
[171] excluding hunting tribes from Masailand. The Wanderobo are an exception, but there are relatively so few Wanderobo that they have little effect. The areas of East Africa where the finest assemblages of grassland wildlife still exist are those in Masailand.

224 The animals Masai hunt or have hunted include
[237] buffalo for shields and possibly food, eland for food and
[714] the hides, giraffe for hides and tail hairs (to ornament gourds and dresses,
[531] according to Millais, 1920), lions and sometimes leopard
[825] for defense and for lion manes, and rhinoceros for horns and to spite national park authorities (particularly
*[233] in the past decade). In times of drought the Masai may spear various animals for defense or to avoid competition for scarce water. They will even spear elephants at such times (Grant, 1957).

*233
*136
224

Masai youths and young Moran may spear any passing animal, possibly to test their skill, but this probably involves relatively few animals in total. It does affect the animals' reactions to the Masai. A Masai driving some livestock, even one cow, is apparently virtually ignored by most wild animals. We watched one Masai drive a lone cow through a herd of 335 wildebeests and 115 zebras. The herd eddied about him at a distance of 20 to 40 yards, and for about a mile he appeared almost a part of the herd, all moving along at about two to three miles per hour. We often saw wild animals grazing in close proximity to Masai livestock and herders. A lone Masai with a spear and no livestock is something else again, and most wildlife will stay nearly 100 yards away from such a person.

857 Masai boys play a game "marking" wild animals. They try to catch young of various species and notch the ears in the same manner as they mark their cattle. Later, when observing the same marked animal they say that it is "my animal." We captured a wildebeest with notched ears in Ngorongoro Crater and a nearby Masai said that it was his wildebeest as he had cut the animal's ears when it was a calf.

* 232
825

As noted above Masai try to avoid wildebeests

232
825 when they are calving because of the snotsiekte disease. In times of drought they try to drive wild animals away from their water holes. When not in use, these holes are often fenced off with a thorn boma to keep them from the wild animals.

#13 Beyond indirect protection, the greatest ecological influence exerted by Masai on wildlife is through their burning and their livestock. The effects of these processes will be discussed below.

19: Talbot K-4,5 (1956-1962)1964 FL12 Masai FL12

Veterinary Services 1918-1962

648
654
177
232

From the end of the 1914-18 war to the present the Departments of Veterinary Services in both Kenya and Tanganyika have been very active in Masailand. The visible results of their work involve provision of water supplies, treatment and prevention of disease, and provision of some experimental or demonstration ranches whose aim is to encourage better livestock management on the part of the Masai. European veterinary personnel with African assistants have been active in Western Masailand in both Kenya and Tanganyika, and they have exerted a very significant influence on the ecology of the area. As noted above their work has greatly aided the increase in the numbers of the Masai livestock, without showing any demonstrable improvement in the quality of the livestock, and with very demonstrable deterioration of the grazing land, especially in the vicinity of the water points.

The significant exceptions are the activities of the Tsetse Survey and Control Branch of the Kenya Department of Veterinary Services. In Narok District they have maintained two small field houses (one has since been removed), a field laboratory, and an experimental ranch. Their research has been aimed at learning the

19: Talbot E-4,5 (1956-1962)1964 FL12 Masai FL12

648 654 177 232 ecology of the tsetse flies in order to effect their control without employing destructive game killing or land clearing schemes (Langridge, 1960, 1961). Within Western Masailand their work has largely consisted of careful research and controlled experimentation.

The damage to rangeland resulting from the activities of the other branches of the Veterinary Services are the natural result of a well intentioned, efficient, but narrow approach to the livestock problems of the Masai. Such effects are not limited to East Africa. There are many such examples in the western United States.

*136 process.

The resting perches of these flies are on the under or shady side of rough barked trees or bushes. These habitats also are removed by hot fires. Thus, changing vegetation from woodland thickets to a light, open bush will not necessarily kill all tsetse flies immediately but it will reduce the available fly habitats and may render it almost impossible for the flies to reproduce.

Complete removal of the flies might entail complete clearance of all brush, but since the effective vision of the flies is about two hundred yards, an opening about twice that distance across will stop
*136 most flies. Livestock can be grazed relatively safely
232 to within about two hundred yards of fly infested bush.

Where burning is frequent and fairly hot, the fly habitat is impaired. Early, light burns may have very little effect on the flies, and by allowing spread of bush, they may spread the fly habitat. Protection from burning allows spread and thickening of
*136 bush and therefore expansion of fly habitat. The action of elephants pushing down trees and pulling off large limbs

21:Huxley Q, T-5 (no date) 1960 FL11 Luo

Masai FL12

good management on modern ranching lines will bring him in hard cash.

I saw the ranch mainly from the air. Lines of bush, cleared by bulldozers dragging giant chains between them, lie neatly along the contour like windrows in a hayfield. Soon the six or seven thousand acres that have been cleared will be fenced, and so managed that star-grass will cover them and steers fatten twice as quickly as they normally do. The snag, of course, is the Masai indifference towards cash.

Yet even here the seeds of change begin to germinate. There are schools now in all Masai centres, Masai students at Makerere, the start of a trickle of Masai teachers, doctors, administrators, vets. One has a Cambridge degree in geography, one is a Legislative Councillor. The shell of Masai indifference has been pricked.

The puncture so far is tiny, but time will enlarge it and one day, not so far away either, the whole shell may crack. Already a Masai parson, the Rev. Daudi Mokinyo, has fenced off 2,000 acres of communal grazing where he fattens steers bred from improved bulls, has a simple milking bail and makes ghee. Elsewhere, half a dozen other Masai have fenced in grazing land. When the railway took a pipeline off Mt. Kilimanjaro, they set up watering points for Masai cattle along its course, and in return one section of the tribe, the Il Kisongo, agreed to operate a pasture-management plan, financed by a grazing fee, which is acting as an entry-point for new ideas.

When these movements spread, as they seem bound to do, the doom of the game will be accomplished. For game cannot co-exist with modern pasture management. Unless the Masai come to see game as an asset of high value, it will go here, as it has on European farms, and for the same reasons: it will go down before the fence, the improved pasture and the need to keep the land free of disease.

has a cow, which he looks after and tends, it bears, and by so doing enables him to live, for he can marry, and have children, and thus become rich.

233 181 [554]

Now cattle feed on grass, and the Masai love grass on this account. [824]

824

Whenever there is a drought, the women fasten grass on to their clothes, and go and offer up prayers to God. [789]

If a warrior beats a boy on the grazing ground, the boy tears up some grass, and when the warrior sees that the child has grass in his hand, he stops beating him.

Again, if the Masai fight with an enemy, and wish to make peace, they hold out some grass as a sign. [828]

Whenever warriors return from a raid, and it is desired to praise those who have killed some of the enemy, a girl takes a small gourd of milk, and having covered it with green grass, sprinkles it over them. [703]

Then, if people move from one kraal to another, they tie grass on to the gourds.

Should one man ask forgiveness of another with grass in his hand and his request be not attended to, it is said that the man who refuses to listen to his prayer is a Dorobo, and that he does not know about cattle. [827] [116]

Again, if a man who is proceeding on a journey sees a tree which has [484]

The process of moving.

The Masai are fond of moving, and if they happen to be staying in a place where the grazing is poor, they move to another spot.

When they move, they mobile their donkeys with skins and pack-saddles in which they put their goods, and the women carry bags.

Should they stay in a place where the grass is not good, they do not build proper huts, but they live in the so-called il-ogoiori, i.e. in huts made of skins. When they go to a good grazing ground, they build huts.

The women do the work of building. They procure poles, and put one end in holes, which they dig in the ground; they then bind the poles together with cord made from trees; after which they cover the framework with long grass. When they have finished this, they plaster the whole of the outside with cow-dung and mud.

Children are very fond of various kinds of fruit, which are also eaten by the old people, but the latter do not care for them very much. 262

Formerly the Masai, when they had plenty of cattle, ate no other kind of food, but nowadays they often have to eat savages' food, such as maize, rice, bananas, and cereals, for they no longer own the vast herds which they formerly possessed[1]. [198]

They, however, do not eat everything. They eat neither birds, nor fish, nor the flesh of wild animals.

Wild animals.

The Masai ate the flesh of no wild animals when in olden days they all had cattle; but some of those who have lost all their cattle are now beginning to eat venison, like the Dorobo. [178]

If Masai boys kill elephants, they only take the tusks, which they exchange for cattle.

When buffaloes are killed, the hide and the horns are kept. From the former the warriors make their shields, and from the latter mortars are cut in which medicines are ground. The medicine-men also use the horns to put stones in for their prophecies. 237 [114] [115] [187]

is not considered correct. The smiths marry amongst themselves. 324 564

If a Masai takes in his hand a spear or sword or other thing which a smith has held, he first of all oils his hand for it is considered improper for him to take it in his bare hand. [576]

The smiths are not rich in cattle like other Masai. They have no luck with cattle. If you find one possessing forty head, it is a very large number. [233]

The smiths have their own language, which, although a corruption of Masai, is not understood by the ordinary Masai. Not all of them can speak this language: it is only a certain number of them who know it. [198]

Earthenware pots and gourds.

Some Masai women are able to make earthenware pots; others who are unable to make them buy them from savages. 323 [939]

Gourds are also bought, or they are collected in the deserted kraals. [915]

One pot can be purchased for a goat. [935]

When the Masai make pots they make them in two sizes, big and small; these pots are also provided with handles[1] by which they can be picked up.

When warriors go to the woods to slaughter cattle, they carry their cooking-pots by a strip of hide fastened to the handles[2]. [982] [231]

[1] Lit. nostrils. [2] For illustrations see Hinde, *The Last of the Masai*, p. 89.

2: Bernardi E, M-4 (no date) 1955 FL.12 Masai FL.12

On the whole, those two authorities stress the linguistic unity of all the Masai. 197

The great majority of the Masai are pastoral, only very few tribes having taken to agriculture. The pastoral tribes follow a semi-nomadic way of life. "They move", writes Lord HAILEY,[1] "with their herds in order to avail themselves of the seasonal variations in water supplies, so that in effect they practise a system of rotational grazing". The same writer,[2] reports "a recent estimate" of Masai herds in Kenya which puts "the number of cattle at over 700,000, with 800,000 sheep and a large number of donkeys". For Tanganyika he gives no figure. The above estimates show clearly enough how the attitude of the Masai to cattle is a paramount feature of their life. To own cattle is a privilege obtained through initiation, and large herds are a sign of outstanding social status. Cattle are the main economic interest and investment for the Masai.[3] 233 [221] 181 233 564

The total population of all the Masai may be reckoned at about 122,792. The 1948 census of Kenya's population (see Bibl.) gives for the Samburu an estimate of 20,000, and the following figures: Njempe 3,423, the other Masai 67,201. In 1931 the Tanganyika Masai were reckoned as 32, 168. 162 [161]

* * *

Under the present political situation, the Masai are not administered as a single unit, for they are divided into two sections by the border of Tanganyika Territory and Kenya Colony. 631

In Tanganyika the Masai form one of the four districts of the Territory's Northern Province (the Masai District). In Kenya the main group inhabits the reserve adjoining Tanganyika Masai District, and constitutes the Extra Provincial District (Masai District) of the Colony. The other group (Samburu and Njemusi) is incorporated with the Rift Valley Province (Samburu and Baringo District), and partly with the Northern Frontier Province. The geographical separation of the Samburu from the other Masai is the reason why the Samburu were considered, and are still considered, as a non-Masai tribe. But, as BRYAN remarks, they are true Masai. The splitting of Masailand and the separation of the Masai were made 631 [631] [601] 195

175 permanent by the present administrative arrangement, but were not established by it. The land which divides the Samburu in the north from the Kapiti in the south of Kenya, was onto the home of the Loikipiak and the Uasin Gishu Masai. In those days, Masailand was a continuous strip of land stretching over the plains south of Mt. Kilimanjaro and Mt. Meru up to the shores of Lake Rudolph. At the end of 19th century a great cattle plague and, even more, civil wars (the Kapiti versus the Loikipiak and Uasin Gishu) wrought havoc among the latter, who were almost destroyed. The few remnants have been absorbed by other Masai tribes, especially the Kapiti and the Kisongo. The Loikipiak plains west of Nanyuki which in 1904 had first been set aside as a special reserve (the Northern Masai reserve), were subsequently declared open to European settlement, and by 1911 Agreement the Southern Masai Reserve was enlarged into what is now the Extra Provincial District of the Masai in Kenya Colony.*

* * *

631 A comparative analysis of the literature shows the existence of three graded territorial units, the major and the minor territorial sections, and the village. A character common to the first two sections is the absence of a clear limit or boundary. The sections are spoken of in terms of watering and grazing rights. The nomadic aspect of Masai life is chiefly responsible for this territorial vagueness. The absence of any centralized authority to check people and cattle's transhumance is another important cause of the vagueness of Masai territorial organization.

632 The major territorial section is made up by the area in which the movements of a full tribe usually take place. The existence of

* SANTORINO, *An Administrative and Political History of the Masai Reserve*, London 1919, *Appendix*; *E. L. C. E.*, p. 188. One may note that the Uasin Gishu and the Loikipiak, together with the Siria and the Lumbwa were despised as inferior, for they were not considered as "pure Masai" by the other tribes who regarded themselves as descendants of Masinda. See FRANKLIN, p. 7. This ill-feeling may explain in part, the fury with which the Kapiti fought against the Loikipiak and the Uasin Gishu.

In December 1950, I visited the Ndigiri Dorobo at Dol Dol on the Mukogodo Hills, some 60 miles north west of Nanyuki. They claim to have been dependent on the Loikipiak Masai, and they survived the slaughter thanks to their seclusion in the forests. Their present outlook seems to be entirely Masai. The names of their age-classes are consonant with those of the Masai.

An important factor in the tribal system of the Masai is the presence of medicine-men whose duties are in general connected with the divination of future events, with the administration of drugs, and with the practice of witchcraft. There appear to be three grades of medicine-men, whose spheres of influence are divided into these three categories, but, for practical purposes, it is only necessary to consider the position of the first grade, represented by the person of the Laibon, or "Ol-oibon," who is the Chief Medicine-Man of the tribe. The history of the Laibons is recorded in Mr. Hollis' book on the Masai, pp. 324-330, and it is unnecessary to enter into it here, but it may be mentioned that Mbatian, who died about 1866, and Lenana, his son and successor, acquired such great influence over all sections of the Masai that the position of Laibon came to be regarded by certain of the European officers who had not carefully investigated the facts of the case, as synonymous with that of a paramount chief. It does not appear, however, that the Laibons have ever attempted to assume a position resembling that of kings of native tribes, and the appointment by Government of Lenana, and, at his death, of his son Seggi, to the office of Paramount Chief of the Masai was, in fact, the result of a misunderstanding of the actual state of affairs which steps have now been taken to rectify.

The Medicine-men

The Laibon

The pastoral Masai "Morua" in raids on surrounding tribes combined with their constant activity in following this pursuit made their name dreaded throughout East Africa and hindered for many years the passage of caravans by the direct route from Uganda to the Coast. When eventually Europeans penetrated the highlands of British East Africa, they found the Masai with their flocks and herds scattered over a wide area. The story of how they were eventually concentrated in one reserve is told in Chapter III., but it is necessary to draw attention here to the effect which this concentration, combined with the introduction of veterinary skill and the cessation of raiding by and against them, had on the Masai. In 1904, before any administrative limit had been placed on the movements of the tribe, it was estimated that the Masai possessed 50,000 head of cattle. In 1911, 80,000 head were said to be in the Northern Reserve alone, and this estimate was subsequently increased to 200,000 when the cattle which were attempting to move south had been more thoroughly counted. 50,000 head of cattle moved south in 1911, but in the final move from Laikipia in 1912 and 1913, nearly 200,000 head were counted. By March 1914 all the Masai herds being located in one reserve, the total estimate for the tribe had leaped up to 400,000 and the number of cattle in the possession of the Masai is now supposed to be in the neighbourhood of three-quarters of a million. These latter figures are the estimates of Mr. E. W. Hemsted, who has been the Officer-in-Charge of the Masai Reserve for more than five years, and, in spite of the objection taken by the Masai on superstitious grounds to the counting of their stock, they must be taken to be substantially accurate. It is scarcely reasonable to suppose that the earlier figures, particularly the first two mentioned, are in any way so exact, but, after allowances have been made for this, it is obvious that an enormous increase in stock has taken place. In addition to this cattle, the Masai are said to possess something over two million sheep and ten thousand donkeys. The stock-carrying capacity of the 14,000 square miles included within the borders of the Masai Reserve, is limited to a certain extent by the evasion shown by the natives to grazing cattle in areas which from past experience they believe to be infected by disease, and, in parts of the Reserve, land which appears to be admirably suited for stock remains unmastered on that account, no attempt having been made to utilise veterinary skill and treatment in rendering their cattle immune from the disease. With the exception of these areas, the Reserve may fairly be said to be stocked to its fullest capacity, and the Masai, who number all told about 45,000 souls, possess capital to an average amount of rather more than £110 per head. They are thus, in all probability, the richest uncivilized tribe in the world. It is not surprising, therefore, considering their conception of manual labour as degrading, the limitations of their personal requirements and their [illegible] to Europeans, to find that they are unwilling to work for wages as do the members of other tribes. Their national diet is meat and milk, both of which they have in plenty, and they can procure any other food or commodity they desire by sale or barter of stock.

The Masai as a pastoral tribe

[33]

[34]

[35]

[36]

[37]

Employment of the "Morans."

More particularly does this argument apply to the "Morans" who are of the ages at which the members of agricultural tribes are expected to work. No suitable employment has as yet been found for them as a body, though a small number have been known to reside as herds on the farms of sympathetic European stock-owners who are willing to pay a high wage for a modicum of service and who will not insist on their performance of any unwarranted labour. A very few also have proved efficient in the Police Force and K.A.R., while numbers of them, employed in the capacity of native levies have frequently proved of assistance in punitive expeditions against other tribes,* but for the majority, all attempts to find a suitable form of employment have failed, and they continue to lead their idle life in the Reserve, where their attitude is one of conceited conservatism combined with opulent apathy. The discipline formerly necessary to their existence as a fighting race is rapidly falling into disuse, and the good qualities they once possessed are fast deteriorating. Many of them have condemned to a feeling of boredom with their idle life but few have had the moral courage to change it for one of labour. This manner of existence is having a disastrous effect both physically and mentally on the Masai as a tribe, and it is stated that the average height of the "Morans" has decreased by three or four inches during the last fifteen years.

Masai cattle considering cattle.

It has been said that the Masai Reserve is already, with certain reservations, stocked to its fullest capacity. Mr. Hemsted has estimated the natural increase in cattle at 15 per cent, or approximately 100,000 per head per annum. It follows therefrom, that a similar number must be disposed of or perish annually; but this is an argument which does not appeal to the Masai. They have not only shown a marked reluctance to sell their stock, but they have made no serious attempt to accept the assistance of science in improving the grazing conditions of their country, and, being satisfied as a result of the few experiments they have made that the class of stock they possess—a small, degenerate, in-bred animal—is best suited to withstand the arduous conditions prevailing in the Reserve, they are unwilling to permit a cross-breeding with pure-bred or grade stock which might materially increase the value of their herds in the world's markets, and which would, by the introduction of fresh blood, obviate the ill-effects of in-breeding which has been rendered necessary by the cessation of raids. The wealth of the Masai, therefore, is turned to no good purpose; their style of living does not change; they are still content to live in low buildings constructed of poles, grass and mud, in conditions of filth that defy description; and, although an improvement has been noticeable in recent years, they have shown no great desire to utilize their wealth in the purchase of imported articles and in the improvement of their diet.

Council of Elders.

Another aspect of the character of the Masai "Morans" which deserves consideration is the disregard which they evince for the authority of their own native administration as represented by the Council of Elders. These Councils exist according to native custom, but have never been in the past, nor are they now, efficient to enforce the decisions they may give in respect of the young warriors. It may be said that serious crime in the Masai Reserve is rare, and that there are not more than three or four cases on record, since European administration was established, when the attitude of the "Morans" gave cause for anxiety and in no one of these cases did a disturbance of such magnitude occur as to render necessary a measure to appeal force to quell it. Politically, the Masai have remained loyal to the British Government since they first encountered it, and except for isolated instances where certain sections attempted to help the allied cause and to increase their herds by the despatch of raiding expeditions against German territory, their conduct throughout the trying period when the war in East Africa was on their borders was exemplary. Nevertheless, a catalogue of the misdeeds of the Masai will show a not inconsiderable number of instances

Crime in the Masai Reserve.

* The Masai have rendered assistance in the capacity of native levies on the following occasions:—
(1) South Kavirondo, 1906. 400 Morans. (2) Kisumu District, 1906. 100 Masai and Sonjo.
(3) South Kavirondo, 1906. 400 Morans. (4) South Kavirondo, 1907. 200 Morans.
(5) Kisumu District, 1907. 200 Morans. (6) Kisumu District, 1908.
(7) South Kavirondo, 1908. (8) Kisumu District, 1909.
(9) Kisumu District, 1909. 100 Morans. (10) South Kavirondo, 1909-10. 100 Morans.
(11) Masai Reserve. 400 Morans. (12) Masai Reserve, 1910.
Reports on the work of these levies have on the whole been highly satisfactory, except in the present Dorobo operations, where it is doubtful if the present Masai have high spirit, and in the Kisumu period when it was found that the Masai sympathies were of little use against the Nandi in their country.

13 one or two streams which are permanent and which run for some distance from the foot of the hill. The most important are the Namanga and Kidongai, but several other springs are to be found on the mountain itself. The upper portions of Mount Ossik, as well as the northern slopes are covered with good grass, suitable for grazing during the wet season, but the Masai usually proceed to the more permanent watering places in the dry seasons.

Following the line of the Longido-Kajiado road northwards, more broken country is encountered, with the Ngurigaishi and Ol Kesparasha Hills on the right forming the western boundaries of the Nyiri plains. This part of the reserve is bare and barren with little grass, and water can only be obtained by digging. The road lies generally at an altitude of between 4,000 and 5,000 feet, and the first permanent water that is to be found is at Besil. There are some perennial springs on the slopes of the Kesparasha and Ngurigaishi Hills. North of Besil the country is covered with grass, and forms excellent grazing grounds comparatively free from trees. To the east lies the broken country of the Bazaga Hills, which contains numerous water-holes, some of them permanent, but no permanent rivers. The line of the Magadi Railway is thus reached, north of which lie the Kapatiei Plains, stretching north-eastwards into the Ukamba country. These plains are at an altitude of about 5,300 feet, and are covered with grass, though the ground is somewhat stony.

To the west the ground rises fairly uniformly to the Ngong Hills, Doinyo Lemayu, and En Doinyo Nasuk. West of these heights lies the escarpment of lava rock, running north and south, which forms the eastern wall of the Rift Valley, and which is more or less clearly defined from the northern boundary of the Masai Reserve at the Kikuyu Escarpment in a south and south-easterly direction to En Doinyo Nasuk and the Turoka Ravine, thence south-westerly past Lemuji, to the Anglo-German boundary near Boundary Post 21.

East of this escarpment the country is at a much lower level, is barren, rocky and destitute of water. A few isolated hills rise up, but it presents the appearance of a rugged desert and is practically uninhabited. Descending from the escarpment, at a mean altitude of 6,000 feet, the general altitude at the foot is little more than 4,000 while in the neighbourhood of Lake Magadi the country falls to 2,022 feet. To the south of the Lake stands Ol Keteruj, a mass of three or four peaks, of which the highest attains an elevation of 4,081 feet, and to the north there is a series of knolls and ridges. Near Lake Magadi, and extending eastwards and northwards for some miles, there are the deposits of an old lake. These are associated with volcanic debris and have in places been overflowed by lava.

Northwards, and some fifteen miles west of the Ngong Hills, the country consists of a series of parallel valleys divided by rocky fault scarps, details of the enormous fault movement so definitely marked in the Rift Valley.

West of Lake Magadi the Rift Valley maintains its low altitude, broken only by Udongoria, a hill which flanks the Uaso Nyiro on the east at a height of 2,000 feet, but at the northern extremity of Lake Natron, a few miles north of the boundary, Ol Shonkolo rises an isolated peak to an altitude of 5,100 feet, 3,000 feet above the swamps of the Uaso Nyiro at its immediate foot.

283 311 The country to the east of the Uaso Nyiro, and lying in the Rift Valley, is undoubtedly the poorest portion of the reserve from a pastoral point of view. East of the Naivasha-Longido road, and in the Ingito Hills, the country may be described as fair stock-land, and though water is not plentiful, and though there are in general considerable distances to be crossed between water-holes, a considerable quantity of stock can be maintained on it by utilising the drier areas during the wet season. Statistics show that this area does in fact support about 170,000 head of cattle and nearly 600,000 sheep.

There remains the country situated in the Rift Valley from the Kedong to the Uaso Nyiro. The Kedong River does not itself enter the Masai Reserve as a stream flowing above ground except in the wet weather and it is, therefore,

SECTION VII

THE MASAI EXTRA PROVINCIAL DISTRICT

GENERAL NOTE

MASAILAND constitutes an Extra Provincial District under an Officer in Charge, holding the powers of a Provincial Commissioner, with two District Commissioners, stationed at Kajiado and Narok. The legislation in force in other parts of the Colony applies to the District, but the Outlying District Ordinance, No. 25 of 1902, has also been applied to it, in order to provide a means for controlling immigration from other tribes, a matter to which, as will be subsequently shown, much importance is attached by Masai tribesmen. The area of the District is 15,177 square miles and the population was estimated in 1945 at 53,000.[1] The density is thus 3.4 per square mile.

The Masai District contains in its more northern section a considerable area of land which ranks for agricultural or pastoral purposes with parts of the neighbouring Highlands reserved for European use, though it is to be noted that the rainfall here is more variable than in the central part of the Highlands. The lower parts of the District have a lower and even more variable rainfall, with the result that there is an area, conservatively estimated at a little over 3,000 square miles, which is arid and for all practical purposes waterless.[2] But the value of the large area held by the Masai is not to be judged by its agricultural possibilities, for if the Masai no longer justify the character assigned to them by history as "a virile tribe of predatory nomads," they have at all events maintained their traditional habit of life as a pastoral people, and though there is some cultivation in the Nairage-Ngare area and also near Ngong, this forms only an infinitesimal part of the District, and is for the most part carried out by Kikuyu immigrants on behalf of the local Masai.

It is of interest to note that in 1904 the number of cattle was estimated at only 50,000 and the sheep and goats at 600,000. This may have been an underestimate, though it must be realized that the country was still to some extent suffering from the effects of the great rinderpest epidemic of 1890, which had entailed such catastrophic results both on the numbers and the military power of the Masai. By 1914 the estimate had gone up to 600,000 head of cattle and over a million and half sheep and goats.[3] The Masai herds suffered severely in the drought of 1933 and 1934, when their losses of cattle were estimated at over a quarter of a million. But a recent estimate has put the number of cattle at over 500,000, with 800,000 sheep and a large number of donkeys. The further increase in the number of cattle is to some extent affected by the existence of tsetse, which is prevalent on the South Kavirondo boundary, in the extreme west, and also in the middle area, where the Kajiado and Narok Districts join. But if the present estimate of the stock is correct,

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

471 233 the Masai must, considering their small numbers, have a larger potential capital per head than any other tribe in East or Central Africa.

563 167 Practically the whole population may be said to belong to the Masai tribe, though there are a small number of immigrants, numbering rather less than one thousand in all, ninety per cent. being Kikuyu. As shown above, they are for the most part employed by the Masai in the cultivation of the small area of land used for agricultural purposes. There has been a certain amount of intermarriage, but the penetration of the country by the Kikuyu is viewed with distrust by the Masai, and three Alien Committees have lately been established in order to consider measures for the control of alien immigration. An area 631 167 of 47 square miles (known locally as Olenguruone) within the Masai Native Land Unit was set aside in 1942 for "squatters" displaced from European farms, most of whom are Kikuyu.[1] But this area will remain politically separate, and it will not affect the position of the Masai as a homogeneous population.

563 Early records refer to the existence in Masailand of a number of Dorobo, of whom Masai tradition speaks as the original inhabitants of the country. When Europeans first came into contact with the Masai, part of the Dorobo were still leading a primitive life in the bush, while part served the Masai as herdsmen and in some cases had small herds of their own. These people have, however, now been absorbed by the Masai and are not readily distinguishable from them.

THE MASAI TRIBE

131 648 Reference will be found in the Chapter on Tanganyika to the circumstances in which the Masai tribe, as it existed in 1890, was cut in two by the international boundary drawn between Kenya and Tanganyika.[2] The area thus left to the Masai in Kenya, now estimated at 15,177 square miles, compares with the area of 18,470 square miles now held by the Tanganyika Masai, with [161] an estimated population of 32,168, and a density of 1.7 per square mile. The proceedings as the result of which the Kenya Masai were in 1911 placed in occupation of their present area have had a prominent place in the controversies connected with the alienation of native lands in the Colony, but it will be sufficient to refer here to the facts as summarized in paragraphs 635 to 674 of 631 648 the Report of the Land Commission of 1933.[3] The Masai lands are now held as a Native Land Unit under the terms of the Native Lands Trust Ordinance 28 of 1938 and the Kenya (Native Areas) Order in Council 1939. There is, however, one fact which differentiates the Masai lands from those occupied by other tribes under the terms of this legislation, or those held by the Tanganyika Masai. Whatever the judicial value of the Agreements made with the Kenya Masai in 1904 and 1911, it is held, in the words used by the Governor of Kenya in 1948, that they "have the validity of a Treaty."[4] If so, the terms of the Order confirming the Agreement of 1911 constitute a moral obligation to the Government to reserve these lands for the exclusive use of the Masai, "so long

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

divided into two sections, the agricultural ('l-oikop) and the pastoral Masai, there now remains in Tanganyika little vestige of the former.[1] A few scattered plots are cultivated by Masai, but it is with the help of alien labour. For the rest, there a little cultivation by the small Sonjo Tribe (9,521 in the 1948 Census), a people living below the Rift Wall who have not been assimilated by the Masai. The only other tribe in the District, the Dorobo (believed to number about 1,500), who are known traditionally as the "hunting people," are possibly a survival of the original inhabitants, and have become practically a servile class to the Masai.

As a pastoral people the Masai are semi-nomadic in the sense that they move with their herds in order to avail themselves of the seasonal variations in water supplies, so that they in effect practise a system of rotational grazing. They are credited with the possession of three-quarters of a million cattle and large herds of sheep and goats, but the number of their stock is subject to large and rapid variation in times of drought, and moreover East Coast fever, rinderpest and other diseases take a heavy toll of them. In the last 'eighties a combination of drought and disease almost wiped out their cattle and greatly reduced the numbers of the people themselves. Though like many other African pastoral tribes they make a cult of their cattle, they show little interest in improving their quality, and in the past have been prepared to dispose of them only in so far as they might need cash for their Poll Tax or for the few articles of food required to satisfy a people whose ordinary diet is limited to milk, meat and blood. To some extent, this position was improved during the recent War, which provided a stimulus to production of beasts for sale.

From an economic point of view therefore the Masai present a difficult problem, since the contribution they make to the economy of the Territory does little to justify their occupation of so extensive an area as twelve million acres. From a social point of view they are also a problem, owing to their reluctance to avail themselves of facilities for education. And as will be further explained in the following pages, they present an equally difficult problem of native administration, for their social system is still reminiscent of a period when their chief concern was in fighting or raiding at the expense of their neighbours.

THE FORMATION OF THE SYSTEM OF NATIVE AUTHORITIES

As already indicated, the diverse social and economic conditions prevailing in different parts of the Province have been reflected in the variety of forms taken by the Native Authorities as now constituted. Before, however, proceeding to describe these in detail, it will be convenient to give here a statement which summarizes their chief features. See page 284.

THE MOSHI NATIVE AUTHORITIES

In the Moshi District the present formation of the Chagga Native Authorities is the result of a somewhat radical reorganization carried out in 1946. Up to that time the Chagga had been split up over sixteen chiefdoms, divided from each other not only physically by the deep ravines of the mountain side, but also politically by the obstinate clan feuds and jealousies of past days. These chiefdoms were all treated as of equal standing, though their jurisdictions varied from 11,500 taxpayers in the Machame chiefdom to 400 in the Mwau. They were united in a Council of Chagga Chiefs, which was conspicuous mainly

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

These figures were obtained by reading through tax registers to groups of elders, who supplied the information. The number of wives showing in the registers were not revealed to them, and it was noted that in many cases the numbers given by the elders exceded those recorded in the books. 162 595 [26]

The percentages to be drawn from this table are of special interest when compared with another tribe. For this reason they are tabulated below, in conjunction with those of the Hehe, figures from Brown and Hutt's 'Anthropology in Action', page 107. 162 171 595

Marriage Statistics.

				MASAI	*HEHE*	
Unmarried men	...	...	..	42.2%	25.3%	) of adult
Men with one wife	...	...	...	35.1%	48.4%	) male
Men with two or more wives			...	22.7%	26.3%	) population.
Wives for every 100 married men			...	161	153	

Two points of interest arise from these figures. The first is the much larger proportion of unmarried men amongst the Masai. These fall mainly in the warrior class, as the following table shows :—

Marriage of Morans. 162 595

	Kibaya	*Simanjiro*	*Engarenaut*	*Longido*	*Total*
Total morans	133	159	66	224	582
Total married morans	17	23	20	85	145
Percentage married	12.8%	14.5%	30.3%	38.3%	24.9%

The other interesting point is that one would expect both the percentage of polygamous marriages to total marriages, and the number of married women per 100 men to be much higher in the case of the Masai than the figures actually reveal. The reason for this lies in the number of dependent women not classified by the Masai as wives. The first table shows that for 900 adult males there are only 900 wives; but census figures show a preponderance of females over males, and the 900 males probably represent at least 1,200 adult females, the balance being made up by mothers (with husbands still alive) living with their morans sons, deceased brothers' wives with male issue, (not therefore taken to wife), etc.

In one area the distribution of the women (wives only) amongst the ages was worked out; it was found that there were approximately 3 wives to every Tenani, 3.5 to every Elemito and 4.5 only to every Kimolo.

Although it was found that on an average each gate pays only four taxes, the probability is that there are usually more than four huts to a gate, for those morans who pay tax but do not possess a hut are thought to be more than offset by those women who do possess a hut yet pay no tax. The number of cattle to each gate were examined in the Longido area, with the results shown in the table below :— 233 592

9:Fosbrooke G-5 (936-1948) 1948 FL12 Masai FL12
Kisonko

233
592

Cattle per Gate.

Number of cattle.		Gates.		Percentage.
Under 50	—	52	—	10.1%
50 — 100	—	92	—	17.9%
101 — 200	—	193	—	37.5%
201 — 300	—	115	—	22.4%
301 — 400	—	34	—	6.6%
401 — 500	—	11	—	2.1%
501 — 600	—	9	—	1.7%
601 — 700	—	3		
701 — 800	—	2		
801 — 900	—	1	—	1.5%
901 —1000	—	1		
Over 1000	—	1		
		Total 514		

As 156,908 cattle were owned by these 514 gates it follows that the average number per gate is just over three hundred, but this figure is misleading, for two-thirds of the gates possess less than two hundred head.*

531
606

The advantages of marriage not only include the acquisition of a a woman to bear one's children and to tend one's cattle. For marriage sets up a new relationship with one's wife's family, whereby each party is expected to help the other. If a father-in-law loses his cattle by drought or disease, the son-in-law is expected to contribute towards a new herd; if a son-in-law strikes hard times, the father-in-law — if only for the sake of his daughter — will transfer cattle to him.

At times, also, a daughter will, by amicable arrangement with the son-in-law, return to live with her father for considerable periods, being visited from time to time by her husband, or again a grandson will be sent from home to help herd his grandfather's cattle.

484
[584]

The fulfilment of these various obligations leads to much travelling and consequent contact almost as much as the actual betrothal and marriage does. This later is a lengthy process. Early betrothal is the rule and involves a longengagement, during which the man is expected to maintain contact with his future in-laws. Frequent travelling is also necessary in other connections; for example a man goes himself or sends a son to examine the water and pasture of the area to which he proposes to move, and as we have seen the moran are always on the move, visiting friends, begging bullock for meat-feasts, etc. So in spite of the size of the area which they inhabit, and of their scattered settlements, the Masai maintain very close contact amongst themselves.

697

Another point of considerable importance in Masai family affairs is the adoption of children, frequently practised both in respect of Masai

* The mean number of cattle per gate lies between 100 and 200 or between 25 and 50 head per adult male taxpayer—Ed.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

422 Women possess no property save their ornaments. Of these the beads and the
423 necklaces become the property of the daughters, but the wire ornaments are thrown away.

915 *Spirit Life.*—My informants declared that the Masai had no belief in a spirit life
916 after death, or in spirits of any kind, but I am not satisfied on this point. For some reason (probably a restriction with a heavy penalty attached) they were unwilling to discuss this subject.

754 *Curses.*—The death-bed curse is considered very terrible, as there is no possible way of escaping its evil effects, for a curse can only be removed by the person who uttered it. A man who has been cursed will use every possible means to have the curse withdrawn immediately lest the utterer of the curse should die. (A curse
[915] uttered during life is supposed often to remain inactive until the death of the utterer, and this in itself seems to indicate a belief in some sort of spirit activity.)

PART VIII.—CLANS.

614 The following is a list of the clans and sub-clans among the Masai (it is as nearly complete as possible):—

Main Clan Name.	*Sub-clans.*
No. 1. Laimer	(1) Laimer (2) Lagetoi (3) Letoya (4) Lokumai (5) Lamothere (6) Libartimaru (7) Loiger.
No. 2. Ndarwiru	(1) Ndarwiru (2) Lanabogaru.
No. 3. Molelian	(1) Molelian (2) Mbarakinati
No. 4. Magwen	(1) Magwen (2) Lowgu.

PART IX.—CATTLE AND SHEEP.

933 As a pastoral people the Masai have many very interesting customs connected with their flocks, but information on this subject is very hard to obtain, as details of the greatest interest to anthropologists are often not given because they are considered too trifling or too well-known to be worth discussion. A few interesting notes were, however, obtained.

11: Leakey E-5 (no date) 1930 FL.12 Masai FL.12
Kenya

Protecting Lost Cattle and Sheep.—If during the day cattle or sheep stray and cannot be found before nightfall, the following interesting ceremony is performed. There are certain men and women (they are not necessarily anything to do with medicine men or witch doctors), who have the power to protect straying cattle, and as soon as a herdsman discovers that some of his animals are lost and cannot be found before dark, he sends with all haste to one of these individuals. If possible the messenger should be a small boy, and he takes with him the staff that the herdsman of the lost cattle was carrying at the time. This staff is handed over to the person who is to perform the protecting ceremony, which is as follows:—The staff is taken and tied up with a leather thong removed from the "Protector's" waist, and is then placed at the head of the "Protector's" bed until the following morning. As an alternative, if there is no staff available, a cinder is taken from the fire and is placed in a cooking pot, the mouth of which is then covered with a skin dress belonging to the "Protector," and the skin dress tied down with the leather thong. In either case, while the tying is being done certain fixed formulæ are uttered by the "Protector." These may be translated as follows: "I tie the hyena's mouth," "I tie the lion's mouth," "I tie the leopard's mouth," "I blind the thief's eyes," etc. Once this ceremony is performed the lost animals are considered safe from all dangerous animals and from thieves. In fact, even the owner would pass right by them and not notice them, for they have become invisible. 233 189

Next morning the animals are "released" by the "Protector" and the owner can go out and find them at once. There is no fee paid to the "Protector" for performing this ceremony, but he (or she) should be given a little snuff. [431]

Driving Out Disease.—In the case of a serious outbreak of disease, one of the some "Protectors" is sent for to perform a "driving-out" ceremony. All the cattle and sheep of the infected village are brought together into the cattle enclosure and a ceremony called "*Choso tuwaraigiako*" is performed. The "Protector" selects a young bull and a young heifer of about the same size and of the same colour (these two animals must be of a single colour and not piebald or spotted in any way). He also chooses a small boy and a small girl. He then instructs these two children to drive the two animals slowly right round the outside of the enclosure and back through the entrance to the cattle again. This "going round" ceremony is accompanied by appropriate sentences by the "Protector" bidding the disease depart, and the ceremony ends. The "Protector" is given beer as a fee. After such a ceremony any cattle disease is supposed to die out quickly.

Preventing Mating.—Among the Masai it is a common custom to put a special shield on to bulls to prevent indiscriminate mating. This shield consists of a square flap of leather which is fastened just behind the animals' forelegs by thongs which come up over the ribs and are tied in the region of the animal's back. This practice is especially common when cattle from several villages are being herded together during the day. Then when the cattle return in the evening to their respective 233 232

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

233 233 villages the shields are removed to allow mating to take place with the owner's own cows. The same method of preventing mating is used with rams, but to a much lesser extent. If a man has several good rams he keeps shields on a few of them at a time in order to use his rams in rotation.

233 [362] *Blood-letting.*—Among the Masai, blood is a staple article of diet. It is either drunk hot and fresh, or cooked with bits of fat and meat into a "black-pudding," or else mixed with fresh milk and allowed to curdle.

In order to obtain blood every sheep and every head of cattle is bled at intervals. Cattle are bled by one method and sheep by another. In the case of cattle, the animal is seized and held, and a thong is then tied round its neck until the vein at the side of the neck swells up under the pressure of the blood. The vein is then [413] punctured by means of a special instrument which may be termed a "blood-letting arrow." The blood-letting arrow consists of a small stocky shaft into the end of which a small flat blade is inserted. This blade has a curved edge and is very sharp. This arrow is used with a special bow which is always small and usually very roughly made. The arrow is not shot from a distance, but *placed* against the swollen vein. The bow string is only pulled back very slightly and when released drives the arrow just far [416] enough to open the vein. The blood is caught in a gourd and the animal released.

Sheep are bled by a different method; the animal is held and a small incision is made just above one eye and blood drawn off.

362 527 *Meat-feasts.*—Young men and old alike indulge in frequent meat-feasts, meat being a staple article of diet. No men may eat meat inside the villages, so meat-feasts take place either in special huts built at a little distance from the villages, or in a cave if there is one near-by.

There are certain rules and regulations concerning meat-feasts, as follows:—

(1) No man may eat meat that has been touched by a woman.

[331] [545] (2) No Masai man may slaughter cattle himself. In every case a man of the Wandarobo tribe must be called in to kill the animal, and he must be rewarded by being given a part of a fowleg.

(3) The neck, stomach and some of the intestines are always given to the women, who may come and fetch them. The breast must be given to the man to whom the slaughtered animal belonged.

(4) During a meat-feast, some at least of the feasters must sleep in the hut or cave where the meat is, and it is usual for all to do so. If by any chance the fire should go right out in the course of the night, it would be considered a very serious matter indeed. In such a case no one inside the hut may go out by the normal entrance, but must break through the walls (in the case of a cave they must break through the brushwood screen which is invariably built across part of the entrance to the mouth of the cave), and all the meat that is left over must be deserted and left to the hyenas. The breaking of this rule is said to result invariably in the death of the miscreant.

		[illegible]	[illegible]	[illegible]
Total for Masailand		[illegible]	[illegible]	[illegible]

This shows only a small increase over the 1941 estimate for the Kenya Masai, when 10,000 Samburu are deducted; but it doubles the previous estimate for the Samburu and shows a substantial increase in the Tanganyika Masai.

The Swanick estimate for the Kenya Masai are:

	Cattle	Goats and sheep	Donkeys
1918	[illegible]	[illegible]	[illegible]
1930	[illegible] to [illegible]	[illegible]	[illegible]

The figures for cattle among the Tanganyika Masai are [illegible],[1] but these may be underestimated. They vary in fact from about [illegible] to [illegible] according to seasons and other factors.[2]

The total area of Masailand in Kenya and Tanganyika is about 41,000 square miles or [illegible] acres (15,000 square miles or [illegible] acres in Kenya, and 26,000 square miles or [illegible] acres in Tanganyika). After deducting [illegible] square miles or [illegible] acres from the Kenya Land Unit as being useless on account of bush or tsetse fly, the Kenya Masai have about three acres per head of stock which is shared with sheep and goats; whereas in country such as theirs cattle alone require anything from three to five acres per head, owing to the low rainfall, poor grazing, scarcity of rivers, and frequent droughts. Their Land Unit is also a Game Reserve.

PHYSICAL ENVIRONMENT

At the height of their power in the middle of the 19th century the Masai occupied a stretch of country which covered some 500 miles from north to south, and, at its widest, 100 miles from east to west. The northern limit was approximately Lake Baringo (now small flats), 30 miles south of Lake Rudolf; the southern, Longido, near

[2] Information from Mr. H. A. Fosbrooke.

13:Huntingford E.-4 (no date) 1953 FL.12 Masai FL.12

Kiteto, some 50 miles south of Kilwa in Tanganyika. The most northerly Masai were (and still are) the Samburu, who in 1900 extended more than 120 miles northwards towards Lake Rudolf. This vast country, with an area amounting to some 80,000 square miles, now reduced to one-half its original size, has great variation of altitude, climate, rainfall, and vegetation. There are three vegetation zones: the first or northern has desert scrub and a desert type of grass; the second or medium zone has thorn bush and medium grass; the third or highland zone has evergreen forest, parkland, and tall grass. In Kenya, the altitude of Masailand ranges from 3,000 to 8,000 ft., though in the highlands which lie between Mount Kenya and Elgon in zone 3 the land in some places rises to 9,000 ft. Most of the present Masai Land Unit is in zone 2; part of the extreme southern territory of pre-European times is in zone 1. In Tanganyika, the Masai territory is at a lower altitude, ranging from 3,000 to 4,000 ft. and including the isolated mountains Kilimanjaro and Meru. Much of this country is unhealthy, and belongs to zone 2. In Tanganyika Masailand, there is one permanent river, the Ruvu or Pangani, on the eastern boundary; there are a few seasonal rivers, but for their main water supply the Masai depend on wells, water-holes, and springs. Since only the third zone is well watered, and most of the Masai live in zone 2, their life is conditioned to a great extent by the water quest, and in the worst areas a form of transhumance is practised. In the present Masai Land Unit in Kenya, the rivers are few, and the rainfall low. Most of the few large rivers run close together in both country unless for grazing; the main rivers, too, rise in the Rift and units lose their tributary across the Land Unit in one stream, the Ewaso-gim. There are no lakes excepting salt lakes Magadi, Natron, and Nerrera, though in the northern part formerly occupied by the Masai is the chain of lakes Baringo, Hemingway (salt), Solai, Nakuru (salt), Elmenteita, and Naivasha. The Rift Valley, in which these lakes lie, runs right through Masailand from south to north. In many places the floor of its valley is a wide grassy plain; in others, as in the Kedia Valley, it is narrow with high precipitous walls. The rainfall is low, the average for the eight years 1925-7 and 1930-4 at Narok being 18 ins., with a range of 47 ins. to 12 ins. It is recorded that at Longido in one year there fell only 8 ins., three of them in one night. With such a rainfall, grazing cannot be anything but scanty. The average rainfall recorded by three gauges in the Masai region between Kilwa and Arusha for six years is 24.4 ins. There are two seasons, the dry weather from June to November, followed by short rains in November and December, after which there may be rain in January and February (January: 1918, 0.60 in.; 1919, 4.20 ins.; 1917, 8.00 ins.; February: 1915, 1.48 ins.; 1916, 1.38 ins.; 1917, 5.33 ins.; though in 1916—a dry year in Kenya—there was only 0.38 in. in February). The dry weather is called "the months of hunger" by the Masai. The occupied sub-season is from March to May, "the months of plenty," though small amounts of rain may fall in other months, notably June to August, which are called "the months of showers." The figures given for Kenya refer only to Narok, and in the more arid parts that is not only less rainfall, but the small precipitation out of season has little effect on grazing or water supply. Except in the highland zone, where there is some seasonal variation, day temperatures vary only between 80° and 60° F.

MAIN FEATURES OF ECONOMY

Semi-nomadic Pastoralism

In dry weather the cattle graze round the permanent waters; in the wet season the cattle are driven to the temporary waters that form, leaving the grass round the permanent waters to rest. In both seasons the herds are built a few miles from the water supply. On one day the cattle are taken to drink, and on the next day they

are taken in another direction, which means that they drink only on alternate days, but at the same time graze over a larger area than if they went to water every day, thus helping to conserve the grazing. There are two types of kraal. The married men with their wives and children live in one type, and the warriors with their mothers, sisters, and girl lovers in another type. The main structural difference between the two types seems to be that the warriors' kraal has no fence, while the elders' kraal is surrounded by a thorn fence. The elders' kraal varies in size: it may contain from seven to several hundred huts, though very large examples (such as were seen by Tobbi and von Höhnel) are probably uncommon; the average is probably about 20 to 30. The warriors' kraal may contain between 50 and 100. In the elders' kraal the huts are built round the inside of the fence, which is also the enclosure in which the livestock are housed at night. The number of gates in the fence depends upon the number and size of the families which live in it. Each family has exclusive rights over at least one gate, and a large family with many cattle has more than one. The kraal, *enkang*, thus approximates to a village, for several families live in it, and the gate, *ilokwani*, has come to typify the family, the word being used with the article (*en-ilokwani*) as a synonym for *ol-mwaki*, "the family." When a man sets up his home in a kraal, he puts his first wife in a hut on the right of his gate as one goes in, and the second wife on the left; the third, if he has one, goes on the right, and the fourth on the left, and so on, the huts being so arranged that each succeeding wife lives immediately to the right or left of her gate. The people on each side of the gate form two distinct groups, *in-lokwani*, the other of which is left most to matters of inheritance. (See below, p. 108.) The warriors' kraal or *e-manyata* is inhabited by all the members of one age-set in one district, who constitute a company, *ariri*, and the kraals are built in straight positions. With the men live their mothers, and some young sisters who help their mothers, and if old enough become lovers of warriors. The mother, her warrior son, and younger children share a hut, all sleeping on separate beds; when the warrior wants to sleep with his lover he goes to another hut. The mother's husband may visit her at any time, and when he comes her hut must be given up to the pair. The inhabitants of a *manyata* vary considerably in number, ranging from 20 to several hundred.

LIVESTOCK

Cattle

Cattle, *in-kishu*, are the object on which the lives of the Masai are centred, and on which their whole existence depends. Their importance is both material and spiritual, and people who perform any kind of work other than tending cattle are despised by the Masai, whose attitude towards cattle is similar to that of the Dinka. The Masai believe that in the beginning God gave them all the cattle in the world, and therefore nobody else has a right to possess any. Cattle provide the Masai warrior with his food in the form of milk, blood, and meat, and they give him spiritual and mental satisfaction through their existence, though it would seem that there is less outward and ritual expression of the love of cattle than among some other East African tribes who combine pastoralism with agriculture. This, however, does not by any means indicate that the Masai are an agricultural people who have wholly given up agriculture and taken to pastoralism. Since the Masai, unlike the Nuer, kill large numbers of their cattle for eating, it was essential in the past for them to maintain the size of their herds by continual raiding, for the natural reproduction rate would not have been enough. On account of its high ritual value, milk may not be drunk on the same day that meat is eaten, nor may it be boiled, but it may be drunk mixed with blood. Cows also has a high ritual value, being the food of cattle, and is used as a sign of peace. In 1936 the average size of an elder's herd was officially estimated at about 75 head of cattle, 40 sheep and goats, and 10 donkeys; this was based on the estimate of 120,000 as the total number of cattle belonging to the Kenya Masai. In Tanganyika, it was found that the average number

13:Huntingford E-4 (no date) 1953 FL.12 Masai FL.12

of cattle to a family (kidowi) in 1948 was between 100 and 200 head. There appears to be no such system on the Naroki kapte or Kipokio kimonkon. (See above, p. 21.) Milking is done by girls and women into gourds; the calf is allowed to suck, and if it dies the skin, sometimes stuffed with grass and called *el-kata*, is presented to the cow at each milking. The milk yield is about three pints a day. Cattle are bled in the same way as by the Naroki, with a blunted arrow, *el-gorot*, shot into the jugular vein, and the blood is caught in a gourd. Sheep also are bled. Cattle are branded with marks on the rump or flank which indicate the owner's clan or sub-clan, with sometimes a private mark as well; the ears are also clipped for the same purpose. Salt for cattle is obtained by driving the herds to a salt-lick, *em-bokai*. The Masai are said to have effective remedies for diseases of cattle, but their efficacy has never been enough to prevent heavy loss during epidemics of rinderpest and pleuro-pneumonia.

Donkeys

[232] The Masai keep large numbers of donkeys (*l-arkwa*, sing. *e-ldorai*) which are used for carrying their goods when they move house (*olor*). Donkeys are marked by slitting the ears in different ways.

The Status of Cattle

[233] The status of cattle as regards ownership is uncertain. Mother says that women may own cattle; Thomson says they may not, and on such a point the statements of a traveller are open to question. Fadiman says that they may.* But further investigation of cattle as property, and of their status in the light of ritual value is required.

INHERITANCE OF CATTLE

[234] There does not seem to be any clear account of the rules which control the division of a man's stock among his sons. The guiding principle is that the eldest son of the senior wife gets the largest share, inheriting not only the cattle given to trust to his mother, but also those which his father had kept for his own use. Inheritance is affected also by the "gate" (*kidowi*) arrangement in the kraal, that cattle may not pass from one side to the other. If a wife on the left side dies without sons, her cattle may not go to a man on the right side so long as there are any sons by other wives on the left side. This subject also needs further investigation.

GRAZING AND WATER RIGHTS

[235] Land is not owned by individuals, but by the sub-tribe (*el-oiton*), and grazing rights are acquired by residence. Water rights are controlled by the clan. In the old days, when the Masai occupied new territory, each section, according to tradition, claimed a well, spring, or water-hole on behalf of his clan. Individual rights over water are then ruled out by tradition, and the senior member of a clan living at the water decides, after consultation with other elements, the order in which people take their cattle to water. But a Masai when actually on the move with cattle may claim, and must be given, priority over local cattle at any well or spring. Where water is plentiful, however, as in a river, possession is unknown.

DIVORCE OR LABOUR

[236] In a purely pastoral society like that of the Masai the expression "economic unit" has little meaning, but so far as it can be said to exist, it is the family. It must be remembered, however, that the normal practice is for families to be divided between the father's kraal, *enk-ang*, and the mothers' kraal, *e-manyata*, and that the

Agricultural Firas

In 1950 the D'Ilonos numbered about 1,000 (1,020 according to the 1948 Census), and though they are of Maasai stock, being descended from a Laikipia section called D'Ongin, they have absorbed a variety of refugees including Kamasia, and become rather mixed. According to rumi Bilkeni they had originally four villages on the south end of Lake Baringo, but they were decimated on account of Maasai and Suk raids, and some of the inhabitants, having lost all their cattle, took refuge on Kokwa Island in Lake Baringo. They are expert swimmers and possess canoes, though now Bilkeni are seen in 1951. Their dwellings are round huts with rather high-pitched and somewhat convex thatched roofs, and walls of posts and sticks. There are crowded into two permanent villages known as "Kiongo Kubwa," and "Kiongo Ndogo" in the Ngiroi valley a few miles south of Lake Baringo. The closely packed huts almost touch each other, and the semi-walled gardens are surrounded by strong palisades.

In general the D'Ilonos keep as close as they can to the dress and customs of the pastoral Maasai; they have circumcision and dances and other ceremonies, and practise the "ime-kere" system of the pastoralists, though without the moranies. Today they have some 100,000 acres of poor land, most of it unfit for cultivation, but they have acquired, since the establishment of British rule, some 12,000 or more head of cattle, and 30,000 goats and sheep, thus achieving in part the ambition of all D'Ilonos to become cattle people again. In the days of Chemosa and Tumbo, however, Kiongo was an important station on the caravan route, and was famous owing to the fact that they had a large extent of cultivated land. This was divided into "fields" (by ways of them to four miles square) which were transformed by irrigation channels bringing water from dams across the river Ngiroi. This system was still working in Dundas's time, who says that the opening of the main ditch was performed with the "sacrifice of a sheep at the mouth of the ditch." Besides agriculture, the D'Ilonos hoed and burned, using the bow, and spears of Suk and Turkana type.

It is possible that the fishing group called D'Ilolo who live on the east shore of Lake Baringo is to be classed as D'Ilonos.[1] They subsist on a diet of fish alone which, when Tuldi and von Höhnel saw them in 1888, had produced no ill-effects but it seems now to have resulted in considerable physical degeneration, and in the appearance of rickets in all members of the group. There seems to be a good deal of Turkana blood in them.

The D'Ilonos round Mount Mera are a large tribe of agricultural Masai, originally of Baringo stock, but now occupied by the pastoral Masai in worthy of recognition as a group which can pay and receive cattle for compensation in cases of homicide. The Dongopiyo in Southern Samburu are also to be classed as agricultural Masai.[2]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

Life Cycle

From birth to circumcision a male is a boy, *el-ayiok*. At circumcision[3] he assets an age-set and becomes a warrior, *el-moran*. A man who is circumcised,[4] and may associate with unmarried girls. At the *el-gulon* ceremony he becomes an elder, *el-moran*. Warriors may marry when they become senior moranies. After the *el-gulon* the newly made elders attend to their family concerns, and get some

[2] G. S. Dundas and F. G. Fardon, "The Gissaru" (1911, (1911), p. 101), von Höhnel, 51, pp. 196-98.
[3] The people known as D'Ilolo in southern Turkana are not Masai, but people of Bantu stock, who have adopted Masai.
[4] There is some uncertainty as to the age at which boys are circumcised. Hollis gives the limits as 15-17 years; Fadiman gives the limits later as 18 or 19.

(ii) *The Masai.*

The Masai are a pastoral tribe whose sole occupation is the tending of large herds of cattle, sheep and goats. It has been estimated that they have about 20 head of cattle, and twice as many sheep and goats, per head of the population.

The staple articles of diet are meat, milk, and blood. The blood is drawn from the living animal by puncture of the jugular vein with an arrow. Various roots and herbs are used to make infusions which are used either with boiled meat or with milk. The men, while in the "morus," or warrior class, subsist practically entirely on these articles of diet. The rest of the population, in addition to these four items, which form the main part of their food, eat also some banana, beans, millet, arrowroot, maize, sugar and honey, as these are available. The use of maize, which was introduced only a few years ago, is increasing.

For the greater part of the year there is no scarcity of meat, blood and milk, but in periods of severe drought, when, in spite of the large herds, the milk supply is inadequate, the consumption of these vegetable foods is increased, and even the "morus" may be compelled to supplement their meat and milk diet.

Berries are eaten by the warriors when on safari, i.e., on hunting or fighting expeditions. It appears also to be customary to send the pregnant women into the bush to eat berries. The berries would make an insignificant contribution to the main constituents of the diet, but it is probable that they are of considerable importance as an antiscorbutic addition.

One section of the tribe, the Loitokitok, have adopted a freakily mixed diet. It is of interest that piss among the Masai is confined to this section, who use nitide earths from various sources with their vegetable foods.

(b) Chemical Composition of Native Foodstuffs, Nitide Earths, and Mineral Waters.

The results of the chemical analysis of 180 samples of substances used in the dietary of the two tribes are given in Appendix I. Certain points of interest are discussed below.

(i) *Foodstuffs.*

In the following table a comparison is made between the analyses of the chief Kenya foodstuffs and analyses of similar products grown in other regions, probably in Europe or America, as quoted by Sherman (1928). All the figures are given as grams per 100 grams dry matter.

171 173 To come now to the early histories, it is to be emphasized at the outset that, for any Semitic people, every time we come to the early period, through linguistic comparison, research into names, and literary remains, we are already able to uncover a well-established stock of myths that come very close to the Biblical early history (dragon fight in connection with the creation of the world, tree of paradise and serpent, first parents, flood) and furthermore, as religion, a moon cult (worship of the moon) to be described almost as henotheism. But we come across exactly the same thing, in its most original form, among our cattle nomads, the Maori, whereby it should further be noted that also among the Aldan Semites, where we have to think of more as nomads than as agriculturists, cattle, as their mythology clearly reveals, must have played a great role, nor perhaps the small livestock as the camel and the donkey, to say nothing of the horse, which only because known from Elam to the Semites here around 2000 B.C.

• (215)

174 171 173 192 There is also the fact that among the Maori we find a series of positively ancient traits that bring us close to the East Arabian original homeland of all West Semites, and which otherwise come to us most clearly only in the religion of the ancient Chaldeans (and then transferred into the more polytheistically accepted one of the Babylonians). To these belong first of all the struggle of the deity with the dragon Nonamir on the morning of creation: when Maori compares the word for dragon, [illegible] (Note 1) with the Babylonian [illegible] (now popular pronunciation somewhat like [illegible]), it is certainly not merely an accidental homophony. Since the word for paradise, [illegible], also goes back to the Babylonian [illegible], "garden," which in the Neosumerian period must still have sounded like the unreduplicated [illegible] (cf. similarly [illegible], or that class still [illegible], and many other examples) (1).

1. When in Maori [illegible] also means from, [illegible], Arabic again offers a striking analogy: here cf. Arabic [illegible] (from [illegible], "heaven," but [illegible], "[illegible]."

/10 cont./

eyes are almond-shaped, straight or somewhat slanted. The nose is extended, narrow, and, at the root, flat or very moderately deep-set compared to the forehead. The alae are narrow and very flat, the nostrils rounded to longitudinally oval, less often transversely oval. The bridge of the nose is straight, sometimes slightly convex. The lips are full, without appearing actually protruding. Protruding, thick lips are something so rare and striking that they earn their owner the nasse labalab -- thick lip (or actually: spread, bent mouth). The ears are small, except for the hypertrophy of the upper edge of the ear and ear lobe caused by the wearing of heavy ornaments. The hair is evenly distributed over the scalp, which is most clearly shown on recently shaved heads. The hair often appears "tufty," but this is artifically produced. Only at a length of from one to three centimeters does it curl slightly and /11/ almost never becomes completely curly. The arms and especially the legs are very long, the wrists thin, hands and feet, especially among female individuals, small, narrow, and delicate, the fingers are slender and often strikingly long and narrow, the fingernails long, narrow, and slightly arched.

Even if the racial uniformity of the three branches were to be proved anthropologically, one can determine on even closer connection ethnographically, which must lead to the conviction that all three belong to the same people. The difference in their principal occupations, to be sure, seems at /12/ I appears hard/ first glance to indicate a sharp division. As has already been pointed out above, however, one can easily explain these differences by the consistent behavior of a people of similar customs and habits under utilize several circumstances. The predilection for men's raiding, based on the exigencies for a meat diet, and the nomadic life necessarily growing out of it were common. While the Waukombs had to endure it when their livestock fell victim to epidemics and raids of the strong Wishaff, the latter, under pressure from the still mightier Mexi, had to flee from the open plains to find residence in the mountains. The Wishaff preserved

Ill. 5. Young Ideal. 9 and a pure-blooded, 9 mixed with Negro blood, 1 doubtful.

The Walsuk's protector

who assented of their freedom by giving up their roving life, whereas the Wandenbo, by sacrificing their lands, were able to continue their tested nomadic life as hunters; and neither of them needed to forge the meat dam.

FIG Even though, in general, one should be very careful in ethnology about drawing conclusions from linguistic bases, I cannot particularize here, on behalf of the three branches' belonging to one people, to point to their language as well.

As a matter of fact, we find the same language among the Ideal and Walsuk, with the Lombolian dialect for the latter, with the great number of Ideal dialects, sometimes this one, sometimes that one is their own, according to the location of their area, whereas the very widely ranging Ideal probably underwent almost all the dialects. In addition, for the Walsuk, in places, according to the degree of their alliance with Negro tribes, a language of the latter's is more or less familiar. Of the Wandenbo, the 6 general speak only the language of the Ideal, whereas the dull and

/78 cont./

small pens built beside or on the hut. The door opening of the hut is closed off at night by means of a seal's skin hung over it or a thorny branch dragged in halfway.

/79/ The individual huts are very close to one another. The space between two of them amounts to scarcely half a meter, so that in the evening the entire ring of huts seems closed except for the entrances. For protection against wild animals and enemies, the kraal is surrounded by a most barricade of thorny acacia branches, with which the entrances are also obstructed after the livestock has returned from pasture. In the place enclosed by the huts one finds a ring-shaped thorn-barricade in which the livestock stays during the night: large livestock, calves, and small livestock

Ill. 9. Mawai hut. Plastered with cattle dung.

/56 cont./
are separated from one another by thorn barricades, and the huts are often protected from damage by the cattle by means of thorny branches placed around them.

One distinguishes between kraals for the married (ndzi ni of mwuali) and such for the wartime (of mwigwa). In the former live the married men (of mwuali, of mwuali) with their families. In the latter the wartime (of mwigwa, of mwuali) with their mothers and the half-grown, uninstructed girls /57/ (ng'ono, s.dzi). One sometimes also finds several kraals built together into one. The author found a village that consisted of five kraals built next to one another, three of which were El mwine kraals. A dense thorn-barricade extended around the entire kraal complex.

The married men on the average has five to six wives, wealthy men have in addition also a few secondary wives to whom they are not legally married. The secondary wives are made up of widows who may not marry again or who have not remarried and

Ill. 5. Small pen beside the hut.

/71 cont./

For the most part an atmosphere of fullness and harmony lies over the level of the married life of marriage. Only on occasion /72/ do the women come themselves with song, especially if a few women are there on a visit and give the impetus for the gaiety. Women and women dance in separate groups. For dancing the women stretch themselves in a row, move forward a short distance, then make a "right turn" and, with short steps, dance in a row back to the former place. The married men dance only on festive occasions, but by themselves. The rest of the accompanying song naturally refers to the life prevailing here.

Otherwise quiet prevails in the family head after darkness has set in. In good weather the people will sit for a while in front of the huts, silently or softly conversing, and go to rest silently at 8:00 o'clock or 9:00.

Even 13-14 years ago, before the latest law that bags livestock-buildings in two great epidemics, each family had its own family hut, on the other hand, almost everywhere several families live together.

In the morning life begins around 4:00 o'clock, at which time the women fetch the quite young calves from the compartments and take them to the cows, where they remain for the driving out to pasture. At daybreak the milking commences, for which all the women appear. After it is finished, breakfast, consisting of fresh milk, is taken. Milk, soups, and this porridge are drunk from good bowlers. Such of general consistency are put to the mouth with the fingers. Meat is partially cut up with a knife and completely torn into bits with the teeth. The hands are not washed before a meal. Scratching and belching while eating show good breeding. Men and women eat apart and have their separate vessels for eating and drinking. These of the latter are shared by the children. If the men wishes to eat in the hut, the women has to leave it beforehand.

[Warrior Ritual]

/on page/

As long as the latter stays in the kraal, his girl is obliged to remain faithful to him, but if he leaves it, even for only one day, she is entitled to remarle herself with another kraal companion, provided that between her and him -- as is also a condition for her relationship with her ex husbe -- there is no obstacle such as the above-mentioned obstacles to marriage based on lineage affiliation.

The tending of the livestock falls to the boys. Even at night they sleep outside in order to watch them and are assisted in the watch by the mothers, who take turns several times every night and frighten off wild animals by shouting.

Within the ring of huts there is a circular kraal of thorns for /the/ the cattle and near that a narrower one for goats and sheep, while beside almost every hut there is a small kraal-ie for the young calves and a barricade of branches for the older calves of the individual men. This everyone remains responsible for the herding of his calves and, if at night they should find their way to the cows, has no excuse for moving a quarrel with others in the morning on account of the lack of milk. Milk is the only food that the Ox women relish in the kraal, and the lack of it is therefore especially grievous. Outside of it, only meat serves the warriors as food, and, to be sure, only that from cattle, sheep, and goats. They do not take vegetable food, honey beer, and tobacco. The meat meals are always held outside the kraal: a slaughtered head of small livestock is consumed a few hundred meters from the kraal, behind a hut, whereas for the consumption of a head of cattle a more distant spot under a shade tree in the bush /Fig. 10 appears here/ or farm is chosen. For these feast meals (of hut, a hut) more responsible are formed to every warrior kraal, which are designated ezi' ol hut and which consist of five or six members, each of whom is called ez ezi of hut. Such banquet-like place once or twice a month for each male company and last three or four days each time, during which no one is permitted. Besides the warriors, one to three girls also take part, and also a few boys as servants for fetching pots, water, and firewood, as well as for kitchen work. Prior to the slaughtering each male company splits up into two equal-sized parts, each of which is called ol ezhez and prepares its own camp. Under a shade tree with thick

[Marriage Ritual]

/90 cont./

Life in the kraal begins at sunrise, when the mothers and the girls start milking the livestock. Not until around seven o'clock, when the boys drive the livestock to pastures, do the women get up to take the first meal (ne ukh e dakwanje = food in the morning), consisting of fresh milk. Then the women apply themselves to the

Sh. 90. Dance in the warrior kraal II.

cleaning of the cattle sculs and other work, as well as to start the cooking of their food, consisting of purchased supplies. This is usual around two o'clock in the afternoon (ne ukh e ban' ash, that is, the second meal), while then the warriors or the sons-in-law drink the rest of the morning milk, which has already become fermented and (ufu ulu ukhanda = slightly sour milk). After that the old women take a rest or busy themselves with sewing and making ornaments, while the warriors along with the girls /90/ venue themselves with dance and song (ne ukhgina) under a nearby thorn tree. For this a row of warriors stands opposite a row of girls. The former dance in place by slightly lifting the toes and beating the

Proceeding from the present year, one also designates, with the help of yesterday and tomorrow, etc., the next years to the past and forward: [illegible] (ni ant = the year, [illegible] = yesterday, [illegible] = [illegible] elapsed). Last year: ni ant i ahy [illegible], the year before last: ni ant i ugent [illegible], the last year but two. Furthermore: ni ant [illegible] (ta[illegible], tomorrow, [illegible] = forward), the next year: ni ant i ahy [illegible], the year after next: ni ant i ahy [illegible] [illegible], more briefly, ni ant i ugent [illegible], the third year coming, etc. One may address fewer designations going beyond the last and next year.

[illegible] The only measure peculiar to the island is the hand span (ta [illegible]), measured, with outspread fingers, from the tip of the thumb to that of the middle finger. I saw only that the people measured with this the length of the spear blade, spear shaft, and sword blade, and heard here, upon entering the pure sacred, they designated with so-and-so many hand spans the desired length to the smith.

[illegible]

[illegible] Livestock. — Cattle. — Cows. — Calves. — Donkeys. — Goats. — Sheep. — Camels. — Stalls for cows. — Ownership marks. — Hand scan for beautification and adjusting from the scarcity of cattle. — Caretaking the hair attachment. — Milk substance. — Skinners and their customs. — Cowbells. — Feeding the livestock. — Drawing blood. — Slaughter. — Cutting up the animal and distributing the meat. — Sacrificing of the livestock. — Pasture in the steppe. — Bushbreeding by the European settler. — Useful and harmful fodder plants.

• [illegible] The island's greatest joy is the ownership of as much livestock as possible; all his thoughts and acts are directed toward preserving and enlarging the herds. The cattle are rather (the bulls), young

• 233 (194) /121 cont./ The cattle are calves (See below) among which one can distinguish a sturdy, short-haired breed and a thinner, long-haired one. One almost never comes across pure representatives of either, however, rather, as a result of plunder and crossbreeding, all the types occurring in East Africa are represented among them. The actual Masai cattle (I gloriu el masai) scarcely exceed in size the average East African cattle. The foreign, that is, Indian, cattle especially prized are, on account of its comparatively large size, the Dromach from Iraqi and vicinity (I gloriu el dromach), that from Gujarawad and Cachaura (I gloriu el cachaura), and further the large-horned I gloriu e kiuma, owned after the escape area of Kiuma, east of the area of Ngura. Among all the others are relatively small and the yield of milk is consequently little. As an exception to this is a low, sturdy breed with short horns, which produces a double quantity of milk and about which the Masai maintain that they are quite pure descendants of the old Walaudi cattle (I gloriu el laudian). The Masai call dancehorn wadgi. Since the calves are not permanently separated from the cows, the women try to avoid the several outbreaks at the milking by bringing the calf close to the cow during the milking. They place dancehorn saddle it and hold to head firmly with the knees. The cow licks the calf, believes that it is suckling, /100/ /Fig. 11 and 12 appear here/ /101/ and is quiet. If the calf dies, one deceives the cow about its presence by hanging the freshly dried /Fig. 14 appears here/ skin over a stick. The cows are milked twice a day, morning and evening, and each time give about one and a half liters of milk. They are never milked completely; rather one leaves the calves with them afterwards. Until the calf is two months old, it is given the milk from two tits, while the other two are milked. The principle of breeding and selection in general one well leaves to the Masai (Fig. 15). Male calves that are not to be used for breeding later on are castrated at the age of 14 days (e gadiau). With a dampened /Fig. 16 appears here/ piece of dung iron, such as is used for charring, a cut is made in the scrotum, then each testicle is grasped with the hand and pulled out, together with the spermatic cords. "So that the wound may heal more quickly," one sticks in a dead fly and the one of the removed testicles around the left foreleg of the calf squeezed on.

/701 cont./

232 Bulls that develop unfavorably and seem unsuitable for breeding are castrated by the wounding of the spermatic cords with the club between the wood and string of a bow (q.v.[illegible]). The testicles are not removed, but are left to atrophy. In the same /701/ way one proceeds to castrate goats, sheep, and donkeys, but the latter always not until they are fully grown. Bulls and bucks with unusual sexual instincts are slaughtered as soon as the vice is noticed, since they are regarded as bringing bad luck. It is believed that, as a result of their behavior, they bring the punishment of God upon the herd in the form of an epidemic.

[701] [702] [703] [704]

231 The donkeys are small, mouse-built, strong, and excellent, with nicely arched croppers, a rounded neck, fine and finky ducts, they are very similar in shape to the cobra. Their coloring is a uniform light gray with a black cross over the back and shoulders. They serve only to carry burdens, whereas mules are only rarely used.

[692]

• 233

Ill. 74. Sheep and goats and sheep.

[1]

231 Two breeds are distinguished, a darker and smaller one and a larger
[Gr1] lighter, thinner one. The latter is allegedly found only among the
El Ismagara Uasogin.

• 232 Among the goats a small breed and a large one can be distin-
[Pr1] guished. The latter have obtained the latter only through visiting
expeditions to Pare, Usambara, etc.; the true Masai goats are
small. All have medium long, smooth hair, a markedly projecting
forehead, and lop ears. The horns are usually only an inch long and
have rips turned back somewhat. Among bucks they are larger, but
also only rarely seven to eight inches. /233/ The sheep are only
medium-sized compared to European ones. They have rally, coarse
hair. Three breeds are distinguished, a large one (ol gor ning =
large sheep) with fat rump, a medium-sized one (ol gor ldol =
small sheep), white with black head and medium-long fat tail, and
a small (ol gor ldimmin ldimmin = poor, paltry) breed and with a
[Pr2] long fat tail. Among the young female animals of the last two breeds
the fat tail is cropped for four to eight be attractive to the buck
during rutting.

The black-headed breed is younger in North Africa and probably
degenerated here, just like the last of the three breeds, which might

31. 32. Masai goats and sheep.

/ [illegible] /

• 233 [illegible] a breeding product of agriculturists. The long fat tail, which, with good pasture, is thick and heavy and therefore walking is very difficult for the animal, can scarcely be the result of breeding by nomads. Moreover, among sedentary nations, such as the Wadelbagge of Kilimandscharo, the inhabitants of the Pare Mountains, of Mandong /Mt. Meru/, the Iraki, etc., I found the animals of this breed in incomparably better condition. In this connection I am thinking of the medium-sized animals, one of the specimens bought in Kilimandscharo for the amusement of the chiefs for hundreds of years, which even on only quite short exercise are constantly made to collapse in the sun by the weight of their fat tails and which on discovery of perhaps an hour's march can scarcely be transported other than by being carried.

Generally one finds crosses of all these breeds in the mixed herds. All have lop ears, rain coats, coarse shaggy hair, and, except for the old herds, are almost entirely hairless.

/ [illegible] /

[illegible] Sheep.

• 233

[illegible] Masai sheep.

231 [illegible] Where the Masai are neighbors of the Swahili (in British East Africa), the camel has also found entry among them as a beast of burden. They do not, however, generally share the passion of their neighbors, for whom polygyny the owner of these animals is a special delicacy. The Masai do not keep chickens, ducks, pigeons, etc. The attachment of the Masai to their cattle, especially to the cows, makes them seem to them like companions and friends. Thus, their habit of giving their animals names, especially considering the extravagance that the people indulge in with proper names, does not seem at all surprising. The /Ti. Ti appears here/ name Ntiyaro means that the cow has come from a distance. Ntiyaro was captured in the victory . Nandip is a cow given as bride price. Olive is one such that was received as a gift from an uncle or aunt. A cow paid as fine is called Ntiyu. Each of the five cows that the

Ill. 16. Bull with ornamental brand.
(The G [= Government] on the hind leg is not part of it, but would have been branded on the animal when it came to the fiscal herd.)

233 capture of the first head of cattle on a war expedition receives as
552 a reward is called Aberí. Other names for cows are: Narok-gonjík, blackeye, Ee-dobiá, brown one, bige, cream-colored one, Erok-lagonje, blackhead, Na-ngugi, red one. A male calf dropped by the cow Ólójaro is called Le-Ólójaro, while a female calf is simply given its mother's name.

231 /185/ Cattle, donkeys, and small livestock bear ownership
233 marks. These consist of cuts or brand lines on one or both ears
552 and of lines and curves burned on the left side of the body. The
412 marks (Plates 3 and 4) el mehere, el mehereno, if put on the
[513] body; el bendiro, el benet, if on the ears) on the cattle and donkeys

/168 cont./

231 show to what lineage or sublineage the owner belongs: those on the
233 small livestock the owner chooses for himself. Probably every lineage
422 has several distinct marks. A glance at history will explain this.
[613] In the immigration of the Masai people, accomplished little by little,
[17] each of the many bands originally formed a closed whole, which each lineage represented in it adopted a particular mark in order to make its property known. So it was natural that later on different ownership marks existed in connection with one and the same lineage, each according to the affiliation with this or that band. Besides this some that belong only to individual -- very wealthy and widely ramified -- families are also known, and then they are applied in place of the others, not together with them. The marks on the cattle are the same as those on the donkeys, although the latter bear the ear marks almost exclusively, only very rarely also those on the body. If a
[613] head of breeding cattle passes to an owner belonging to another lineage, it is usually given a new mark, and, to be sure, this one
233 then on the right side of the body. Besides the
531 ownership marks, cattle often have still other signs burned in as adornment, especially
[232] circles or a sentry-box type of design. A
[412] circle around the root of the tail and, on either side of it, one or two concentric rings on the hind legs are found especially
233 frequently among bulls. In addition to these
232 cut and brand scars, which are therefore supposed to serve in part for identification, in part for beautification purposes, there is also a third type, which arises from operations that are performed with a red-hot iron (Fig. 75) for the curing of swellings on joints and tendons. These lines, usually lattice-shaped, are also found among goats and sheep. On female calves the horn attachments are often cauterized, so that they can not butt later on. This operation further brings about, in the view of the Masai, an enlargement of the belly, desirable for leather production.

Fig. 75

/[illegible] cont./

233 232 At birth manual help is given. As soon as the cow lies down, she is held firmly by a few people; others grasp the legs of the calf coming forth and pull it out. Then it is struck against the belly of the cow a few times, so that "she will love it," and then struck on the forehead with the palm of the hand, so that "it will quickly go to the udder and suck."

233 232 Swellings on cattle, for healing, are smeared with the glowing ashes of [illegible] (Solanum spec.).

(237) Injuries to the feet of the cattle and goats are treated by a thorough washing with hot water and subsequent embrocation with cattle urine, as is a sort of foot rot (ex jelly), which /[illegible]/ frequently appears when the cattle stand for a long time in mud and dirt during the rainy season. One tries to cure ailments of donkey hoofs by

(234) placing the hoof on a stone heated very hot and holding it there for a few minutes.

In describing the internal ailments of livestock I am relying chiefly on the statements of the Masai, since only exceptionally did I have an opportunity to make observations on cows, calves, etc.

(237) For coughs (ndg [illegible]) the cattle are given a thin soup consisting of milk and pulverized, charred acac-skin. Oil skilling bark cures diarrhea in cattle. The infusion of a decoction of ol [illegible] bark (Bedania aegyptica) for cattle acts beneficially on the afterbirth and curatively on the birth organs. To hasten the afterbirth after a miscarriage, one gives the cow an infusion of a root decoction from the ol jogi I ol aiboi (a Euphorbia).

For eye inflammation one spits milk into the eye of the sick and rubs it in it, or one drips into the eye the juice of the ol [illegible] kinak (Heliotropium Steudneri Vatke).

An epidemic disease among young calves, which is supposed to lead rapidly to death, is called ol [illegible] or ol [illegible] by the Masai.

(234) As the cause of the ailment they cite the eating of a certain bush [illegible] (Pennisetum ciliare) and as symptom swelling of the lymph glands, which they often try to heal by cauterization (1).

1. In all the meat and fatty parts of the stricken

/120 cont./

• [illegible]

/however I continued/ animals there are said to be found heavy harvesting and to the animals a greenish, watery fluid.

Another frequent ailment of calves is called [illegible] and consists of a rash, predominantly on the head. The individual spots are grey and dry and are the size of a mark or a tailor pieces. The blanet knew nothing about their cause. From time to time one gives the sick animal an infusion of fresh beef blanet. The ailment is usually cured within a few months and is supposed to disappear at the latest after complete weaning.

For fevers one gives the cattle an infusion of an extract from the pounded walk of an galawiko (Capparis galawia Pam.) and sprinkles wood ashes on their bodies. Calves are given an extract of the pounded bulb of al gilse (Scilla spec.) to drink.

Oil sawagar is a cattle ailment that usually leads to death overnight and, in the opinion of the people, arises through swallowing dust in the dry season. This ailment is recognized by the fact that the animals tremble all over their bodies. Drinking is supposed to lessen death, whereas the refusal of water shows that the animal will recover.

They know of no remedy against rinderpest. If the epidemic appears in the vicinity, they flee as far away as possible, and then, as soon as /170/ suspicious signs of sickness are observed in their own herd, the will flight is resumed with the healthy animals, while the infected animals, which soon lose flesh, remain behind and die by the wayside. They call rinderpest al ulse (1)

1. Pronounced 'ulse or also 'ulse.

• the gall, in whose morbid change they see the chief symptoms of the sickness.

On the other hand, they are familiar with a protective inoculation against tuberculosis (al gilsi) (2)

2. Also al ktsili.

Fig. [illegible]

[illegible] and lies used to successfully on a large scale on the end of the eighties. One or several cuts are made with a knife in the underside of the bridge of the nose of the animal to be inoculated, so that blood flows copiously from the wound. In the same time the chest cavity of an animal

Fig. [illegible]

Fig. [illegible].
Cow inoculated on the bridge of the nose against tuberculosis.

that has just died is opened and from it is taken a fist-sized piece of the lung, greatly swollen and filled with a watery fluid. One rubs the wound thoroughly with this piece, so that the fluid penetrates well. Soon after the operation the cow swells considerably and mucus flows copiously from the nostrils. The sickness comes out of the cow, the people say. The healing of the external wound is sometimes connected with a considerable elevation, which not so rarely leads to a purulent inflammation of one eye, indeed to the complete loss of it. The ulcer heals with the formation of a thick,

[illegible]

[illegible] [illegible] [illegible] [

/115 cont./

[illegible] Maasaiwere on the southern end of Lake Nyo, could be cured. Grazing cattle do not also eat the caterpillars, but fan blow them away; thus, on the march, one should drive them slowly through a region infested with these caterpillars, so the blowing away is possible for them.

The Masai designate as one [illegible] a cattle sickness that most probably is pulmonary anthrax, caused by the infestation of the containing anthrax spores. As a remedy they give the cattle a leaf extract of a [illegible] mixed with a little milk.

Infection in cattle is caused by a vigorous blowing of air into the anus. One applies for this a wooden tube (of gourd), which otherwise is used to store the switch feathers of the warriors' head ornaments. It is regarded as a symptom of infection when the sick animal, without showing any desire to eat, often lies down and rolls about.

/116/

With the [illegible] sickness of the cattle the sick animal is said to exist often a strong reaction-when the lymph glands are swollen, the belly is distended. As the cause of the sickness popular belief names a large snake that has contaminated the pasture grass. A cow is not known; experiments, however, have shown as that in the first stages of the sickness a laxative (a bottle of salad oil or raw native beer would be given as such) brings speedy recovery.

/117/ The [illegible] sickness, also called [illegible], is recognized by the fact that balls of gas hair are found in the stomachs of the stricken animals. The only symptom of the sickness, which, however, it has in common with many others, is the refusal of fodder. The people believe concerning the cause of the sickness that the most are the grass, contaminated with cattle blood and hair, from a spot where a gnu dropped young.

For the [illegible] of the cattle the Masai give the sick animal the strongly laxative extract from the pounded leaves and fruits of a [illegible] (Combretum spec.) to drink. As the cause of the sickness they assume that the animal ate the grass on which a buffalo cow dropped her calf. According to their statements, mucus flows from the nose of the sick animal, it trembles over its whole body, and the dung has a pomegranate-red coloring.

[illegible]

For the hoof and mouth disease of cattle (or *[illegible]*), which is recognized by sores on hoofs, in the mouth, and on the tongue, one broke himself to covering the hoof sore in the manner described above.

A marked elongation of the hoofs — of elongated sickness — the blood cows in the fact that the sick animals have sores the of elongated hoof (*Coxalgia labunifolia*). In the hot season this hoof dries up, and the cattle do not run it any more, whereupon then the tips of the hoofs are said to drop off soon by themselves.

For coughing (*ulu ungan*), goats and sheep are given a decoction of *ro ngaiai* bark to drink.

The *ung ga vulungan* (*ung ga* = sickness; *vulungan* = hot) of goats and sheep is a sickness rapidly leading to death, whose symptoms are fever, weak breathing, and a distended belly. No remedy is known. The microscopic examination (3)

> 3. By *Gaaaaaaaaaaaaaaa* /*gaaaaaaaa aaaaaaaaa*/ Dr. Brown.

of blood slides showed that it is a matter of pulmonary anthrax caused by the infestation of due containing anthrax spores.

One time to cure — usually to raise — a peculiar rash of goats and sheep (*ung ga vaiai*) by means of two bread scales that go from the ears along both sides of the body to the anus. With dissection purple ulcers are found in the stomach.

With *ung ga ali gatilo* (*ga gatilo* = any small envelope), which affects only goats, the eyes stand out strongly. For the cure one makes incisions in the temples and drips bile far into the eyes. Popular belief arises concerning the cause that the animals, during sniffing searches for fodder plants, had breathed in the dried excrement of these envelopes.

For severe flatulence, from which goats and sheep often suffer after an excessive eating of fresh grass, one punctures the belly with a sewing awl to let out the gases.

[illegible]

[illegible]

The foliage of the el jaal (el dogon tree (Cordia [illegible]), that is, tree of the donkeys, is regarded as poison for donkeys. Besides a laxative, el gindal (el dogon). Even when bite the donkeys (bites in the penis) are stricken beyond recovery, the blood also fear for donkeys and cattle the same fly (Glossina morsitans), which they call as dandiko. The latter is allegedly only dangerous to cattle if it bites them in the zip of the tongue. One made a cure by cauterizing the spot bitten, but the result is very doubtful.

For getting rid of flies, one makes young livestock with an extract from the crushed plants of el sitrin gerdi (Boerhavia geographica L.) or from el shel (Mitragyna spec.).

The powdered seed of el gingil (Acacia pennata Willd.) is taken into the nose of calves and small livestock, in order to drive out the maggots of the tsetse fly /=sabia fly/.

233 234 Cowbells (Fig. 77) in the form customary in Europe are found generally, but here they are hung especially on cows and only on those cows that do not tolerate their calves. Another bells, often

Fig. 77. (1/4) Fig. 78. (1/4)

of wood or deep horn with wooden clappers, are worn by castrated deep and goats. As adornment one hangs around the neck of castrated calves clapper-shaped pieces of ivory (Fig. 78) or, for especially handsomely developed cattle, a leather band or a cord stitched with cowrie shells.

233

[illegible]

Small livestock and fowlings are herded by little boys, cattle by older boys, under the supervision of a few old men. Dogs are no longer used for this now; rather the livestock herds the cattle as well of the herdsmen. To what extent this is the case is not demonstrated when these flies with herds of livestock. A number of men, shouting and whistling, run before and behind the herd, which rages across the steppe in a mad chase. In former times the herdsmen were generally used dogs. The dogs did not serve as much to keep the herd together, but more for guarding. They announce the approach of predatory animals by barking or by howling to the herdsmen.

[illegible] As has already been mentioned above, fresh livestock blood alone or mixed with milk forms a food prized as quite particularly nourishing. The blood for this is drawn off the living cattle and goats in the following manner. A strap is tied around the animal's neck in such a way that the blood returning to the heart in the large vein is blocked by a cut breaking of her efforts. Then a man draws an arrow (Fig. 70) with a bulb-shaped, thick tip (of horn), from which projects a scale-shaped sharp piece of horn (one six to eight millimeters long and equally wide, into the median vein, whereupon the blood spurts out in a stream and is caught in a good bowls (of hogan). The bleeding is stopped by a simple varying of the strap after the operation is finished. From a strong bull or an approximately four to five liters of blood are drawn at one time, from a cow only half as much, and this is repeated every month. No blood is drawn from good milch cows and cows with young calves. Blood is drawn from sheep by means of an incision in the depression above the eyes or between the eye and the middle of the forehead. The slaughtering of cattle is done by a stab in the neck after the front and hind legs have been firmly gone and sheep are suffocated by having their mouths and nose held shut. Cows are never slaughtered, not even when they are too old to be used for breeding. Livestock that has died is eaten. As soon as the animal is dead, one removes the skin from the neck, severs the neck veins, and catches the blood flowing out in the skin. The cutting up of a head of cattle is done with the greatest care; almost every single muscle is carved

The far greater part of the steppe often excellent pastures only another or longer isolated exercise are quite unsuitable for this. The [illegible] have been partially and completely avoid them. What makes these unsuitable is free of all the occurrence of grasses that bring about digestive disorders and the lack of salt in sufficient quantities, through which a similar effect is brought about. In good pastures places are always finds salt licks. The rain water standing in a depression in the ground has leached out the very salitbearer earth and, after evaporation, has left behind a more or less strong, gray crust of salt. It is self-evident that one avoids those places about which the presence of the above-mentioned harmful insects is known. It is striking, however, that ticks are not found at all.

When the pastures around the kraal has been grazed off, a change of dwelling is decided upon, which takes place as soon as a new pasture ground has been found by a few people sent out. There there is activity in the kraal long before daybreak. After the cows have been milked, the cattle move off at the first peep. Then the herds of goats and sheep follows, and after these [illegible] the calves. Young

[illegible]

[illegible] animals that go forward only with difficulty are carried to the [illegible] boys take care of the livestock driving, under the supervision of [illegible] men. With each party is found a meager guard of warriors. Meanwhile the women are still busy with the loading of the donkeys, on which all the household equipment is packed. Some really a few cows or even goats help out. After this work is finished, the herd of donkeys follows the cattle of the livestock. Behind them come the women, girls, and children; almost every one of them also drags along some household object or at least a small livestock or goat skin. Oddly enough, a guard of warriors is not found with this party, as there was with all the preceding ones, but rather at most a few old men armed with spears or bows and arrows. Usually the destruction is reached on the same day. If this is not the case, however, camp is pitched during the night within a hastily constructed barricade of thorny branches. The next morning the march then continues before daybreak. After arrival at the new site the women immediately start laying out the kraal. After the thorn barricade is laid out, and in the following days the huts are built. Erecting the kraal proceeds very rapidly; as a rule it is finished in a week or the latest. The old kraal was not destroyed upon being vacated. It is left standing and reoccupied later, after the pasture has recovered. Meanwhile, of course, much has deteriorated, so that the work of reconstruction almost equals that of a new installation. In the last few years, since the road from (Palma [illegible]) has become a part of the [illegible], the reoccupation of old kraals is declining more and more. In order to destroy the noxious insects inhabiting them, they are burned when vacated.

It is obvious that the European who wants to engage in stock-breeding here cannot move about with his herd in the manner of the Masai. Moreover, a division of the herd in such a way that sufficient grass is present throughout the year within range of the kraal for the individual parts does not seem feasible, and, to be sure, especially because of the difficulty of personal supervision and observation of the sickness raging, as well as of isolation in case of an epidemic. An improvement of the pasture by means of

[illegible]

participants eats a small piece of the meat, after he has roasted it in the ashes. Furthermore he is given a strip of the skin, from which he then fashions amulet rings, one for himself, the others for his relatives. The ring protects the wearer from sicknesses of every kind. Men wear it on the right middle finger, women wear it on the large spiral-shaped neck ornament of iron wire. During the feast the participants ceremonially sing:

[illegible]

Ndi nanda, ehe, Ndi kindwa ijo, eh,
Ndi nanda, ehe, Ndi ndogo ijoh eh!

(Ndi ndogo ijoh = may God heal my sheep = cover the cattle, ndogo ijoh = give me to drink, give rain.)

On the following day the women carry fresh cattle dung to the ashes and heated a cloth from it, into which is mixed a medicine that an ol gatichi has prepared and brought along. With these preparations the second part of the application feast has begun, which is called ol ngor i ob gatichi, i.e., application feast for the cattle. Inside the mine songs as above the women spread the medicine on the livestock in the form of lines and curves, and, to be sure, on the spines of the cows and female sheep, on the right side of the belly of the male animals and those females even that have not yet dropped young. With this the feast is over. The goats are not smeared, but are driven to pasture even before this ceremony. As the reason for this the blacksmiths say that 'Ng ol does not like goats because they do not modestly carry their little tails hanging down as a fig leaf.

Another application feast is celebrated only by the married women in order to implore God to give them children. It is called ingo 'Ng ol ol ejin, i.e., may God hear the word. In or near the kraal the women gather in the forenoon, together with a seer (ol gatichi), around whom they station themselves in a circle. Every woman is then given an amulet by him, which she hangs on the big cord of the skin apron. Then he sprinkles their heads and shoulders with a medicine, which, besides milk and honey beer, also contains one of his secret remedies, for which he is rewarded with a few sheep. Then the women dance and sing throughout the day under a shade tree, during the night in the kraal, until dawn.

[illegible] caused the island people to the period before the occupation of the country by Europeans. I have no reliable observations made by myself or by Europeans. Such can scarcely exist, for at that time the island was a feared place that every caravan tried to avoid. I am therefore relying on the statements of old men. According to their recollection, the epidemics were never capable of producing actual famine. As soon as the beginning of an epidemic was observed, the island fled to wild flight with the herds, leaving the sick animals lying along the way. Half the herd at least is supposed to have succumbed. If one considers the size of the herds at that time, one understands that the surviving part could always still furnish sufficient milk and meat. Furthermore, the war expeditions were brought substitutes for the fallen animals and thus acted to preserve prosperity. (5).

> 5. It is to be lamented here that empirically Gronovi's epidemics caused few losses for the sedentary Hugu practicing animal husbandry along with agriculture. This is probably chiefly due to the fact that he cells only very few head his own and keeps them in his hut, which is far from the cattle one. Though that the island were able to replenish their depleted herds quickly and easily.

Finally, the island's profound contempt for the surrounding Hugu tribes was also favorable for the preservation of the people. It kept the people free of foreign elements, which here would only have resulted in a degeneration of the race.

The fable that primitive peoples would have continued to develop peaceably and favorably if Europeans, with their corruption, had not disturbingly interfered has long been recognized as such. On the other hand, however, it remains an /text/ undeniable fact that these peoples decline upon contact with the higher culture, and that many even disappear as a people. The reason for this phenomenon lies in the fact that these peoples have slowly been living on an unhealthy basis and have owed their preservation to means that we designate as

CHAPTER 10

Masai Herds and Mara Lions

I

THE Masai have won respect by their contempt for civilization and all that it has offered them. For half a century Europeans have been tempting them with all the material bribes, indeed even non-material ones, for which every Bantu and Nilotic people is avid. There is scarcely an African of the fat lands who would not sell his soul for a school certificate. The Masai have rejected school certificates with a proud and lofty disdain.

Will a certificate fatten a bullock or swell the belly of a cow? Masai hearts are with their cattle; they desire no finer destiny for a son than to walk in the dust of a larger herd than his father's. The young man who dreams of glory sees fine white bulls and brindled cows and green grass knee-high, he does not see the stone bungalow, the shining motor-car, the well-cut suit, the framed diploma so alluring to his darker fellow-countrymen. He likes to wear his hair in matted pigtails smeared with red ochre and rancid butter, to stand with one foot against the other knee, to eat a compound of bullock's blood and curdled milk, to carry his long spear and to keep his women in their beads and coils and fly-infested mud burrow as his ancestors did—those ancestors whose lion head-dresses and painted shields filled the hearts of lesser breeds with terror, and won the right of conquest over the steppes of eastern Africa from their northern Somali deserts to their southern tsetse bush.

For the Masai have pride, and pride is a quality we recoil from in ourselves and half-admire, half-deplore in others. An Englishman today must stamp with the hob-nail boots of equality upon the little shoots of pride that cannot help but spring up in his heart; but when he sees the fine, free growth of it in others, an envious respect attacks him. For

21:Huxley Q, T-5 (no date) 1960 FL11 Luo
Masai FL12

233 The Masai, numbering about 85,000, keep about one
177 million head of scrub cattle, and 660,000 sheep and goats.
556 They *could* export fat steers and lambs, but have done next to
[161] nothing to improve the quality of their animals. This is because they do not need the cash. There are old men living in mud hovels with little but ear-rings, a spear and a blanket who could at any minute realize several thousand pounds for their cattle. Scarcely one of them could not afford a motor-car if he wanted one, probably a Jaguar at that. The plain fact is they do not want motor-cars, or beds, or kitchen sinks, or radios, or refrigerators, or washing machines: they just want cattle, which they have, and which the processes of nature will increase for them without their having to do any disagreeable work.

It is an *impasse*. The whole machinery of modern society, modern trade, modern development, has been halted by the Masai's refusal to keep up with the Jones's, or the Kamaus in this case. It is like a great Britannia aircraft grounded by a midge in the works. Modern civilization runs on avarice as cars on petrol, and if there is no pump where you can fill up with avarice, you simply stay where you are.

But even the Masai are not really free of avarice: it merely takes a different form. If they do not want bicycles and trousers, they do want more cattle, and this has led them into a great error. Instead of rejecting everything the West offered them, they accepted the hypodermic syringe of the vets. First of all the vets put an end to rinderpest, and then, rather less successfully, dealt with various other diseases that were keeping their herds in check.

233 No doubt it would have needed superhuman self-denial on
177 the part of the Masai to have rejected this magical means of
185 ending the periodic epidemics that had wiped out all but a rump of their cherished herds. Yet these were the means by which nature had kept herds and habitat in balance. Vegetation, controlled by constant factors like rainfall and soil structure, cannot multiply as creatures of the animal kingdom can, and do. The fact remains that to accept the vet's syringe was fatal to the Masai, and to offer it to them, as the Government did, without also insisting upon some means of keeping down the livestock population, was an act of remarkable

21:Huxley Q, T-5 (no date) 1960 FL11 Luo
Masai FL12

imbecility—or perhaps not remarkable, since nothing has been more characteristic of the half-century of European intervention in Africa than the slap-happy introduction of bright, well-meaning ideas by enthusiasts of all kinds, without any regard for their long-term consequences.

Anyway, vets controlled diseases, livestock multiplied and their hoofs and mouths destroyed the precarious grass cover of the plains. The result is that, except where the tsetse fly remains in control, the Masai are living in country poised upon the edge of deserthood. Some of it has gone over the edge, some hovers on the borderline, some has not reached it yet. And so pressure mounts upon those regions that are still protected by the tsetse fly.

Overcrowded people outside want to get in, overstocked Masai themselves want to take their herds where grazing is still rich and deep. If either succeed, unless they adopt very different methods, they will destroy those regions as surely as they have damaged their present inheritance. Agricolas and vets do not want to see these last remaining areas opened up without strict control. But governments are terrified of controlling anyone by what may be represented as harsh measures, and administrators have inclined to caution since the Masai speared to death a D.C. who was persuading them to sell some steers. So the matter, like many others, rests in a state of suspended flux, and everyone hopes for good rains.

III

Down on the Kenya–Tanganyika border, not so very long ago, there lived an Englishman who kept in touch with the world by carrier-pigeon. For three or four months of the year no vehicle could reach him, and even in the dry weather it was a long, hard, bumpy seventy-mile journey from Narok, where the road ends. The aeroplane has changed all that. An hour's pleasant flight from Nairobi brought us comfortably to rest beside a tributary of the Mara river.

First we flew over the Mau, that range of mountains forming the south-western wall of the Rift Valley. Covered with forests of cedars and olives and, higher up, of bamboos, the

21:Huxley Q, T-5 (no date) 1960 FL11 Luo
Masai FL12

133 Mau is the source of all the rivers watering the western half
[137] of Masailand, Kipsigis and part of the Rift Valley. The birthplace of innumerable streams, it is, in theory, protected by its status as a forest reserve.

185 Looking out from the small yellow aircraft expertly handled
311 by June Wright, one of the best commercial pilots in East Africa, one could quickly see how different theory was from practice, here as elsewhere. In a forest reserve no one is allowed to fell trees, cultivate, start fires or graze livestock. In less than half an hour, I counted seventeen active fires and saw the shambles created by innumerable others. Whole ridgebacks of the mountain, sticking up like black spines, were as bare as slag-heaps and already runnelled and creased by gully erosion. Older fires were still smoking in some of these devastated areas; one could see the forest being eaten into like a great fur pelt attacked by moths.

As sure as fate, one day there will be no more water for cattle in the streams below. 'God is punishing us,' will say the Masai: but it will not be God, it will be themselves. The
[233] streams are already shrinking and the Masai are driving their herds farther into the hills to find grazing. They cannot take cattle into forest and so they burn a way in. They are creeping upwards, spreading destruction as they go in order to escape the consequences of destruction they have already caused.

[222] Other fires are started by honey-hunters who burn down trees to smoke out the bees. Often, in the forest, you can see blackened hollow cedars and olives killed by fires tucked into the roots. If the foliage is dry and the wind right, the fire will spread and get out of hand.

And then there are 'acceptees': a clumsy term given to men of other tribes who are settling in Masailand, family by family, with the permission of Masai elders. They are tenants: but it is very unlikely that they will ever go.

[167] In South Nyanza and in Kipsigis it is reckoned that upwards of two thousand families a year are crossing the southern border into Masailand and Tanganyika. In recent years a
[582] good many Masai have married Kikuyu or Kamba wives
[842] because so many of their own women are sterile; at one time there was quite a trade in Kikuyu girl-children, exchanged for
Cattle.

Kenya FL1
Masai FL12

K
654

marked with luminous paint to trace their movements; all over East Africa, people bicycled about the bush with sacks on their backs to attract them and grew to pensionable age catching them in nets, digging their pupae out of the sand, keeping them in test-tubes and cages, even studying micro-organisms which appeared to be their enemies.

Seldom has so much careful, detailed, expert study been given to one kind of insect. Some of the many facts discovered have been used ingeniously. Tsetse flies, for instance, probably mate only once in their lives. A current experiment is to expose a number of pupae to controlled doses of radiation which sterilizes them, and then to release the males so that gradually the fly population will die out.

The expense of bush-clearing is its principal handicap, and the quick regeneration of the bush. By itself, it could never have conquered tsetse fly in Africa. In recent years, chemists have discovered how to synthesize drugs which kill the trypanosomes in the blood, and which will prevent infection. The main drug in use at present, Antrycide pro-salt, will protect cattle for about four months.

No one doubts that, in time, the chemists will improve on this, and cattle-owners like the Masai will be able to take their herds anywhere they please. The battle is not yet wholly won; trypanosomes have already shown a tendency to develop resistance to the drugs, and there will no doubt be disappointments and setbacks. But, by and large, it can only be a matter of time before areas like the Mara are opened to hungry herds from overstocked pastures elsewhere.

Several experiments are under way to discover how things could be managed so as to avoid disaster to the land, and at the same time make a profit for its custodians. One such is the Ol Choro Orowa ranch which the vets are running on behalf of the District Council at Narok. On some 21,000 acres young beasts were to be fattened and sold at a profit, but profits have been shy because of various setbacks, such as an outbreak of pleuro-pneumonia and an army worm invasion. Now it seems that the acreage is too small and the Masai have so far refused to enlarge it. So the vets have not yet succeeded in bringing home to the Masai cattle-owner the basic fact that

M
177
233
K
654

21:Huxley Q, T-5 (no date) 1960 FL11 Luo
Kenya FL1
Masai FL12

good management on modern ranching lines will bring him in hard cash.

I saw the ranch mainly from the air. Lines of bush, cleared by bulldozers dragging giant chains between them, lie neatly along the contour like windrows in a hayfield. Soon the six or seven thousand acres that have been cleared will be fenced, and so managed that star-grass will cover them and steers fatten twice as quickly as they normally do. The snag, of course, is the Masai indifference towards cash.

Yet even here the seeds of change begin to germinate. There are schools now in all Masai centres, Masai students at Makerere, the start of a trickle of Masai teachers, doctors, administrators, vets. One has a Cambridge degree in geography, one is a Legislative Councillor. The shell of Masai indifference has been pricked.

The puncture so far is tiny, but time will enlarge it and one day, not so far away either, the whole shell may crack. Already a Masai parson, the Rev. Daudi Mokinyo, has fenced off 2,000 acres of communal grazing where he fattens steers bred from improved bulls, has a simple milking bail and makes ghee. Elsewhere, half a dozen other Masai have fenced in grazing land. When the railway took a pipeline off Mt. Kilimanjaro, they set up watering points for Masai cattle along its course, and in return one section of the tribe, the Il Kisongo, agreed to operate a pasture-management plan, financed by a grazing fee, which is acting as an entry-point for new ideas.

When these movements spread, as they seem bound to do, the doom of the game will be accomplished. For game cannot co-exist with modern pasture management. Unless the Masai come to see game as an asset of high value, it will go here, as it has on European farms, and for the same reasons: it will go down before the fence, the improved pasture and the need to keep the land free of disease.

VI

To admire pictures in the National Gallery, cathedrals of the Middle Ages or the antiquities of Greece is considered

THE STORY OF THE BOY AND HIS BROTHER AND THEIR SONG.

There once lived an old man who had two wives, and by each wife he had a son. One of the wives died, and the old man told the other one to look after both children. 539*

The boys loved one another very much, and always went together to herd their father's cattle. They had their own pet cow, which they called the Dapple-grey, and when they wanted to milk her they only had to sing the following song:

'Child of my father, brother dear,
She yields her milk, our Dapple-grey,
She yields it though no calf is near,
This song of mine she can't gainsay.

'Into my mouth I milk thee not[1],
Dear Dapple-grey, there's nought to fear,
No gourd or calabash I've got,
I only, whom thou lov'st, am here.'

After a time the woman took a great dislike to her step-son, and made up her mind to get rid of him so that her own son might have all the milk. She therefore dug a hole in the floor of the hut, and said to the boy: 'You whom God gave me, come from the grazing ground at midday, and have your head shaved.'

When the child arrived, his step-mother told him to go into the hut, and bring the bag containing her razor from under the bed. He entered the hut, and not seeing the hole which had been dug in the floor, fell into it. The woman immediately covered in the hole by dropping a big stone into it.

In the evening the other boy returned with the cattle to the kraal, and asked his mother where his brother was. The woman replied that she had shaved him a short while before, and that he had returned to the grazing ground. When she was told that he had not been seen, she wept and cried out: 'My child is lost.'

As nothing was heard of the boy that evening, it was assumed that he was dead. His brother was much distressed, and during the greater part of the next day whilst herding the cattle he wept and sang their every-day song.

[1] It is a common practice amongst Masai herdsmen to milk their cows direct into their mouths. [234]

824 [184] eitoi, neñgeru 'n-gujit anañgaki, amu ějo metum endōki nalo aiñgoru.

fallen on the road, he pulls up some grass, and throws it on the tree; otherwise he fears that his journey will not be successful.

Enyor il-Maasae 'n-gujit naleñg, amu ějo: 'Eishorua opa eng-Aɪ 'n-gīshu oo 'n-gujit, mikiór in-dōkitin náishoo 'yook eng-Aɪ.'

The Masai love grass very much, for they say: 'God gave us cattle and grass, we do not separate the things which God has given us.'

●234 787 Ore 'ng-oloñgi pōkin ten elep i-ñgorōyok in-gīshu, neitau kulle te-'m-bukuri, neibughoo, amu ějo: 'Enyor eng-Aɪ.'

Whenever Masai women milk their cows, they take some milk from the gourd and pour it away, for they say: 'God likes this.'

233 422 Il-mishiren oo 'l-ponot.

The brand-marks and ear-cutting of cattle, sheep, and donkeys.

Meñgar il-Maasae 'l-mishiren.

The brand-marks which the Masai use for their cattle are not alike.

[C14] Eata ae-kishōmi ol-mishire lenye kitok le-'n-gishōmi pōkin.

For each clan and family there is one principal mark, and all the cattle belonging to the various members of a family are branded in a special way.

Neitōki aata 'l-gilat ti-atwa, eiyōlōuni en-giteñg injere en-e-'n-gishōmi naje, kake en-e-ñgania.

There are also small marks by which the actual owner can be recognized.

E-ata sii 'l-ponot; metii en-gishōmi nemeata ol-ponoto lenye.

Besides branding, each family has a special method of slitting the ears of their cattle, sheep, and donkeys.

Neitōki aoro ti-atwa.

They likewise have smaller marks for each individual owner.

Ten edoli en-giteñg neiyōlōuni 'njere en-oo-'l-Aiser enna-kiteñg, kake en-e-ñgania.

If therefore a cow is seen, it can be recognized as belonging to the Aiser clan, for instance, and also to such and such a person.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Milking.—Milking is usually done by women and girls, but uninitiated boys may also milk. Milk is either drunk fresh or is curdled by mixing with blood, or is curdled alone by leaving for two or three days. 234 462 252

Raiding.—Frequent raids on neighbouring tribes are carried out by the warrior classes, and the cattle and sheep so obtained are some of them distributed to a warrior's parents and friends and some kept for himself. When cattle are raided from another clan or sub-clan in order to repay a murder (*see* Murder), all maimed, blind, and otherwise damaged cattle are returned immediately afterwards, for to keep these would certainly bring bad luck on the raiders. 721 [682] [777]

PART X.—MISCELLANEOUS NOTES.

Fire.—Fire for special occasions is made by means of the hand-drill method, and women may not make fire by this means. Normally, fire is obtained from the ashes of the previous day's fire or from a few live coals borrowed from a neighbouring hut. The first fire in all new huts must be made with fire-sticks. 372

Murder.—Should a man kill a member of his own sub-clan there is no punishment. "What would be the use of taking a fine from one's own sub-clan?" If, however, a man of another sub-clan is killed, then the sub-clan of the murdered man raid the murderer's sub-clan and try to seize cattle in compensation. Usually a free fight takes place and if, in the course of this, a man of the murderer's sub-clan is killed, the matter is considered all square, and any raided cattle are returned. In the course of such a raid all sorts of cattle are driven off, but all the blind and maimed ones are returned next morning (*see* Raiding, above). 682

Smiths.—Among the Masai smiths are considered "bad." There are smiths in each clan, and the business is purely a family one handed down from father to son. Young boys of smiths' families are initiated alone, and once initiated go straight to the business of smithing and may take no part in the life of the ordinary novices or warriors. Smiths are considered to be considerably lower in the social scale than even the Wandorobo. A Dorobo can leave his hunting life and rank as a true Masai if he so chooses, but never a smith. 326 564 [563]

If a smith comes and sleeps at a village he is given a bed, but must sleep on the wrong side of the sleeping hide (*i.e.* the rough fleshy side). 'Smiths may only marry with smiths' families. No Masai would dream of marrying or having any kind of sexual intercourse with a smith's daughter (Wandorobo girls may be married by Masai, but not *vice versa*), nor can a smith marry an ordinary Masai girl. Smiths make spears and small knives, cattle bells and iron ornaments, but never swords, which are always bought from the Kikuyu. Should a Masai buy the cattle or sheep of a smith he must dip them in the river before adding them to his flock. [574] [582] [563] [411] [412] [438]

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

233 of cattle to a family (*kishomi*) in 1948 was between 100 and 200 head. There
[171] appears to be no such system as the Nandi *kaptic* or Kipsikis *himanakan*. (See
above, p. 21.) Milking is done by girls and women into gourds; the calf is allowed
[234] to suck, and if it dies the skin, sometimes stuffed with grass and called *ol-kutu*, is
presented to the cow at each milking. The milk yield is about three pints a day.
Cattle are bled in the same way as by the Nandi, with a blocked arrow, *ol-goret*,
shot into the jugular vein, and the blood is caught in a gourd. Sheep also are bled.
Cattle are branded with marks on the rump or flank which indicate the owner's
clan or sub-clan, with sometimes a private mark as well; the ears are also clipped
for the same purpose. Salt for cattle is obtained by driving the herds to a salt-lick,
232 *em-holioi*. The Masai are said to have effective remedies for diseases of cattle, but
their efficacy has never been enough to prevent heavy loss during epidemics of
rinderpest and pleuro-pneumonia.

Donkeys

492 The Masai keep large numbers of donkeys (*i-sirkon*, sing. *o-sikiria*) which are
used for carrying their goods when they move house (*idur*). Donkeys are marked by
slitting the ears in different ways.

The Status of Cattle

422 The status of cattle as regards ownership is uncertain. Merker says that warriors
may own cattle; Thomson says they may not, and on such a point the statements
of a traveller are open to question. Fosbrooke says that they may.[6] But further
investigation of cattle as property, and of their status in the light of ritual value is
required.

Inheritance of Cattle

428 There does not seem to be any clear account of the rules which control the
division of a man's stock among his sons. The guiding principle is that the eldest
son of the senior wife gets the largest share, inheriting not only the cattle given
in trust to his mother, but also those which his father had kept for his own use.
Inheritance is affected also by the "gate" (*kishomi*) arrangement in the kraal[~] for
cattle may not pass from one side to the other. If a wife on the left side dies with-
out sons, her cattle may not go to a man on the right side so long as there are
any sons by other wives on the left side. This subject also needs further investigation.

Grazing and Water Rights

423 Land is not owned by individuals, but by the sub-tribe (*ol-osho*), and grazing
rights are acquired by residence. Water rights are controlled by the clan. In the
old days, when the Masai occupied new territory, each warrior, according to tradition,
claimed a well, spring, or water-hole on behalf of his clan. Individual rights over
water are thus ruled out by tradition, and the senior member of a clan living at
the water decides, after consultation with other clansmen, the order in which people
take their cattle to water. But a Masai when actually on the move with cattle may
claim, and must be given, priority over local cattle at any well or spring. Where
water is plentiful, however, as in a river, possession is communal.

Division of Labour

592 In a purely pastoral society like that of the Masai the expression "economic
593 unit" has little meaning, but so far as it can be said to exist, it is the family. It
must be remembered, however, that the normal practice is for families to be divided
between the father's kraal, *enk-ag*, and the warriors' kraal, *e-manyata*, and that the

517 For the most part an atmosphere of dullness and boredom lies
535 over the kraal of the married (eṅg aṅ el moruak). Only on moon-
[533] lit evenings /32/ do the women amuse themselves with song, especially if a few warriors are there on a visit and give the impetus for the gaiety. Women and warriors dance in separate groups. For dancing the women station themselves in a row, move forward a short distance, then make a "right turn" and, with short steps, dance in a row back to the former place. The married men dance only on festive occasions, but by themselves. The text of the accompanying song naturally refers to the life prevailing here.

517 Otherwise quiet prevails in the family kraal after darkness has
521 set in; in good weather the people will sit for a while in front of
513 the huts, silently or softly conversing, and go to rest already at 8:00 o'clock or 8:30.

621 Even 12-14 years ago, before the Masai lost their huge
592 livestock-holdings in two great epidemics, each family had its
178 own kraal; now, on the other hand, almost everywhere several
233 families live together.
731

In the morning life begins around 4:00 o'clock, at which time
512 the women fetch the quite young calves from the compartments
[462] and take them to the cows, where they remain for the driving out
[233] to pasture. At daybreak the milking commences, for which all
[234] the women appear. After it is finished, breakfast, consisting of
264 fresh milk, is taken. Milk, soups, and thin porridge are drunk
[512] from gourd bottles; foods of greater consistency are put in the
[262] mouth with the fingers. Meat is partially cut up with a knife and
[415] completely torn into bits with the teeth. The hands are not washed
[412] before a meal. Smacking and belching while eating show good breeding. Men and women eat apart and have their separate vessels for eating and drinking. Those of the latter are shared by the children. If the man wishes to eat in the hut, the woman has to leave it beforehand.

/32 cont./

512 When the livestock have been driven out of the kraal to pasture,
[462] the women and children start to clean it. Then the fire is lighted
[351] in the huts and on it are placed the pots filled with water in which
[252] the vegetables are to be cooked. These pots (e modi, 'modio) are
[415] not made by the Masai themselves, but are bought from sedentary
[439] tribes or also from the Wandorobo, who presumably learned the potter's art from them. They are a foot high and globular. In con-
262 trast to the warriors, all the occupants of the family kraal, espe-
[241] cially since the cattle epidemics, eat vegetable food which they buy from the neighboring peoples, since they themselves do not
262 engage in any agriculture at all. Their favorite foods, however,
272 are, of course, milk, meat, and blood. Milk is always drunk by
[158] healthy people uncooked, as fresh (en gule) or sour (en gule naoto); boiled milk is food for the sick and as such is usually mixed with pulverized grains of ol lodoa (Maesa lanceolata). Sheep milk is especially popular because of its very high fat content. Blood of cattle, sheep, and goats is drunk fresh or eaten in the clotted
[158] state. Milk mixed with fresh or /33/ cooked blood (en jiwot) is greatly appreciated; this drink is highly esteemed as invalid soup
[234] for the wounded. Cheese making is unknown. Butter is made by agitating the cream in a large gourd-bottle (en diagolgol). Fat,
[252] rendered in a pot, is used as an ingredient in other foods, especially
[263] meat broth, but is also drunk without any admixture. Meat is prepared without adding salt; it is cooked either with various spices or roasted on a stick at the open fire. One does not eat in
[252] one day cooked meat and milk /Ill. 13 appears here/ together
[153] (1).
[263]

[171] 1. This was also forbidden for the Hebrews, according to the 2nd Book of Moses 23, 19-34, 26, passages which are part of the so-called Yahwist documents, that is, the oldest sources of the Pentateuch.

because the latter together with the ol mokotan spice (bark of

/36 cont./

524 Now the partner starts in the same way playing in his row, /37/ to let the other play again as soon as he has placed a last stone in an empty compartment. The one who places a last stone in an empty compartment of his own row takes it and the ones lying in the adjacent compartment of the opponent's row for himself, and so on until, according to the rules, no more stones can be taken out of play. The one who has removed the most stones has won the match and gives himself a point. Serving as counters [802] are small, finger-thick, and spindle-shaped ivory sticks 15-20 [239] centimeters long (ol alai, el ala) (1).

1. As tooth generally is called tusk of the elephant, ivory.

Before the game starts, there is an understanding as to how many points are to be played. Women never play this game, warriors rarely. The latter usually prefer the en gebé ('n gebén), which is played in much the same way, except that in any case about eight players for each side take turns and each row has 40 to 50 compartments, which are not chiseled into a board, but are scratched into the ground.

When the livestock has come home from pasture, it is milked, as in the morning, and after that the evening meal, consisting of fresh milk, is taken.

[Warrior Kraal]

512 /89 cont./
701 Life in the kraal begins at sunrise, when the mothers and the
462 girls start milking the livestock. Not until around seven o'clock,
[233] when the boys drive the livestock to pasture, do the warriors get up
[234] to take the first meal (en dal e dadegenja = food in the morning),
[224] consisting of fresh milk. Then the women apply themselves to the
[272]
[262]

701

512 cleaning of the cattle stalls and other work, as well as to start the
701 cooking of their food, consisting of purchased vegetables. This is
462 eaten around two o'clock in the afternoon (en dal e kat' aré, that
[262] is, the second meal), while then the warriors at the same time
[264] drink the rest of the morning milk, which has already become
[272] somewhat sour (efg ule naisedjo = slightly sour milk). After that
512 the old women take a nap or busy themselves with sewing and making
535 ornaments, while the warriors along with the girls /90/ amuse
701 themselves with dance and song (en sifgélie) under a nearby shade tree. For this a row of warriors stands opposite a row of girls. The former dance in place by slightly lifting the feet and bending the

[Warrior Kraal]

/90 cont./

512 knees. The row of girls moves forward up to the warriors with short,
535 stamping steps, bending their knees and swaying their upper bodies.
701 As a rule the dance ends when each girl whose lover is absent ap-
[836] proaches one of the dancing warriors in short high-jumps. This is an
[832] invitation to a rendezvous, which the one concerned answers in
[533] similar fashion as a sign of consent. The dance is always accom-
panied by singing. Shortly before sunset all return to the kraal.

701
535

Ill. 34. Dance in the warrior kraal III. $\frac{1}{4}$ C. G. Schillings phot.

512 Soon afterwards the livestock returns home, and, after it is milked,
701 the people take the evening meal (en dall e téiba = food in the even-
• [234] ing), again consisting of milk. After that the dancing of warriors
[264] and girls begins anew on a small open place in the kraal, close to
[272] the entrance, and is interrupted only from time to time in order to
[535] moisten with milk the throats shouted dry. During this time the
512 mothers are still busy with the livestock. It takes quite a while
234

1. [Illustrations 34 and 35 (on p. 119), despite the differences in captions, apparently were both taken at the same location, with only a slight time differential--Analyst]

[Warrior Kraal]

/90 cont./

512 before the milking is finished, then the calves are allowed to go to
• [234] the cows for about an hour, and finally /91/ the former must again be separated and shut up, so that there will be enough milk in the morning. At ten o'clock it becomes quiet, the people retire into the huts, except for the boys who lie down to sleep on the ground beside the goats.

136 The silence lying over the vast steppe is broken only now and then by the howl of the spotted hyena (Hyaena crocuta), reminiscent of the whistle of a siren, more rarely by the hoarse laughter of the
825 striped hyena (Hyaena striata and Hyaena Schillingsi). Sometimes the roar and growl of a lion can also be heard, and if the latter slinks about silently sometime, one becomes aware of its approach

535
701

C. G. Schillings phot.

Ill. 35. Dance in the war camp IV.

825 by the behavior of the cattle: they snort, stamp, and crowd together, or race wildly through the kraal. Then a number of women immediately hasten out of the huts, in order to drive away the beast
000 of prey by shrill, trilling cries (ol gijoi). A few intrepid warriors also

/161 cont./ The cattle are zebus (Bos indicus) among
233 which one can distinguish a stocky, short-horned breed and a thinner,
[136] long-horned one. One almost never comes across pure representatives of either, however, rather, as a result of plunder and crossbreeding, all the types occurring in East Africa are represented among them. The actual Masai cattle (ń gischu el masai) scarcely exceed in size the average East African cattle. The foreign, that is, stolen, cattle especially prized are: on account of its considerably larger size, the livestock from Irangi and vicinity (ń gischu ol datua), that from Unyamwesi and Usukuma (ń gischu ol moibaro), and further the large-horned ń gischu e kiteto, named after the steppe area of Kiteto, west of the area of Nguru. Among all the udders are relatively small and the yield of milk is consequently little. An exception to this is a low, stocky breed with short horns, which produces a double quantity of milk and about which the Masai maintain that they are quite pure descendants of the old Wakuafi cattle (ń gischu el lumbua). The Masai call descendants mahgá. Since the calves
• 234 are not permanently separated from the cows, the women try to avoid the natural restlessness at the milking by bringing the calf close to the cow during the milking. They place themselves astride it and hold its head firmly with the knees. The cow licks the calf, believes that it is sucking, /162/ /Ills. 51 and 52 appear here/ /163/ and is quiet. If the calf dies, one deceives the cow about its presence by hanging the freshly dried /Fig. 74 appears here/ skin over a stick. The cows are milked twice a day, morning and evening, and each time give about one and a half liters of milk. They are never milked completely; rather one leaves the calves with them afterwards. Until the calf is two months old, it is given the milk from
232 two tits, while the other two are milked. The principles of breeding and selection in general are well known to the Masai (Fig. 74). Male calves that are not to be used for breeding later on are castrated
[412] at the age of 14 days (a-gelém). With a sharpened /Ill. 53 appears here/ piece of sheet iron, such as is used for shaving, a cut is made in the scrotum, then each testicle is grasped with the hand and pulled out, together with the spermatic cords. "So that the wound may heal more quickly," one sticks in a dead fly and ties one of the removed testicles around the left foreleg of the calf operated on.

[TEXT CONTINUED ON PAGE 217]

362 started in and under the dung it is similar to a peat fire and virtually impossible to put out.

708 Masai also sometimes abandon a boma, or at least the house involved, if a person dies in it.

75(People who are very seriously ill are removed from the boma at least during the day, often to a small thorn boma with a shelter constructed nearby. They may remain there at night also. It was difficult to learn much definite about this practice. A disabled person spending the night outside a boma is very likely to end up

[177] inside a hyaena. The administration frowns on this

[178] efficient method of disposal and consequently the Masai have become reticent to talk about it. The sick persons' bomas that we saw looked to have been occupied nights as well as days.

262 <u>Food:</u> Traditionally the Masai are supposed to survive entirely on blood and milk (Gunther, 1955). In Western Masailand the Masai diet consists of posho

234 (maize meal), milk, meat, and occasionally blood. The

462 cows and sometimes goats are milked by the women and little

234 girls. The milk is collected in large calabashes. These

415 calabashes, ochre colored and sometimes ornately

[531] decorated with beads, are almost as much a symbol of the

[384] Masai as the ochre blankets or cloaks, moran spears and

[291] hair styles.

234 hair styles. The gourds are grown by nearby cultivators
415 and purchased or traded by the Masai. The calabashes
[264] are cleaned between usings by washing in water (if available) and then purified with a mixture of urine and wood ash. After being carried in one of these containers the milk has a rather characteristic, somewhat smoky-sweet taste that may stay with one for several days.

443 The maize meal is purchased or traded from the dukas or trading post cum general stores which are found at Narok, Loliondo, and at other points around the periphery of the area.

262 Meat comes from the Masai livestock and occasionally
272 game. The old traditions laid down specified rules for who in the tribe might eat what kind of meat, and at
[701] what times. Apparently the warriors had a right to demand milk and sometimes meat from anyone, at least in their section. Milk and meat were not to be consumed on the same day, but blood could be mixed with the milk.

701 When not fighting the warriors could carry out
[562] an olpul, or meat camp. They would take goats or a bullock and make camp in the bush, kill and eat the animals. The olpul might take from a week to a month,
[826] depending on the available time and meat. We presume that

21:Huxley Q, T-5 (no date) 1960 FL11 Luo

Masai FL2

good management on modern ranching lines will bring him in hard cash.

I saw the ranch mainly from the air. Lines of bush, cleared by bulldozers dragging giant chains between them, lie neatly along the contour like windrows in a hayfield. Soon the six or seven thousand acres that have been cleared will be fenced, and so managed that star-grass will cover them and steers fatten twice as quickly as they normally do. The snag, of course, is the Masai indifference towards cash.

Yet even here the seeds of change begin to germinate. There are schools now in all Masai centres, Masai students at Makerere, the start of a trickle of Masai teachers, doctors, administrators, vets. One has a Cambridge degree in geography, one is a Legislative Councillor. The shell of Masai indifference has been pricked.

The puncture so far is tiny, but time will enlarge it and one day, not so far away either, the whole shell may crack. Already a Masai parson, the Rev. Daudi Mokinyo, has fenced off 2,000 acres of communal grazing where he fattens steers bred from improved bulls, has a simple milking bail and makes ghee. Elsewhere, half a dozen other Masai have fenced in grazing land. When the railway took a pipeline off Mt. Kilimanjaro, they set up watering points for Masai cattle along its course, and in return one section of the tribe, the Il Kisongo, agreed to operate a pasture-management plan, financed by a grazing fee, which is acting as an entry-point for new ideas.

When these movements spread, as they seem bound to do, the doom of the game will be accomplished. For game cannot co-exist with modern pasture management. Unless the Masai come to see game as an asset of high value, it will go here, as it has on European farms, and for the same reasons: it will go down before the fence, the improved pasture and the need to keep the land free of disease.

The circumcision.

The following is a Masai custom:

A Masai child cannot be circumcised until the father has observed a custom called The passing of the fence.

The man who wishes to have his eldest child circumcised brews some honey-wine, and calls his neighbours together while it is being prepared.

A hut is then built for him outside the kraal, and he stays there for four days alone. He also sleeps there, and his food is taken to him.

During these four days he only approaches the kraal to look after his cattle when they are grazing outside.

881 292 [237] Neishopito 'n-dōkitin oo-'l-muran—ol-alem, o em-bere, o ol-kuma, o el-loñgo, o en-geranda, o e-sidai, o ol-mairutye,

He must don the clothes, ornaments, and weapons of a warrior—the sword, the spear, the club, and the shield, the cap made from the

Children are very fond of various kinds of fruit, which are also eaten by the old people, but the latter do not care for them very much. 262

Formerly the Masai, when they had plenty of cattle, ate no other kind of food, but nowadays they often have to eat savages' food, such as maize, rice, bananas, and cereals, for they no longer own the vast herds which they formerly possessed[1]. [178]

They, however, do not eat everything. They eat neither birds, nor fish, nor the flesh of wild animals.

Il-chafigit.

Menya 'l-Maasae 'l-chafigit opa eton eata 'n-gīshu pôkin; kake eiter kulikae áinos taata 'l-chafigit anaa 'l-Torōbo, amu etumutate 'n-gīshu.

Wild animals.

The Masai ate the flesh of no wild animals when in olden days they all had cattle; but some of those who have lost all their cattle are now beginning to eat venison, like the Dorobo. [178]

If Masai boys kill elephants, they only take the tusks, which they exchange for cattle.

When buffaloes are killed, the hide and the horns are kept. From the former the warriors make their shields, and from the latter mortars are cut in which medicines are ground. The medicine-men also use the horns to put stones in for their prophecies. 237 [914] [915] [987]

[1] It was recently estimated that the Masai in the Naivasha Province own 35,000 head of cattle and 250,000 goats and sheep. Those living in the Ukamba Province and in German East Africa are, however, much poorer, most of their cattle having died of rinderpest some years ago. [233] [184]

[2] The northern Masai sometimes use o-singir (pl. i-singiri) for a fish. The southern invariably use o-singiri (pl. i-singir).

Earthenware pots and gourds.

Some Masai women are able to make earthenware pots; others who are unable to make them buy them from savages. 323 [439]

Gourds are also bought, or they are collected in the deserted kraals. [415]

One pot can be purchased for a goat. [435]

When the Masai make pots they make them in two sizes, big and small; these pots are also provided with handles [1] by which they can be picked up.

When warriors go to the woods to slaughter cattle, they carry their cooking-pots by a strip of hide fastened to the handles [2]. [482] [237]

The divisions of the day [1].

The Masai have various names for the divisions of day and night.

There is day (as compared to night) and evening.

The evening is the time when the cattle return to the kraals just before the sun sets (6 p.m.).

There is also the time called Nightfall, or the hour for gossip (8 p.m.); this is the hour before people go to bed.

Then there is the night, midnight, and the time when the buffaloes go to drink—this latter is the hour before the sun rises, which the Swahili call *Saa kumi* (4 a.m.).

There is also the time called The blood-red period *or* When the sun decorates the sky: this is the hour when the first rays of the sun redden the heavens (6 a.m.).

Then there is the morning; this is after the sun has risen.

There are also the hours called The sun stands *or* is opposite to one (midday), The shadows lower themselves (1–2 p.m.), and Afternoon.

[171] [1] The Dinka divide their day in much the same manner as the Masai (Kaufmann, *Schilderungen*, p. 131).

Wounds and Surgeons.

752

If a Masai warrior is shot, and an arm or leg broken, the surgeons are able to mend it.

They cut through the flesh, take out the splinters and bring the edges of the bone together, after which they stitch up the wound with the sinew from the back of an ox, and bind the limb securely. 752 237

The only food that is given to a man with a broken limb is roast meat and the thirst-quenching medicine obtained from *Acacia abyssinica*. [278]

Should a man be shot in the belly so that the intestines protrude, the wound is washed and the intestines returned to their place; sheep's fat (a quart or more) is poured into the wound, which is then stitched up.

Again, if a man is shot and a rib broken, the flesh is skinned from the wound, and a sheep's rib is inserted in place of the broken one. Sheep's fat is then poured into the wound, after which it is sewn up.

The wounded man is not allowed to drink milk, and may only eat meat.

If a man is shot with a poisoned arrow, a pregnant cow is slaughtered, and he is given the oxal fat to drink. This causes him to vomit and he recovers.

If the surgeons see that a man's bone cannot be mended, they fasten 752

FL12 Masai FL12

were killed, and the cattle driven off. Famine came upon them, and they were reduced to the terrible necessity of selling their children. Large numbers took refuge at Njemps and Nyiro, where they had to bow themselves to the cultivation of the soil. The war lasted several years. At last only a remnant of the Wa-kwafi of Lykipia were left, and these contrived to make peace. Not so fortunate were those of Guas' Ngishu. The Masai swept from north to south, and left not a man in the entire land, those who escaped the spear and sword finding refuge in Kavirondo. 175 628 726

Such is the history of the bloody feud between the Masai clans. Now they live peaceably together, with kraals in friendly proximity.

Having thus conveyed to the reader some general notions about the tribe as a whole, we may now conveniently turn to follow with the eye of our imagination the life-history of one of its members.

Very many years ago a matron of the Masai lay in what is pleasingly described as an "interesting condition." Her environment was not of a luxurious or even comfortable nature. She lay on no better a bed than a dressed bullock's hide spread on the bare ground. The hut which protected her from the blazing sun or the cold night was not built on sanitary principles, and was not commodious. It reached a maximum height of three feet and a half, and might be nine feet long by five feet broad. It was constructed of boughs bent over and interwoven together, forming a flat-roofed building with rounded corners. To keep out the wind a composition of cow's dung was liberally plastered over the bough. This sufficed for the dry season, but for the rainy one a further covering of hides had to be laid upon it. The doorway was of the smallest, and stood at right angles to the line of the house in the manner of a porch. The hut of the expectant Masai lady was one of a circle enclosing a considerable area, in which the cattle were kept during the night. As this central space was never swept up, its condition may be better imagined than described. The smells were strikingly suggestive of the farmyard; and if the reader is so inclined, he may imagine some charming picture of full-uddered kine, with their mild eyes and expression of repose as they contentedly chew the cud. For any such picture, however, I can accept no responsibility. Outside the circle of huts there extends a strong fence of thorns as a protection from wild beasts, and in case of an attack. Inside 844 [352] 844 342 [237] [361] [364] 844 [351]

6: Thomson K-3. (1883-1884)1887
FL12 Masai FL12

726 ever, a party had been sent to the chief lybon of the Masai —Mbaration—to seek advice as to the time of their start, and to procure medicines to make them successful. On their return the party mustered, and set off. It was a remarkable sight to behold these bloated young cut-throats on the march, and it is almost an impossibility to convey any clear picture of their appearance in words. The Frontispiece illustration, however, will help to some extent.

714 Let us pause and in imagination watch some enthusiastic
726 young ditto buckling on the armour of her knight. First there is tied round his neck, whence it falls in flowing lengths, the *năiberè*,—a piece of cotton, six feet long, two feet broad, with a longitudinal stripe of coloured cloth sewed down the middle of it. Over his shoulders is placed
[237] a huge cape of kite's feathers—a regular heap of them. The kid-skin garment which hangs at his shoulder is now folded up, and tied tightly round his waist like a belt, so as
[302] to leave his arms free. His hair is tied into two pigtails, one before and one behind. On his head is placed a remarkable object formed of ostrich feathers stuck in a band of leather, the whole forming an elliptically-shaped head-gear. This is placed diagonally in a line beginning under the lower lip and running in front of the ear to the crown. His legs are ornamented with flowing hair of the colobus, resembling wings. His bodily adornment is finished off by the customary plastering of oil. His simè or sword is now attached—it does not hang—to his *right* side; and through the belt is pushed the skull-smasher or knobkerry, which may be thrown at an approaching enemy, or may give the quietus to a disabled one. His huge shield in his left hand and his great spear in his right complete his extraordinary equipment. For the rest you must imagine an Apollo-like form and the face of a fiend, and you have before you the beau-ideal of a Masai warrior. He takes enormous pride in his weapons, and would part with everything he has rather than his spear. He glories in his scars, as the true laurel and decorative marks of one who delights in battles.

726 With astonishing hardihood, Moran and his comrades,
[648] thus terribly arrayed, shaped their course towards Swahili-land; for, strangely enough, they have found that they can lift the cattle with greater impunity there than anywhere else—in spite of the Swahili guns and a large population. The reason is the complete absence of anything like patriotism or public spirit among the coast people. Their argument

is called an *ol emal*. The boys may carry knives for defence but not 561
spears, for it is said that a spear is a sign of force, and their quest [411]
is a peaceful one. Each boy must carry a bow, for the bow is a
token of peace. Furthermore it ensures that any reasonable request
the boys may make during the *ol emal* will be granted. No Masai [574]
may refuse the request of one who carries a bow in his hand. The
boys take no arrows with them. They visit all the principal villages
and in dance and song they announce the object of their visit. They
then seek out all the bigger boys of the village and add them to their
number. If they wish to spend a night at a village they beg an ox
for food from the elder of their sponsor's age-group. Elders of other
age-groups present them with milk to drink. In this way the news
is spread far and wide and finally the boys, now of considerable [431]
numbers, return to the elders who despatched them, taking as a gift
a large quantity of honey. Then a special village is erected in which [361]
only the boys' sponsors and their families may live. The boys borrow
ostrich feathers and lion mane head-dresses from the warriors and [237]
on the appointed day they collect at the elders' village. [714]

The ceremony commences with a dance called *engibata;* for this, [535]
the boys form three files, one wearing ostrich feather head-dresses,
the second wearing lion mane head-dresses, and a third, of boys who
have decorated their bodies with broad stripes of white earth to
resemble zebras.

The latter must be quite nude; those who wish may wear thigh- [291]
bells. They may not carry weapons of any sort, but each carries a
thin wand, the length of a spear. After much dancing, the boys
form a procession and walk round inside the circle of huts following
two leaders, one of whom blows a Kudu horn from time to time.
The procession then halts and the leader prays aloud to *Engai Narok* [782]
—the Black God, to shower his blessings on the boys. This prayer
has been taught them beforehand by the elders, some of whom stand
by and prompt when necessary. When the prayers are over, the
elders take the boys outside the village and spend some time instructing them in their duties to their sponsors and to the tribe. A return is then made to the village and the elders bring a fire-stick, the one called *ol-piron*, also a male circumcision knife and a small dead bird. This bird may be of any kind other than a dove. The elders break the fire-stick before the assembled boys. They then place a curse upon the circumcision knife and taking the dead bird they break one of its legs and pierce one of its eyes—presumably as an indication of the ill which will befall any boy who dares to be circumcised before the curse is taken off the knife.

In this way, the elders formally lay claim to the sponsorship of a new age-group. From that time the boys refer to their sponsors as *Il-piron*, whilst the elders refer to the boys as *Il-piron*.

NEWLY CIRCUMCISED YOUTH.

[Facing p. 30]

(Common Trees and Wood Plants of Kenya Colony) gives the Masai name of *F. Hochstetteri* as 'Ol-edeti' and identifies 'Ol-retei' (the name used by my informants) with a small tree growing on highland forest edges called *Maesa lanceolata* Forsk. 302 [824]

(v) Fat, sheep fat for preference, but otherwise the best bovine rib fat. [237]

(vi) Red ochre (*ol Karia*). [386]

(vii) Ornaments, usually comprising a metal clasp, wire bangles usually strung with coloured beads (*engiok*) and double-lobed copper weights (*esekerwa*). [301]

The method is as follows: The hair is grown until it hangs on the shoulders, that is, about nine inches long. This it does naturally and only in exceptional cases has to be eked out with cow hair. During the growing period the hair usually remains in a mop, but occasionally is braided into short pigtails.

As soon as the necessary length has been reached, the hair is parted transversely across the top of the head, that is at right angles to the European fashion. The largest portion, that at the back of the parting, is painstakingly twisted by hand into braided strands which are then grouped round the end of the 'siteti' stick or sticks (according to the number of pigtails to be worn) and lashed on with the gut string. The stick and hair ends are then bound neatly with the sheep skin strip so as to taper to a point.

The hair in front of the parting is divided into three equal portions and braided. The ends of each portion are bound together with gut string. The two side pieces which fall in front of each ear are then tied together by a cord under the chin, tight enough to hold them flat against the face. The central forelock' is finished off with a metal clasp.

If the warrior wishes to wear the ultra-smart 'helmet' style, the single pigtail is brought forward over the top of the head and its tip bound to the tip of the 'forelock' but as the pigtail stick is pliant and would therefore pull the forelock up, the latter is bound down by a further cord, passing across the forehead and tied at either end to the tips of the 'side-locks', which as we have already seen are firmly tied down to the face by the chin cord. As soon as the pigtail is securely fastened in the ridge position, the whole coiffeur is liberally coated with fat, tinted with red-ochre, and the 'helmet' effect is complete. [237] [386]

The wire bangles with coloured beads pass through the top of the ear, and the copper weights are of course suspended from the earlobes, which have been carefully lengthened during many years of youth — initially by the insertion of wooden plugs. In extreme cases the ear lobe has been so stretched that if it is desired to get it out of the way, it can be hitched right over the crown of the head onto the opposite ear! 301 304

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Those candidates who are eligible to take part in the ceremony assemble on the day fixed for the proceedings. They come from all parts of the Masai country, north, south, east, and west, as there is only one ox-seizing ceremony in the whole of Masai country before a new age-group proceeds to initiation and circumcision. They wear ordinary everyday dress and carry sticks. The ox is brought into the village by the elders in charge of the ceremony, and the boys are lined up some distance away. A signal is given, and immediately the boys race to the ox, each boy endeavouring to get a firm grip of the ox's horns or of the hump. As soon as two boys have succeeded in gripping these parts firmly, all those boys of the same clan protect him with their sticks, while all the others endeavour to force the boys to release their grip. Should they do so and should boys of another clan succeed in taking their place, they in their turn are attacked by the other clans and defended by their own. After a time the elders stop the contest, and those who succeeded in keeping their grip are greatly lauded. The two boys who actually held the horns and hump respectively will be renowned for their success for the rest of their lives. It is a recognised thing that during the contest very many individuals receive more or less serious wounds. 881 561 [484] [614]

As soon as the contest has been stopped, the ox is slaughtered and eaten by all present at the ceremony, and the hide is cut up into small strips, in each of which a hole is cut, and a strip put as a ring on the middle finger of the right hand of each of the boys who participated in the contest. If any skin remains over after each boy has been thus decorated, it is cut into a long thin thong, which is given to a boy candidate of the Lukumai sub-clan (*i.e.* the sub-clan who provided the ox). This boy is called *olobolosoi elegeteng*. This thong must never be lost or parted with, but the small strips of skin placed on the boys' fingers must be removed a day or two later and thrown down in that part of the boy's mother's house where the calves sleep. [301] [230] [614]

When this ceremony is over the boys go to their own homes to await their turn for circumcision.

Circumcision.—The candidates are not circumcised in groups at local centres, but individually at their own homes, and as the number of operators is limited, candidates may have to wait for anything up to two years before their turn comes. The operators travel from district to district, visiting all the villages where there are candidates, and circumcising them at their own homes. During the interval between the end of the ox-seizing ceremony (before which none of the candidates may be circumcised) and the time when his turn to be circumcised arrives, each boy goes back to his cattle-herding and carries on with the normal routine life of an uninitiated boy. 881

The operators who circumcise the boys are never true Masai, but invariably "Wandorobo" living in Masai country, but no explanation of this could be obtained except that it had always been so from the beginning. [563]

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

881 As only those candidates who belong to a given village may be operated on in that village, it is seldom that there is more than one circumcised at a time, but should there be two or three candidates belonging to a single village they would be circumcised together on the same day at the same time. There is no elaborate ceremonial accompanying the operation or preparatory to it. A boy will continue herding his cattle until the late afternoon of the day before that fixed for his circumcision. He is then fetched back to the village and has his hair shaved off by his mother, and has new sandals and a new skin dress given to him. This dress must be made of the skins of four rams sewn together, and will be worn the following day during the operation. The actual operation takes place next day, either early in the morning or in the middle of the day. If it is in the morning, the cattle are kept in the yard until the ceremony is over, but if it is in the middle of the day the cattle must be brought into the yard and kept there during the ceremony, for it is absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony. Sheep and goats are not included in this rule. The boy (or boys) sits on an ox-skin in the courtyard in front of his mother's hut wearing his new ram-skin dress and sandals, and the operator performs the operation with a special small knife without any elaborate ceremonial. The boy then retires to his hut to convalesce. A fat ram is killed for the patient, who is fed on meat boiled in fat and on plain cold fat, "so that he may get well quickly." After about five or six days the other boys in the district who have already been circumcised and have recovered, call for the boy, and he joins their band for the period of their novitiate.

881 561 *The Novitiate.*—The period of novicehood varies in length of time, as a boy must remain in the novice stage from the time that he is circumcised until every other candidate has been circumcised too. Usually a period of about two years elapses between the time of the bull-seizing ceremony and the time when the last candidate has been operated upon. Then the group undergoes the hair-shaving ceremony which marks their transfer from the novice stage to the warrior stage; thus, the last few to be circumcised may only have a few weeks in the novice stage, while others may be about two years in that stage. During the novitiate, there are certain rules and regulations which must be observed by the novices. They wander about the country in bands armed with bows and bird-arrows visiting more especially those villages where they hear that fresh candidates have just been circumcised, and enlisting them in their groups. During the whole novitiate period the novices must not cut their hair at all, nor may they indulge in any form of sexual intercourse, nor may they use red ochre, but only plain fat on their bodies. They are required to shoot as many birds as they can, and to skin them and stuff them roughly with grass, and tie them to their hair as a decoration. More and more skins are added to this head-dress as the weeks go by, until at length a boy has a complete wig of stuffed bird skins. Certain birds must on no account be so used, notably birds such as pigeons, doves, and

Kenya

561
884 The *Loita* and *Siria E-Unoto* ceremony took place in July, 1929, and lasted three days. They invited me to it, but, owing to pressure of political work, I was unable to arrive till the morning of the third day at about 10 a.m. (Pl. XIII, Figs. 1–3, and Pl. XIV, Figs. 1 and 2).

The Masai definition of the *E-Unoto* is as follows :—

"The *E-Unoto* is a religious ceremony of blessing of the age-group, after which the warriors have leave to marry.

"The *O-Singira* gives the warriors permission to have sexual relations with initiated women."

The warriors were dancing at the time (Pl. XIII, Figs. 1 and 2). After about an hour they went off to a spot about a mile away in the forest, where I was [789] informed that they sacrificed a bullock as a charm.[1] They returned about 3.30 p.m., [787] about twenty of them being dressed in a manner similar to that of the three functionaries (Pl. XIII, Fig. 3). They danced round the *O-Singira* hut, and those warriors who were entitled to enter it led their families up to smear some cow-dung on it. The warriors then squatted down in a close group in the centre of the *manyatta*, while some elders walked round them drinking honey wine and spraying it out of their mouths over the group as a blessing. Others of the elders sat by the *O-Singira* hut and refreshed themselves with honey wine. It was at this point of the proceedings that the age-group of warriors was named *Irimirim* (from verb *arim*, pierce). This terminated the festival.

561
884 The chief functionary is the *Ol-Otuno*, but I cannot say what part he takes,
624 having arrived so near the end of the ceremony. He is held in great reverence for ever afterwards, and it is unlucky for the age-group if a mishap befalls him. He must not take part in political affairs. He is always spoken of as *Ol-Otuno*, and his son, when he grows up, is known as the son of *Ol-Otuno*. (Pl. XIII, Fig. 3.)

There is a minor official called *Ol-Oiber engāne*. *Eng-āne* is a thong of leather. If my spelling of the first part of the title is correct it would perhaps mean "He who splits the thong." But there are several words from which it might derive, and I have no knowledge of his duties to assist me in checking my spelling of the name.

561 *O-Singira* (*Thingira*).—Being ignorant of Kikuyu I had been puzzled by this
346 word prior to reading Mr. Leakey's article. At the *Loita E-Unoto* it was built just within the eastern edge of the village. The village consisted of a circle of huts [361] about 300 yards in diameter. I looked in to the *O-Singira*, but it was too dark to [237] see anything. It was made of cow-dung plaster like an ordinary hut, but was much bigger. Ranged against the wall outside were the heads of numerous oxen which the warriors had slaughtered.

561
884 I was informed that 109 of the warriors had not had sexual relations with initiated women and could therefore enter the *O-Singira*. After the *E-Unoto* the

805

Ol Oilokurukur = The Thunderer and 2nd month ditto.
Ol Oirujeruj = Light showers and 2nd month ditto.
Ol Tumuri. Meaning unknown and 2nd ditto.
Ol ol Aibor Ari = The month of the white water

The following are the days of the month :—

1. *Ol Kardet* = Full moon.
2. *Ol Oinyori* = When it rises green.
3. *Ol Onyuki* = When it rises red.
4. *Esobieh Naiturugu* = The beginning of the wane.
5. *Esobieh il Giporoon* = They wane the scars (?).
6. *Esobieh e Nadarhas* = The red wane (?).

The other days are not named. But one may refer to a day as, for example, "the eighth day of the moon," that is, counting from the time when the old moon disappeared. The dark days between old and new moon are called *Enaimin* = the darkness.

FIG. 2.

Hut-building.—The Masai frequently move from one place to another in order to seek the best grazing and water for their cattle. They are therefore constantly deserting old villages and building new ones. If time permits, after the day's march is over and before darkness sets in, each woman sets to work to build a hut, even if it is only to be occupied for one night. 361 342

She first cuts a number of straight sticks about 5 feet long and brings them to the place where she wants to build. She takes six of these sticks and marks out an oblong about 5 feet by 8 feet with them and places little blobs of cow-dung (*Emodio*) round it at 9 inches or 12 inches interval (Text-fig. 2). She then drives a hole in the ground through each blob of cow-dung to a depth of 12 inches or so with a pointed stake called *Enaunir*. The cow-dung lubricates the point of the stake and makes it easier to pierce the ground. The holes slope slightly outwards from bottom to top. She then drives an upright into each hole, after which she binds the tops of the uprights to a pliant wand which runs all round horizontally, leaving every fourth or fifth upright unbound. [237]

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12

561 **The 'E-Unoto' Ceremony of the Masai.** *By Lord Claud Hamilton. With three text figures*

135 The cycle of ceremonies connected with the forming of a Masai age set starts with that known as *em-polosata*, performed by the members of the age set immediately senior to the existing warrior set. These members are destined to become the instructors in tribal lore of the youths who are about to comprise the new age set. *Em-polosata* is followed by *en-dungore* which marks the end of the current circumcision. These two ceremonies are followed by a four-day dance of the initiates-to-be [535] called *en-kipaata;* and the circumcision of the new age set is carried out over the next three to four years, the youths being 14–17 years of age. Each generation is divided into Right Hand and Left Hand circumcisions; the latter begin their ceremonies about six to seven years after the former, but both cease to be warriors at the same time.

Seven years after the beginning of their circumcision, the members of the Right Hand Circumcision become senior warriors through the *e-unoto*. This ceremony, which is part of the age-set institutions, is held about every seven years, when an age set of junior *muran* (warriors) feels that it is sufficiently strong and mature to graduate into senior *muran*, and so 'push' the next senior warriors of the previous age set up into adult manhood. The word *e-unoto* is derived from the verb *a-un*, to plant upright or set up (*i.e.* a new age set of senior warriors is 'set up') and, as will be seen below, certain things are ceremonially 'set up' in the *manyata* (warriors' kraal) where the ceremony is held.

Tribal elders choose a site for the ceremony, and there the *muran* who are to take part, aided by their mothers and girl friends, build a new kraal. Each young man has his own hut, a [342] long, low building of withies, mud and cow dung. These are [361] built in a circle, facing inwards. At night branches are pulled into the gaps between the huts to keep out wild beasts which might prey on the cattle sleeping in the arena encircled by the huts.

Besides choosing the site, the elders also select 49 *muran* from those about to take part in the ceremony. These 49 'pure ones' as they are called must be young men of good character, 100 per cent. full-blooded Masai and without physical blemish. Their leader, the *Ol-Onuno*, is chosen secretly and is not told of his appointment until the ceremony is due to start. Every *murani* dreads being called upon to fill the position for the *Ol-Onuno* is regarded as a scapegoat for the misdeeds of his fellows. They [183] believe that if he dies young as a sacrifice for their sins, they will live long and prosper.

After the other huts have been built, the mothers of the 49 [346] 'pure ones' build the sacred hut called *O-Singira*. This is a round building, also made of branches, mud and cow dung, topped with a conical roof of the same materials. Around its base is laid a circle of bullocks' skulls on which are left the horns and a strip of skin [239] running down the face. Inside, in the centre of the *O-Singira*, the *Ol-Onuno* 'sets up' a stick of the wild olive tree (*Olea chrysophylla*) and so receives his name which means 'He-who-set-it-up.' The doorway of the *O-Singira* faces that of the *Ol-Onuno*'s hut, next to which is that of his assistant known as 'The Cutter-up of the Hide.'

The *e-unoto* of the Loita division of the Masai was held on 10–13 June, 1959, at Entasekera in southern Kenya. The youths taking part were of the right-hand circumcision, the members of which are known as *Il-Dereçeyani*.

561 The ceremony lasts for four days, and the first of these is called 535 'The Day of the Red Dance.' As dawn breaks, all the people assemble outside their huts facing east. Four elders chant a prayer

535
[237]
[292]

calling on every man to love his neighbour, and the crowd then call '*Hoi-yoor*' three times—a form of 'amen.' In the centre of the arena—about 70 yards across—some long poles were 'set up' in the ground. To the tops of these were tied some of the ostrich-feather headdresses which Masai *muran* like to wear; and on the branches of nearby trees were more of these and also a number of the conical hats made from lions' manes—not unlike guardsmens' bearskins—which are worn on ceremonial occasions by those who have killed a lion with a spear.

FIG 1. THE E-UNOTO, FIRST AND SECOND DAYS

Ill. 5. Kraal on the steppe between Kilimandscharo and Meruberg.

342 out of material available everywhere. Like every task in the
[462] kraal, hut construction is the duty of the women. After the site for the individual hut (Fig. 3) is cleared of grass and brush and then leveled, the spiral-oval ground plan is undertaken in that the woman scratches it on the ground with her foot. They do not
[804] use any auxiliary means for measuring it; measuring by eye is sufficient for the woman who, even as a child, helped her mother
342 with this work. Into the ground plan, at foot-long intervals, poles
335 (ol ōmi, el ōm) about 1 1/2 meters long are stuck in the ground and joined lattice-like with thumb-thick cross-switches (ol gereni, el gerenen). Then in the longitudinal diagonal seven to eight supports (em bogischi) are dug in, over which a longitudinal bar (ol ereschena, el ereschenan) is put from one end of the hut to the other. Over this the poles are arched and the opposite ends lashed
[284] together with papyrus grass (es sedja). By interplaiting finger-
[824] thick switches (en jaschoi, n jascho) walls /24/ and roof are made
342 tight. The lattice-like framework is about 1 1/2 to 1 3/4 meters high, 4 to 5 meters long and 3 meters wide. Neats' skins served
[237] principally for roofing before the rinderpest raged among the
[731] livestock around the year 1890. Now, /Figs. 2 and 3 appear here/
[824] when the Masai herds have become vanishing small in contrast to former times, the switch framework is first packed with a
[237] layer of dry, long-bladed grass (ol gudjeda or ol godjeda) 15 to

342 latter a separate entrance leads into each of these compartments.
[352] The bed consists of a pad of dried grass over which two dehaired
[237] neat-skins are spread. Opposite the door is found a small enclosure
[233] (ol ale l el ascho) into which young calves are put for the night. There is often found beside the door yet another enclosure (ol ale l ol balelon) for young goats and sheep, if these are not housed in small pens built beside or on the hut.

/25 cont./

342 small pens built beside or on the hut. The door opening of the hut is closed off at night by means of a neat's skin hung over it or a thorny branch dragged in halfway.

361 /26/ The individual huts are very close to one another. The space between two of them amounts to scarcely half a meter, so that in the evening the entire ring of huts seems closed except for
417 the entrances. For protection against wild animals and enemies,
361 the kraal is surrounded by a stout barricade of thorny acacia
351 branches, with which the entrances are also obstructed after the
824 livestock has returned from pasture. In the place enclosed by the
[233] huts one finds a ring-shaped thorn-barricade in which the livestock stays during the night; large livestock, calves, and small livestock

142

/35 cont./

276 adds some natron salt and beef fat, frequently also pulverized bark of ol amóra (Ocimum suave Wild.), and mixes the whole by further grinding.

[415] Small boxes (en dulet -- 'n duleta)
[237] made out of wood, bamboo, cattle
[531] or sheep horn, or even out of the
[136] horn of the Rhinoceros bicornis, which often are quite attractively carved and decorated with beads,
[273] serve as snuffboxes (Fig. 6). They
[415] are worn around the neck on thin chains made out of iron wire.

Fig. 7. (1/10.) Vessel for the preparation of honey beer.

273 Another luxury, also intended only for married men, is a kind of honey beer (en aischo namga) (Fig. 7). One dissolves honey in
[824] water and adds a piece of the root of the steppe aloe, os sugurol, /36/ or a peeled and cooked piece of the root of the so-called liver-sausage tree (1)

1. Named after the resemblance of the fruit to a liver sausage.

(ol darbol -- Kigelia aethiopica), both as a taste corrective and to hasten the fermentation. The mixture is allowed to stand and ferment three to five days in a warm place, say, in the vicinity
[824] of the hearth fire. Before it is drunk, one often puts in a few bunches of leaves from the ol gonjet bush, I suspect in order to stop the vinegar fermentation. The honey beer is quite strongly intoxicating, so that a drinking bout usually ends with complete
[439] drunkenness. Other brews, which the sedentary Negroes bring to the Masai for sale and which are made out of bananas and Eleusine, maize, or sorghum, are milder. The Masai do not distinguish these with names, but rather call them generally ol márua.

/36 cont./

524 Now the partner starts in the same way playing in his row, /37/ to let the other play again as soon as he has placed a last stone in an empty compartment. The one who places a last stone in an empty compartment of his own row takes it and the ones lying in the adjacent compartment of the opponent's row for himself, and so on until, according to the rules, no more stones can be taken out of play. The one who has removed the most stones has won the match and gives himself a point. Serving as counters [802] are small, finger-thick, and spindle-shaped ivory sticks 15-20 [237] centimeters long (ol alai, el ala) (1).

1. As tooth generally is called tusk of the elephant, ivory.

Before the game starts, there is an understanding as to how many points are to be played. Women never play this game, warriors rarely. The latter usually prefer the en gehé ('n gehén), which is played in much the same way, except that in any case about eight players for each side take turns and each row has 40 to 50 compartments, which are not chiseled into a board, but are scratched into the ground.

415
531

Fig. 9. (1/1).

512
234
264
262

When the livestock has come home from pasture, it is milked, as in the morning, and after that the evening meal, consisting of fresh milk, is taken.

/37 cont./

415 The household equipment is quite paltry. Except for two or
[356] three earthen pots there is found first of all a number of gourd bottles (Fig. 9) of various sizes: for milking, the ol ôdi, el odio; for storing milk, the ol buguri, el bugurta and the larger e mala, 'malasin; for making butter, the en diagologol; and for honey beer, the e' mikorokoro. Some have a bulging, others a slender
[531] bottle shape. They often have sewed on them longitudinal strips
• [237] of neat's leather, which are trimmed with cowrie shells (2)

2. The shell of the procelain snail, Cypraea moneta, which even today takes the place of money in many parts of Interior Africa: on the Nianza /Nyanza/, for example, 1000 cowries have the value of two rupies, two pesas (at an exchange rate of 1.40 marks) = 2.84 marks.

415 (os sigirai, es sigira). To make these vessels one puts the ripened
322 and externally hardened bottle gourds, the only plant that the Masai grow near their kraals, and, to be sure, on piles of goat and sheep dung, either in water or to dry on the hut roof until /38/ their contents soften, and then removes these by poking and twirling with a brush made out of a neat's tail (ol kidongol). Later, the
[237] cleaning is done after daily use through rinsing with cattle urine. As the reason for this peculiar "cleaning" the women whose duty this work is say that the vessels rinsed with water soon become foul-smelling and the milk stored in them does not thicken as evenly as with the use of urine, but rather deposits a layer of water. Since, with use, the gourd bottles soon take on a sourish, disgusting odor, they are often perfumed, and, to be sure, through fumigation with twigs of the ol orien acacia, through which the milk too is given a taste pleasant to the Masai. /Figs. 10 and 11 appear here./

415 The Masai buy wooden bowls (ein giná, 'i giran) (Fig. 10),
[439] out of which one eats, from sedentary tribes, while they them-
[237] selves make the honey pots (ol ôlul, el ulull) (Fig. 11). On each of the two openings of a wooden tube approximately a foot long

415 /38 cont./

[237] and 20-25 centimeters thick, one ties a piece of fresh neat-skin, then removes the one, after it has dried and become hard, as a

352
412

415
[237] cover and /70/ ties it with a thong (eng ŋim, ng ŋuda) to the finished container. Smaller and larger pouches (el ŋine, el ŋinea)
352 of neat's leather serve for storing solid foods. In every hut one also finds round, four-legged wooden stools 2-3 feet high (Fig. 12)

/39 cont./

352 (ol origa, el origaach), on which people sit to eat. The stool is
[322] made out of one piece, in that one first roughly hews the block with
412 an ax and then carves it with the knife. A few cooking spoons (en
gilige, 'n giligani) (1).

[192]

1. Formed from the Dchagga /Chagga/ word
gilige; the Maasi do not have a word of their
own, since they were unfamiliar with spoons
in former times.

stirring sticks for thick porridge (ol gutar, el gutera), whisks (Fig.
13), 1 ax (Fig. 14) (en dilo, 'n dolo), and a couple of knives
(Fig. 15) (ol alam) complete the kitchen equipment. Nowadays

342
291
482
301

Ill. 14. Woman with pack holder.

412 spoons (formerly only the sticks and whisks) are also carved out of
wood by older people. The whisk has various shapes: sometimes
• [237] it consists of a stick on whose lower end is stuck a vertebra from a

/39 cont./

412 goat or sheep. Other shapes consist of such a piece of a thin tree
• [237] trunk, which bears on its lower end a wreath of branches, or also
of a wooden handle on whose lower end, in slits placed crosswise,
[326] sit two short cross-sticks. The blacksmiths make ax and knife.
372 A little board (en dauale) /40/ of soft wood and a twirling stick
[824] (ol birón, el birondo) of hard wood (1)

1. Especially from the ol ñanholi (Ficus Sycomorus) and ol dessegon (Pluchea Dioscoridis).

serve as fire-lighter (Fig. 16). To make fire, one holds the little board firmly on the ground with both hands, while another kneels before it and, twirling on it with the stick, produces the necessary
[237] friction. After approximately half a minute, when the fine shavings rubbed off the board smoke, one shoves on some dried cattle-dung. As soon as this starts to glow, one puts brush on it. Once the fire is burning in one of the huts, the people come here from the others, a stick of firewood in hand, in order to fetch fire for themselves.
415 With the household equipment also belong the large leather pouches
482

372 ←

415 →

415 (Fig. 16 /sic: see Fig. 17/) (ol berne, el bennia), which in
482 former times were loaded only on donkeys, but now are also carried by the women on their backs, just like the leather bags (e mogage, mogagení), when they set out to buy vegetables.

/40 cont./

415 Now and then the receptacles are also replaced by two pouchlike
492 pack-holders (ol dereta, el derēta), one tied on the other. These
[283] have the oval shape of a shield and consist of a wooden frame that is covered with a plaited work of leather thongs or ropes. Otherwise they serve to hold the pack loaded on the donkey and some-
285 times also on oxen. Mats are unknown; dressed neat-skins take
• 237 their place. Mortars are also unknown.
412

III.

000 Closer family relationships. -- Kinship designations. -- Terms of address for relatives.

602 Since every tribe and every lineage are descended from a
[613] tribal ancestor, the tribal and lineage members consider themselves
[614] more or less distant relatives. The family, one's own as well as, ascending, those of the father and of the mother, forms the closer
[611] relationship. The child follows the father's family (father right).
[672] Relatives are not responsible for punishable offenses, fines, or debts of a relative. Legally they need not support them either in connection with imprisonment or release from captivity; it is such a general custom, however, that probably no one ever evades it.

601 /41/ The Masai language is poor in particular kinship designations: most of them are made up of words for father, mother, brother, sister, son, daughter, etc.

Father: baba.

Mother: jëjo.

Another wife of the father: eng afiji e jëjo.

Principal wife: e' ngorojoni kitok, that is, the great woman, or en altero eng an, that is, the first in the kraal.

Every other wife: e' ngorojoni.

Brother (1):

1. Brother and sister come from the same wife, half brother and half sister from different wives of the same father.

/78 cont./

714 These[1] consist of curves, sectors of circles, lines and scallops,
53 which are painted on the shield's surface in three colors, Pompeian
[822] red, black, and gray (1),

1. Gray is very rare. Black and red, on the other hand, are represented on every shield of the warriors.

with which white belongs as a fourth color, /79/ serving as the background color for the shield's surface, from which the colored designs
[386] stand out in sharp contrast. One uses for this the red earth mixed
[824] with blood or with the juice expressed from the fruit of the Solanum campylacanthum, further the white earth that is found in various places on the steppe, which is mixed with water, and, for black,
[239] pulverized, charred gourd shell. Gray is produced out of charred and pulverized cattle bones.

714 Today considerable confusion in the shield escutcheons already
53 prevails. The rarer the war expeditions of the Masai become,
721 thanks to European domination, the more the old formalities of war-
178 fare are sloughed off, and ancient rules, which formerly were never
[648] transgressed, are today all too often ignored; their purpose has lost
[669] its meaning in the changing times. A further blurring in the shield escutcheons arose through the Lenana-Zendeo civil wars, in which, for the first time, long-lasting struggles between the Masai are taking place. The confusion in the escutcheons in and of itself interests us here only as one of the many visible proofs of the relaxation of the old strict organization. Therefore a special description of the present-day, often arbitrary escutcheon figures may be omitted. On the other hand, it is important to establish the rules according to which the shield escutcheons were made up.

714 A shield escutcheon (Plate 1)[2] may contain: 1. the red warrior-
531 emblem (os serat' onjugi), 2. the black emblem (os serat' erok) (1),

1. To which the rare gray also belongs.

3. the ornamental band (es segira l el oño), 4. the escutcheon of the lineage, 5. the emblem of the sections, and, finally, 6. an emblem

1, [i.e., the shield escutcheons--Analyst]
2, [See pp. 604-607--Analyst]

[Warrior Kraal]

701 /85 cont./ Under a shade tree with thick
361 foliage a spot about 20 to 25 square meters in size is cleared and en-
342 closed with a barricade of branches. During the rainy season in place of this kraal a small hut (Fig. 18) is built out of leaves. Its approximately circular ground plan has a diameter of two to three
701 meters. On the side opposite the
342 entrance opening is the common
35 sleeping place of the ol gibet companions; between this and the door, the hearth; beside the door the space for firewood.

Fig. 18.

a) Sleeping place. b) Drinking bag. c) Pole for meat. d) Hearth. e) Firewood. f) Entrance.

[415] Close beside the sleeping place hangs the stomach or
[237] bladder -- from the head of
[276] cattle just slaughtered -- filled with an extract of roots and barks that acts as a nerve stimulant and is drunk whenever one is thirsty (ol ɔɔni).

[251] In the vicinity of the hearth the meat supply, is hung on sticks (ol
701 alele). In the vicinity of the warrior hut the serving boys build them-
342 selves their own, considerably smaller one. One calls kraal or hut eng adji ol bul. Each ol gibet receives a longitudinal half of the
701 slaughtered head of cattle, from which, however, it immediately
262 gives back the pieces intended for cooking for the common meals
264 of the day. /86/ The picked-out fat is cooked together with this
[252] meat, and to the whole are added extracts or decoctions from roots
[276] and barks (especially from ol getalassua (1).

1. Myrica kilimandscharica Engl.

ol giloriti (2).

2. Acacia abyssinica.

[Warrior Kraal]

3. Pappea capensis.

which have a strong stimulating effect. The rest of the meat, roasted at an open fire, is then eaten by each ol gibet in common, and, to be sure, at a morning and an evening meal. The head of cattle is furnished in turn by the participants or their fathers.

The longest forest meal takes place as a rule in the month kipēr. Since the pasture is poor then, the livestock gives so little milk that the warriors sometimes live for a whole month on almost only meat.

701
537
[293]
[237]

At the head of the warriors of a kraal stands the speaker (ol aigwenani or ol airohani). The badge of his office is an especially beautifully worked club or rhinoceros horn (4)

4. The straight horn of a species of Rhinoceros bicornis not yet described to my knowledge, which the author found at the beginning of 1896 in the steppe southeast of Kilimandscharo, is especially popular for making these clubs. The horns of this species (or variety) differ from those of the ones described thus far by the fact that they are quite straight and in cross-section never round, but rather so strongly compressed laterally that they appear sword-shaped; the front horn is often shorter than the back one.

or ebony wood. It is swung like a baton in connection with the speeches accompanied by numerous gestures, in order to give emphasis to individual words. This is also achieved in the manner of speaking, by the fact that one pronounces the emphasized words long drawn out and repeats the emphasized sentence several times. The speech to a larger gathering is always delivered very loudly and vigorously. While the listeners squat on the ground, the orator stands erect, his glance directed alternately toward one or the other of the chief persons among the listeners. What the orator lacks in logic he tries to make up for by verbosity, dialectic, and higher pitch in tone. The members of the audience often give the impression of rapt attention, their glance is almost continually directed at the one

[516]

/94 cont./

726 'Ng ai's blessing upon the sons and their companions going off to war.
782 The old men hold a small gourd bottle of honey beer in the right hand, a similar one of milk in the left one, while the women have a filled milk-vessel only in the right hand. During the prayers loudly called out to heaven, they gradually pour out the contents of the gourd bottles as an offering to God and also sprinkle the warriors with
726 it. Many of the latter smear themselves on forehead and cheeks with
[237] fresh cattle dung, while the girls and the old women living in the warrior kraal put such, together with a bunch of fresh grass, on the hut roof close above the door. The custom expresses the confident hope of rich spoils in livestock.

/95/ Then the warriors march off, and, after a march of two to
[252] three hours, they pitch camp around sunset. Several head of cattle
[262] are slaughtered, the meat of which is roasted at the fire and eaten.
[411] At the same time they smear the thrusting spears with a paste of red earth or wrap them with grass or cloth so that their gleaming in the
[725] sun, visible very far away, will not betray them. Finally, they loosen the thongs of the sandals and fasten them on the underside in such a way that the sandal may be worn with the tip in the rear and the heel part toward the front, so that the footprints left behind
704 will be deceiving concerning their direction of march. During the
701 march comradeships are formed by two men in each case, each of
726 which calls the other os sirit ai, that is, my companion. /Ill. 37 appears here./ The duty of the companion is to stand by the other one in battle and, if he falls, to bring his weapon to safety. Five to ten such comradeships combine to make a section (ol ale), each of which
726 erects its own small camp. During the first days of march, still far from the enemy, it is fortified for the night by a few branches of thorns. On the evening before the attack it is replaced by the eñg adji en djoré. The spears are stuck in the ground in a semicircle about five paces in diameter, and against them, on the outside, the shields are placed in such a way that one overlaps the other like scales. The warriors lie or squat in this semicircle, armed with their weapons, awaiting

/98 cont./

727 in shares as equal as possible: one warrior receives as much as the
[703] other, but before that a few head of cattle are distributed as a special reward and first to those warriors who killed an enemy in battle, then to the benefactors (ñ gaminini), then to the one who captured the first head of cattle and to the spies who went ahead (el aigedalak), and finally to the wounded, each of whom is entitled to the head of cattle that he marked with the blood gushing out of the wound. The number of cattle that the individual of the ones mentioned receives, except for the last who is entitled to only one head of cattle, is determined by the size of the booty and the proportion of the size of the booty's parts according to the above order of succession. /99/ Every
727 warrior strives as quickly as possible to drive off from the others his
579 share of the booty, but each one also tries to take along with it one or more head not belonging to him. This, of course, gives rise to another brawl, in which there are almost always several wounded men. If the booty is too small for an equal division, the warriors form two
[614] parties, on the one side the El muleljan, on the other the 'L aiser and El mengana. The former have as slaughtering cry the term ado mongi = the red cattle, the latter the term narok geteñ = the black cattle, after which they are also sometimes named (for example, I heard it in songs). A fight decides which one of the two parties receives the entire booty.

722 At home in the kraals it was very quiet during the warriors' absence. After the farewell, those remaining behind went home, each somewhat heavy-hearted in the anxiety about a son or lover, which, however, was soon more or less pushed into the background by the expectation of the spoils that they would bring back. Soon after the farewell the old man was again
[237] squatting in quiet contemplation in front of
[136] his hut and chasing away from his face and head, also as before, with a fly switch (ol enjua, el enjuai [Fig. 20]) consisting of a gnu's tail, the flies constituting a veritable
[782] plague in the Masai kraals. Then he took a hair from the switch and made a knot in it for each of his sons who had gone to war,

Fig. 20.

/113 cont./

326 [314] [324] charcoal (eñ gúkuo, ñ guk). The charcoal, in piles the height of a man, is burned out of the wood of the trees ol mokotan (Albizzia anthelmintica), ol kadedemma, ol mandemando, and a few others and then carried to the smithy in skin sacks. A stone (os soid 1 eñ gidoñgore = stone of forging) serves as an anvil. The hammer (os gisirjedi, el gisirjed, Fig. 21 (1)) 325 413

1. See p. 150.

has the shape of a pestle, the lower end of which is somewhat compressed. Working with it is pounding, not hammering. The tongs (ol garamet, el garameta, Fig. 22 (1) /see footnote 1 above/) consist of two parts that are joined by a pin mechanism. Their grip arms are long, the grasp arms short. The small striking chisel (Fig. 23 (1) /see footnote 1 above/) (ol oiseñge, el oiseñgen) has the usual shape. The bellows (eñ guneĩ, ñ guneĩ) is /114/ represented in two forms. The one very widespread in Central Africa, which consists of two conical bags made of sheepskin or goatskin (Fig. 24), is the most common. In the lower end of each bag is stuck a wooden plug, like a stopper, through which projects an iron tube 20 centimeters long. In place of the latter there is also often a wooden tube, or for both bags together a forked branch hollowed out like a tube. On the upper, wide end of the bag two sticks are sewed on with small thongs so that they form the opening in a slit. The one using the bellows -- usually an old man or a woman -- grasps with each hand one of the two bags at the upper end, so that they, opened with the stretching of the bellows by spreading out the hands, let air enter. With the following pressing together of the bellows, by squeezing the sticks together, /Figs. 21-25 appear here/ one prevents the air from ebbing back again and drives it through the lower iron tube. Both iron tubes open into a clay tube (ol modi, el modio) lying in the fire. The two bags of the bellows are manipulated in such a way that with the stretching of one the other one is squeezed together at the same time. The other type (Fig. 25) consists of a wooden bowl -- covered with skin for durability -- upon which is tied, airtight, a leather bag that has a round hole on top. In using the bellows, one inserts here the thumb of the right hand and with it stretches the bag upward. With the compressing of the bag the hole is closed with the palm of the hand. Below at the side of the wooden bowl is found the air tube. [171] [237]

316 Where brooks deposit the ferruginous sand (os sinjai
325 oidongijēki m beria, that is, sand from which spears are forged), this is /115/ scraped together in small heaps, cleaned superficially by having water poured over it repeatedly, and then, packed in leather bags, transported to the workshop. In order to extract the iron from the sand, one sprinkles a handful of iron sand into the fire every five minutes and on top of it each time another two to three handfuls of charcoal. When, after about two hours of this procedure, the outer slag is broken, one has a few little pieces of iron sponge of hen's egg size all together, which then, after being
325 made red-hot repeatedly, can be further worked. For this the in-
• 237 dividual pieces, under sprinkling with crushed snail shells

325 /115 cont./
(ol bigit) (1),
[237]
[136]

are welded together. As this shows, the extraction of iron is very difficult work. Therefore it is still found only rarely today. For the
[437] most part one works iron wire, which everywhere in the Masai country is the favorite article of barter. Pieces of wire 15 to 25 feet long are twisted together; when they are red-hot, they are sprinkled with snail shells and then hammered together. The object ready in shape, for example, a sword blade, is smoothed and polished with volcanic slag and sharpened on a stone. The principal
326 products of the blacksmith art are: spear, sword, and knife. The two parts of the spear, blade (es sibil, sibilin) and socket (ol ñgorát, el ñgoratí), a blacksmith with his helpers should make in one day,

325
413

Fig. 26a. (1/4)

326 sword (ol além kitok, el aléma kitwa) and ax (ol dólu, el dóluo) in half a day, the other smaller objects, such as knife (ol alem), awl (ol dědó, el dědí), iron for cattle branding (ol měhěrě, el měhěrěn), arrow points (em bunid, m bunido), razors (ol mŏrŏnjĕ, el mŏrŏnjĕni), tweezers for plucking the beard (ol budet, el budeta), in a still shorter time. As payment he receives for a spear two goats or an ox;
[435] for a sword, a large livestock-bell (eñ gurugur, ñ guruguri); for an

411 /131 cont./ The
[237] beautifully worked scabbard (eṅ djaschúr, ṅ djaschuri [Fig. 31 c and
386 33]) is made from goatskin or neat's hide and dyed with the red juice
[824] of the root of the shrub ol gneriandus l en doje (1):

1. Plumbago ceylonica.

on the back side is found a longitudinal middle seam and on the front side a corresponding longitudinal fold. Twelve centimeters from the upper edge /132/ of the scabbard there sits on the front side an oblong eyelet (ol gümë, el gumeschi) through which the belt (eṅ gĭmĕtá, ṅ gĭmĕtán [Fig. 33 b]) worn around the hips is
[237] stuck. The latter is made of neat's skin and decorated with several
[53] longitudinal folds. There is a hole (en audoto, n audot) at one end, and at the other one a small leather strap (eṅg ene, ṅg enda). The sword is worn on the right side and drawn with the right hand. Left-handed men wear it on the left side. This carrying method seems
[174] to point to the fact that formerly the people did not carry swords, but daggers, for a sword can be drawn with the right hand better from the left side, whereas a dagger is more quickly ready for a thrust from the right. Moreover, the sword, even today, is also frequently handled like a dagger.

714 According to the tradition of the people, the original Masai
178 shields were very small (shield = ol oṅo). They had a circular, flat
[173] shape, a round umbo in the center, and a diameter of 30 centimeters. The grip stick was fastened on the back side with small straps, which were drawn through the shield. The very light shield was carried with two fingers at the grip stick. Accordingly, the hollow of the umbo was very small. Gradually the shields became larger, and the reason for this may be sought in the frequent conflicts of the Masai with peoples
[237] carrying bows and arrows. Since in its original shape, the shield, with its enlargement, lost firmness, this was increased in that a wooden frame (ol deretál, el deréta) was sewed around the outer periphery with strips of goat or sheep skin, the shield was bellied out, and, to preserve the longitudinal convexity, two straps (e rescheta)

/132 cont./

714 were drawn from each end of the grip stick to the grip (Fl. 34). The
178 present-day shields, like the former ones, are also made out of buf-
[237] falo or giraffe skins. For better protection of the hand, the umbo is lined with a round patch of the same skin, and, on top of that, in order to prevent the chafing of the finger knuckles, with a piece of soft sheepskin. The shields now in use, measured with the convexity, are 1-1.10 meters long and half as wide. The escutcheon is painted
[531] on the front surface of the shield, whereas the reverse side often --
[613] not always -- bears the lineage coat of arms.

714 On the march the warrior carries the spear with one hand, the
411 shield in the other one. With arm hanging down, the hand grasps
482 the shield grip so that the smaller diameter of the shield is vertical and the painted surface is turned outward.

411 The club (ol gūmán, el gūmá [Fig. 35]) is now made out of one piece, generally out of ordinary hard wood, especially from the
[824] tree ol oirień and ol oiborbenek (1):
[237]

1. Dregea rubicunda K. Sch.

only the clubs of the speakers, which serve solely for gesticulating,
411 are made out of ebony wood or rhinoceros horn. The old clubs /133/
178 consisted of two parts: the spherical head, into which the sticklike handle was stuck through a central bored-hole. The club does not
[412] actually serve as a weapon of war; except for accompanying a speech, it is used almost exclusively in fights and -- to break marrow bones of slaughtered livestock. The present clubs are about 40 centimeters
411 long, their head has a diameter of five to six centimeters. A clublike
[824] cudgel (es sēre), especially out of the wood of eń gadardar (1),

1. Ochna Merkeri Gilg.

often takes the place of the club. The club is worn in the sword belt; it sticks in it as a rule close to the sword, with the head upward.

/133 cont./

411 and not flattened in the center. The string is twisted from the back
[283] tendons of cattle. As a hunting trophy one often winds a couple of
[237] strips of hide from the /134/ slain animal around the bow. The point of the arrows [Fig. 37] (em baiē, m ba) has the customary "arrow shape" or is lancet-shaped or awl-like. Its tang, on either side, bears a tight row of barbs made by notching. It sticks into a
[237] wooden shaft, the lower end of which is notched and bears a three-
[136] part, rounded feathering made from the feathers of the carrion vulture (Neophron percnopterus), which one always sees in great

Fig. 37. (1/2)

411 /134 cont./
[136] flocks in the branches of the trees surrounding the kraals, waiting
[237] for some kind of animal waste. In addition to the iron points, one also finds awl-shaped wooden points; the latter are often poisoned,
[439] the former only rarely. The Masai do not make the poison (eñ duerai) themselves, but buy it from Wandorobo, who obtain it from /135/ the olmoridjoi (Acocanthera abyssinica) tree by boiling the roots and the wood. The arrows are carried in a leather quiver (e modian, modiani), which is slung over the shoulder on a leather
[237] strap. It consists of a tube 70 centimeters long and made out of neat's skin, with a bottom stitched in and a similarly worked, twelve-centimeter lid that can be turned up high.

Firearms, which at times almost entirely replaced the spears and bows among sedentary Negroes (1),

1. For example, in a few areas at Kilimandscharo.

[648] are not generally carried by the Masai. Although in the battles
[727] with the Protectorate Troops they have at various times captured guns and ammunition from fallen Askari, I never observed or learned that they used these weapons. They never bought muzzle-loaders from trade caravans, and the ones that I found in one of their kraals showed by the lack of cock or piston, or by other damage, that they were not carried along by the Masai for the
[177] purpose of use, but merely as trophies. It was not until April, 1902, that a troop of Masai warriors armed with English Snyder breech-loaders came into my field of observation. The troop came from the Masai province of Ol bruggo, and, to be sure, from the English station of Nairobi, located on the Uganda railway, and attempted an invasion in the Kilimandscharo area of Rombo. With a loss of approximately 20 per cent dead and bootyless, however, they were sent home by the Warombo, armed only with spears.

/137 cont./

291 married men wear a similarly cut, but considerably longer cape, which is called en jóriba (n joribán) and usually, but not always, is undehaired. For protection against the often sharp cold, especially in the rainy season, the warrior wears no other article of clothing, but, while sitting, simply draws the cape also over the left shoulder and -- the nose. The ol megiti is made by a sister or the favorite girl of the ol morāni. The clothing of the women is not quite so simple, but also is certainly not luxurious. It consists of two large leather aprons made out of goatskins sewed together. The lower one (ol ogessaṅa, el ogessanani) is put around the hips and stuck fast by means of a tucked-in corner, or held fast with a leather belt (eṅ ailieṅa, n ailieṅa) embroidered in a zigzag pattern with colored beads. The other, upper one (ol egíschobo, el egíschobon) is knotted on the right shoulder and /138/ leaves the left shoulder and left breast free. The upper garment is rarely decorated with a few beads, the lower one almost always. Most common is a row of small colored beads running around the lower edge; often too the inserted patches have beads sewed around them. Old men and furthermore boys and girls during the healing of the circumcision wounds wear an apron that has the same form as the upper garment of the women, but a considerably greater length. It is called ol gelā (el gelāni) and, depending on its wearer, is designated as ol gela l el móruak, ol gela l es sibolio, ol gela l eṅ dōje. Among the men it is knotted at hip and shoulder on the right side, among the girls /Ill. 44 appears here/ fastened under the arms with a strap and around the hips with a belt, whereas by the es sibolio it is mostly slung around the body toga-fashion.

[237] [294] [531] [294]

The sandal (Fig. 39) in its customary shape (en ámge, n ámga) forms the footwear for all without distinction as to sex and age. It is made from the thick back-hide of the bulls.

[237]

301 As among all primitive peoples, the richness of the ornamentation stand in contrast to the simple clothing. This is most manifold among the warriors and the young women.

Fig. 43a.

Fig. 43b.

Fig. 44.

301 ornament is bent W-shaped out of liana wood and hung with
291 feathers (ol marangusch [Fig. 40]). Also popular among the
292 warriors in the field and for dancing, but rarer, are the foot-high,
237 pointed warrior caps, ol ugaru, with the designation of the skin added, made out of the skin of wild animals. The cap usually consisted of only one type of skin; more rarely a narrow strip of

291 /140 cont./
another skin is sewed on the seam going from the tip toward the
[292] back. Most common are the caps out of lion manes (ol ugaru kitok
[136] or ol gnatunj = lion) or the skin of the baboon (ol dódil, Papio cynocephalus), resembling it almost perfectly in appearance. Furthermore they use the skin of the leopard (ol ugaru géri; géri = spotted), Indian leopard (Cynaelurus guttatus, ol /141/ genja l ascho = calf-devourer), serval (Felis serval, eń gerasi = biter, he only bites the goats and sucks their blood), Colobus monkey, jackal, and hyena dog (ol oibor gidoñoi). A strap holds the cap fast under
[294] the chin. The warrior sews the cap himself. Awl (ol dedo, el dedi
[283] [Fig. 41]) and a twisted cattle tendon (eń obini) serve as needle and thread for all needlework. Another cap worn by warriors, boys and
[531] older men has the shape of a baby's bonnet (Figs. 42 a and b): it is made out of the honeycomb of a head of cattle and often adorned on the edges with small beads.

[291] →

Fig. 45c.

Fig. 46.

Ill. 48. Ear ornament of the men.

/141 cont./

301 In order to make the ears suitable for holding ornaments, their
304 lobes are pierced in early childhood with a strong acacia thorn and distended by the insertion of longer and longer wooden plugs. The
[824] plugs (Figs. 43 a and b) are mostly made out of the wood of the
[531] *oñ gadardar* tree (Ochna *Merkeri* Gilg), often quite beautifully marked. The weight of the ornaments enlarges the holes still more, so that they often hang down extended ten centimeters. At the same time the upper edge of the ear is also pierced in one or two places.
301 In these the women wear bunches of four to eight small chains to 30
• [237] centimeters long (Fig. 44); the men wear just as many *ol oimdr*
[136] (sing. *ol oimdri*), a clock-key--shaped ornament made out of tin (Figs. 45 a and c) or out of brass wire (Fig. 45 b), often also a pesa on a wire ring, a polished mussel shell, which ornament /142/ is called *oñ jiu* (o *jiu*) (Fig. 46), or a wooden stick 10 centimeters long (*ol benifi*, *el benifia* [Fig. 47, upper part]), or a quill of the porcupine (*olaiai* or *ofai*, *Hystrix africae-australis*). Around the lower part of the enlarged ring of skin of the ear lobe the men wear a tube four centimeters long (*ol gimdi*, *el gimo* [Fig. 47]), wound out of thin iron wire. /Figs. 47-51 appear here/ whose end coils are wrapped with copper wire, while on the rest of the coils usually hang small chains 6 to 20 centimeters long (*ol bimdi*, *el bimta*). If these are only short, they are as a rule glued together with red paint (Fig. 46). In place of this ornament one also often sees an oval,
[824] perforated tin disk (*oñ gobolia*, *ñ gobolia*) and other things, or a nut-shaped ornament that /143/ is carved out of the nut of the Hyphaena palm (Fig. 49). Married women and old men wear, tied in the ear lobes with a thin strap, the large double spirals (*e* (*e suradia*, *suradia*) made out of thick brass wire. They are supported by a leather strap put over the crown of the head, since, because of their great weight, the ear lobe is unable to do so. It is
[531] regarded as particularly beautiful if they are further decorated with a leather band sewed across them and stitched with four rows of small beads, on which hangs a row of small chains. This decoration, which, incidentally, is found only among women, is called *ol*
[535] *girdigata*. For dancing, young girls often wear a string of beads (Fig. 50) around the forehead and occiput, or two strings of beads lying one above the other an inch apart (Fig. 51), which are joined, ladderlike, with small chains. The ornament is called *er ndirale*.

[TEXT CONTINUED ON PAGE 189]

1m Marker--190 G-5 (1895-ca.1905) 1910 FL13 Masai FL13

/144 cont./

301 [illegible], el [illegible]), oblong, bean-shaped white beads (en [illegible]), date-pit--shaped, multicolored figured beads (em [illegible]), ring-shaped blue and green beads (el [illegible], ĕ [illegible]), and various wire rings. The beads are either strung on wire and cord twined out of cattle tendons, or also sewed on narrower or wider, flat leather rings.

[531] In the latter case the beads are arranged, according to color, in rectilinear, mostly square designs (Fig. 53). Such a bead band is

[237] called e [illegible]. The middle piece of each circlets, lying on the chest, often consists of a taler sized piece of mail shell ground flat (el [illegible], el [illegible]), on the beaded border of which hangs a row of small chains (Fig. 54). With this material consisting of beads, wire, and leather circlets the most varied and all conceivable combinations are formed, which everyone designates by the sort of it most conspicuous to him, so that there is no fixed nomenclature for them. Special mention should be made of a string of beads regarded as particularly beautiful and chic for young women, in which em [illegible] beads alternate with rows of small glass beads and spirals of brass wire two or three inches long and which is worn bandoleerlike over the left side of the chest.

301 237 As a war ornament the el [illegible] often wear a sort of shawl, a cross between a cape and a ruff, consisting of vulture feathers. The ornament is called el [illegible] or el [illegible]—the vulture; each individual cord on which the feathers are strung is called ek [illegible].

Besides a simple bead ring, a leather band stitched with beads (el [illegible], el [illegible]) or an ivory ring (el [illegible], el [illegible]), the men, especially the warriors, often wear on the left upper arm a bracelet of sheep horn in the form of a double chopping-knife (e [illegible] e [illegible] (Fig. 55)). If one goes to a festival or goes to war there

[36] hangs on it a meter-long, twined strip (el [illegible], el [illegible]) made out of the skin of leopard, Indian leopard, serval, jackal, furthermore of the goat (el [illegible], Genetta pardina), mole (el [illegible] [illegible], Jerusys /Jerusys/ [illegible]), zebra mongoose (el [illegible], Cynictis [illegible]), tree cosies (el [illegible] [illegible], Dendrohyrax [illegible]), and of a squirrel-like animal (el [illegible] el [illegible] a goat-milker; the blood generally relate that it varies on the sides of the goat or night), the

Th Merker--191 G-5 (1905-ca.1908) 1910 FL12 Mend FL12

301 yellow long-tailed monkey (Cercopithecus pygerythrus, el dikdik), 327 the black long-tailed monkey (C. albigularis, el gima), the honey 034 badger (Mellivora ratel, el beldi), and a few other smaller animals.

301 Around the right wrist, often covering almost the entire lower 904 arm, those warriors who are generous and benevolent, the ǂ gamini, wear a cuff (Fig. 58) that consists of rows of iron beads (el dondgin or el gabenet) put close together, in whose place in more recent times appear ordinary small -- especially blue -- glass beads. The iron beads are made by pounding flat small wire rings and then /145/ putting them, strung on thin strips of sheep leather, around the lower [931] arm and knotted on the inner side of the arm. Those people who constantly enjoy the kindnesses of the ǂ gamini express their gratitude from time to time by giving a string of such beads, so that, as was said, the ornament often extends almost to the elbow. More rarely than among warriors, the ornament is also found on one or [931] another of the young girls living in the warrior kraal. If a girl has [913] no brother belonging to the warrior standing, but does have a wealthy father, she receives from the latter both milch cows and an occasional

301 291

Ill. 47. Arm and leg ornaments of the women.

30 /145 cont./
[564] piece of slaughtered livestock. She then generously distributes milk
[431] and meat and thus acquires the position of benefactress.
[593]

The arms and legs of a beauty, except for the thighs, are stuck into a more or less complete armor of tubes of iron wire, which often leave only the knee and elbow free, while among poorer women this adornment shrinks to a few coils. These tubes are called es segengel = iron wire, and are differentiated according to their location as es segengel ol beraágasch for the upper arm, es segengel en dagile for the lower arm, es segengel ol oreschet = what is worn on the lower leg (below the knee). This ornament, like the neck spiral (es segengel e mum), /146/ is wound directly onto the body part in question and can therefore not be taken off, but only unwound again, which usually does not occur until death. The weight
[481] of the ornamentation seriously impairs the mobility of the women and not infrequently gives them a waddling gait.

Warriors in dance ornamentation wear around their hips a leather strap embroidered with small beads (edg ene om bolói; edg ene is any strap, om bolói = the hip). Little girls also wear a
[291] like-worked strap; it then bears a row of small chains in front as a fig leaf and is called en doré (pl. en dorén). Older girls and women wear around their hips an inch-wide belt likewise stitched with beads (Fig. 57), which holds the leather apron together. Boys
[237] and younger men often wear below the knee and above the calf a ring made out of white neat's hide, with an end five centimeters long and one centimeter-wide hanging down in front and in back (Fig. 58), and around each ankle a small bell (en duli, en /Figs. 57-61 appear here/ duliin [Fig. 59]) tied on with a little strap, which, by its widely audible tinkle in the silent steppe, is supposed to frighten off predatory animals lying in the grass. Finally with
[237] the war and dance ornamentation belong the long-haired black and white strips of skin (e mónge, e mónges) that the warriors tie around their ankles and that are made out of the skin of the white-tailed colobus (Colobus caudatus).

/161 cont./

233 At births manual help is given. As soon as the cow lies down,
232 she is held firmly by a few people; others grasp the legs of the calf coming forth and pull it out. Then it is struck against the belly of the cow a few times, so that "she will love it," and then struck on the forehead with the palm of the hand, so that "it will quickly go to the udder and suck."

233 Swellings on cattle, for healing, are smoked with the glowing
232 stalks of en dulele ed gare (Solanum spec.).

• [237] Injuries to the feet of the cattle and goats are treated by a thorough washing with hot water and subsequent embrocation with cattle urine, as is a sort of foot rot (en jalia), which /169/ frequently appears when the cattle stand for a long time in mud and dirt during

[234] the rainy season. One tries to cure ailments of donkey hoofs by placing the hoof on a stone heated very hot and holding it there for a few moments.

In describing the internal ailments of livestock I am relying chiefly on the statements of the Masai, since only exceptionally did I have an opportunity to make observations on cause, course, etc.

[237] For coughs (olg ilmoget) the cattle are given a thin soup consisting of milk and pulverized, charred neat-skin. Ol ebiiro bark cures diarrhea in cattle. The infusion of a decoction of ol ojengalani bark (Sesbania aegyptica) for cattle acts beneficially on the afterbirth and curatively on the birth organs. To hasten the afterbirth after a miscarriage, one gives the cow an infusion of a root decoction from the ol jogi I ol aiñit (a Euphorbia).

For eye inflammation one spits milk into the eye of the neat and rubs it in it, or one drips into the eye the juice of the ol alengerai kitok (Heliotropium Steudneri Vhe).

An epidemic disease among young calves, which is supposed to lead rapidly to death, is called ol diñana or ol digñna by the Masai.

[224] As the cause of the ailment they cite the eating of a certain bush en jaré (Pennisetum ciliare) and as symptom swelling of the lymph glands, which they often try to heal by cauterization (1).

1. In all the meat and fatty parts of the stricken

/190 cont./

762 hours after the wounding. After careful cleaning, the wound is closed by the twined-around suture. The edges of the wound, fitted together, are lifted slightly, as though into a fold, with two fingers of the left hand, whereupon the pointed awl is quickly thrust through the two edges of the wound in such a way that the puncture openings in and out are the same distance from the edge of the wound. Then the awl is drawn out again and in its place is inserted a needle-shaped thorn of ol debbe (Acacia Merkeri), ol debesi (Acacia verrugera), or ol gilorili (Acacia abyssinica). Under the projecting thorn ends a cord
• [237] twisted out of cattle tendons is led around in a circle in several windings; then the cord ends are knotted /191/ and cut off a short distance above the knot. The individual needles are not placed closer than four centimeters apart, so that the pus can drain out between them unhindered. A fresh wound that seems insignificant for making a suture is covered with a paste, which consists of the scraped meat of the fruit ol darboi (Kigelia aethiopica), or with the leaf of o' tarait (Cissus rotundifolia [Forsk.] Vahl.). One also drips the juice of ol doroina, of ol aisegerai kitok (Heliotropium Steudneri Vtke.) or of ol aisegerai l eñ gare (Verbena officinalis L.) into the wound.

On the edges of small children's nostrils that have been eaten raw by flies the mother puts a paste of chewed plants of eñ gilodo or akum (Spilanthus Acmella L.).

For penetrating wounds (e remoto, e remot), only the larger of the two openings is sewed up, which, since it is always a matter of spear or sword thrusts, is the thrust-entry opening. If this lies considerably higher than the thrust-exit one, the needles are placed closer than previously; if it lies equally high or lower, what was said above holds. Torn ear-lobes are sewed together like the wounds.

Old wounds (em baldăga, m baldagani) that will not heal are burned out with a knife made red-hot and then closed with a cooked and heavily thickened paste made out of water and the sifted earth of a termite hill placed on them. The so-called leg ulcers (em baldăga) are first burned out in the same manner. Then one pastes
[237] around the wound a border of cow dung a centimeter high, so that the wound itself forms the bottom of a bowl, and finally pours into it boiling sheep fat. For healing burns they are covered with a thick

/191 cont./

752 paste of the pounded leaves of a climbing species of asparagus (em bere e baba). The taking of an extract of the root and bark of ol gelai mixed with cattle blood and milk is regarded as beneficial for the healing of suppurating wounds. The decoction of the wood of a Rhus species (ol mesigiẽ kete) is supposed to have a similar effect, in that taking it "makes the wound dry."

[237]

Sand fleas (1).

[36]

1. The sand flea was brought into the Masai region in 1897 from Uganda. In June, 1897, it reached Kilimandscharo.

the females of which in particular eat into the soft skin parts of the feet, are removed as soon as they manifest themselves by an itching pressure resulting from their egg-swollen bodies. By means of a sharp scratch with a long acacia thorn, one pierces the layer of skin, usually only quite thin, lying over the sand flea (2)

[114]

2. Here M. is mistaken: The tip of the rear abdomen of the female sand flea juts out into the open, without any skin covering. The Ed. Dr. S.

and then squeezes it out by lateral pressure. During this one is careful to avoid injuring the animal, so that healing will not be delayed.

/192/ For snake bite (a-tonjo 'l assurai) one thoroughly squeezes out the hastily ligated wound, around which one has also made a number of punctures with the sharp thorns of ol gurschaschi (Barleria mucronata) and then cauterizes it with a red-hot iron wire. At the same time the root of ol asajet is chewed, whereupon vomiting follows. This method, however, is customary only if the one bitten is unable to reach a surgeon. Otherwise one has the ol abani fetched immediately and, until his arrival, burns out the immediately ligated wound several times. Swellings of the lymph glands that may occur are also cauterized. If the ol abani regards the bite as only slightly poisonous, he enlarges it by means of a few incisions and sucks it out vigorously. But if he regards it as dangerous to life, he cuts out around the bitten spot a piece of muscle from the size of a nut to

752 /192 cont./
that of an egg or even amputates the member (hand, finger, toe), if
[758] this seems to him absolutely necessary. After the operation the patient is given raw sheep kidney to eat and a considerable amount of liquid sheep fat to drink, whereupon severe diarrhea soon sets in. Often one has him go through a sweat cure in that he is set over glowing charcoal on which leaves of Barleria mucronata and sheep hair are thrown.

On a scorpion sting (a-tonjo eñ golówa) one has a woman who has given birth to twins or, lacking such, a pregnant woman spit and rubs the saliva over the painful spot. As long as the pain continues,
[262] [791] the patient eats only raw goat liver, to which is ascribed some kind of marvelous effect -- as is also shown by the fact that it is the only solid food of the ol oiboni.

Into the wound caused by a poisoned arrow another person urinates
[759] as quickly as possible. At the same time the wounded one is given as an emetic a mixture of the juice of the fruit of en dulele (Solanum campylacanthum) and the amniotic fluid (eñ geba) of a gravid sheep, which is slaughtered for this purpose.

757 For conjunctivitis (eñg ga eñ goño) a tobacco extract (eñ gare ol gumbau) or the juice of leaves of ol ogilidia (Coleus kilimandscharicus), ol dungui (Harrisonia abyssinica Oliv.) and ol assajet, or an extract of the leaves of ol gummi, is dripped into the eyes.

752 The surgeon removes the remains of a violently destroyed eye, by drawing it out of the eye socket, with an awl bent hook-shaped, far enough so that he can cut it off with the razor. The eye socket is then washed out with warm water and not bandaged afterwards.

A place that has suffered a sprain or bruise the El dorobo rub
[171] with the juice of ol gerigis (Iatropha spec.). Sometimes they also apply the same drug by the method of rubbing the powder of the charred twigs into small incisions that are made on that place.

/193/ Dislocated limbs are set again and placed in a splint bandage that is not stiff. For a lower-arm dislocation the surgeon sits on the ground in front of the patient, grasps his lower arm just above the wrist, and sets it again by a gradually stronger pulling exerted in the required direction. He then puts around the affected
• [237] part, from the middle of the lower arm to that of the upper arm, which are drawn together at an angle of 135°, a padded bandage consisting of a strip of sheep leather that is covered with as much thick and soft hair as possible. The padded bandage is tied with a

/193 cont./

752 [237]

narrow leather strap around it. Over this is put a second, stiffer bandage of dehaired neat's leather tied around like the first one. Finally, one fastens on the bandage, on both the inner and outer sides, a correspondingly bent wooden splint, with leather straps as before. The wooden splints are splinter-like and are only supposed to support the arm, not to stiffen it. The arm is tied up, in that one carries it in a sling put around the neck. The bandage is left on for about a month. The procedure is similar for other dislocations. A dislocated finger is not put in a splint. To set the lower extremities the patient lies flat on the ground.

For a bone fracture the surgeon investigates first the location and kind of fracture. With one or two bones lying together with a simple fracture, extension and counter-extension are done, as among us, by two assistants, while the surgeon takes care of the setting. Then he puts on the padded bandage and, on that, two flat, but firm splints, before he fastens the upper bandage of hard neat's skin with leather straps. For an arm fracture the bandage is left on for two months; for a leg fracture, longer. After an arm fracture is healed, the surgeon has the patient lift stones, at first light ones, then heavier ones, to strengthen the arm.

On the other hand, if the surgeon determines by contact that a bone of the lower arm or lower leg is badly crushed, he cuts the limb concerned open lengthwise on the outside as far as is necessary for the removal of the individual bone splinters. When these have been taken out, the arm is sewed up again with the bound-around suture. "Such operations are always successful, but it is more difficult with a crushing of the upper-arm or thigh bone; then one never knows whether one will be able to keep the arm or the leg." This is approximately how a surgeon standing in especially high repute expressed himself to me. Further statements of his revealed that this is far more frequently a matter of compound fractures. If the ol abani comes across such a case, he removes the bone splinters as before and, after he has put the tendons and muscles in order as much as possible, sews up the wound again. If, after eight to ten days the fracture shows no tendency to heal and the patient suffers from fever, the surgeon proceeds to amputate.

/195 cont./

752 stomach or intestine with tendon cord and awl, then the inner and finally the outer wound-edges of the enlarged shot-entry opening. An arrow point that has penetrated into the lungs is taken out in a similar manner.

Spear thrusts in the abdomen are not uncommon in war. One or several intestinal coils are probably always injured by this. Moreover, a more or less large bundle of intestines always wells out from the thrust-entry opening and thus is exposed to the greatest soiling. Against the latter, one proceeds with the general lack of consideration in that a few companions of the wounded man wash the soiled intestinal parts with cold water at the nearest brook. In a cloth -- unclean -- attached around the neck at the top, around the hip strap at the bottom, the patient carries the welling-out intestines to the nearest dressing station. The surgeon then first sews up the intestinal tears with tendon cord and awl, then washes the intestine with warmed water, and then stuffs it through the thrust-entry opening back into the abdominal /196/ cavity. After that he sews up the outer wound-edges of the abdominal covering with the twined-around suture.

If an amputation is indicated, it takes place on the leg below the knee and on the whole arm at the nearest joint. Only on the thigh, even if there [732] exists the probability that a second amputation in the hip joint must be undertaken, is it performed first as much as possible 20 centimeters below the hip joint, at any rate not a stroke higher then necessary, so that fastening an artificial leg (Fig. 79) is possible. There is nothing special to be said about the technique of severing a limb in the joint. From the limb taken off two flaps of skin are preserved, which are drawn over the area of the incision and sewed together there. 732 The artificial leg is made of wood; its length is measured off on the sound leg. The upper • [237] hollow into which the leg stump is set is lined with woolly sheepskin and bears two

Fig. 79

/196 cont./

732 flat wooden pegs 25-30 centimeters long, by means of which the
• 237 artificial leg is splinted to the leg by laced leather straps.

Midwifery and Women's Ailments

759 Midwifery is in the hands of older women, who, as ñ gaitoijok (sing. eñ gaitoijoni), professionally practice the calling of midwives and have at their command a surprisingly accurate anatomical knowledge of the body parts in question. It seems that only in
843 exceptional cases are they not called upon at a birth. At the beginning of the last month of pregnancy the midwife examines the pregnant woman several times, in order to determine by palpation of the abdomen the position of the child. The head position is regarded as the most favorable for the birth; thus, if the woman doing the examining finds another one, she attempts to change it to the desired one by means of a massage.

844 As soon as the first labor pains begin, the midwife, who lives either in the same kraal or in one nearby, is called in. She finds the woman in labor, who, incidentally, is not regarded as unclean, on the bed in her hut in a squatting, sitting, or lying position. With a normal birth the assisting woman remains in attendance without performing any kind of superstitious or irrelevant manipulations. On the other hand, if it proves necessary to bring about an intensifying of the labor-pain activity, the midwife, with the help of a few women, first leads the woman in labor around for a few steps and, if the desired result is not obtained in this way, further help is given by means of a light massage. Only if these remedies prove insufficiently effective does one attempt the last one: The woman giving birth is /197/ slowly lifted by her feet by several women until her body hangs vertically and the crown of her head touches the ground, whereupon the midwife massages her abdomen in the direction of the navel.

The use of internal medicine to promote labor-pain activity is rare; a mixture consisting of liquid sheep fat and a decoction of os segi root (Cordia quarensis Gürke) is regarded as effective.

The midwives questioned regard the undertaking of turnings through insertion of the hand, in analogy to the birth assistance given livestock,

/199 cont./

853 bring back the milk secretion by a copious drinking of liquid sheep fat. Meanwhile the child is nourished with cow's milk.

757 For pains in the uterus (eñ gusset) and in the uterine ligaments (es sabôl, es sabô) the woman drinks a root decoction of ol mañgulai (Grewia villosa).

847 To induce an abortion, the one concerned drinks a decoction of
824 dried goat manure or a strong docoction of os segi (Cordia quarensis)
[237] or ol durgó root. During the subsequent two or three days of convalescence she takes a weak decoction of ol mokotan bark or one of the bark of ol oilale (Colubrina asiatica).

163 Concerning fertility, the relationship of the sexes, and child mortality I was able to discover the following. The largest number of one woman's confinements that became known to me was 17. The 87 old women questioned had given birth to 548 children all together, which gives an average of 6.3 confinements for one woman. Of these, 231, therefore 42.2 per cent, were boys, 371, therefore
[165] 57.8 per cent, girls. Before their circumcision 38.7 per cent of the children died, including the stillbirths.

845 It should also be mentioned that the realization of a twin preg-
842 nancy is regarded as having arisen through one conception.

764 /201 cont./ Later, upon passing
[765] the place, one again throws a stone or a handful of grass on that spot where the dead lay. The more respected he was, the longer this custom expressing veneration is continued.

[787] If the laid-out corpse is immediately devoured the first night by hyenas, this is regarded as a sign from 'Ng ai, at whose command the animals act here, that the deceased was a good human being.
[782] On the other hand, if one finds the corpse still untouched the next morning, the survivors bring a black ram as a sacrifice to appease the wrathful god. No prayer is spoken in this connection.

765 After the obsequies, a funeral banquet takes place, at which the animal whose fat served to anoint the deceased person is consumed. Everyone is welcome to take part. Formal mourning is observed only after the death of adult male persons. The period of mourning does not begin until one or more months after the death, and, to be sure, with the survivors shaving their heads (1)

1. Cf. the passage Micha /Micah/ 1, 16 (from the time around 724 B.C.) and Jer. 7, 23 /sic; see 7, 29/ (from the time around 605 B.C.).

--and the principal widow also cuts her nails -- and ends as soon as the hair has grown back about an inch long. /202/ The mourners remove all ornaments, for which the women also unwind the wire spirals from their necks and the wire cuffs from arms and legs; they do not take part in any feast or dance and may not marry during the period of mourning. For the death of a warrior his fellow comrades and fellow section-members, as well as his brothers and half brothers, mourn by shaving their heads and removing their ornaments.

766 In contrast to the simple exposure of the corpse, that of a chief
[791] (ol oiboni), of a married man of the El kiboron lineage, and often
[613] also that of a sorcerer (ol goiatiki) is buried. The bottom of a pit
[764] a meter deep is covered with a neat's hide moistened with fat, and
[237] upon this the corpse is laid in the position described above. A second neat's skin, likewise rubbed in fat, is then spread over the corpse. Now the pit is filled with stones and earth and the latter

/209 cont./

796 782 participants eats a small piece of the meat, after he has roasted it in the ashes. Furthermore he is given a strip of the skin, from which [751] he then fashions amulet rings, one for himself, the others for his [237] relatives. The ring protects the wearer from sicknesses of every kind. Men wear it on the right middle finger, women wear it on the large spiral-shaped neck ornament of iron wire. During the feast the participants constantly sing:

[539]

Hai narok, oho, Hai kindera ije, oh,
Hai narok, oho, Hai ndogo ijok oh!

(Hai ndogo ijok = may God feed us; aldog = water the cattle, ndogo ijok = give us to drink, give rain.)

796 782 233 On the following day the women carry fresh cattle dung to the ashes and knead a mash from it, into which is mixed a medicine that an ol goiatiki has prepared and brought along. With these preparations the second part of the supplication feast has begun, which is called ol ogor l ch gischu, i.e., supplication feast for the cattle. Amidst the same songs as above the women spread the medicine on the livestock in the form of lines and curves, and, to be sure, on the spines of the cows and female sheep, on the right side of the belly of the male animals and those females ones that have not yet dropped young. With this the feast is over. The goats are not smeared, but are driven to pasture even before this ceremony. As the reason for this the Masai say that 'Ng ai does not like goats because they do not modetly carry their little tails hanging down as a fig leaf.

796 782 842 791 Another supplication feast is celebrated only by the married women in order to implore God to give them children. It is called iruga 'Ng ai ol adjo, i.e. may God hear the word. In or near the kraal the women gather in the forenoon, together with a sorcerer (ol goiatiki), around whom they station themselves in a circle. Every woman is then given an amulet by him, which she hangs on the hip cord of the skin apon. Then he sprinkles their heads and shoulders with a medicine which, besides milk and honey beer, also contains one of his secret remedies, for which he is rewarded with a few sheep. Then the women dance and sing throughout the day under a shade tree, during the night in the kraal, until dawn.

/209 cont./

796 782 [842] [539] In the songs the following prayer is constantly repeated: 'Ng ai atasaia, 'j' oschiage aomon, kiamon ag' ije kiamon eñ gera, eñ golobi en aischo, i.e., God, I implore you always; I pray, we pray to you alone, we pray for children, for birth for the barren woman.

Whereas the supplication feasts are usually held on the es sobiaĩn days (from the 18th to the 20th of the month), a joint supplication-prayer, ol dogǒm, often takes place on the day of the new moon. The people of the kraal gather in the evening and, from a [272] [237] buffalo or cattle horn, drink a mixture consisting of milk, a cold [415] extract of eñ gaitetojai twigs (Commelina Merkeri K. Sch.), and a [824] white powder obtained from the ol oiboni, while they say the /210/ [539] prayer: 'Ng ai jo ijok eñ gischon, jo ijok ñ gischu, jo ijok eñ gera! That is, may God give us well-being, livestock, and children. If a larger supplication feast is to be held in a month, the joint supplication feast always precedes it on the first day of the month.

782 783 [784] If a small child of one not long detached from the warrior standing dies, he not infrequently sees in it a punishment from God for his having killed a pregnant woman on an earlier expedition, provided that he once killed a woman who might have been in this condition. In order to obtain forgiveness, he offers God a black gravid sheep, and, to be sure, close to the spot where at that time he committed the deed. Before he kills the animal, he prays to God, mentions the purpose of the sacrifice, and asks for pardon. As penance for his misdeed, he throws the blood and amniotic fluid (eñ gepa) of the sacrificial animal, as well as the fetus and uterus, both cut into pieces, upon the spot where it occurred. He takes along neither meat nor skin of the slaughtered animal, but leaves everything lying there when, after the concluded sacrifice, he returns to his kraal.

825 826 775 613 The lineage of the El kiboron believes that the bones of the buried corpses of their married men turn into snakes. They therefore do not kill these animals, like the other Masai, but are happy about their presence in the kraal and by the huts and, as soon as a snake appears, set on the ground a shallow dish with milk and honey as food for it. Snakes in and near El kiboron kraals are not rare.

/218 cont./

692 only in putting forward property claims, and then only in the rare cases in which self-help is not preferred to legal procedure. The prosecution of a punishable deed does not take place by official action, but only on the basis of a complaint raised by the injured party. Judicial proceedings are generally customary.

685 The procedure in the penal case of a livestock theft, which occurs frequently, is to be shown. It is to be assumed that an ox has been stolen in the pasture. If the boy tending the livestock observed the theft, he notifies the owner of the herd (father or brother of the herdsman) upon coming home in the evening. Otherwise the wives of the owner, in looking over the livestock, immediately notice the loss, since they know every head precisely. All the conversation in the kraal only revolves around the theft, and through that it becomes known on that same evening, not only in the home kraal, but also in the neighboring ones. The friends of the one robbed declare themselves ready to pursue the thief and track down the stolen head of cattle. If their investigation leads [692] to their discovering the ox or parts of it, so that the thief can be convicted, there are as a rule no judicial preceedings, since the perpetrator and his accomplices usually immediately declare themselves ready to pay the customary fine. If, however, the investi- [787] gation is without success, the person robbed turns to a sorcerer [694] (ol goiatiki), who, on the basis of an oracle (eñ gidoñ), gives him a description of the appearance of the thief, whereupon the one robbed will accuse of the theft a man who fits this description. The 695 one so accused appears in the following proceedings as defendant, 685 in the same way as, say, one who is charged on circumstantial evidence. The one robbed selects as leader of the proceedings a [693] respected old man who must have formerly once been speaker of [202] the warriors. This man determines /219/ the day and place of the [237] proceedings and has this announced by a crier, who goes to the neighboring kraals, draws attention to himself by blowing a kudu or oryx horn, and informs the approaching people about the matter. Further, the judge summons plaintiff, defendant, and possibly witnesses by messengers. If the defendant refuses to appear, he is forcefully led up by friends of the plaintiff. Anyone may appear a as a witness. Relatives of the defendant may refuse both to give

*233
182 every opportunity. There the purpose is primarily to
232 clear new grazing land. During the 30 months of our
824 major study period, we were in sight of the Mau forest (at the foot of the Mau Escarpment) at least twice a month, often in the rains, and only o[illegible]id we not see smoke from a fire burning in the [illegible]r brush.

*13 Relations with Wildlife
648 The most significant influence the Masai have exerted upon the wildlife is their protection through
[171] excluding hunting tribes from Masailand. The Wanderobo are an exception, but there are relatively so few Wanderobo that they have little effect. The areas of East Africa where the finest assemblages of grassland wildlife still exist are those in Masailand.

224 The animals Masai hunt or have hunted include
[237] buffalo for shields and possibly food, eland for food and
[714] the hides, giraffe for hides and tail hairs (to ornament gourds and dresses,
[531] according to Millais, 1920), lions and sometimes leopard
[825] for defense and for lion manes, and rhinoceros for horns and to spite national park authorities (particularly
*[233] in the past decade). In times of drought the Masai may spear various animals for defense or to avoid competition for scarce water. They will even spear elephants at such times (Grant, 1957).

CATALOGUE.*

DRESS AND ADORNMENT.

C

Dress. Of tanned goat skins, rubbed with red ocher, beaded on the edges. Sections of skin are pieced together into a sort of shawl. There are no sleeves and apparently no means of fastening the garment. Worn by boys and girls. 291 281 301

Wa Chaga tribe; Mount Kilima-Njaro, East Africa.

Dress. Of dressed goat skins dyed with red ocher, fringed on three sides.

Wa Chaga tribe; Machame, Mount Kilima-Njaro, East Africa. M

Face-ruff. Of ostrich feathers, fastened between two oval plates of leather. The rims of the plates are decorated with a line of red paint on a white ground. Worn around the border of the face in war. Loops on the front are for insertion of white ostrich plumes, generally two in number. [Fig. 5, page [12].] 292 531 237

Dimensions, 20 by 14 inches.
Masai tribe; Mount Kilima-Njaro, East Africa.
The manner of wearing this ruff is shown in one of the plates to Fischer's "Masailand", Mittheil. Geog. Gesellsch. in Hamburg, 1882-3, Heft, II.

C

Face-ruff. Of black feathers sewed between oval pieces of leather. Worn around the face by Chaga warriors in imitation of the Masai. 291 292 237 177

Outside dimensions, 23 by 16 inches.
Wa Chaga tribe; Mount Kilima-Njaro, East Africa.

Face-ruff. Halo of dark plumes set into an oval structure of leather. Worn around the face by warriors in imitation of the Masai.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. M

Face-ring. Oval ring of leather without feathers. Worn around the face in war. 292 [284]

Masai tribe; Ejiri, East Africa.

Ostrich Plumes. Used as ornaments on apex of face ruffs. M 301 337

Masai tribe; Mount Kilima-Njaro, East Africa.

* The numbers in this catalogue relate to the entries in the Museum catalogue books of the Dimensioned Series.

C

Cloak. Made of cony skins *(Dendrohyrax validus)*, square; tied around the neck. Worn by males only. 291 301

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151586 531

Cloak or Cape. Made of cony skins, squared and sewed together. Worn over the shoulders. 281

Size 4 by 2 feet.
Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151587

Cloak. Made of cony skins sewed together and simply worn over the shoulders as a protection in cold weather.

Three feet square.
Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151588

Cape. Made of three goatskins sewed together.

Length, 3 feet 3 inches; width, 21 inches.
Wa Chaga tribe; Machame district, Mount Kilima-Njaro, East Africa. 151589

M

War Cloth (Malbère). For trade with the Masai all cloth must be made up into malbère. The red stripe in this specimen is too narrow and therefore was rejected in trade. 439 714 411

Masai tribe; Mount Kilima-Njaro, East Africa. 151819

In dress, implements, and in weapons, fashion reigns supreme among these fastidious aborigines. Frequently, an assagai offered in trade will be rejected with the remark "We have not used that pattern for ten years."

M

War Cape (Maliti). Made of the feathers of the vulture and the guinea fowl, fastened to a groundwork of goatskin. Worn over the shoulders by Masai warriors. 281 714 237

Masai tribe; Mount Kilima-Njaro, East Africa. 154787

War Cape (Maliti). Made of the feathers of the vulture and guinea fowl, which are fastened to a groundwork of leather. Worn over the shoulders by Masai warriors.

Masai tribe; Mount Kilima-Njaro, East Africa. 151798

Beadwork. Parallel bands of beading on leather, sewn to the cloth as an ornament; usually on the bottom of the cloak.

Mimki tribe; Mount Kilima-Njaro, East Africa. 151845

N

Arm-rings. Made of the toe nails of the elephant. Mere bands or rings cut out so as to pass over the hand. They are of the same width all around, varying from one-fourth to one-twelfth of an inch in thickness. 301 237

Duruma, East Africa. 151229

C

Armlets. Cut from the butt end of a buffalo horn; resembling the widely-gaping mouth of the skeleton of a fish. 301

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151229

Armlet. Beaded leather band, with fringe of iron chain. Worn by women.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151225

Armlet. Beaded leather band. Worn by women.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151226

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151573

Belt. Round belt, beaded. Worn by women and girls. Sometimes a dozen are worn at one time, and the apron hung over them in front.

Length, 27 inches.
Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151207

Belt. Flat band of leather, beaded. M 291 301

Masai tribe; East Africa. 151208

Belt. Leather band, beaded.

Masai tribe; East Africa. 151209

Belt. Made of leather and beaded.

Width, 1½ inches.
Masai tribe; East Africa. 151210

Anklet. Cowrie shells, with dorsal portions removed, strung to a leather band. C 301

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151230

Ankle-rattles. Little iron bells of semilunar outline, with a slit at the bottom formed by the juxtaposition of the edges. The clappers are small iron balls. The bells are strung on a thong of leather by means of double holes in the top. C [326]

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151231

Anklets. Made of monkey fur. M 301

Masai tribe; Njiri, East Africa. 151229 237

Leglet. Of monkey skin (*Colobus caudatus*), and worn on the calves of the legs with the joined ends in front, tied with thongs of rawhide. Edges beaded.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151543

Leglet. Of black monkey skin, beaded around upper edge.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151544

Leglet. Bands of black monkey skin, worn after the fashion of the Masai. C [177]

Wa Chaga tribe; Kahe district, south of Kilima-Njaro, East Africa. 151545

Leglet. Made of reddish gray monkey skin, beaded around upper edge.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151546

Plume. Made by drawing the skin of two monkey tails over a stick. Probably used as fly-flappers. C 413 237

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151551

Plume. Monkey-tail skin. Probably used as a fly flapper.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151552

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old culture of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas*, in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle tooth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

* It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

character and great reputation as a medicine-man, but even his influence does not extend throughout the Fiche and Lolo divisions. The Council provided over by Sambo also possesses a certain measure of authority, but these two present the only instances where respect is given and the respect shown to them rests in the direct contact to the personalities of the individual presidents and not to the system which they represent.

The population of the Hawaii Reserve numbers not much more than 10,000 of whom the great majority are Hawaii, but which also includes a considerable number of poor or half-caste Kikuyu. The indigent lives led by the Hawaii population present considerable attraction for the neighbouring Kikuyu, who bring less wealthy, are under the necessity of performing agricultural and manual labour either in their reserve or on adjacent lands. For many years, the Kikuyu and Hawaii have engaged in trade, and their lands being contiguous, they have had ample opportunities for intercourse. To satisfy their conditions of an idle life, immigration of individuals from Kikuyu to Hawaii primitive have been of not infrequent occurrence and the Hawaii Reserve therefore contains these scattered units, mostly among the divisions known as the Kaguru and Ukulu Lakwiri.

The policy of the Government in dealing with the native tribes in the East African Protectorate has been to develop their agricultural industry and industry and to discourage tendencies towards pastoralism. This policy has been pursued with success among the Kavirondo, Kikuyu and other tribes who, when constituted by the administration were under the necessity of engaging in agriculture and has been introduced with fair results into the reserve of such pastoral tribes as the Masai and Lumbwa, but with the Hawaii it has been a total failure. Though encouragement has always been given, the Hawaii have shown no inclination to till the soil, and in the only recent cases where gardens have been prepared on the initiative of Hawaii women, the labour employed was drawn from the Kikuyu tribe.

The increased activity in recruiting natives as porters for the Uganda Congo mentioned for the military situation in March and April, 1937, led to the resignation of a number of Kikuyu from their own country into the Hawaii Reserve, and these emigrants, with a view to escaping enrollment, signed agreements to work as servants for Indians, Swahilis and Hawaii. Colonel Kenworth, then Military Commissioner for Labour, represented that, while such revision of their duties were highly reprehensible in regard to the employment with Indians and Swahilis, any system which prohibited of Kikuyu working for Hawaii was open to the gravest objections on both administrative and economic grounds. The question of such Kikuyu emigration to the Hawaii Reserve and therefore was discussed in Executive Council in June, 1937, and was referred to the Chairman of the Special Committee appointed to consider the "Southern Reserves Bill," but no decision on the matter has yet been reported.

In view of the general desirability of discouraging such emigration of Kikuyu natives, the policy has been adopted in the Hawaii Reserve of prosecuting all Kikuyu living in that reserve who cannot claim by long residence to circumstances rights to have become Hawaii, and of returning them to their own reserve. This policy applies to the cases of all those Kikuyu who have joined the Hawaii since the month from Lakipia. Efforts have also been made to register all Kikuyu who may be considered to have become Hawaii.

An important step in the revision of the system of Hawaii administration was undertaken early in 1938, when for reasons mainly connected with the personality of the leader, the Acting Governor recommended that the office of Paramount Chief of the Hawaii should be abolished.

At the time of Lenana's death, in 1935, Kagai was still a boy and control over the Hawaii was exercised for the two regents, Kipanda and Lagdaine. When Kagai came of age and assumed the duties assigned to him in the capacity of Paramount Chief, he was given an appointed and has proved himself to be totally unsuitable. He lacked energy, physique and moral courage; he was intemperate and unscrupulous; he appeared to regard any administrative function as an

FL12 Masai FL12.
Wa-Kwafi

M
189 between the married and the unmarried people, very little work being expected of the latter, and the sweetheart system being preserved. They all, however, occupy the same village,
243 and of course the young men cannot afford to live on meat,
189 though they always come in for the lion's share when any of it is going. When parties go off on war-raids, they also contrive to eat a bullock by way of getting up their courage.

578 They lead upon the whole a very miserable life, ever threatened with destruction by the Masai, who have swept off several villages and all their cattle. The soil being the
199- very richest loam, brought down from the mountains and
199 spread over a comparatively level plain to the south of the lake, it is capable of producing anything; only the extreme dryness of the air and the very small annual rainfall, confined to a couple of months, keeps it sterile and barren.
302 To ameliorate this unhappy condition of things the Wa-kwafi have developed a wonderfully ingenious system of irrigation by artificial canals of (for them) great magnitude. They construct dams across the deep channel of the Guaso Tigirish and thus raise the level of the water to that of the plain, and then, by an intricate network of channels, they spread
243 the precious fluid over a large area, and raise their millet
241 and maize. These products form almost their sole food, eked out by what they are able to kill in the chase and by fish from the river, though when meat is scarce they are not
179 indifferent even of rats. Of these there were simply
123 myriads. They swarmed everywhere, and nothing was too sacred for them. Need it be wondered if "oft in the stilly night" were heard imprecations loud and deep upon the wretched pests when I have been wakened up by my nose being bitten or the sanctity of my toe invaded. My books were devoured, and even the bullets in my cartridges were not too indigestible. Everything, indeed, had to be kept under iron or hung up under sheds as represented on page 312.

157 As in the case of the Wa-turwa, the Wa-ejempe are
123 singularly honest and reliable, so much so that valuable goods and equally valuable food are left in their charge with the utmost confidence, and I have heard of no case of this being violated. To me, one of the most remarkable features in the character of the young women and girls was their absolute unconsciousness of fear in my presence, and the complete confidence they seemed to have in me. They indeed look

614 The name of the main group 'Loodo mongi is very liable to be confused with that of the sub-clan 'Loodo 'Kishu because the former means "the blood-red bullocks and the latter the blood-red cattle."

It is further difficult, if not impossible, to know whether to treat some of the divisions as clans or sub-clans.

The two words used by the Masai are *Ol piloto* (the clan) and *Enkishomi* (the sub-clan). But these words are not much help to the enquirer, because the Masai use each to some extent interchangeably.

Hollis, p. 290, speaks of a group of Masai called 'L-Okiep or Il-Lumbwa. I have been unable to discover these people. The tribe called Lumbwa, which lives to the west of the Masai area, is quite different in language and customs from the Masai, being similar to the Nandi. [101]

Some clans are associated with certain snakes as under :—

'L Aiser ol Orusumu Orok (the black cobra ?), 'Loglorumu ol Aurai Rongai Orok (the thin black snake), Il Darusero ol Aurai Sero (the brown snake), Il Molelian all snakes.

597 *Adoption.*—The Masai like to adopt children, and even grown men, of other clans and other tribes, who may help them to herd their cattle. Of recent years they have also shown a tendency to adopt Kikuyu cultivators to plant maize for them in the more fertile areas Nairagi Enguare and Il Molili, west of the Rift valley. [563] [241] An adopted person is called *O-Ninga*. Having been adopted he is regarded as being a member of the family and clan of his adoption and has nothing to do with his former clan. He may even marry a woman of the sub-clan of his natural father, provided that it is not also the sub-clan of his adoption. But he may not marry or have sexual intercourse with a woman of the sub-clan of his adoption. Accordingly, an adopted Kikuyu may call himself a Masai, and even though he may be unable to speak the Masai language he is not telling a lie according to Masai ideas.

When a man or boy is adopted as a herdsman he is treated by the head of the family as one of his own sons. He is given his herd of cattle and is helped to marry a wife. But if or when he elects to leave his adopted family he must go empty handed as he came, leaving behind him such cattle, wives and children as he may have acquired under adoption.

[554] An adopted man takes an inferior position socially to a well-born Masai. He would not in practice hold any important position in the tribe nor be able to marry a well-born Masai woman.

361 428 *Inheritance. Arrangements of Wives' Huts.*—Before dealing with inheritance it is necessary to explain briefly the arrangement of huts in a village in order that the terms "right of the gate" and "left of the gate" may be understood.

13:39untingford E-4 (no date) 1953 FL12 Masai FL12

572

462

lotter is of little economic significance, except that it is the duty of the warriors to get cattle by raiding. In the division of work, the people mainly concerned are the uninitiated boys, the girls, and the women. The boys do most of the herding, assisted by the elders. Women and girls milk and act as servants to the warriors. The girls do household work till they are old enough to become lovers of the warriors, when they do very little work. The greater part of the work thus falls on the older women, who besides doing or supervising the milking and other ordinary household tasks like fetching water and firewood, build the huts, load and drive the donkeys when moving, prepare skins for clothing, and trade with neighbouring tribes for food and other things. The warriors used to be occupied exclusively either with war or preparations for war, or with dancing, visiting, and making love. Their military activities have today been replaced by certain tasks connected with cattle, and by cattle-stealing and raids on neighbouring tribes. The senior elders are occupied with political matters, and some of them with the instruction and control of the initiates and young warriors; they also help with the herding, and take part in trading with the neighbouring peoples.

326
[96-9]
[364]

The only specialists in the economic sphere are the smiths, *il-kumwan*, sing. *ol-kumwi*, who live segregated from the rest of the Masai, and marry among themselves. They have a distinctly inferior status, and are despised by the Masai, who all their hands before taking anything from a smith. At one time the smiths lived near deposits of iron ore, such as those in the Mataputo river; but nowadays the availability of trade-iron has given them greater freedom of domicile. They make the iron-work used by the Masai, including spears, swords, and ornaments.[1]

323
439

Though according to Hollis a few Masai women made pottery, the Masai as a rule buy their pots from the Bantu.

Food

262
[41]

Except among the agricultural Masai, no cereal or vegetable food at all is grown, nor was it eaten in the old days by warriors, whose diet consisted of meat, milk, and blood, the latter providing the necessary salt. The animals eaten included their own cattle, buffalo, *el-ewuan*, and eland, *e-ewu*, which they considered to be related to cattle, and therefore fit to eat.[2] Warriors were not allowed to eat honey, to drink honey-wine, or to take tobacco, though some took snuff. Children and married people eat vegetable food, and the meat of cattle which die a natural death. Warriors when they want to eat meat, build a rough shelter called *al-pul* in the bush where, accompanied by a boy to do the work, small groups feast upon the meat of an ox supplied by the father of one of their number. The elder who supplies the ox is given some of the meat, and this is one of the regular sources of meat for married people, for meat eating is the regular practice of warriors. Men and women do not eat together, and fish, fowls, eggs, and game other than buffalo and eland are not eaten by any Masai.

[91]
[264]

Trade

439
[18]

Since the Masai are not self-supporting, they have to trade with the Bantu agriculturists, *il-ewuk*, whom they despise, in order to get what they want. Their chief suppliers are the Kikuyu, Chaga, and Taveta; and for certain things, notably ivory and honey, the Dorobo. The media of exchange are cattle (old, barren, and otherwise unsatisfactory cows), old and thin goats and sheep, donkeys, butter, and hides. The principal goods bought are food (beans, millet, maize) and tobacco, which they get from the Bantu; the chief suppliers of meal are Indian traders, often Sikhs,

[1] Lenkey says that the Masai buy their swords from the Kikuyu (*JRAI*, LX, p. 308); this may well be the case near the Kikuyu border, though it is perhaps a recent development.
[2] The Gallas also consider the buffalo to be the equivalent of the ox. Salomo, *Historia Gentis Galla*, chap. XX, Gentil.

13:Huntingford K-4 (no date) 1953 FL.12 Masai FL.12
Agricultural Masai

In 1932 the Il-Tiamus numbered about 2,250 (3,423 according to the 1948 Census), and though they are of Masai stock, being descended from a Samburu section called Il-Dorgin, they have admitted a variety of refugees including Kamasya, and become rather mixed. According to von Höhnel they had originally four villages at the south end of Lake Baringo, but two were deserted on account of Masai and Suk raids, and some of the inhabitants, having lost all their cattle, took refuge on Kokwa Island in Lake Baringo. They are expert swimmers and possess canoes, though von Höhnel saw none in 1887. Their dwellings are round huts with rather high-pitched and somewhat convex thatched roofs, and walls of posts and sticks. These are crowded into two permanent villages known as "Nyenga Kokwa" and "Nyenga Nokyo" in the Tigrish valley a few miles south of Lake Baringo; the closely packed huts almost touch each other, and the mud-walled gateaux are surrounded by strong palisades.

In general the Il-Tiamus keep as close as they can to the dress and customs of the pastoral Masai; they have circumcision and *emuro* and other ceremonies, and practise the "free-love" system of the pastoralists, though without the *moryatan*. Today they have some 180,000 acres of poor land, most of it unfit for cultivation; but they have acquired, since the establishment of British rule, some 12,000 or more head of cattle, and 30,000 goats and sheep, thus achieving in part the ambition of all Il-Oikop to become cattle people again. In the time of Thomson and Teleki, however, Nyenga was an important station on the caravan route, and von Höhnel noted that they had a large extent of cultivated land. This was divided into blocks (he says of three to four miles square) which were intersected by irrigation channels bringing water from dams across the river Tigrish. This system was still working in Dundas's time, who says that the opening of the main ditch was performed with the sacrifice of a sheep at the mouth of the ditch.[19] Besides agriculture, the Il-Tiamus fished and hunted, using the bow, and spears of fish and Tortoise types.

It is possible that the fishing group called Il-Molo who live on the east shore of Lake Rudolf is to be classed as Il-Oikop.[20] They subsist on a diet of fish alone which, when Teleki and von Höhnel saw them in 1888, had produced no ill-effects; but it seems now to have resulted in considerable physical degeneration, and in the appearance of rickets in all members of the group. There seems to be a good deal of Gelubu blood in them.

The Il-Arusa round Mount Meru are a large tribe of agricultural Masai, originally of Baraba stock, but now accepted by the pastoral Masai as worthy of recognition as a group which can pay and receive cattle for compensation in cases of homicide. The Ramagaya in Southern Masailand are also to be classed as agricultural Masai.[21]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

Life Cycle

From birth to circumcision a male is a boy, *ol-ayiani*. At circumcision[22] he enters an age-set and becomes a warrior, *ol-murani*, "one who is circumcised," and may associate with uncircumcised girls. At the *ol-geshe* ceremony he becomes an elder, *ol-moruo*. Warriors may marry when they become senior warriors. After the *ol-geshe* the newly made elders attend to their family concerns, and get wives

[19] E. H. Dundas, *JRAI*, XL, pp. 49-50.
[20] W. L. Dyson and V. E. Fuchs, "The Elmolo," *JRAI*, 1937, LXVII, p. 337; von Höhnel, II, pp. 186-90.
[21] The people known as Wakiboro in northern Tanganyika are not Masai, but people of Baraba stock who have mixed with them.
[22] There is some uncertainty as to the age at which boys are circumcised. Hollis gives the limits as 12-17 years; Fosbrooke gives the lower limit as 10 or 11.

M /9 cont./
192 in that it was taken as a tribal name, and people spoke of ol olub-
101 Masai and ol olub-Wakuafi. El olub (sing. ol olubani) means killers, rough, brutal persons, and is an invective with which the Wandoribo, Wakuafi, and the Masai blacksmiths (el kosone) designate their oppressors, the Masai. Fischer mistakenly translates the word as "owners of the land": this, however, would be called ol ogón i ob gob.

M The Wakuafi live in their colonies as more or less peaceful,
619 sedentary cultivators. Wherever they found peaceful neighbors after
189 their defeats, they too became calm. On the other hand, where
181 they remained in close contact with the Masai and were exposed to their constant raids, the old bellicosity remained in them. An example of this is the population of Meruberg /Mt. Meru/ in the Great Aruscha /Arusha/ and Meru areas. In spite of a very con-
M [144] siderable mixture with Wadschagga from nearby Kilimandscharo, they have completely kept their original character traits. Their imperiousness, rapacity, and cunning equal that of the Masai: in
M [148] courage, on the other hand, they even surpass them. Their numerous attacks on the camps of Europeans and trade caravans reveal them as brigands. The relationship between Wakuafi and Masai
M is in general not bad. The latter regard the former as fellow tribes-
829 men, even though as inferior ones, because they work the soil
619 and own only a little livestock. They are foes one minute and
• [241] friends the next! And both must always reconcile themselves to
[251] each other, for the Masai cannot do without them as suppliers of
[138] vegetable foods, after the cinderpest at the end of the eighties
[131] again raged so destructively among their herds.

While among the Wakuafi one can still clearly recognize
D their one-time power and greatness, this is no longer the case at
105 all among the Aná. Most of them, just like the El ambi, timidly and concealed in the bush of the steppes, live in miserable little grass and leaf huts which can be reached only by hidden paths. Their food consists of game, which they kill with poisoned arrows and poisoned javelins, honey, agricultural products which they obtain in barter, various wild berries, roots, and herbs. Where they dwell in the vicinity of the Masai, they live in a certain

/32 cont./

512 [462] [351] [252] When the livestock have been driven out of the kraal to pasture, the women and children start to clean it. Then the fire is lighted in the huts and on it are placed the pots filled with water in which the vegetables are to be cooked. These pots (e mooli, 'moolie) are [415] [439] not made by the Masai themselves, but are bought from sedentary tribes or also from the Wandorobo, who presumably learned the potter's art from them. They are a foot high and globular. In con-
262 trast to the warriors, all the occupants of the family kraal, espe-
[241] cially since the cattle epidemics, eat vegetable food which they buy from the neighbouring peoples, since they themselves do not
262 engage in any agriculture at all. Their favorite foods, however,
272 are, of course, milk, meat, and blood. Milk is always drunk by
[758] healthy people uncooked, as fresh (en gule) or sour (en gule naoo); boiled milk is food for the sick and as such is usually mixed with pulverized grains of ol indoe (Maesa lanceolata). Sheep milk is especially popular because of its very high fat content. Blood of cattle, sheep, and goats is drunk fresh or eaten in the clotted
[758] state. Milk mixed with fresh or /32/ cooked blood (en ziwo) is greatly appreciated; this drink is highly esteemed as invalid soup
[234] for the wounded. Cheese making is unknown. Butter is made by agitating the cream in a large gourd-bottle (en diagiogi). Fat,
[252] rendered in a pot, is used as an ingredient in other foods, especially
[363] meat broth, but is also drunk without any admixture. Meat is prepared without adding salt; it is cooked either with various spices or roasted on a stick at the open fire. One does not eat in
[252] one day cooked meat and milk /32. 13 appears here/ together
[423] [263] (1).

[171] 1. This was also forbidden for the Hebrews, according to the 2nd Book of Moses 23, 19-34, 26, passages which are part of the so-called Talwist documents, that is, the oldest sources of the Pentateuch.

because the latter together with the ol moiyoo spice (back of

/348 cont./

had been sown with the bleaching skulls of those who had starved and out of the stricken animals. Any of the women and girls who had not died of hunger sought and found refuge among Negroes practicing agriculture, who always like to buy or kidnap female individuals. A mother would sell her child for a handful of maize and would sell herself a day later for a similar price, in order to avoid starvation. Negroes and caravans /349/ took possession of the will-less ones, in order to resell them as slaves. Many have since come back, in part through flight, in part through redemption by their relatives, but more are still found in strange hands. The latter, even though their blood lives on beneficially in the new mixture with Negroes, are permanently lost to the Masai people. So greatly has the misfortune, to which an opposite effect is so often attributed, broken up the former organization, the firm unity, that, soon after the end of the epidemics, the unhappy quarrel between the brothers Lenana-Zendeo about the undivided rule over the Masai could begin. With its continuing civil wars it acts powerfully toward the completion of the destructive work of the epidemics. The Negroes, with whom alone the Masai formerly waged war, except for smaller undertakings among themselves, which bore more the character of provocations than of serious battles, were opponents inferior to them. Now equal parties stand opposite each other, which makes the wars bloodier, more destructive.

Through increasing impoverishment as a result of these epidemics and civil wars, there is now going on among the Masai -- as formerly among the Wakuafi -- a change from nomadism to sedentation, agriculture is taking the place of animal husbandry. The ones deserting the "people" in this manner are founding settlements, in part self-sufficient, in part supported by Negro tribes, somewhat removed from the dry steppes, there where the watering is adequate for the laying out of plantings. No one expects them to prove to be particularly skillful at this; but Nature, which goes so far to meet her children in the tropics, helps here too. A moderate watering suffices to make the batata shoot stuck in the virgin soil grow and produce tubers. Maize for the most part appears just as easily satisfied as advantageous. These then are the principal useful plants

/349 cont./

178 that are started with as a rule and which one therefore finds in all the
• 241 settlements. Yet despite the ease of production of the field crops,
the transition to agriculture nevertheless is taking place in a way
178 that is reducing the population in extraordinary fashion. First of all,
182 the acclimatization process slowly being accomplished demands a
164 great sacrifice of human lives. The Masai, little afflicted with
165 fever in the dry steppes, suffers with it quite seriously in the moist
regions in which mosquitoes are permanently at home. Thus on two
occasions in the same new settlement I found all the adults and many
children sick with fever. Another one had just been abandoned by
its inhabitants, leaving the sick behind. The ones left behind,
principally men and boys, were badly reduced by fever and, in
addition, suffered to a great extent from virulent leg ulcers, whose
great extent -- in many cases they covered the entire lower leg,
from knee to ankle -- probably is to be traced back to a general
weakening of the body by fever and lack of food; for such ulcers
are not common among nomadic Masai, and, where they occur,
/350/ they remain smaller and show a tendency to heal rapidly.
Other illnesses arise from the unfamiliar diet. The rapid transition
[262] from an almost pure meat diet to an almost pure vegetable diet
makes demands on the stomach and intestines that a body weakened
by fever is seldom equal to. Sickness and death from this cause
are frequent and are increased further by the consumption of bad
water. Thus, more than half the people in one settlement com-
plained of painful diarrhea and bloody stools. All these acclimati-
[842] zation illnesses seem also to manifest their effect in decreased
[163] fertility of the women and increased child mortality. I was repeat-
edly struck by the small number of sucklings (two-year suckling
period) and older children. Thus early in 1902 in Ngaruka, between
Lake Manyara and Lake Natron, among a number of about 50 women,
I found only twelve children, three of them babies. According to
the statements of the parents, very many children had died of various
ailments, especially fever, stomach and intestinal affections, several
178 also had perished in Masai attacks. For the Masai who are becoming
619 sedentary, the ones still living among the "people" as nomads are
721 a scourge that scarcely falls short of the illnesses just mentioned in

in gourds. Some drink it pure; others mix it with milk[1].

There are a few other things which the Masai eat.

Some old men and women chew tobacco mixed with salt and *Ocimum suave*, whilst others sniff ground tobacco up their nostrils: this latter is called snuff. Others again smoke pipes.

Those of the warriors who like it also take snuff. The boys and girls, however, neither take snuff nor chew tobacco[2].

The Masai do not grow tobacco themselves, for they do not know how to dig. They buy it from savages, exchanging it for butter and lean goats.

The Masai do not sell good cattle to the savages; they only give them barren cows, or those which have no milk, or which do not care for their calves. These and old or lean goats and sheep are the only animals they part with.

The old men drink honey-wine, and they purchase from the savages two kinds of beer, called Ol-marra and En-joi.

It is only the children who like wild honey: old men eat the comb full of grubs[3].

[1] This custom is also common among the Bari (Kandhaura, Sudan-wanga, p. 270).

[2] In olden days it was the privilege of the old men and their chief wives only to take tobacco, which was called *ol-ekani loo-'ng-eyok*, the eye-medicine.

[3] 'The Masai obtain their honey by following the Sunbird (*Anthreptes Metallica*) bird.'

How fire is obtained.

When the Masai move and go far[1], the men take with them, or cut on the spot where they intend to stay, a hard pointed stick and a flat piece of wood. They then search for some donkey's dung or dry grass, and produce fire in the centre of the new kraal by drilling the stick into a hole in the wood. When the fire has reached the grass they set light to some leaves of *Cordia ovalis* and throw wood on to the fire. The women obtain their fire from the one which the men have made.

The Masai say that the hard stick is a man and the flat piece of wood his wife.

The hard sticks are cut from *Ficus sycomorus* and *Ekebergia sp.*; the flat pieces of wood from any fibrous tree, such as *Kigelia africana*, *Cordia ovalis*, or *Acacia albida*.

[1] When the journey is a short one the women carry fire with them.

[Warrior Kraal]

701 /85 cont./ Under a shade tree with thick
361 foliage a spot about 20 to 25 square meters in size is cleared and en-
342 closed with a barricade of branches. During the rainy season in place of this kraal a small hut (Fig. 18) is built out of leaves. Its approximately circular ground plan has a diameter of two to three
701 meters. On the side opposite the
342 entrance opening is the common
35 sleeping place of the ol gibet companions: between this and the door, the hearth; beside the door the space for firewood.
[415] Close beside the sleeping
[237] place hangs the stomach or
[276] bladder -- from the head of cattle just slaughtered -- filled with an extract of roots and barks that acts as a nerve stimulant and is drunk whenever one is thirsty (ol ôlel).

Milking.—Milking is usually done by women and girls, but uninitiated boys may also milk. Milk is either drunk fresh or is curdled by mixing with blood, or is curdled alone by leaving for two or three days. 334 466 252

Raiding.—Frequent raids on neighbouring tribes are carried out by the warrior classes, and the cattle and sheep so obtained are some of them distributed to a warrior's parents and friends and some kept for himself. When cattle are raided from another clan or sub-clan in order to repay a murder (see Murder), all maimed, blind, and otherwise damaged cattle are returned immediately afterwards, for to keep these would certainly bring bad luck on the raiders. 721 682 697

PART X.—MISCELLANEOUS NOTES.

Fire.—Fire for special occasions is made by means of the hand-drill method, and women may not make fire by this means. Normally, fire is obtained from the ashes of the previous day's fire or from a few live coals borrowed from a neighbouring hut. The first fire in all new huts must be made with fire-sticks. 372

Murder.—Should a man kill a member of his own sub-clan there is no punishment. "What would be the use of taking a fine from one's own sub-clan?" If, however, a man of another sub-clan is killed, then the sub-clan of the murdered man raid the murderer's sub-clan and try to seize cattle in compensation. Usually a free fight takes place and if, in the course of this, a man of the murderer's sub-clan is killed, the matter is considered all square, and any raided cattle are returned. In the course of such a raid all sorts of cattle are driven off, but all the blind and maimed ones are returned next morning (see Raiding, above). 682

Smiths.—Among the Masai smiths are considered "bad." There are smiths in each clan, and the business is purely a family one handed down from father to son. Young boys of smiths' families are initiated alone, and once initiated go straight to the business of smithing and may take no part in the life of the ordinary warriors or warriors. Smiths are considered to be considerably lower in the social scale than even the Wandorobo. A Dorobo can leave his hunting life and rank as a true Masai if he so chooses, but never a smith. 326 564 [823]

If a smith comes and sleeps at a village he is given a bed, but must sleep on the wrong side of the sleeping hide (*i.e.* the rough fleshy side). Smiths may only marry with smiths' families. No Masai would dream of marrying or having any kind of sexual intercourse with a smith's daughter (Wandorobo girls may be married by Masai, but not vice versa), nor can a smith marry an ordinary Masai girl. Smiths make spears and small knives, cattle bells and iron ornaments, but never swords, which are always bought from the Kikuyu. Should a Masai buy the cattle or sheep of a smith he must dip them in the river before adding them to his flock. [594] [583] [823] [911] [1121] [1137]

561 Prior to the meat *Ol-Ng'oko* the men must eat meat in the forest or bush.
[564] They build a small round stockade, called *Ol Pul*, of thorns with one entrance about
[343] 2 ft. 6 ins. high through which one must crawl. Here they store the meat, and sleep. They may eat the meat either within or without the *Ol Pul*. There is a picture of an *Ol Pul* opposite p. 292 in Hollis.

[353] The meat is pierced by a wooden spit about 18 ins. long. This is stuck in the ground by the fire and the meat is roasted. Soup is also made of fat and water and the bark of *Il Kitukuwa* or *Il Kiburetti* trees. The decoction of these barks
[396] makes the warriors fierce. They also ascribe to this cause the curious hysterical
[158] fits into which they frequently fall when excited. I can vouch for the *Il Kitukuwa*, small doses of which do, in fact, produce a fierce and unbalanced state of mind. I have never tried the *Il Kiburetti*.

When the warriors sleep in an *Ol Pul* they pray to God at sunrise on behalf
561 of their age-group. Each one takes his shower and rubs it in the ashes of the fire
982 in the *Ol Pul*. He then goes out of the entrance and strikes the side of it and walks
539 towards the East reciting his prayer and striking trees with the shower. While
[533] returning he sings the war song *Eng-ipukuna* of his age-group. As he re-enters the *Ol Pul* he thrusts the shower into the thorns at the entrance on his right and leaves it there. There are nearly always a bundle of showers to be seen in this position.

The prayer is as follows :—

"*Na Ai* [illegible] *Na ipo Eng Ai* [illegible] *Nan ipo Eng Ai* [illegible] *Ai* [illegible] *Ai* [illegible] *

/32 cont./

When the livestock have been driven out of the kraal to pasture, the women and children start to clean it. Then the fire is lighted in the huts and on it are placed the pots filled with water in which the vegetables are to be cooked. These pots (e mudi, 'mudin) are not made by the Masai themselves, but are bought from sedentary tribes or also from the Wandorobo, who presumably learned the potter's art from them. They are a foot high and globular. In contrast to the warriors, all the occupants of the family kraal, especially since the cattle epidemics, eat vegetable food which they buy from the neighboring peoples, since they themselves do not engage in any agriculture at all. Their favorite foods, however, are, of course, milk, meat, and blood. Milk is always drunk by healthy people uncooked, as fresh (ol gule) or sour (ol gule naata); boiled milk is food for the sick and as such is usually mixed with pulverized grains of el ludoo (Ximenia americana). Sheep milk is especially popular because of its very high fat content. Blood of cattle, sheep, and goats is drunk fresh or sweet in the clotted state. Milk mixed with fresh or /33/ cooked blood (ol gudu) is greatly appreciated; this drink is highly esteemed as invalid soup for the wounded. Cheese making is unknown. Butter is made by agitating the cream in a large gourd-bottle (ol kiyaiyai). Fat, rendered in a pot, is used as an ingredient in other foods, especially meat broth, but is also drunk without any admixture. Meat is prepared without adding salt; it is cooked either with various spices or roasted on a stick at the open fire. One does not eat in one day cooked meat and milk /33. 33 appearance/ together

1. This was also forbidden for the Hebrews, according to the 2nd book of Moses 23, 19-34, 34, passages which are part of the so-called Yahwist documents, that is, the oldest sources of the Pentateuch.

because the latter together with the el ponoyo spice (lack of

262 272 Maasi only most reluctantly and infrequently will cow's milk, for the buyer indeed could in the above-mentioned manner make their cows sick with it. The Maasi more any kind of game meat, as

[134] well as birds and even fish, of the latter of which species of Barbus, Chromis, Clarias, and the deadfish-like Synodontis occur almost everywhere in larger brooks.

• 252 262 263 The preparation of the principal vegetables is the following: batatas (el mundgo, el mundgoni -- Ipomoea batatas) are cooked in water with a little soppe salt (e munjo), then drained, mashed with a whisk (el gheen, el gheeni), and mixed with fresh milk. The finished dish is called el mundgoni. Unripe bananas (el mariga, el mariga -- Musa paradisiaca) are peeled, cut up, and cooked in water with salt. After they have been drained, a little butter (el gurui) is added. Unripe dried bananas (el kikiro, el kikiroi) are cooked in water, drained, and then mixed with milk and butter. Maize kernels (el bilegi, el bilegi) are cooked in water without the addition of salt. Beans are cooked with salt. One distinguishes el bunda -- el bunda (Dolichos lablab), el gii --el gii (with which both Cajanus indicus and Vigna sinensis are designated), furthermore e ngurdi -- e ngurdi (Phaseolus vulgaris), el ghoori -- el ghoori (Phaseolus radiatus). Hordeum cereale (e dabi -- 'e dabi, or e drigi -- 'e drigi or also called e gurumu -- 'e gurumu) and Sorghum vulgare (el bird -- el birdi) are cooked to a thick porridge and lightly salted. Dioscorea alamyanica (el gurd -- el gurdi) and Colocasia antiquorum (which the Maasi on Kilimandscharo designate with the Dschagga /Chagga/ word mafuma) are cooked in salted water.

Honey (e ngiche -- 'e ngichi) is eaten unmixed and is also used as an addition to various medicaments. They buy tobacco

276 [139] (el gumbi, Nicotiana rustica), which the Maasi consume in question, from midway Steppes, [illegible] packets (Fig. 4) of various sizes or in the shape of solid balls about five centimeters in diameter. [415] → For the preparation of this, the tobacco leaves, picked ripe, are tightly packed, tied up with

/93 cont./

words and blows by the assembled warriors, because they did not
rear their sons to have the hardening and self-control necessary for
a warrior, while the wailing is reviled for a long time afterwards
as *ahiro* a coward, or *ahiwi* a the bad one. After the circumcision
all the men of the neighborhood gather in the kraal, where they are
[972] regaled with meat and honey beer by the fathers of the ones just
circumcised, after the latter have kindled a fire with juniper twigs
(*Juniperus procera*). The festival is called *ol ogiki* | *ol olpik gwenko*,
that is, the festival of the circumcised boys. Unbelievable amounts (1)

1. I once observed that my four Mewi boys together at an evening meal ate over 90 pounds of lean meat.

of raw or half-cooked meat slightly roasted at the open fire are consumed in the shortest time by the married men and women, whereas the warriors neither eat meat nor drink honey beer, but only take some fresh milk. People joke and laugh and everyone seems to want to outdoor the others. The warriors boast of alleged heroic deeds in former wars and discuss the prospects of the ones circumcised that day on their first military expedition, which will perhaps take them to this or that region, where they themselves had made an attack only a short time before. The fathers dream of their sons' future heroic deeds and are happy at the thought of the rich booty with which the building warriors will augment the personal herds. Suddenly the glances of a few who had just been joking darken and turn toward a distant hut at whose door a military old man is sitting. They jump up and go toward him with quick steps. The angry expression on their faces matches their rough and sharply uttered invectives and threats, in which one hears the reproaches that the old man has brought up his son to be a weak coward, who during the circumcision betrayed his pain by a twitching of facial muscles and a half-suppressed groan, which they, however, jestingly compare to the cries of pain of a bull being cut. The old man has quickly fled from their impressions into his hut, and his attackers vent their wrath on two good bottles of honey beer left standing, which they knock over and

which have a strong stimulating effect. The use of the nuts, roasted or on open fire, is done once by each of *[illegible]* in common, and, to be sure, on a morning and an evening meal. The head of cattle is furnished in turn by the participants or their fathers.

The longest horse meal takes place as a rule in the month *[illegible]*. Since the person is poor then, the livestock gives as little milk that the vectors nevertheless live for a whole month on almost only meat.

At the head of the vectors of a local stands the speaker *[illegible]* or *[illegible]*. The badge of his office is an especially beautifully worked club or dimorous horn (6)

> 6. The straight horn of a species of *Dimorous bicornis* not yet described to my knowledge, which the author found at the beginning of 1898 in the copper southern of Kilimandelkoro, is especially popular for making these clubs. The horns of this species (or variety) differ from those of the one described that far by the fact that they are quite straight and in cross-section never round, but rather so strongly compressed laterally that they appear sword-shaped; the front horn is often shorter than the back one.

or ebony wood. It is swung like a horse in connection with the speeches accompanied by numerous gestures, in order to give emphasis to individual words. This is also achieved in the manner of speaking, by the fact that one pronounces the emphasized words long drawn out and repeats the emphasized sentence several times. The speech to a larger gathering is always delivered very loudly and vigorously. While the listeners squat on the ground, the seven female seers, his glance directed alternately toward one or the other of the chief persons among the listeners. When the seers begin to begin he rises to make up for by velocity, dialectic, and higher pitch to rise. The members of the audience often give the impression of rapt attention, their glance is almost continually directed at the one

/Pg cont./

726 726 Pg at's blessing upon the sons and their companions going off to war. The old men hold a small gourd bottle of honey beer in the right hand, a similar one of milk in the left one, while the women have a filled milk-vessel only in the right hand. During the prayers loudly called out to heaven, they gradually pour out the contents of the gourd bottles as an offering to God and also sprinkle the warriors with it. Many of the latter smear themselves on forehead and cheeks with fresh cattle dung, while the girls and the old women living in the warrior kraal put such, together with a bunch of fresh grass, on the hut roof close above the door. The custom expresses the confident hope of rich spoils in livestock.

726 [239]

/Pg/ Then the warriors march off, and, after a march of two to three hours, they pitch camp around sunset. Several head of cattle are slaughtered, the meat of which is roasted at the fire and eaten. At the same time they smear the thrusting spears with a paste of red earth or wrap them with grass or cloth so that their gleaming in the sun, visible very far away, will not betray them. Finally, they loosen the thongs of the sandals and fasten them on the underside in such a way that the sandal may be worn with the tip in the rear and the heel part toward the front, so that the footprints left behind will be deceiving concerning their direction of march. During the march comradeships are formed by two men in each case, each of which calls the other ɲ ɲ̀ ɲ́, that is, my companion. /Ill. 37 appears here./ The duty of the companion is to stand by the other one in battle and, if he falls, to bring his weapon to safety. Five to ten such comradeships combine to make a section (ol ale), each of which erects its own small camp. During the first days of march, still far from the enemy, it is fortified for the night by a few branches of thorns. On the evening before the attack it is replaced by the olg adji en djoré. The spears are stuck in the ground in a semicircle about five paces in diameter, and against them, on the outside, the shields are placed in such a way that one overlaps the other like scales. The warriors lie or squat in this semicircle, armed with their weapons, awaiting

out, since special food laws determine to which class of people this or that piece will fall. From a head of cattle slaughtered during the meateating in the bush the warrior will send his father a shoulder-blade (ol ñarebuacha) and for the wives of his father the head (ol ogunja), paunch (eñ gorori), the entrails (mamor), feet (el ollelek), as well as the hind leg without the rear half (eñ gubek), and to the girls, the lateral belly-piece (e murñ). The warriors eat all the rest of the meat. If they have visits from other warriors, the latter are entitled to the long, straight belly muscle (eñ galemiñ) and rear hocks (el oreschita). On the other hand, if a head of cattle of a married man is slaughtered at the kraal, the warriors get nothing. From the cut-up animal there is put aside first for the other married men: the tongue (el ñaiñ), a shoulderblade (el ñarebuacha), a rear hock, the rear part of the hind leg (el mimor), the long belly-muscle; for the uncircumcised boys, the ribs (el ñiñ), a rear hock, the fillet (ee sonek), the "flache /flat/ Rosebeef" -- as my cookbook calls it -- (el ore), the heart (el dol). The rest of the meat is given to the women, who give the girls the lateral belly-piece and the neck (e murt) from it. The principal wife of the one to whom the slaughtered animal belongs is given the tail piece.

/175/ If the warrior slaughters a goat, the married men are given half the liver (e mañjua), the wives the paunch and head, the girls the back (en gorioñ) and the feet. If a married man slaughters a goat, he gives the wives the paunch, the rennet bag, spleen, entrails, and head, the girls back and feet, the boys a side of ribs, breast (ol oigolé), lungs (el kibink), heart, and a hind leg (eñ gulio muro), while he himself keeps the rest.

[593] From a warrior's sheep, the father gets the neck; the wives of the father, paunch, rennet bag, entrails, and liver; the sisters, feet and back. If a married man slaughters a sheep, the distribution to the women and girls is the same, and the boys receive the same pieces as from the father's goat. Of the individual pieces of meat, one boils [252] the bones for soup, furthermore the fillets, the carved-out cutlets, the dark meat on the hind leg, and the heart. Everything else is roasted at the open fire. Brains and spinal marrow are not eaten, but thrown away. Bone marrow is sucked raw out of the smashed bones.

/300 mss./

824 [152] 126. ol [illegible] (Pappea capensis Brid. or Zeyh.). About seven finger-sized pieces of the bark are boiled with the meat and fat of a fatty tail (of sheep); the warriors in particular drink the broth as Tonicum roborans /strengthening wine/ and beautifying agent.

[152] 127. ol [illegible] (Cissus quadrangularis L.). About ten finger-sized pieces of the vine are cooked with goat-meat broth. The broth serves as a stimulant.

134. ol [illegible] (Pelargonium alata L.).

135. ne [illegible]. The decoction of a fist-sized piece of root is drunk as a stimulant, that of a hand-sized piece of bark for severe intestinal catarrh.

136. ol [illegible] (Euphorbia erythradea [Pers.] Pl.). The expressed juice is dripped into fresh arrow and spear wounds for healing purposes.

137. ne [illegible] (Senecio adenanderus Hach.).

138. ne [illegible] (Solanum campylacanthum Hochst.). The decoction of a fist-sized piece of root is given to the malaria patient as a diaphoretic remedy. To someone wounded by a poisoned arrow one give gives as an emetic /?/ a mixture of the juice of the fruits and the amniotic fluid of a gravid sheep.

139. ne [illegible] ol gare (Solanum). One covers swellings on cattle with the glowing ashes of the plant to heal them.

140. ol [illegible] (Euphorbia abyssinica Gill.). Edible fruit. The decoction of a handful of bark or root is used or as emetic for fever. The juice is dripped into suppurating wounds to heal them.

The principle was that the meat and blood strengthened the warriors for fighting. We periodically came upon women cooking fresh meat. It was usually goat or sheep, although occasionally bovine, and they cooked it either by skewering pieces on green sticks which they held over the fire, or by placing the strips of meat on a wooden grill above the fire. Youngish children usually accompanied the women. Gower (1969:78) notes that in Turgwyike Reconlands

> At an ~~place~~ a few women (sometimes) will go into the bush and slaughter a bullock or goats. They take with them a few uninvolved boys and girls. They camp in the bush for any period from 10 to 30 days, depending on how many bullocks they have to slaughter. For the first few days they eat the meat roasted and cookedly. Thereafter they subsist on soup. The Masai consider that this diet gives considerable strength.

We never observed women cooking meat far out in the bush. Usually these feasts were close to a boma.

We were told that stand and buffalo were considered close enough to men to be proper food for Masai and this was also postulated by Grotenhuis and Grotenhuis (1969a) and described by Hunningfield (1953:108). The women apparently could eat game meat, especially gazelles, during pregnancy. From the conversation of the meat we brought to Nakuru, we believe that in addition to women and children sisters and a few women will gladly

[142] eat meat from wildebeests and gazelles. When I shot an elephant near one kraal some Masai women turned out in force. They spent most of the day cutting off strips of subcutaneous fat and some flesh. A few elders joined [252] [944] the women in the cutting. Several Masai requested fat from a lion I had shot (which had been cutting their kraal), but they said that their use was for medicine rather than food. We have records, therefore, of Masai eating (or taking to eat) wildebeest, Grant's gazelle, Thomson's gazelle, elephant, buffalo, eland, and hartebeest.

[925]

Cattle are usually eaten when they die. Goats are rarely slaughtered, although bullocks sometimes are killed for food and calves once are killed and eaten by men at ceremonies. We have watched women picking up the remains after livestock have been slaughtered, and Ndiolo (1968) spoke of Masai women eating offal and other remains of poor ox sheep after the men were through eating.

[944]

[131] [274] Bleeding of cows and sheep is accomplished by tying a thong about the animal's neck as the jugular swells, then shooting a particular blunted arrow into the jugular vein and catching the spurting blood in a gourd.

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

The *Lpiron* is a warrior elected by a number of kraals as their captain or leader, with absolute power of life and death. He is their judge in cases of dispute. He directs their battles, though, curiously enough, he does not lead his men, but, like the general of a civilised army, he stands aside and watches the progress of the fight under the direct command of the *Lpyanani*. If, however, he sees symptoms of his men wavering, he forthwith precipitates himself with his body-guard into the battle. Of course he holds his office purely on sufferance, and if he fails to give satisfaction he is summarily deposed. This, indeed, is almost the only attempt at a form of government. Each war-district elects its own *Lpiron*. The *Lpyanani*, again, is a very different personage. He is the public leader of a kraal, leads and guides the debate in cases of dispute. To be such eloquent and persuasive orators, the Masai are the most remarkable speakers and debaters imaginable. In some American novels we have the Indian belauded for his eloquence and dignity; but commend me to the Masai for grace and oratorical power, for order and decorum in debate; and, indeed, for most of the good qualities which in these days are conspicuous by their absence in our own Houses of Talking. Not that their praise in this line is always worthily applied; for in their fatal persistency in talking out a question they might even beat our Parliamentary Obstructionists. They will spend days discussing the most trivial matter—nothing, indeed, can be settled without endless talk. But we must proceed with our history.

The *Lpiron* and *Lpyanani* having been elected, a raid to the coast was determined on. For a month they devoted themselves to an indispensable, though somewhat revolting, preparation. This consisted in their retiring in small parties to the forest, and there gorging themselves with beef. This they did under the belief that they were storing up a supply of muscle and ferocity of the most pronounced type. This strange process being finished, and the day fixed on, the women of the kraal went outside before sunrise, with grass dipped in the cream of a cow's milk. Then they danced and invoked Ngai for a favourable issue to the enterprise, after which they threw the grass in the direction of the enemy. The young men spent several hours at their devotions, howling out in the most hideous sheep-like fashion, "Amen Ngai! Amen Mbaruku!" (We pray to God! We pray to Mbaruku!). Previous to this, how-

(ii) *The Masai.*

The Masai are a pastoral tribe whose sole occupation is the tending of large herds of cattle, sheep and goats. It has been estimated that they have about 20 head of cattle, and twice as many sheep and goats, per head of the population.

The staple articles of diet are meat, milk, and blood. The blood is drawn from the living animal by puncture of the jugular vein with an arrow. Various roots and herbs are used to make infusions which are used either with boiled meat or with milk. The men, while in the "morans," or warrior class, subsist practically entirely on these articles of diet. The rest of the population, in addition to these four items, which form the main part of their food, eat also some bananas, beans, millet, arrowroot, maize, sugar cane, honey, so these are available. The use of maize, which was introduced only a few years ago, is increasing.

For the greater part of the year there is no scarcity of meat, blood and milk, but in periods of severe drought, when, in spite of the large herds, the milk supply is inadequate, the consumption of these vegetable foods is increased, and even the "morans" may be compelled to supplement their meat and milk diet.

Berries are eaten by the warriors when on safari, *i.e.*, on hunting or fighting expeditions. It appears also to be customary to send the pregnant women into the bush to eat berries. The berries would make an insignificant contribution to the main constituents of the diet, but it is probable that they are of considerable importance as an antimetabolic addition.

One section of the tribe, the Loitokitok, have adopted a freshly mixed diet. It is of interest that pica among the Masai is confined to this section, who use edible earths from various sources with their vegetable foods.

(iii) Chemical Composition of Native Foodstuffs, Edible Earths, and Mineral Waters.

The results of the chemical analysis of 152 samples of substances used in the dietary of the two tribes are given in Appendix I. Certain points of interest are discussed below.

(i) *Foodstuffs.*

In the following table a comparison is made between the analyses of the chief Kenya foodstuffs and analyses of similar products grown in other regions, probably in Europe or America, as quoted by Sherman (1929). All the figures are given as grams per 100 grams dry matter.

It appears at once that the phosphorus content of the foodstuffs is approximately the same throughout. Potassium tends to be slightly higher in the Kenya foods and is definitely higher in red millet. Chlorine is high in the Kenya beans and red millet, and approximately the same in the other foods. Calcium is low in maize and bananas, about equal in white millet, but considerably higher in red millet and green beans. Sodium is low throughout. The high calcium and chlorine content of the Kenya beans is striking. Indeed, the percentage of calcium in some of the beans is higher than that previously recorded for any natural foodstuff. Hence, any considerable addition of beans to a diet of cereals and potatoes or plantains would tend to correct the deficiency of these foods in calcium. In this connection it is interesting to observe that a selective preference for particular beans appears to exist. From the observations in the field and the replies to the questionnaire, it has been possible to classify the beans analysed according as they are commonly used by men and women, by women alone, or by women in time of famine only.

Kenya FL1

As might be expected from the nature of the material, the milkie curbs show considerable variation according to the area from which they are obtained. On the whole, the two elements which occur in the highest amount in these substances are sodium and iron. At the same time, they have a much higher percentage of calcium than phosphorus, the reverse of what the foodstuffs show. The majority of the milkie curbs are heavily loaded up with silica, the average percentage of sub insoluble in acid being 50 per cent. of the dry matter. Two of the milkie curbs, namely, that from Kisumu, and the one, G1 Dagai, from a special part of the desert, south of the Mwaga-Lokichoki road, would make fair substitutes for Magadi soda, by virtue of their sodium content.

TABLE VI.—Milkie.

	Per 100 c.c.			Per 1,000 calories.	
	Kenya.		British.	Kenya.	British.
	Av. of 10 samples.	Range.	Average.		
Total solids	10·77	10·33–11·38	10·00		
Nitrogen	0·[illegible]	0·[illegible]–0·[illegible]	0·[illegible]		
Sugar	4·[illegible]	3·[illegible]–4·[illegible]	4·[illegible]		
Fat	3·[illegible]	3·[illegible]–3·[illegible]	3·[illegible]		
Ash	0·[illegible]	0·[illegible]–0·[illegible]	0·[illegible]	0·[illegible]	[illegible]·77
Calcium	0·[illegible]	0·[illegible]–0·[illegible]	0·[illegible]	1·[illegible]	1·[illegible]
Sodium	0·[illegible]	0·[illegible]–0·[illegible]	0·[illegible]	0·[illegible]	0·[illegible]
Potassium	0·[illegible]	0·[illegible]–0·[illegible]	0·[illegible]	1·[illegible]	1·[illegible]
Phosphorus	0·[illegible]	0·[illegible]–0·[illegible]	0·[illegible]	1·[illegible]	1·[illegible]
Chlorine	0·[illegible]	0·[illegible]–0·[illegible]	0·[illegible]	1·[illegible]	1·[illegible]
Iron	0·[illegible]	[illegible]–0·[illegible]	0·[illegible]	0·[illegible]	0·[illegible]

The Kenya milks are, on the average, richer in protein, fat and sugar than British samples, but poorer in ash and all its constituents with the exception of calcium. This poverty is accentuated if the comparison is made on the basis of 1,000 calories as supplied by the milk and then the Kenya milk shows up as deficient in calcium.

Bearing in mind that the milk yield of the native cows is as a rule very low, (100–150 pounds per annum), on the basis of Dr. Tocher's figures for variation in the composition of milk, it would have been reasonable to expect the Kenya milk to be richer in fat, protein and ash than the British, but poorer in sugar. This is actually true for the fat and protein, but not for the ash and sugar. Similarly certain results, as yet unpublished, obtained at the Rowett Institute, indicate that with a low milk yield, the calcium, potassium and phosphorus percentages might be expected to be low, but the sodium and chlorine high. The results for calcium, sodium and chlorine do not agree with this expectation.

TABLE VII.—*Fodders Grazed by Milkie Cows.*

Percentages in Dry Matter.

	Average of 17 samples. Dry matt.	Range. Dry matt.
Nitrogen	0·[illegible]	0·[illegible]–1·[illegible]
Total ash	0·[illegible]	0·[illegible]–[illegible]
Acid sol. ash	0·[illegible]	1·[illegible]–0·[illegible]
Calcium	0·[illegible]	0·[illegible]–0·[illegible]
Sodium	0·[illegible]	0·[illegible]–0·[illegible]
Potassium	0·[illegible]	0·[illegible]–1·[illegible]
Phosphorus	0·[illegible]	0·[illegible]–0·[illegible]
Chlorine	0·[illegible]	0·[illegible]–0·[illegible]

[91 cont.]
words and blows by the unwedded women, because they did not
[92]
[93]
want their son to have the hardening and self-control necessary for
[94]
a warrior, while the wedding is invited for a long time afterwards
as either a reward, or whether a the bad one. After the circumcision
all the men of the neighborhood gather in the kraal, where they are
[97]
regaled with meat and honey beer by the fathers of the men just
circumcised, after the latter have kindled a fire with juniper twigs
(Juniperus procera). The festival is called *ol ngiti* | *ol nkiti gwedia*,
[97]
that is, the festival of the circumcised boys. Unbelievable amounts (1)

1. I once observed that my four Masai boys together at an evening meal ate over 40 pounds of lean meat.

of raw or half-cooked meat slightly roasted at the open fire are consumed in the shortest time by the assorted men and women, whereas
[101]
[102]
the warriors neither eat meat nor drink honey beer, but only take
some food with. People joke and laugh and everyone seems to

[illegible]

The months of the [illegible] were: 1. [illegible], also called [illegible], that is, the [illegible]. As a result of the rich harvest of the recent months, they have become [illegible] in the future they would be constantly fighting with one another, hence they are separated. 2. [illegible] (= middle) [illegible], or also, but more rarely, called [illegible]. 3. [illegible], that is, [illegible] distinguishes this month.

The [illegible] starts with the month [illegible], that is, [illegible] and [illegible]. The [illegible] is sparse and as a consequence the [illegible] give too little milk to satisfy all the people. Everyone tries to appropriate for himself some of the milk from the livestock of others, through which [illegible] and bowels arise. Finally the milk no longer [illegible] to necessitous [illegible], and the majority of the [illegible] with a few [illegible] more than the [illegible] [illegible], which usually [illegible] not only through the [illegible] month, but also even over the next month of [illegible] or [illegible] or [illegible], there even does the milk is still very [illegible]. The [illegible] seems to be forced from the word [illegible] = [illegible]. Due until the beginning of the third month, of the [illegible], do they return to the herds. From the [illegible] [illegible] they feel very strong, and the heavy use of [illegible] [illegible] have affected their nerves to a high degree, and almost daily one or another has a fit of rage (5).

5. [illegible], [illegible] [illegible].

The [illegible] do not count years. Rather, they designate the year after the event serving to them the most important one that happened during it. For example, after a livestock epidemic, a drought, the death of the high chief, a war expedition especially [illegible] to [illegible], etc. (6).

6. Just as the Babylonians, even in the 1st millennium B.C., did not count the years, but gave each year a name after an outstanding event (e.g. especially after the deeds of the king. One presented [illegible]

FL12 Masai FL12

claim to belong to them live elsewhere. Merker gives as the principal divisions these previous, Kisongo, Loita, and Olbonjo. This is perhaps not according to Masai traditions, but is not incorrect as a practical description of the present distribution of the tribe. The Loita and Olbonjo, also known as Elbonjo and Purko, are both subdivisions of the Naivasha district, of whom the former acquired importance by refusing to accept the present Laikon, Lenana, and following instead his brother Sendeyo. Besides these districts, there are four class representing genealogical not territorial divisions: Aiser, Matapaa, Molumo, and Molelyan. The Aiser seem to enjoy a certain primacy. The medicine men all belong to this class, which is specially connected with Mount Ngong (to the south of Kikuyu), also called Ol-donyo lon-l-Aiser, the mountain of the Aiser.

According to the social system of the pastoral Masai the male sex is divided into boys, warriors, and elders. The first stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circumcised about the same time (see p. xlv for details) are said to belong to the same age, and are known collectively by a distinctive name, such as "the White Swords" or "the Invincibles." After circumcision the warriors plait their hair, but, except for a small skin hanging over the shoulders, and their arms and ornaments (which are described by Mr. Hollis), go absolutely naked. They subsist entirely on meat, milk, and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in separate kraals with the immature unmarried girls, with whom they are allowed to cohabit freely. Tradition* (see p. xxv) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the diminishing stature of the race. Besides this, female morality after such a girlhood was naturally low, even when the Masai kept to themselves. Now that they have come into contact with civilization, prostitution and venereal disease have become diabolically frequent. About the age of twenty-seven or thirty, or sometimes when waiting to fortunate somewhat earlier, a warrior marries and settles down. If he

* It is said that among the Dorobo, Boni, and Sebilok there are similar customs of free love.

I: Hollis G-9 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[*], in the unwittingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called El-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Lumbwa, Suri, and Dinka, so far as differences of environment and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle tooth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though scanty and obscure information about the language of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

* It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

* 599 One day some of the old man's monkey came to the cave, and said to the children: "Open the door, children." But as the children refused, they decided to wait until the sun should set to see if the owner arrived.

The old man returned in the evening, and sang the usual song, whereupon the door was opened.

The monkey then elected to sleep where they were, and to go the next evening to sing the same song, and to kidnap the children. On the next evening they went to the cave and sang:

> "It is now dark, but not yet home,
> My children of the home,
> Ho, my little one, let me in,
> Open the door to me!"

As the voice, however, did not resemble their father's, the children refused to open the door.

The men then returned to their own country and consulted a medicine-man. They told him they wanted to make their voice resemble an old man's in order that they could kidnap some children they had seen in the forest.

The medicine-man told them to go back to where the children were, and to eat nothing on the road.

But before they reached the cave, they had eaten a lizard and an ant* which they found, thinking that these small things would not matter. On their arrival they sang the song, but the children did not recognize their father's voice, and refused to open the door. The monkey then returned to the medicine-man's kraal, and, on being asked what they had eaten on the road, replied: "A lizard and an ant."

They were told to go again to the cave, and to pick up nothing whatever on the way, not even a small ant.

They did as they were told, and when they reached the cave they sang the song. The children, thinking it was their father, opened the door, whereupon the men entered and carried them off to their kraal.

In the evening the old man returned to the cave, and sang, but as

le'ailgani,
in-the-deserted-kraal.

You have got what the son of Ele-gipiko got in the deserted kraal, i.e. you are in a fix.

[The story told of the son of Ele-gipiko is as follows. One day he was eating meat in the slaughter-house when the place was suddenly attacked by the enemy. He managed to escape with his life and meat, but without his weapons, and he fled, hotly pursued by the enemy. He outstripped them, however, and after running some distance, entered a deserted kraal where he proposed to hide. But he soon discovered that he was not the only occupant, and a few grateful escapees at being disturbed. Thinking it more prudent under the circumstances to leave the deserted kraal, the son of Ele-gipiko turned round to continue his flight, when he was horrified to see an enormous serpent coiled round the post of the gate, which was the only exit, darting out its head and tongue in his direction. In the distance too he could see the enemy rapidly approaching his hiding-place. It is not related how the son of Ele-gipiko escaped from the dilemma in which he found himself.]

FL.12 Masai FL.12

Food.

Amongst the Masai the principal food of the old men, the women, and the children is milk.

The warriors alone drive bullocks into the forest, and slaughter them there: at other times they go to the married people's kraals and drink milk, but they never remain for two months together without slaughtering.

Whenever the old men, the women, and the boys are able to do so, they likewise eat meat. They also eat an ox if it dies a natural death [1], or if it is bitten by a snake, or if a beast of prey has killed it.

The Masai elders, however, do not slaughter their cattle without good cause, and a man who is very fond of meat is called a Dorobo.

Whenever a woman gives birth to a child, a bullock is slaughtered, and she is given the fat.

A pregnant woman is not given good food. When she wants meat, she is given bones or lean scraps; and when she wants milk, water is mixed with it.

The Masai are also very fond of blood. They tie a thicker ligature round the neck of a beast and pierce a vein with an arrow, the shaft of which has been blocked. When the blood gushes forth, they catch it

In gourds. Some drink it pure; others mix it with milk[1].

There are a few other things which the Masai eat.

Some old men and women chew tobacco mixed with salt and Guinea maize, whilst others sniff ground tobacco up their nostrils: this latter is called snuff. Others again smoke pipes.

Those of the women who like to also take snuff. The boys and girls, however, neither take snuff nor chew tobacco[2].

The Masai do not grow tobacco themselves, for they do not know how to dig. They buy it from strangers, exchanging it for butter and less grain.

The Masai do not sell good cattle to the strangers; they only give them barren cows, or those which have no milk, or which do not cave for their calves. These and old or lean goats and sheep are the only animals they part with.

The old men drink honey-wine, and they purchase from the strangers two kinds of beer, called Ol-mooro and Ee-jei.

It is only the children who like wild honey: old men eat the comb full of grubs[3].

[1] This custom is also common among the Bari (Emoluoro, Adolimoyo, p. 190).

[2] In olden days it was the privilege of rich old men and their chief wives only to take tobacco, which was called ol-dami lee-'ng-eyok, the ceremonies.

[3] The Masai obtain their honey by following the Cuculus indicator bird.

Wild animals.

The Masai are the flesh of no wild animals when in olden days they all had cattle; but some of those who have lost all their cattle are now beginning to eat venison, like the Dorobo.

If Masai boys kill elephants, they only take the tusks, which they exchange for cattle.

When buffaloes are killed, the hide and the horns are kept. From the former the warriors make their shields, and from the latter mortars are cut in which medicine are ground. The medicine-men also use the horns to put stones in for their prophecies.

[1] It was recently estimated that the Masai in the Naivasha Province owns [illegible] head of cattle and [illegible] goats and sheep. Those living in the Ukamba Province and in German East Africa are, however, much poorer, most of their cattle having died of rinderpest some years ago.

[2] The northern Masai sometimes use e-ningir (pl. i-ningir) for a fish. The southern invariably use e-ningir (pl. i-ningir).

It has, too, an edible fruit, called The berries of the Cordia, which the children are fond of.

4. The bark of *Combretum aculeatum*, Bretage.
5. The roots of *Cupria tenuifolia*, Engl.

[1] Or *Kigelia pinnata*, DC.

[illegible] [illegible] stem to the exclusion of other clans above them. Their status is that of trainees in the case of junior initiates, and of full warriors in the case of senior initiates. Although it is not incorrect to state that they are in a condition of *conscriptio* it is wrong to say that military activity is solely their privilege.

[illegible] Residential segregation is generally connected with the military activity of the initiates. Kimera states that the *manyat* were usually situated in the strategic positions of the country.[illegible]

[illegible] But there are other points to show that this segregation was not intended only for military purposes. Thus the initiates are not allowed to form their own family until they are elders. They are also forbidden to eat meat "seen by women", and because their mothers and girls reside with them in their village, the initiates hold their meat festivals on their own in a secluded place. Similarly, they are not allowed to have milk unless they are in groups of two or three at least.[illegible]

It is difficult to see any relationship between these restrictions and the initiates' military activity. It seems evident that members of the age-units are still considered not sufficiently qualified to deal with cattle, and matters connected with them such as meat and milk, with complete freedom. Apparently, they do not have the full possession of any cattle; the share of their mother's cattle to which they have right remains the property of their fathers' until they get married. And to the father goes the best part of the booty which they take from a raid.[illegible] Since cattle are the primary source of wealth and food, we must conclude that the initiates are still in a state of dependence on their fathers socially and economically.

This conclusion is corroborated by the fact that an analogous dependence holds true of their political activity. On this they depend entirely on their *pirre*-elders.[illegible]

[illegible] The statement is endorsed by Hinde's description l. c., p. 91. He says that the *manyat* were always built free from any kind of cover, "if possible on a plateau overlooking a good water supply", and "commanding many miles of plain".

[illegible] The initiates have a right to ask everybody for milk which cannot be refused. Generally they address themselves to their *pirre*-elders.

[illegible] Merker, l. c., p. 80: "Das Verdienst der zu Krieges heranwachsenden Söhne besteht in erhöhtem Fleiß und Eifer in der Herbeischaffung der Vieh der Vatern".

[illegible] Other restrictions such as the prohibition against smoking and drinking beer, both privileges of the elders, reinforce the general status of inferiority of the initiates with relation to the elders.

J: Bernardi E, 56-4 (no date) 1955 FL12 Masai FL12

time. Then the dance is resumed until night. At this stage the initiate is allowed to have intercourse with his wife. [56]

The next morning the initiate, as soon as he rises, again drinks some milk. Then he is smeared all over with a special mixture by two of the elders, who also present him with an olive and a bamboo stick. A procession is then formed from inside the hut, where these ceremonies have been accomplished, to the cattle kraal. Here the elders choose four or eight * (it must be four or eight) * head of the initiate's cattle, and he hits each one of them with his olive stick.

The initiate must now remain inside for five days. On the fourth day his mother pours liquid, half milk and half water, on his head, and then the mother shaves him.** The ceremony is now complete.

Fosbrooke,*** makes reference to a similar ceremony " by which a woman is permitted to drink the milk from his wife's cattle ".*** He then remarks that " this does not, however, permit him (the initiate) to drink milk by himself; this must always be done with his age-mates until such time as all go through the spokor ceremony ". This indicates that " that spokor of milk " must also be considered as an individual anticipation of the status officially recognized only at the corporate ceremony.

We do not possess any detailed description of " the spokor of meat ". We are informed by Fox,*** that the ceremony takes place, and he records it as " the second el-spokor ceremony, called the Ol-spokor of meat ". After such ceremony the initiate may eat meat freely, and, if he chooses, eat meat which has been touched by a woman. [AC2]

The spokor proper is the closing ceremony which finally initiates the age class. It is celebrated by the Kisongo, but acknowledged and accepted throughout Masailand.*** The ceremony is briefly described by Merker,*** as follows: " when all the members [14]

** These formalities may be performed either by the candidates' mother or his first wife, provided the latter had not conceived while he was still uninitiated, or by the two women together.

*** Fosbrooke, l. c., p. 86.

*** The expression " his wife's cattle " sounds inaccurate and indefinite. Probably it refers to the initiate's cattle touched by his wife.

*** Fox, l. c., pp. 482 s.

*** Fosbrooke, l. c., p. 86, states that the ceremony " is traditionally held at oldeye for 7 moreak (the hill of the Elders), Upper Sonyas, Kisii District.

*** Merker, l. c., p. 72.

FILE Mount FILE

ing to his father to learn something about his origin, and this I believe is—among other stories—what he was told. [547]
The primal ancestor of the Masai was one Kidongi, who lived at Dongo Kipiri (Mount Kenia), was hairy, and had a tail. Filled with the spirit of exploration, he left his home and wandered north. The people of the country, seeing him [548] [549]
shooting something in a calabash, were so struck with admiration at the wonderful performance that they brought him women as a present. By these he had children, who, strangely enough, were not hairy, and had no tails, and these were the progenitors of the Masai. As Mosan had not heard anything of the theories which were convulsing scientific Europe and America, he remained ignorant of the fact that he had struck upon an interesting legend which the savants of civilized society would have given their hearts to verify.

Meanwhile Mosan practised with the spear, and killed innumerable imaginary enemies. He listened intently with beating heart to the stories of daring battle-raids and sanguinary fights, but as yet he could only dye his spear in the blood of an antelope, or, it might be, of a buffalo. His food still continued to be that of a non-fighter, namely, curdled milk, maize, or millet, and meat. Hot vegetable pulse was the meat of women and children, and he loathed it, though he ate it. [550]

As he approached the age of fourteen he began to develop a truculent and ferocious expression, instead of making himself sick in the attempt to smoke a cigar, or examining his upper lip in the glass, as a lad of proper spirit in England would have done at the same age. It is quite laughable to think of Mosan trying to look dangerous, frowning his brow, and generally cultivating the freakish. And really, I am told he was the admiration and the envy of all the Lions (boys) of the district, and quite won the hearts of the girls.

At last it was agreed that Mosan had become a man, and was fit to be a warrior. A certain rite, better known in Africa than in Europe, was performed; and Mosan was no longer a boy, he was an El-moran—a warrior. His father, who was wealthy, resolved to rig him out in the height of military fashion. For this purpose they journeyed to a neighbouring settlement of Ambwebbo—a clan who are despised heartily by their distant relatives, the aristocratic Masai, on account of their ignoble mode of gaining a livelihood by the chase. After making the Ambwebbo quake in their [551] [552] [553] [554]

6:Thomson 2,-3 (1883-1884)1887
FLLL Meset FLLL

arm. A beaded belt confines it round the waist, leaving only one limb partly exposed. Frequently it is slipped off the shoulder, and depends entirely from the waist, leaving the breast exposed. Their ornaments are of a very remarkable nature. Round the legs from the ankle to the knee telegraph wire is coiled closely in spiral fashion. So awkward is this ornament that the wearer cannot walk properly, she cannot sit down or rise up like any other human being, and she cannot run. Round the arms she has wire similarly coiled both above and below the elbow. Round the neck more iron wire is coiled—in this case, however, horizontally—till the head seems to sit on an inverted iron salver. When the leg-ornaments are once on they must remain till finally taken off, as it requires many days of painful work to fit them into their places. They chafe the ankles excessively, and evidently give much pain. As they are put on when very young, the calf is not allowed to develop, and the consequence is, that when grown up the legs remain of a uniform thickness from ankle to knee—more extended ankles, in fact. The weight of this armour varies according to the wealth of the person, up to thirty pounds. Besides the iron wire, great quantities of beads and iron chains are disposed in various ways round the neck.

Such, then, were the people that now greeted Mawa, who, being a novice, had to suffer a good deal of chaff from both sexes. He was, however, soon initiated into the mysteries of a warrior kraal, and had seen a bit of life. The strictest diet imaginable was the rule. He had to be content with absolutely nothing but meat and milk. Tobacco or snuff, beer or spirits, vegetable food of all kinds, even the fish of all animals except cattle, sheep, and goats, were alike unknown. To eat any of these articles was to be degraded—to lose caste; to be offered them was to be insulted in the deepest manner. As if these rules were not strict enough, he must needs not be seen eating meat in the kraal, neither must he take it along with milk. So many days were devoted entirely to the drinking of raw milk, and then, when carnivorous longings came over him, he had to retire with a bullock to a lonely place in the forest, accompanied by some of his comrades, and a Dilito to act as cook. Having scrupulously made certain that there was no trace of milk left on their stomachs by partaking of an extremely powerful purgative, they killed the bullock either with a blow from a rungu or by stabbing it in the back of the neck. They then

G:\Thomson K-F\1983-1984\1987
F'LLZ Moses F'LLZ

opened a vein and drank the blood fresh from the animal. This proceeding of our wonderful young friends was a wise though repulsive one, as the blood thus drunk provided the salts so necessary to the human economy; for the Maori do not partake of any salt in its common form. This sanguinary draught concluded, they proceeded to grope themselves on the flesh, eating from morning till night—and keeping their work steadily at work. The half-dozen men were quite able to dispose of the entire animal in a few days, and then they returned to the kraal to resume the milk diet.

If they lived to sustain life in the matter of food, they could not be said to do so in other ways. Life in the warriors' kraal, as may easily be conceived, was prosaic to a considerable degree. They may, indeed, be described as a colony of free livers. Curiously enough the "concubinat" system was largely in vogue, though no one confined his or her attentions to one only. Each girl, in fact, had several concubinats, and, what is still stranger, this seemed to give rise to no jealousies. The most perfect equality prevailed between the Dido and Elsewen, and in their savage circumstances it was really pleasant to see how common it was for a young girl to wander about the camp with her arm round the waist of a stalwart warrior.

Till a war-raid was planned, Moran, our interesting prodigal, found he had nothing to do but make acquaintances and amuse himself with the girls. His cattle were looked after by some poor mamiels, and though the kraal was stationed near a dangerous neighbour, yet no fighting took place. It was, however, a rule in the warrior kraals that no leave for pottering was allowed, hence the utmost vigilance had to be exercised. Moran thus in the course of his duty had frequently to act as watch. At other times he practised various military evolutions, and he kept up his muscle by the peculiar mode of dancing described in the Tewete chapter. Unlike vapor tribes, they led what might be called a serious life. They had no sparkling fun, no moonlight dancing, no lively songs, no thundering drums. No musical instrument whatsoever enlivened the Maori life, and their songs were entirely confined to such occasions as the return home from a successful raid, or the invocation of the deity. As soon as darkness fell upon the land the guard was appointed, the cattle milked, and everything hushed up in silence.

Shortly after joining the kraal, Moran was called upon to record his vote in the election of a *Lptuwa* and a *Lppuwaal*.

6:Thomson M-3 (1883-1884)1887
FLLZ Macal FLLZ

becoming bald or developing grey hairs, but that he could not take the exploitation done of perspiration as formerly. From this, coupled with the fact that he could not take such liberties with his stomach, he gathered that he was not quite as strong as formerly. We can imagine how he would curse his luck and look foolish on discovering this unpalatable truth. There was nothing for it but to marry, and become a staid and respectable member of society. He had never his wild oats.

Getting shaved, he fixed upon a damsel after his heart. The preliminaries having been arranged—the number of bullocks to be paid, &c.—she was sealed to him. Then an operation was performed on the damsel. Recovered from its effects, she had to wait till the calving season, as abundance of milk is an indispensable requisite in the honeymoon. Meanwhile, she allowed her hair to grow till it assumed the appearance of an old shoe-brush clothed up with blacking. Round the head she wore a band of cowries from which dangled a number of strings, forming in fact the bridal veil. At last the happy day arrived, and the final seal was put upon the marriage by both parties dropping of their chain earrings, and substituting a double line of copper wire arranged spirally. The lady also shaved her head, laid aside the garment of the Ollin, and clothed herself with two skins, one suspended from the waist, the other from the shoulder. Strangest of all, however, and strikingly indicative of the fact that he had exchanged the spear for the distaff, Moses had actually to wear the garment of a Ollin for one month. Just imagine what fun it would be in this staid and dignified country of ours, if a young man had to spend his honeymoon in a cast-off suit of his wife's maiden clothes. What our friend's feelings were in this guise, I do not know, and this wondrous chronicle does not admit of conjecture.

And now Moses's sole idea was to rear a brood of young cattle-lifters, and so that he got them, he was not very particular as to the manner of it. He was not jealous, asked no awkward questions, and employed no spies. If a friend should visit him, he was hospitable in a degree not consistent with a high level of morality. We shall here prudently follow his example of non-inquisitiveness; for we might find that the domestic affairs of our friend's household will not bear a too curious scrutiny.

He was now wholly a changed being—as indeed who is not when he gets married! His strict rules of diet were

4:Thomson R.-3 (1883-1884)1887
F122 Maori F122

chewed, and, though meat and milk were still the main items of his eating, he could now vary it with vegetable food, obtained by his wife from neighbouring agricultural tribes. Luxuries, also, he might now indulge in. He sported a fancy mat-box and tobacco-box of ivory or ornamental horn, and delighted to say up his contents as he handed it to a friend. He chewed tobacco (mixed always with native), though he never smoked. Then, as often as convenient, he liked to lounge with his friends, and have a jolly conversation over tea or meal.

It is pleasant to know that with this change in his mode of life there was a corresponding alteration (very much for the better) in his views of things. He delighted to talk with the traders whom before he had glorried in killing or enslaving, and would, in token of good-will, cordially exchange the contents of his by spitting upon them and being spat upon. In his conversation he showed an intelligence far superior to any specimen of the Bantu tribes. He had no superstitions, and was communicative about his affairs and beliefs. He would even at times exercise a friendly guardianship of passing traders, and was able to ward off many a disaster by judicious warning. He was not stinted in his generosity, and generally gave far more than he got. He has been known even to protect stranded persons, and tend sick men left behind.

The softening down of his ferocity exerted upon his face. The habitual scowl gradually died away, and was replaced by a more pleasing and genial expression. His thoughts turned more to the strange mystery of life. He, alas! had little that was cheering to look forward to. He believed in the existence of a Supreme Being, and yet had not the faintest conception of an after-life. Unlike the men of the Bantu race, he did not believe in ghosts or spirits. He had no theory of dreams, and did not imagine like the negro that when he dreamed he was really experiencing all that was passing through his brain, and that his soul or spirit was actually knocking around somewhere, having a good time of it, unencumbered by his body. Maori believed nothing of that; indeed, whether he had any idea on the subject, I have not been able to determine. When the man died, he was finished utterly, except so far as he might go piecemeal to build up the body of a hyena, a vulture, or a merchant stock. The Maori believes in annihilation. To bury a corpse would, they think, be to poison the soil: it must be thrown to the wild beasts without ceremony.

Kilimanjaro

between the married and the unmarried people, very little work being expected of the latter, and the excellent system being preserved. They all, however, occupy the same village, and of course the young men cannot afford to live on meat, though they always come in for the lion's share when any of it is going. When parties go off on war-path, they also contrive to eat a bullock by way of getting up their courage.

They lead upon the whole a very miserable life, ever threatened with destruction by the Masai, who have swept off several villages and all their cattle. The soil being the very richest loam, brought down from the mountains and spread over a comparatively level plain to the north of the lake, it is capable of producing anything; only the extreme dryness of the air and the very small annual rainfall, confined to a couple of months, keeps it sterile and barren. To ameliorate this unhappy condition of things the Wa-kwafi have developed a wonderfully ingenious system of irrigation by artificial canals of (for them) great magnitude. They construct dams across the deep channel of the Ozaro Tigwale and thus raise the level of the water to that of the plain, and then, by an intricate network of channels, they spread the precious fluid over a large area, and raise their millet and maize. These products form almost their sole food, eked out by what they are able to kill in the chase and by fish from the river, though where most in waters they are not molestedindeed even of late. Of these there were simply magnitude. They swarmed everywhere, and nothing was too sacred for them. Need it be wondered if "oft in the stilly night" were heard impressive lowl and deep upon the wretched pests when I have been wakened up by my nose being bitten or the sanctity of my toe invaded. My books were devoured, and even the bullets in my cartridges were not too indigestible. Everything, indeed, had to be kept under lock or hung up under shade as represented on page 312.

As in the case of the Wa-kwafi, the Wa-ziwaya are singularly honest and reliable, so much so that valuable goods and equally valuable food are left in their charge with the utmost confidence, and I have heard of no case of this being violated. To me, one of the most remarkable features in the character of the young women and girls was their absolute unconsciousness of fear in my presence, and the complete confidence they seemed to have in me. They indeed took

particular relation. The naming ceremony is as follows:—When the child was one [55]
about a small rose is chosen and filled by the women of the village and eaten by
them (and not by any men). The child is then given a name which is chosen by the
assembled women. It is usually named after some friend of the family either living
or deceased, and great care is taken that the person after whom the child is named
is (or was) good looking and of good character, so otherwise the child would grow up
ugly and of an evil nature. This is the name used by the family and by friends, but [55]
after initiation a boy is always called "Son of 'so-and-so,'" and not by his own
name (except by his family). After a man is married and has named some of his
own he is called "Father of 'so-and-so.'"

Tooth Extraction.—As soon as a child of either sex has cut all its milk teeth the [56]
two central lower incisors are knocked out, and this operation is repeated when the
permanent teeth grow. There is no ceremony attached to this removal of the teeth, [56]
which is performed with a small, sharp two-edged knife. The reason given for this [56]
practice is, that in the case of any illness, if the patient keeps his teeth tightly closed, [56]
water and great care be poured in through the hole so formed.

Ear Piercing.—At the age of about 4 or 5, children of both sexes have holes pierced
in the cartilage round the upper part of the ear, and as soon as the boys start herding
cattle and the girls start fetching water they have the lobes of the ears pierced. These
are pierced in order to prepare them for carrying ornaments, and the holes are
stretched to the size which the individual requires by means of a gradual increase
in the size of the inserted stretching plug of rough wood.

Games.—All sorts of childish games are played by the children during their [56]
early days, but I could not obtain any details from my informants.

Clothing.—From a very early age children are given small bits of skin as clothing, [56]
and the boys have small aprons made for them.

Food.—The food of children is the same as that of grown-ups and is mentioned [56]
in milk, fat, and meat, as no crops are grown.

Part II.—Between.

Herding.—As soon as they are considered old enough (and this depends upon the [57]
number of other boys in the family available for this work), boys are sent to help
herd the sheep and cattle, and they continue to do so until they are old enough to
start preparing for initiation.

Sex Life.—Initiation is often delayed until some little time after puberty, and it [58]
is not considered in any way wrong for these boys to begin indulging sexually as soon [58]
as they like, provided that they observe certain restrictions. They may do as they [58]
like with the younger girls in the neighbouring villages, provided, of course, that they [58]
observe the law forbidding sexual relations with any member of their own sub-clan,

[illegible] The only three candidates who belong to a given village may be operated on in their village, it is edious that there is more than one circumcised at a time, but should there be two or three candidates belonging to a single village they would be circumcised together on the same day of the same time. There is no elaborate ceremonial accompanying the operation as prescribed to it. A boy will continue [illegible] the cattle until the last element of the day before that fixed for his circumcision. He is then brought back to the village and has his hair shaved off by his mother, and has new sandals and a new skin that given to him. This does most he made of the skins of four male goats together, and will be worn the following day during the operation. The actual operation takes place next day, either early in the morning or in the middle of the day. If it is in the morning, the cattle are kept in the pen until the ceremony is over, but if it is in the middle of that day the cattle must be brought into the pen and kept there during the ceremony, for it is absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony. Sheep and goats are not included in this rule. The boy (or boys) who are to be circumcised is brought to the enclosure in front of his mother's hut, wearing his new sandals and sandals, and the operator performs the operation with a special small knife without any elaborate ceremonial. The boy then retires to his hut to convalesce. A hut must be built for the patient, and he is not allowed to leave it and must be given with him, so that he may get well quickly. After about five or six days the other boys in the district who have already been circumcised and have recovered, will fetch the boy, and he joins their band for the period of their novitiate.

The Novitiate.—The period of novitiate extends for a considerable length of time, as a boy must remain in the novice stage from the time that he is circumcised until every other candidate has been circumcised too. Usually a period of about two years elapses between the time of the last existing ceremony and the time when the last candidate has been operated upon. Then the group passes from the hair-shaving ceremony which marks their transfer from the novice stage to the warrior stage; then, the last few to be circumcised may only have a few weeks in the novice stage, while others may be about two years in that stage. During the novitiate, there are certain rules and regulations which must be observed by the novices. They wander about the country in bands armed with bows and bird-arrows visiting more especially those villages where they have that both candidates have just been circumcised, and returning there to their groups. During the whole novitiate period the novices must not eat their food at all, nor may they indulge in any form of sexual intercourse, nor may they go out alone, but only plain hut on their bodies. They are required to shave as many birds as they can, and to skin them and stuff them roughly with grass, and to tie them to their hair as a decoration. More and more skins are added to this head-dress as the weeks go by, until at length a boy has a complete wig of stuffed bird skins. Certain birds must on no account be so used, notably birds such as pigeons, doves, and

[213] [214] villages the shields are removed to allow meeting to take place with the owner's [215] own cows. The same method of governing meeting is used with cows, but to a much lesser extent. If a man has several good cows he keeps shields on a few of them at a time in order to use his cows to meetings.

[213] [214] *Blood letting.*—Among the Meeni, blood is a simple article of diet. It is either drunk hot and fresh, or cooked with bits of fat and meat into a "black pudding," or else mixed with fresh milk and allowed to curdle.

In order to obtain blood every sheep and every head of cattle is bled at intervals. Cattle are bled by one method and sheep by another. In the case of cattle, the animal is seized and held, and a thong is then tied round its neck until the vein at the side of the neck swells up under the pressure of the thong. The vein is then punctured by means of a special instrument which may be termed a "blood letting arrow." The blood letting arrow consists of a small stocky shaft into the end of which a small flat blade is inserted. This blade has a curved edge and is very sharp. This arrow is used with a special bow which is always small and usually very roughly made. The arrow is not shot from a distance, but placed against the swollen vein. The bow string is only pulled back very slightly and when released drives the arrow just far enough to open the vein. The blood is caught in a gourd and the animal released.

[216] Sheep are bled by a different method; the animal is held and a small incision is made just above one eye and blood drawn off.

[217] [218] *Meat feasts.*—Young men and old alike indulge in frequent meat feasts, meat being a simple article of diet. No men may eat meat inside the villages, so meat feasts take place either in special huts built at a little distance from the villages, or in a cave if there is one near by.

There are certain rules and regulations concerning meat feasts, as follows:—

(1) No men may eat meat that has been touched by a woman.

[219] [220] (2) No Meeni men may slaughter cattle himself. In every case a man of the Wanderobo tribe must be called in to kill the animal, and he must be rewarded by being given a part of a fowling.

(3) The neck, stomach and some of the intestines are always given to the women, who may cook and eat them. The breast must be given to the man to whom the slaughtered animal belonged.

(4) During a meat feast, none at least of the females must sleep in the hut or cave where the meat is, and it is cruel for all to do so. If by any chance the fire should go right out in the course of the night, it would be considered a very serious matter indeed. In such a case no one inside the hut may go out by the normal entrance, but must break through the walls (in the case of a cave they must break through the brushwood screen which is invariably built across part of the entrance to the mouth of the cave), and all the meat that is left over must be [illegible] and left to the hyenas. The breaking of this rule is said to result in [illegible] in the death of the miscreant.

warriors may have sexual relations with initiated women. This is regarded as being the first stage in a warrior becoming an elder.

The warriors have their heads shaved—usually by their mothers—for the sake of the E-Oiata ceremony, but they allow the hair to grow again, and plait it into a pig-tail when long enough.

Milk Drinking by Warriors.—A warrior may not drink milk unless it is handed him by mother of his age-group. They must therefore always go about in parties of two or more. The procedure on arrival at a village where they want some milk is as follows:—

The warriors enter the village and stand in the open space within the circle of the huts till one or more of the old men come to greet them. They ask for a bowl of their age-group, or, failing that, a bowl of an elder of their O-Piron. On being shown a hut to enter they go in and sit down on a bed or the stool, and wait till milk is handed to one of them (for description of hut see p. 488 ff.). He shakes up the milk, removes the cap of the gourd, and hands it to his companion, who drinks it. If only one gourd is brought they share it, handing it from one to the other. If a second gourd is brought the warrior to whom the first gourd was originally handed may open it and drink it himself provided that he has given the first gourd to his companion. Drinking after a drink of milk is a sign of repletion and is good manners, showing the guest's appreciation of the hospitality of his host.

O-Ry'ulor of Milk.—This ceremony is performed by each warrior individually. He is given milk by an elder in his mother's hut, and drinks it by himself. He shaves his head and does not grow a pigtail again. Thereafter he may drink milk by himself. He usually marries very soon after this ceremony, and is no more regarded as a warrior after it. The ceremony usually takes place nowadays a year or two after the E-Oiata owing to Government policy of reducing the period of warriorhood as much as possible. In the Purko, most of the Il-Sidamok have already performed their milk O-Ry'ulor, although there is as yet no left-hand age-group for their generation.

I have heard it said that in some tribes there is a ceremony of handing over warriorhood from one generation to a junior one. Among the Maasai there was no such ceremony. When the young warriors of a new generation became strong enough they fought and defeated the old men, taking on the warriorhood by force.

Meat Fenets.—No man may eat meat which has been touched by an initiated woman until he has performed the secret O-Ry'ulor ceremony, called the O-Ry'ulor of meat. After that he may eat meat which a woman has touched if he likes. The Il Moruroot and Il Kitoip age-groups of the Purko were said to be going to have their meat O-Ry'ulor in June, 1930; but I left Africa before it was done, and therefore cannot describe the ceremony.

A man of the generation immediately older than the warriors must not be seen eating or drinking milk by a warrior until one of the warrior age has given him a bottle.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

777 It is lucky to see a fish eagle (*ol korpellia*) sitting on a tree if it is facing the observer. It is unlucky to see a single wild pig, but lucky if a number of pigs cross the path from left to right in front of the traveller.

There are several other superstitions, but they seem to be held in little, if any, more importance than most of our own, *e.g.* seeing the new moon through glass, encountering magpies, spitting when a hare crosses one's path, etc.

514 576 *Spitting* is a greeting and brings good luck. One is asked to spit on a new-born baby. I have sometimes been spat on in a similar way by very old men and women—a somewhat trying ordeal which had to be patiently endured. Moreover, a Masai may spit on his palm before shaking hands in order to give an exceptionally warm greeting. It is then etiquette to follow his example.

173 *History.*—The Masai have little historical tradition. Some of it is given in Hollis, pp. 266–273. They are said to have come from a place in the North called by them *Endigir* a hundred generations (of 15 years each) ago. The generation names from the present time, working backwards as far as they are remembered, are :—*Il Tweti, Il Talala, 'L Aimer, Il Nyangusi, Il Twati, Il Kidotu, I Merishare, Il Tiegi, Il Salaash*, and *Il Meshopo*. Those before this have been forgotten. When they left Endigir there were no *Laibons*, so the elders arranged about the ceremonies. The warrior and age-group system was already in being, having been instituted by Naiteru Kop (*see* Hollis, p. 266). The customs of group marriage and of free love between the warriors and the girls were also in existence.

There were four tribes in Endigir—the Masai, the Dorobo, the Kikuyu and the Il Kunono (smiths). God gave the cattle to the Masai and the wild beasts to the Dorobo. He told the Kikuyu to go to the mountains and the place of many rivers and to eat grass. He gave iron to the smiths and provided them with stones to beat it with. These four tribes were all friends together.

262 *Restrictions as to Food.*—Besides those mentioned above as applying to warriors and junior elders, the following apply to all Masai :—

They must not eat the flesh of wild animals.

They must not drink milk soon after eating meat.

Women must not be seen eating meat or drinking milk by men of their husband's generation.

805 *Months and Days.*—The Masai divide the year into the following months :—

Ol Adualo. Meaning unknown

Or'at = Grass in the hollows. (About February.)

O Ãnyi Oing'ok = When the bulls are tied up.

Ol o Doyoerie ol o Ingokwa = When the Pleiades are in the West.

Ol o Olepunyi Ingokwa = When the Pleiades are in the East.

Ol Guju Orok = The short black bristles. So called because it is the month of ceremonies, and therefore heads are shaved.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

are taken in another direction, which means that they drink only on alternate days, [233] but at the same time graze over a larger area than if they went to water every day, 361 thus helping to conserve the grazing. There are two types of kraal. The married men with their wives and children live in one type, and the warriors with their mothers, sisters, and girl lovers in another type. The main structural difference between the two types seems to be that the warriors' kraal has no fence, while the [357] elders' kraal is surrounded by a thorn fence. The elders' kraal varies in size: it may contain from seven to several hundred huts, though very large examples (such as were seen by Teleki and von Höhnel) are probably uncommon; the average is probably about 20 to 50. The warriors' kraal may contain between 50 and 100. In the elders' kraal the huts are built round the inside of the fence, which is also the enclosure in which the livestock are housed at night. The number of gates in the fence depends upon the number and size of the families which live in it. Each family has exclusive rights over at least one gate, and a large family with many cattle has more than one. The kraal, *enk-ay*, thus approximates to a village, for several [829] families live in it, and the gate, *kishomi*, has come to typify the family, the word being used with the article (*en-kishomi*) as a synonym for *ol-marei*, "the family." When a man sets up his home in a kraal, he puts his first wife in a hut on the right 361 of his gate as one goes in, and the second wife on the left; the third, if he has one, 593 goes on the right, and the fourth on the left, and so on, the huts being so arranged that each succeeding wife lives immediately to the right or left of her gate. The people on each side of the gate form two distinct groups, *in-taloishin*, the effect of which is felt most in matters of inheritance. (See below, p. 108.) The warriors' 361 kraal or *e-manyata* is inhabited by all the members of one age-set in one district, 591 who constitute a company, *siril*, and the kraals are built in strategic positions. With the men live their mothers, and some young sisters who help their mothers, and if [561] old enough become lovers of warriors. The mother, her warrior son, and younger children share a hut, all sleeping on separate beds; when the warrior wants to sleep [593] with his lover he goes to another hut. The mother's husband may visit her at any time, and when he comes her hut must be given up to the pair. The inhabitants of a *manyata* vary considerably in number, ranging from 30 to several hundred.

Livestock

Cattle

Cattle, *in-kishu*, are the object on which the lives of the Masai are centred, and on which their whole existence depends. Their importance is both material and spiritual, and people who perform any kind of work other than tending cattle are despised by the Masai, whose attitude towards cattle is similar to that of the Nandi. The Masai believe that in the beginning God gave them all the cattle in the world, and therefore nobody else has a right to possess any. Cattle provide the Masai [262] warrior with his food in the form of milk, blood, and meat, and they give him spiritual and mental satisfaction through their existence, though it would seem that there is less outward and ritual expression of the love of cattle than among some other East African tribes who combine pastoralism with agriculture. This, however, does not by any means indicate that the Masai are an agricultural people who have wholly given up agriculture and taken to pastoralism. Since the Masai, unlike the Nandi, kill large numbers of their cattle for eating, it was essential in the past for them to maintain the size of their herds by continual raiding, for the natural reproduction rate would not have been enough. On account of its high ritual value, milk may not be drunk on the same day that meat is eaten, nor may it be boiled; but it may be drunk mixed with blood. Grass also has a high ritual value, being the food of cattle, and is used as a sign of peace. In 1930 the average size of an elder's 233 herd was officially estimated at about 75 head of cattle, 85 sheep and goats, and 18 donkeys; this was based on the estimate of 720,000 as the total number of cattle belonging to the Kenya Masai. In Tanganyika, it was found that the average number

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

latter is of little economic significance, except that it is the duty of the warriors to get cattle by raiding. In the division of work, the people mainly concerned are the uncircumcised boys, the girls, and the women. The boys do most of the herding, assisted by the elders. Women and girls milk and act as servants to the warriors. The girls do household work till they are old enough to become lovers of the warriors, when they do very little work. The greater part of the work thus falls on the older women, who besides doing or supervising the milking and other ordinary household tasks like fetching water and firewood, build the huts, load and drive the donkeys when moving, prepare skins for clothing, and trade with neighbouring tribes for food and other things. The warriors used to be occupied exclusively either with war or preparations for war, or with dancing, visiting, and making love. Their military activities have today been replaced by certain tasks connected with cattle, and by cattle-stealing and raids on neighbouring tribes. The senior elders are occupied with political matters, and some of them with the instruction and control of the initiates and younger warriors; they also help with the herding, and take part in trading with the neighbouring peoples.

The only specialists in the economic sphere are the smiths, *il-kunono*, sing. *ol-kunoni*, who live segregated from the rest of the Masai, and marry among themselves. They have a distinctly inferior status, and are despised by the Masai, who oil their hands before taking anything from a smith. At one time the smiths lived near deposits of iron ore, such as those in the Matapato river; but nowadays the availability of trade-iron has given them greater freedom of domicile. They make the iron-work used by the Masai, including spears, swords, and ornaments.[6]

Though according to Hollis a few Masai women made pottery, the Masai as a rule buy their pots from the Bantu.

Food

Except among the agricultural Masai, no cereal or vegetable food at all is grown, nor was it eaten in the old days by warriors, whose diet consisted of meat, milk, and blood, the latter providing the necessary salt. The animals eaten included their own cattle, buffalo, *ol-osowuan*, and eland, *o-airua*, which they considered to be related to cattle, and therefore fit to eat.[7] Warriors were not allowed to eat honey, to drink honey-wine, or to take tobacco, though some took snuff. Children and married people eat vegetable food, and the meat of cattle which die a natural death. Warriors when they want to eat meat, build a rough shelter called *ol-pul* in the bush where, accompanied by a boy to do the work, small groups feast upon the meat of an ox supplied by the father of one of their number. The elder who supplies the ox is given some of the meat, and this is one of the regular sources of meat for married people, for meat eating is the regular practice of warriors. Men and women do not eat together, and fish, fowls, eggs, and game other than buffalo and eland are not eaten by any Masai.

Trade

Since the Masai are not self-supporting, they have to trade with the Bantu agriculturists, *il-meek*, whom they despise, in order to get what they want. Their chief suppliers are the Kikuyu, Chaga, and Taveta; and for certain things, notably ivory and honey, the Dorobo. The media of exchange are cattle (old, barren, and otherwise unsatisfactory cows), old and thin goats and sheep, donkeys, butter, and hides. The principal goods bought are food (beans, millet, maize) and tobacco, which they get from the Bantu; the chief suppliers of meal are Indian traders, often Sikhs,

[6] Leakey says that the Masai buy their swords from the Kikuyu (*JRAI*, LX, p. 209); this may well be the case near the Kikuyu border, though it is perhaps a recent development.

[7] The Galla also consider the buffalo to be the equivalent of the ox. Bahrey, *Historia Gentis Galla*, Cap. XX, Guidi.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12
Agricultural Masai

In 1932 the Il-Tiamus numbered about 2,250 (3,423 according to the 1948 Census), and though they are of Masai stock, being descended from a Sambur section called Il-Doigio, they have admitted a variety of refugees including Kamasya, and become rather mixed. According to von Höhnel they had originally four villages at the south end of Lake Baringo, but two were deserted on account of Masai and Suk raids, and some of the inhabitants, having lost all their cattle, took refuge on Kokua Island in Lake Baringo. They are expert swimmers and possess canoes, though von Höhnel saw none in 1887. Their dwellings are round huts with rather high-pitched and somewhat convex thatched roofs, and walls of posts and sticks. These are crowded into two permanent villages known as "Njemps Kubwa" and "Njemps Ndogo" in the Tigrish valley a few miles south of Lake Baringo; the closely packed huts almost touch each other, and the mud-walled granaries are surrounded by strong palisades.

In general the Il-Tiamus keep as close as they can to the dress and customs of the pastoral Masai; they have circumcision and *eunoto* and other ceremonies, and practise the "free-love" system of the pastoralists, though without the *manyatas*. Today they have some 180,000 acres of poor land, most of it unfit for cultivation; but they have acquired, since the establishment of British rule, some 12,000 or more head of cattle, and 30,000 goats and sheep, thus achieving in part the ambition of all Il-Oikop to become cattle people again. In the time of Thomson and Teleki, however, Njemps was an important station on the caravan route, and von Höhnel noted that they had a large extent of cultivated land. This was divided into blocks (he says of three to four miles square) which were intersected by irrigation channels bringing water from dams across the river Tigrish. This system was still working in Dundas's time, who says that the opening of the main ditch was performed with the sacrifice of a sheep at the mouth of the ditch.[13] Besides agriculture, the Il-Tiamus fished and hunted, using the bow, and spears of Suk and Turkana types.

It is possible that the fishing group called Il-Molo who live on the east shore of Lake Rudolf is to be classed as Il-Oikop.[13] They subsist on a diet of fish alone which, when Teleki and von Höhnel saw them in 1888, had produced no ill-effects; but it seems now to have resulted in considerable physical degeneration, and in the appearance of rickets in all members of the group. There seems to be a good deal of Gelaba blood in them.

The Il-Arusa round Mount Meru are a large tribe of agricultural Masai, originally of Bantu stock, but now accepted by the pastoral Masai as worthy of recognition as a group which can pay and receive cattle for compensation in cases of homicide. The Baraguyu in Southern Masailand are also to be classed as agricultural Masai.[14]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

Life Cycle

From birth to circumcision a male is a boy, *ol-ayioni*. At circumcision[15] he enters an age-set and becomes a warrior, *ol-murrani*, "one who is circumcised," and may associate with unmarried girls. At the *ol-gesher* ceremony he becomes an elder, *ol-morno*. Warriors may marry when they become senior warriors. After the *ol-gesher* the newly made elders attend to their family concerns, and get wives

[13] K. R. Dundas, *JRAI*, XL, pp. 49–55.

[13] W. S. Dyson and V. E. Fuchs, "The Elmolo," *JRAI*, 1937, LXVII, p. 327; von Höhnel, II, pp. 138–40.

[14] The people known as WaMeru in northern Tanganyika are not Masai, but people of Bantu stock who have imitated them.

[15] There is some uncertainty as to the age at which boys are circumcised. Hollis gives the limits as 13–17 years; Fosbrooke gives the lower limit as 16 or 17.

K M 125

The information collected directly was supplemented by the replies to two questionnaires issued by the Medical Department to district medical officers, medical missionaries, chiefs of tribes and others interested in the investigation. One questionnaire dealt with the dietary customs of natives and the other with the incidence and etiology of ulcers.

II.—FIELD WORK.

(a) Dietary Customs and Incidence of Disease in the Kikuyu and Masai Reserves.

K M 114

Dr. J. W. Foster was sent out from the Rowett Research Institute to carry out this part of the investigation, and Dr. J. C. J. Callanan, of the Medical Service in Kenya, was specially detailed to work with him for the first five months.

K M 121 262

The two reserves chosen for the investigation were the Kikuyu and Masai, the choice being made on account of the fact that the reserves adjoin while the dietary customs of the tribes are very different, the Akikuyu* being almost exclusively vegetarian and the Masai chiefly carnivorous.

K M 126 [114]

The two Reserve areas were visited alternately during a period of over a year and a half, each trip occupying two or three months. Samples of all foodstuffs in common use were collected and despatched to the Rowett Institute for analysis. The samples consisted of articles of diet in the raw state, cooked foods, edible earths, salt substitutes, and natural mineral waters used in cooking.

K M 125

A physical examination was made of 6,349 Kikuyu and 1,546 Masai† adult natives of both sexes and all ages. The examination was made under eighteen heads, including stature, weight, chest, abdomen and calf measurements; presence of anæmia; condition of teeth and gums; general physical and muscular development; strength as indicated by the dynamometer; presence of hernia, splenomegaly; ulcers.

A similar examination was made of 2,500 Kikuyu and 254 Masai children. The special object of this examination was to compare the tribal incidence, during the growth period, of osseous deformities, dental caries, periodontitis, anæmia, and general signs of malnutrition.

The subjects examined for physical condition were taken at random from the healthy section of the community in all parts of the Reserves. Great care was taken to exclude any sick native who presented himself. Apart from this, no selection was made, and the records may be taken as representatives of the average native of the Reserves.

An estimation was made of the diseases prevailing in the two tribes. Hospital returns were analysed, but, as it became apparent that, for

K [101]

* The prefix "A" in Akikuyu has a collective sense, the term "Akikuyu" referring to the tribe as a whole, while the term "Kikuyu" has only an adjectival significance.

K [161]

† It should be noted that the estimated populations of the Kikuyu and Masai Reserves at the end of 1929 were respectively 795,934 and 48,547.

14:Orr & Gilks D-4 (no date) 1931 FL12 Masai FL12
Kikuyu FL10
Kenya FL1

M 10 233 (ii) *The Masai.*

The Masai are a pastoral tribe whose sole occupation is the tending of large herds of cattle, sheep and goats. It has been estimated that they have about 25 head of cattle, and twice as many sheep and goats, per head of the population.

M 262 261 [363] The staple articles of diet are meat, milk, and blood. The blood is drawn from the living animal by puncture of the jugular vein with an arrow. Various roots and barks are used to make infusions which are used either with boiled meat or with milk. The men, while in the "moran," or warrior class, subsist practically entirely on these articles of diet. The rest of the population, in addition to these four items, which form the main part of their food, eat also some bananas, beans, millet, arrowroot, maize, sugar and honey, as M [177] these are available. The use of maize, which was introduced only a few years ago, is increasing.

For the greater part of the year there is no scarcity of meat, blood and milk, but in periods of severe drought, when, in spite of the large herds, the milk supply is inadequate, the consumption of these vegetable foods is increased, and even the "moran" may be compelled to supplement their meat and milk diet.

M [484] Berries are eaten by the warriors when on safari, *i.e.*, on hunting or fighting expeditions. It appears also to be customary to send the [843] pregnant women into the bush to eat berries. The berries would [146] make an insignificant contribution to the main constituents of the diet, but it is probable that they are of considerable importance as an antiscorbutic addition.

M [184] One section of the tribe, the Loitokitok, have adopted a frankly mixed diet. It is of interest that pica among the Masai is confined to this section, who use edible earths from various sources with their vegetable foods.

(*b*) Chemical Composition of Native Foodstuffs, Edible Earths, and Mineral Waters.

Ka M K 146 The results of the chemical analysis of 153 samples of substances used in the dietary of the two tribes are given in Appendix I. Certain points of interest are discussed below.

(i) *Foodstuffs.*

In the following table a comparison is made between the analyses of the chief Kenya foodstuffs and analyses of similar products grown in other regions, probably in Europe or America, as quoted by Sherman (1926). All the figures are given as grams per 100 grams dry matter.

	Kenya Maize.	*Maize.*

Cl	·05	·058
K	·42	·48

14:Orr & Gilks D-4 (no date) 1931 FL12 Masai FL12
Kikuyu FL10

It will be seen that the first three estimates are in good agreement with the actual weighings. The fourth, which is an estimate of the upper limit of food intake, probably represents a quantity well above the usual average. K 262 128

Taking all the available information together, therefore, it is believed that an estimate based on the samples actually weighed and measured forms a sufficiently accurate approximation to the daily food intake.

(ii) *The Masai.*

The assessment of the composition of the diet presents fewer difficulties in the case of the Masai. While a certain amount of differentiation exists between the sexes, it is less marked and of less importance than that between Kikuyu males and females. The following figures show the approximate amounts of the different foods taken :— M 262

Average Diet of Masai Male of Warrior Class.

Meat	1,135 grams.
Milk	2,000 c.c.
Blood	50 c.c.

Average Diet of Women and Males, not Warriors.

Meat	450 grams.
Milk	1,400 c.c.
Maize Meal	250 grams.

(iii) *Comparison of the two tribes.*

On the basis of the above dietaries, the following table has been prepared, comparing the average daily intake of the most important constituents of the diets in the two tribes. K M 146

Comparison of probable Average Daily Intake (excluding incidental Food Consumption) of Dietary Constituents by Kikuyu and Masai.

There are no standards, based on experimental data, for the food requirements of African natives. Breinl and Young (1919–20) reviewing the existing information on dietary requirements in the tropics, conclude that "in general, the requirements in calories, either of white men or coloured natives, does not differ appreciably from European standards." Further, there is no reason to expect that there would be much difference in the relative proportions of the different constituents required. Hence, considering the analyses on the basis of European standards, the caloric value and protein intake appear to be ample. The amount of fat, however, is distinctly below 60 gms., which is regarded by several writers as the desirable amount.

We have little experimental information on the calcium and phosphorus requirements of men. Sherman and his co-workers, from the results of their experiments, consider that the minimum requirement is 0·45 gm. of calcium per man per day. To bring the

Ka 164 146

In the absence of further information, it can only be said that the results of this investigation suggest that susceptibility to ulcer, which appears to be general amongst natives on ill-balanced diets of the type mentioned, is correlated with a high blood inorganic phosphate, occurring with a normal, or slightly subnormal calcium, and that the actual occurrence of ulcer is associated with an exaggeration of this abnormality.

IV.—SUMMARY OF RESULTS.

M K 146 164

Preliminary observations and a review of existing information suggested that disease is more prevalent amongst native races than is generally supposed, and indicated that the incidence of certain diseases might be correlated with diet.

A survey of two tribes, the Masai and Akikuyu, showed that the diet of the former consisted to a large extent of milk, meat and raw blood, and that of the latter mainly of cereals, roots and fruits, the bulk of the diet being cereals. The outstanding points of difference in chemical composition of the two diets were that the Masai have a relatively very high intake of protein, fat and calcium, while the Kikuyu have a high intake of carbohydrate and a low one of calcium. Differences were found in the dietary customs between men and women in both tribes, the diets of the females approaching in each case to the mean between the diets of the males.

M K [262]

M K [141]

Physical measurements showed that the full-grown Masai male is on an average, 5 inches taller and 23 lb. heavier than the full-grown male Kikuyu, and his muscular strength, as determined by the dynamometer, is 50 per cent. greater. Marked differences were found in the incidence of disease in the two tribes, bony deformities, dental caries and anæmia, pulmonary conditions and tropical ulcer being much more prevalent amongst the Akikuyu. On the other hand, intestinal stasis and rheumatoid arthritis were more common amongst the Masai.

Ka [146]

Analyses showed that routine Hospital and Prison diets are markedly deficient in calcium, the average daily intake being only about 0·3 gm. Ca, as compared with the assessed requirement of about 1 gm.

K Ka 147

Examination of the blood of Kikuyu and other natives on a similar dietary showed that the concentration of calcium was lower than the European standard, the average of 90 cases, prisoners and farm labourers (not pathological) being 9·4 mg. per 100 c.c. serum, as compared with 10·0 to 10·5 mg. in Europeans at home, and 11·4 mg. in 13 Europeans in Kenya. The range of variation in blood calcium was wide, from 7·3 mg. to 11·2 mg., the highest figure being below the mean for Europeans in Kenya.

561 warery of old: 'I am the son of So-and-So,' and 'I am the Son of
535 Such-and-Such' and drive their branding irons into the outcrop.
[386] They fill their gourds with it and then return home and are
[574] treated with great reverence at Masai villages *en route*, being fed
[262] on a hot mixture of milk and water, known as 'blue water.'

Once painted, the young men formed into two columns, some 50 yards apart, and marched to the village. Many wore ostrich headdresses and some the lion-mane caps. Around their necks and waists they wore gaily coloured lengths of calico and beaded thongs secured crescent-shaped bells to their thighs. The clashing of the bells was deafening. This return journey to the village is carefully planned so that the young men do not have to walk through or near any water or cross a stream. On nearing the village, the columns counter-marched, then joined together into double file and entered the arena. As they passed, their mothers called out: '*Endopok*!'—'May you survive!'—but many of the women were busy attending to those throwing fits. There were a number of very violent ones as soon as the columns had passed within the circle of houses. Then the columns split up into groups and marched back and forth across the arena, each group
[534] led by an elder blowing a kudu horn (one of the very few Masai musical instruments). Now and then two groups would halt and, forming line, kneel and bow to one another; or to the *O-Singira* hut.

56 Late in the afternoon of this day the mothers of the 49 'pure
[302] ones' shave their sons' heads. All the hair, eyebrows included, is
[413] removed by means of a spatulate Masai razor. Milk is used in place of soap. Whilst being shaved, each young man squats in front of his hut on the ceremonial hide on which, as a boy, he had sat to be circumcised, and which, in future, will form the top layer of his mother's bed. A little of the hair from the *Ol-Otuno* and his lieutenant is also put in their mothers' beds, the remainder being thrown into the calf pens which form a part of their family
[825] home. Great care is taken that none is left lying about in the open
[554] in case birds should use it for their nests—a grave affront to the young men's sacred role.

During the course of the day the branches used as night barricades between the houses were replaced with new ones bearing
[789] green leaves. This is a symbolic act, meant to ensure that the *muran* may flourish as 'green bay trees.'

The third day is called 'The Day of the Sacred Hut.' During the morning a heifer, a gift to the *Ol-Otuno* from his father, is driven into the bush and slaughtered. This animal, called 'The Cow of the Rings,' must be a first-calver, well built, and black with a white belly. All the *muran* gathered at the slaughtering place to receive their rings from 'The Cutter-up of the Hide,' whilst their families waited in the village in an atmosphere of great expectancy.

Late in the afternoon the first of the *muran*, naked and still whitened with diatomite, came running back to his hut. There he received a deafening welcome from his family, whom he then led in a boisterous procession round and round the sacred hut. Soon, the whole arena was full of *muran* leading their families round the *O-Singira*, everyone shouting and highly excited. Each young man wore, on the third finger of his left hand, a ring from the hide of the *Ol-Otuno*'s heifer. These rings are really only strips of hide about four inches long with a hole near one end to take the wearer's finger. After a time, the 'pure' 49 arrived, their shaven heads gleaming, white circles of diatomite like spectacles round their eyes and garlands of green leaves round their necks. They stood in a group near the *O-Singira* whilst the *Ol-Otuno* was led to his hut. In front of his doorway was placed the hide on
[351] which he had sat to be shaved, and on this was set his three-legged stool, and into its concave seat was poured a mixture of water, milk and honey. The *Ol-Otuno*, who seemed all too conscious of his role of scapegoat, then sat on the stool.

M D 142

eyes are almond-shaped, straight or somewhat slanted. The nose is extended, narrow, and, at the root, flat or very moderately deep-set compared to the forehead. The alae are narrow and very flat, the nostrils roundish to longitudinally oval, less often transversely oval. The bridge of the nose is straight, sometimes slightly convex. The lips are full, without appearing actually protruding. Protruding, thick lips are something so rare and striking that they earn their owner the name Lebeleb -- thick lip (or actually: uproar, loud noise). The ears are small, except for the hyperplasia of the upper edge of the ear and ear lobes caused by the wearing of heavy ornaments. The hair is evenly distributed over the scalp, which is most clearly shown on recently shaved heads. The hair often appears "tufty," but this is artifically produced. Only at a length of from one to three centimeters does it curl slightly and /14/ almost never becomes completely curly. The arms and especially the legs are very long, the wrists thin, hands and feet, especially among female individuals, small, narrow, and delicate, the fingers are slender and often strikingly long and narrow, the fingernails long, narrow, and slightly arched.

M D 619 174

Even if the racial membership of the three branches were to be traced anthropologically, one can determine an even closer connection ethnographically, which must lead to the conviction that all three belong to the same people. The difference in their principal occupations, to be sure, seems at /Ill. 3 appears here/ first glance to indicate a sharp division. As has already been pointed out above, however, one can easily explain these differences by the consistent behavior of a people of similar customs and habits under unlike external circumstances. The predilection for stock raising, based on the eagerness for a meat diet, and the nomadic life necessarily growing out of it were common. While the Wandorobo had to endure it when their livestock fell victim to epidemics and raids of the strong Wakuafi, the latter, under pressure from the still mightier Masai, had to flee from the open plains to fixed residences in the mountains. The Wakuafi protected

619
197

/15/ Even though, in general, one should be very careful in ethnology about drawing conclusions from linguistic bases, it seems permissible here, on behalf of the three branches' belonging to one people, to point to their language as well.

As a matter of fact, we find the same language among the Masai and Wakuafi, with the limitation that for the latter, with the great number of Masai dialects, sometimes this one, sometimes that one is their own, according to the location of their area, whereas the very widely ranging Masai probably understand almost all the dialects. In addition, for the Wakuafi, in places, according to the degree of their mixture with Negro tribes, a language of the latter's is more or less familiar. Of the Wandorobo, the El

D
197

gasurek speak only the language of the Masai, whereas the Asá and

/21 cont./

791 576 609 rises, goes toward him, and, with the customary greeting, extends his hand to him, whereby, not this, but the wrist is grasped. After the concluded discussion, for which there are no particular formalities, he takes his leave with the ordinary farewell.

791 789 In the way of food, the ol oiboni takes only goat liver roasted on the fire, milk, and honey, for, through any other food, "he [262] would suffer the loss of the capacity for prophecy and the preparation of efficacious magic charms." Of these arts very little is [173] supposed to have been handed down to his son Lenana and still less to Zendeo, through which it is all the more explicable that the /22/ Masai today tell of hundreds of different kinds of miracles that Mbatyan allegedly performed. According to them, he could fell large trees by sheer will power, or he had the hut in which he was to be found set afire by his attendant, and, after it had burned down, he appeared, uninjured, out of the ashes.

756 [613] From the En gidon lineage there are further supplied, as has already been mentioned, the sorcerers or medicine men (ol goiatiki, el goiatek), several of whom live in each district. Their office, too, is handed down from father to son, who, however, is usually initiated into the whole secret art only after his marriage. The [789] most important magic charm in the life of the Masai, the war medicine, the ol goiatiki does not know how to make. Rather, one turns to him only in cases of illness of human beings and livestock for which the well-known remedies fail, or which one traces back to the sorcery of evil neighbors, as well as to determine unknown wrongdoers (thieves, murderers, etc.).

613 [776] The lineage of the El kiboron of the El mileljan tribe, who, according to the view of all the people, are especially favored by 'Ng ai, the god of the Masai, which has made them primarily the bearers of the religious traditions, require a special discussion.

613 157 Corresponding to their position with 'Ng ai, they are distinguished by a relative peaceableness. The young warriors, to be sure, also set out on raiding expeditions with the other lineages, but they thereby seem to avoid any unnecessary roughness or brutality, in which the others often compete. The passion for disputes, quarrels, and vituperation, a prominent trait in the character of the young

/31 cont./

517 For the most part an atmosphere of dullness and boredom lies
535 over the kraal of the married (eṅg aṅ el moruak). Only on moon-
[533] lit evenings /32/ do the women amuse themselves with song, especially if a few warriors are there on a visit and give the impetus for the gaiety. Women and warriors dance in separate groups. For dancing the women station themselves in a row, move forward a short distance, then make a "right turn" and, with short steps, dance in a row back to the former place. The married men dance only on festive occasions, but by themselves. The text of the accompanying song naturally refers to the life prevailing here.

517 Otherwise quiet prevails in the family kraal after darkness has
521 set in; in good weather the people will sit for a while in front of
513 the huts, silently or softly conversing, and go to rest already at 8:00 o'clock or 8:30.

621 Even 12-14 years ago, before the Masai lost their huge
592 livestock-holdings in two great epidemics, each family had its
178 own kraal; now, on the other hand, almost everywhere several
233 families live together.
731

In the morning life begins around 4:00 o'clock, at which time
512 the women fetch the quite young calves from the compartments
[462] and take them to the cows, where they remain for the driving out
[233] to pasture. At daybreak the milking commences, for which all
[234] the women appear. After it is finished, breakfast, consisting of
264 fresh milk, is taken. Milk, soups, and thin porridge are drunk
[512] from gourd bottles; foods of greater consistency are put in the
[262] mouth with the fingers. Meat is partially cut up with a knife and
[415] completely torn into bits with the teeth. The hands are not washed
[412] before a meal. Smacking and belching while eating show good breeding. Men and women eat apart and have their separate vessels for eating and drinking. Those of the latter are shared by the children. If the man wishes to eat in the hut, the woman has to leave it beforehand.

/32 cont./

512 When the livestock have been driven out of the kraal to pasture,
[462] the women and children start to clean it. Then the fire is lighted
[351] in the huts and on it are placed the pots filled with water in which
[252] the vegetables are to be cooked. These pots (e modi, 'modio) are
[415] not made by the Masai themselves, but are bought from sedentary
[439] tribes or also from the Wandorobo, who presumably learned the
potter's art from them. They are a foot high and globular. In con-
262 trast to the warriors, all the occupants of the family kraal, espe-
[241] cially since the cattle epidemics, eat vegetable food which they
buy from the neighboring peoples, since they themselves do not
262 engage in any agriculture at all. Their favorite foods, however,
272 are, of course, milk, meat, and blood. Milk is always drunk by
[158] healthy people uncooked, as fresh (en gule) or sour (en gule naoto);
boiled milk is food for the sick and as such is usually mixed with
pulverized grains of ol lodoa (Maesa lanceolata). Sheep milk is
especially popular because of its very high fat content. Blood of
cattle, sheep, and goats is drunk fresh or eaten in the clotted
[158] state. Milk mixed with fresh or /33/ cooked blood (en jiwot) is
greatly appreciated; this drink is highly esteemed as invalid soup
[234] for the wounded. Cheese making is unknown. Butter is made by
agitating the cream in a large gourd-bottle (en diagolgol). Fat,
[252] rendered in a pot, is used as an ingredient in other foods, especially
[263] meat broth, but is also drunk without any admixture. Meat is
prepared without adding salt; it is cooked either with various
spices or roasted on a stick at the open fire. One does not eat in
[252] one day cooked meat and milk /Ill. 13 appears here/ together
[153] (1).
[263]

[171] 1. This was also forbidden for the Hebrews, according to the 2nd Book of Moses 23, 19-34, 26, passages which are part of the so-called Yahwist documents, that is, the oldest sources of the Pentateuch.

because the latter together with the ol mokotan spice (bark of

262 Albizzia anthelmintica) always used in the cooking of meat is
272 supposed to cause severe diarrhea. Therefore milk that is offered
[153] is often refused in the hope that a meal of meat will be obtained
[263] on the same day. One who wishes to partake of both foods in one day -- and where is there a Masai who could resist an invitation to a meal of meat?! -- vomits first before eating the meat, for which he produces the necessary stimulus by means of a blade of grass stuck in the throat. If one has eaten cooked meat today, then /34/ one first drinks some blood in the morning before the milk, not out of considerations of health, but rather because it is believed that the livestock would give less milk as a consequence of neglecting this custom. Bringing milk into contact with meat
[231] is most scrupulously avoided, because, according to the general view, through that the udder of the cow from whom that milk came would become permanently diseased. For this reason the

/34 cont./

262 272 Masai only most reluctantly and infrequently sell cow's milk, for the buyer indeed could in the above-mentioned manner make their cows sick with it. The Masai scorn any kind of game meat, as [136] well as birds and even fish, of the latter of which species of Barbus, Chromis, Clarias, and the sheatfish-like Synodontis occur almost everywhere in larger brooks.

252 262 263 The preparation of the principal vegetables is the following: batatas (ol muruṅgu, el muruṅguni -- Ipomoea batatas) are cooked in water with a little steppe salt (e munján), then drained, mashed with a whisk (ol gibere, el giberen), and stirred with fresh milk. The finished dish is called el muruṅguni. Unripe bananas (ol marigol, el marigo -- Musa paradisiaca) are peeled, cut up, and cooked in water with salt. After they have been drained, a little butter (eṅ gorno) is added. Unripe dried bananas (ol kitáno, el kitáṅón) are cooked in water, drained, and then stirred with milk and butter. Maize kernels (ol bálegi, el bálegi) are cooked in water without the addition of salt. Beans are cooked with salt. One distinguishes ol bombol -- el bombo (Dolichos lablab), eṅ giá --eṅ giṅn (with which both Cajanus indicus and Vigna sinensis are designated), furthermore os sigoriol -- es sigorio (Phaseolus vulgaris), ol gámuri -- el gámuri (Phaseolus radiatus). Eleusine coracana (en dabá -- 'n dabán, or en drigá -- 'n drigán or also called eṅ guruma -- 'n guruman) and Sorghum vulgare (ol birirí -- el biriríṅ) are cooked to a thick porridge and lightly salted. Dioscorea abessynica (ol geré -- el gerén) and Colocasia antiquorum (which the Masai on Kilimandscharo designate with the Dschagga /Chagga/ word maduma) are cooked in salted water.

Honey (en aischo -- 'n aischi) is eaten unmixed and is also used as an addition to various medicaments. They buy tobacco 276 [439] (ol gumbau, Nicotiana rustica), which the Masai consume in quantities, from sedentary Negroes, who put it on the market in loose, bast-wrapped packets (Fig. 4) of various sizes or in the shape of solid balls about five centimeters in diameter. [415] → For the preparation of this, the tobacco leaves, picked ripe, are tightly packed, tied up with

Fig. 4

/36 cont./

524 Now the partner starts in the same way playing in his row, /37/ to let the other play again as soon as he has placed a last stone in an empty compartment. The one who places a last stone in an empty compartment of his own row takes it and the ones lying in the adjacent compartment of the opponent's row for himself, and so on until, according to the rules, no more stones can be taken out of play. The one who has removed the most stones has won the match and gives himself a point. Serving as counters [802] [239] are small, finger-thick, and spindle-shaped ivory sticks 15-20 centimeters long (ol alai, el ala) (1).

1. As tooth generally is called tusk of the elephant, ivory.

Before the game starts, there is an understanding as to how many points are to be played. Women never play this game, warriors rarely. The latter usually prefer the en gebé ('n gebén), which is played in much the same way, except that in any case about eight players for each side take turns and each row has 40 to 50 compartments, which are not chiseled into a board, but are scratched into the ground.

843 observed, since as a rule a new pregnancy ends the nursing period.
[853] The pregnant woman removes the ornaments that she previously
[183] wore, in order -- as the Masai explain this custom -- not to entice men. During the first five months of pregnancy the woman lives as usual with respect to food and drink. Then she is given a broth of
[262] lung, liver, and kidneys cooked with a bitter-tasting tree bark (2)

2. From Albizzia anthelmintica.

called ol mokotan, and milk, only the latter during the last month. Through this the woman is supposed to become as exceedingly thin as possible, so that the birth will proceed easier. She may not eat the meat of fallen livestock. The husband during this time need not subject himself to any special diet or special acts, but he may not go to war, for it is believed that he would die on the way. Shortly before the delivery the husband may not leave the kraal or its immediate
[732] vicinity. If he should tease a crippled person or mock him because of his infirmity, the awaited child would come into the world af-
844 flicted with the same defect. /51/ For a successful delivery the
[782] pregnant woman prays: 'Ng ai ndaba 'ndubuggu en tiamassi (1)

1. Or en diamassi.

"God let come out healthy -- the monster," as the unborn child is called. The woman gives birth in her hut, which on this day may be entered only by women and girls. A midwife (eh gaitoijoni, h gaitoijok) provides or performs the necessary assistance. If the newborn child is a boy, the midwife calls out that blood should be drawn from an ox as food for the woman in childbed; in the other case, from a heifer. Through this the father also learns the sex of the new-
[782] born child. During the birth process the women who are in the hut or standing around it cry to God for help and assistance in shrill, often
845 plaintive voices. The birth of a boy is more desired than that of a
[842] girl, but the greatest joy prevails at the birth of twins, especially if both are boys. In that case the woman often keeps only the first-born child with her, while the second one is nursed by another suitable

881 /63 cont./
[304] words and blows by the assembled warriors, because they did not
[866] rear their son to have the hardening and self-control necessary for
[626] a warrior, while the weakling is reviled for a long time afterwards as ebíryo = coward, or tórónó = the bad one. After the circumcision all the men of the neighborhood gather in the kraal, where they are
[872] regaled with meat and honey beer by the fathers of the ones just circumcised, after the latter have kindled a fire with juniper twigs (Juniperus procera). The festival is called ol ogór l el aíjok amerite,
[252] that is, the festival of the circumcised boys. Unbelievable amounts (1)
[262]
[261]

1. I once observed that my four Masai boys together at an evening meal ate over 80 pounds of lean meat.

of raw or half-cooked meat slightly roasted at the open fire are consumed in the shortest time by the married men and women, whereas the warriors neither eat meat nor drink honey beer, but only take
[522] some fresh milk. People joke and laugh and everyone seems to
[521] want to outshout the others. The warriors boast of alleged heroic deeds in former wars and discuss the prospects of the ones circumcised that day on their first military expedition, which will perhaps take them to this or that region, where they themselves had made an attack only a short time before. The fathers dream of their sons' future heroic deeds and are happy at the thought of the rich booty with which
881 the budding warriors will augment the paternal herds. Suddenly the
626 glances of a few who had just been joking darken and turn toward
152 a distant hut at whose door a solitary old man is sitting. They jump up and go toward him with quick steps. The angry expression on their faces matches their rough and abruptly uttered invectives and threats, in which one hears the reproaches that the old man has brought up his son to be a weak coward, who during the circumcision betrayed his pain by a twitching of facial muscles and a half-suppressed groan, which they, however, jeeringly compare to the roar of pain of a bull being cut. The old man has quickly fled from their imprecations into his hut, and his attackers vent their wrath on two gourd bottles of honey beer left standing, which they knock over and

881 /63 cont./
[626] trample underfoot. The one now scorned had also wanted /64/ to
[152] regale guests with it on that day, but no one came to him whose son
showed himself to be a tŏrŏnŏ. While the old people, as long as
[535] there is something to eat and drink, are only interested in that, the
[533] warriors, already early in the afternoon, start to dance and sing
with the young girls and amuse themselves in this way into the night.
Not until about ten o'clock do they go back to their kraal, to which
the girls presently follow them, after they have begged for a little
more milk, which they take along to their lovers. /Ill. 18 appears
here./

[158] The circumcised boys, soon after the completed operation, went
into the huts of their mothers and stayed there for seven days, until a
superficial healing of the wound has taken place. In order to hasten
this, they are particularly well cared for and are given only milk,
[411] blood, and meat. During the following period, until complete
[223] healing, they roam in small bands with bow and arrow -- they do not
use the ordinary bows, but ones only about half as long, made only
for this occasion: the arrows used with them have a wax ball at the
tip -- through steppe /65/ and forest, in order to shoot small birds,
the skins of which they string by the beaks on a cord, which they
place garland-like around forehead and occiput. Between the bird
[301] skins the es sibolio (sing. os siboli) -- as the newly circumcised ones
[302] are called during their recuperation -- stick an ostrich feather on
each side of their heads and paint their faces with white clay (en
doroto). On the first day they go out, they slaughter a white goat-
[262] buck on the steppe. After they have roasted and eaten its meat,
they throw the gnawed bones into the fire. This meal is called ol
gĭne l ol benek (ol gĭne = the goat buck, ol benek means the tree
with whose branches they make the fire). Every evening after their
excursions they return to the kraal and to the huts of their mothers.

881
591 As soon as the young girl, who until then has lived in the warrior
kraal in the most unrestrained freedom, concludes from certain

000 Age classes. -- The annual courses of an age class. -- Age-class association. -- Organization of the circumcised. -- Choice of speaker and of the ol aunoni; their activity. -- Festivities at the formation of an age-class association. -- Significance of the age classes. -- Division of an age class. -- Names of age classes.

561 All the boys circumcised during a series of circumcision years belong to an age class (ol borōr). Within them the boys form, since they are circumcised at yearly or somewhat longer intervals, annual courses by way of divisions.

The first annual course of an age class is the el jaṅgēn ōbīr; they are followed by the el bariṅgo-duallan; the youngest annual course of the ones circumcised during the circumcision years is the el gerimbot. They are followed by a fourth one, the el oirogua. These are circumcised only after /72/ the circumcision years have officially ended by the celebration of the eṅ gebāta festival ordered by the ol oiboni. Anyone who wishes to be circumcised after this festival may not take part in celebrating the above-mentioned festival, otherwise his circumcision is not permitted.

Every two age classes together form an association (ol adji) in which the older is designated as the right circumcision (emorat' ertatenne), the younger one as the left circumcision (emorat' ekediēnje). Each of them has definite rules forbidding for them the uttering of certain words or the enjoyment of certain foods. The emorat' ertatenne may eat neither head nor tail pieces of slaughtered livestock and do not say eṅg aṅ en dare for goat-kraal, /Ill. 25 appears here/ but rather e merata en dare; moreover, they say ol ogunja for head, and not ol ukuṅgu, and for tail piece, not ol gorom, but rather en aisuba. The others may eat neither gourd nor cucumber, and for arrow poison they say en duerai, instead of e sajēt. It is an insult, which often leads to immediate violence, if the one does or says the things forbidden to the other, which are called en dorotj, in the latter's presence.

561
262
784

/76 cont./

561 701 According to this, the institution of the age classes together with the existence of the age grades, which were more sharply defined and made more prominent in their meaning by the former, seems so important for the maintenance of a constantly war-ready troop that the thought obtrudes as to whether that institution did not first become formed out of a striving for such a band of warriors. [703] The warriors' living together as a valuable impetus for comradeship and esprit de corps, in which lies a chief condition for success in war, leads further to celibacy and then to free love; one can see as its sequel the women's society that belongs to an age class. This in turn then is the first step for mother right, of which, indeed, we also find remnants among the Masai.

X.

000 Introduction of the youths to the warrior life. -- Their first war expedition. -- The ol oiboni gives them the name for the age class. -- Shield escutcheon: its individual constituent parts and their meaning. -- The youths become warriors.

701 702 561 [291] [302] [411] As soon as the circumcision wound has healed, the circumcised exchange the long apron (ol gelí, el gelíni) for the short skin-cape (e megiti, /77/ megitin), again put on their ornaments, anoint their bodies with red paint and, after they have once more shaved their heads, set out as el barnot (sing. ol barnoti, formed from barno = bald-headed), armed with spear, club, sword, and shield, into the bush to celebrate the ol geteń l oń gutui. Spear, shield, and sword are gifts from their fathers; they have carved the club themselves. As we shall learn later in connection with the warriors, they divide themselves into mess-groups of five or six. In the forest they erect [342] a kraal of thorns for themselves or even build small huts out of leaves. 701 702 561 522 [262] [822] The festival consists of consuming large quantities of meat and nothing but meat! For this each participant furnishes a fat ox obtained from his father, which must be plain-colored, black if possible.

[Warrior Kraal]

/84 cont./

701 As long as the latter stays in the kraal, his girl is obliged to
836 remain faithful to him, but if he leaves it, even for only one day, she is entitled to console herself with another kraal companion, provided that between her and him -- as is also a condition for her relationship with her os sandja -- there is no obstacle such as the above-mentioned obstacles to marriage based on lineage affiliation.

233 The tending of the livestock falls to the boys. Even at night
857 they sleep outside in order to watch them and are assisted in the watch by the mothers, who take turns several times every night and frighten off wild animals by shouting.

361 Within the ring of huts there is a circular kraal of thorns for
/85/ the cattle and near that a narrower one for goats and sheep,
233 while beside almost every hut there is a small lean-to for the young
417 calves and a barricade of branches for the older calves of the in-
[343] dividual ones. Thus everyone remains responsible for the barricading
[672] of his calves and, if at night they should find their way to the cows, has no excuse for starting a quarrel with others in the morning on ac-
701 count of the lack of milk. Milk is the only food that the Ol morani
• 262 takes in the kraal, and the lack of it is therefore especially grievous.
264 Outside of it, only meat serves the warriors as food, and, to be sure, only that from cattle, sheep, and goats. They do not take vegetable
[273] food, honey beer, and tobacco. The meat meals are always held
[276] outside the kraal; a slaughtered head of small livestock is consumed a few hundred meters from the kraal, behind a bush, whereas for the consumption of a head of cattle a more distant spot under a shade tree in the bush /Fig. 18 appears here/ or forest is chosen. For these
701 forest meals (ol bul, e buli) mess companies are formed in every
262 warrior kraal, which are designated sirit' ol bul and which consist of
264 five or six members, each of whom is called os sirit ol bul. Such
574 banquets take place once or twice a month for each mess company and last three or four days each time, during which an ox is consumed. Besides the warriors, one to three girls also take part, and also a few boys as servants for fetching pots, water, and firewood, as well as for kitchen work. Prior to the slaughtering each mess company splits up into two equal-sized parts, each of which is called
000 ol gibet and prepares its own camp. Under a shade tree with thick

[Warrior Kraal]

701 /85 cont./ **Under a shade tree with thick**
361 foliage a spot about 20 to 25 square meters in size is cleared and en-
342 closed with a barricade of branches. During the rainy season in place of this kraal a small hut (Fig. 18) is built out of leaves. Its approximately circular ground plan has a diameter of two to three
701 meters. On the side opposite the entrance opening is the common
342 sleeping place of the ol gibet com-
35 panions; between this and the door, the hearth; beside the door the space for firewood.

Fig. 18.

a) Sleeping place. b) Drinking bag.
c) Pole for meat.
d) Hearth. e) Firewood.
f) Entrance.

[415] Close beside the sleeping
[237] place hangs the stomach or
[276] bladder -- from the head of cattle just slaughtered -- filled with an extract of roots and barks that acts as a nerve stimulant and is drunk whenever one is thirsty (ol oōni).

[251] In the vicinity of the hearth the meat supply, is hung on sticks (ol
701 alele). In the vicinity of the warrior hut the serving boys build them-
342 selves their own, considerably smaller one. One calls kraal or hut eng adji ol bul. Each ol gibet receives a longitudinal half of the
701 slaughtered head of cattle, from which, however, it immediately
262 gives back the pieces intended for cooking for the common meals
264 of the day. /86/ The picked-out fat is cooked together with this
[252] meat, and to the whole are added extracts or decoctions from roots
[276] and barks (especially from ol getalassua (1),

1. Myrica kilimandscharica Engl.

ol giloriti (2),

which have a strong stimulating effect. The rest of the meat, roasted at an open fire, is then eaten by each ol gibet in common, and, to be sure, at a morning and an evening meal. The head of cattle is furnished in turn by the participants or their fathers.

The longest forest meal takes place as a rule in the month kipër. Since the pasture is poor then, the livestock gives so little milk that the warriors sometimes live for a whole month on almost only meat.

701
537
[293]
[237]

At the head of the warriors of a kraal stands the speaker (ol aigwenani or ol airohani). The badge of his office is an especially beautifully worked club or rhinoceros horn (4)

4. The straight horn of a species of Rhinoceros bicornis not yet described to my knowledge, which the author found at the beginning of 1896 in the steppe southeast of Kilimandscharo, is especially popular for making these clubs. The horns of this species (or variety) differ from those of the ones described thus far by the fact that they are quite straight and in cross-section never round, but rather so strongly compressed laterally that they appear sword-shaped; the front horn is often shorter than the back one.

or ebony wood. It is swung like a baton in connection with the speeches accompanied by numerous gestures, in order to give emphasis to individual words. This is also achieved in the manner of speaking, by the fact that one pronounces the emphasized words long drawn out and repeats the emphasized sentence several times. The speech to a larger gathering is always delivered very loudly and vigorously. While the listeners squat on the ground, the orator stands erect, his glance directed alternately toward one or the other of the chief persons among the listeners. What the orator lacks in logic he tries to make up for by verbosity, dialectic, and higher pitch in tone. The members of the audience often give the impression of rapt attention, their glance is almost continually directed at the one

[516]

[Warrior Kraal]

512 /89 cont./
701 Life in the kraal begins at sunrise, when the mothers and the
462 girls start milking the livestock. Not until around seven o'clock,
[233] when the boys drive the livestock to pasture, do the warriors get up
[234] to take the first meal (en daã e dadegenja = food in the morning),
[264] consisting of fresh milk. Then the women apply themselves to the
[272]

Ill. 33. Dance in the warrior kraal II.

512 cleaning of the cattle stalls and other work, as well as to start the
701 cooking of their food, consisting of purchased vegetables. This is
462 eaten around two o'clock in the afternoon (en daã e kat' aré, that
[262] is, the second meal), while then the warriors at the same time
[264] drink the rest of the morning milk, which has already become
[272] somewhat sour (eñg ule naisedjo = slightly sour milk). After that
512 the old women take a nap or busy themselves with sewing and making
535 ornaments, while the warriors along with the girls /90/ amuse
701 themselves with dance and song (os siñgólio) under a nearby shade
tree. For this a row of warriors stands opposite a row of girls. The
former dance in place by slightly lifting the feet and bending the

/94 cont./

726 'Ng ai's blessing upon the sons and their companions going off to war.
782 The old men hold a small gourd bottle of honey beer in the right hand, a similar one of milk in the left one, while the women have a filled milk-vessel only in the right hand. During the prayers loudly called out to heaven, they gradually pour out the contents of the gourd bottles as an offering to God and also sprinkle the warriors with
726 it. Many of the latter smear themselves on forehead and cheeks with
[237] fresh cattle dung, while the girls and the old women living in the warrior kraal put such, together with a bunch of fresh grass, on the hut roof close above the door. The custom expresses the confident hope of rich spoils in livestock.

/95/ Then the warriors march off, and, after a march of two to
[252] three hours, they pitch camp around sunset. Several head of cattle
[262] are slaughtered, the meat of which is roasted at the fire and eaten.
[411] At the same time they smear the thrusting spears with a paste of red earth or wrap them with grass or cloth so that their gleaming in the
[725] sun, visible very far away, will not betray them. Finally, they loosen the thongs of the sandals and fasten them on the underside in such a way that the sandal may be worn with the tip in the rear and the heel part toward the front, so that the footprints left behind
704 will be deceiving concerning their direction of march. During the
701 march comradeships are formed by two men in each case, each of
726 which calls the other os sirit ai, that is, my companion. /Ill. 37 appears here./ The duty of the companion is to stand by the other one in battle and, if he falls, to bring his weapon to safety. Five to ten such comradeships combine to make a section (ol ale), each of which
726 erects its own small camp. During the first days of march, still far from the enemy, it is fortified for the night by a few branches of thorns. On the evening before the attack it is replaced by the eñg adji en djoré. The spears are stuck in the ground in a semicircle about five paces in diameter, and against them, on the outside, the shields are placed in such a way that one overlaps the other like scales. The warriors lie or squat in this semicircle, armed with their weapons, awaiting

/160 cont./

805 The months of the ol airodjerod are: 1. le logunja airodjerod,
821 also called oiēni oiṅok, that is, the tied-up bulls. As a result of the
132 rich fodder of the recent months, they have become wild; in the pasture they would be constantly fighting with one another, hence they are separated. 2. bolos (= middle) airodjerod, or also, but more rarely, called ol dāt. 3. kudjorok, that is, cold; cool weather distinguishes this month.

805 The ol amẽji starts with the month kibér, that is, noise and
821 strife. The pasture is sparse and as a consequence the cows give too
132 little milk to satisfy all the people. Everyone tries to appropriate
261 for himself some of the milk from the livestock of others, through
262 which strife and brawls arise. Finally the milk no longer extends
[518] to necessitous satiation, and the majority of the warriors with a few cattle move into the forest for meat eating, which usually lasts not only through the entire month, but also even over the next month of ol doṅgos or ol doṅos or ol doṅgosch, since even then the milk is still very scant. The name seems to be formed from the word eh guschusch = food scarcity. Not until the beginning of the third month, of the boschogge, do they return to the kraals. From the
[276] abundant meat meals they feel very strong, and the heavy use of nerve-stimulating roots has affected their nerves to a high degree, and almost daily one or another has a fit of rage (1).

1. Cf. XIX, Nerve Ailments.

805 The Masai do not count years. Rather, they designate the year after the event seeming to them the most important one that happened during it, for example, after a livestock epidemic, a drought, the death of the high chief, a war expedition especially rich in spoils, etc. (2).

[171] 2. Just as the Babylonians, even in the 3rd millennium B.C., did not count the years, but gave each year a name after an outstanding event in it, especially after the deeds of the king. One proceeded similarly

/173 cont./

233 [561] [857] Small livestock and donkeys are tended by little boys, cattle by older boys, under the supervision of a few old men. Dogs are no longer used for this now; rather the livestock heeds the whistle or call of the herdsmen. To what extent this is the case is best demonstrated when Masai flee with herds of livestock. A number of men, shouting and whistling, run before and behind the herd, which rages across the steppe in a mad chase. In former times the [231] [178] herdsmen quite generally used dogs. The dogs did not serve so much to keep the herd together, but more for guarding. They announce the approach of predatory animals by barking or by hastening to the herdsmen.

231 /174/ As has already been mentioned above, fresh livestock blood alone or mixed with milk forms a food prized as quite particu- [262] larly nourishing. The blood for this is drawn off the living cattle and [272] goats in the following manner: A strap is tied around the animal's neck in such a way that the blood returning to the heart in the large vein is blocked by it and breathing is not affected. Then a man [411] shoots an arrow (Fig. 76) with a bulb-shaped, thick tip (ol ñoret), [415] from which projects a seale-shaped sharp piece of sheet iron six to eight millimeters long and equally wide, into the swollen vein, whereupon the blood squirts out in a stream and is caught in a gourd bottle (ol buguri). The bleeding is stopped by a simple untying of the strap after the operation is finished. From a strong bull or ox approximately four to five liters of blood are drawn at one time, from a cow only half as much, and this is repeated every month. No blood is drawn from good milch cows and cows with young calves. Blood is drawn from sheep by means of an incision in the depression above the eyes or between the eye and the middle of the forehead. The slaughtering of cattle is done by a stab in the neck after the front and hind legs have been fettered; goats and sheep are suffocated by having their mouths and noses held shut. Cows are never slaughtered, not even when they are too old to be used for breeding. 231 Livestock that has died is eaten. As soon as the animal is dead, one 262 removes the skin from the neck, severs the neck veins, and catches 561 the blood flowing out in the skin. The cutting up of a head of cattle is done with the greatest care; almost every single muscle is carved

/174 cont./

231 262 561 [593]

out, since special food laws determine to which class of people this or that piece will fall. From a head of cattle slaughtered during the meateating in the bush the warrior will send his father a shoulder-blade (ol ñarebuscha) and for the wives of his father the head (ol ogunja), paunch (eñ gonjori), the entrails (menér), feet (el oilelek), as well as the hind leg without the rear half (eñ gubés), and to the girls, the lateral belly-piece (e murté). The warriors eat all the rest of the meat. If they have visits from other warriors, the latter are entitled to the long, straight belly muscle (eñ gelemiân) and rear hocks (el oreschéta). On the other hand, if a head of cattle of a married man is slaughtered at the kraal, the warriors get nothing. From the cut-up animal there is put aside first for the other married men: the tongue (ol ñajéb), a shoulderblade (ol ñarebuscha), a rear hock, the rear part of the hind leg (ol móuo), the long belly-muscle; for the uncircumcised boys, the ribs (el erés), a rear hock, the filet (os sondi), the "flache /flat/ Roastbeef" -- as my cookbook calls it -- (ol oró), the heart (ol dáü). The rest of the meat is given to the women, who give the girls the lateral belly-piece and the neck (e murt) from it. The principal wife of the one to whom the slaughtered animal belongs is given the tail piece.

/175/ If the warrior slaughters a goat, the married men are given half the liver (e mónjua), the wives the paunch and head, the girls the back (en gorioñ) and the feet. If a married man slaughters a goat, he gives the wives the paunch, the rennet bag, spleen, entrails, and head, the girls back and feet, the boys a side of ribs, breast (ol oigoló), lungs (el kibiuk), heart, and a hind leg (eñ gedju muró), while he himself keeps the rest.

[593] From a warrors's sheep, the father gets the neck; the wives of the father, paunch, rennet bag, entrails, and liver; the sisters, feet and back. If a married man slaughters a sheep, the distribution to the women and girls is the same, and the boys receive the same pieces as from the father's goat. Of the individual pieces of meat, one boils [252] the bones for soup, furthermore the filets, the carved-out cutlets, the dark meat on the hind leg, and the heart. Everything else is roasted at the open fire. Brains and spinal marrow are not eaten, but thrown away. Bone marrow is sucked raw out of the smashed bones.

/175 cont./

136 Since the Masai do not eat game meat and hence do not pursue
[262] game in any way, it is usually very tame in the vicinity of the
[224] kraals and often grazes along with the cattle. The author saw an unforgettably beautiful scene in mid-1897 in the circular valley of Ngorongoro, where large herds of gnus and zebras, as well as Grant's and Thomson's gazelles, were grazing quietly and without any trace of fear beside and among the cattle herds of the Masai.

192 From the extensive nomencalture for the livestock, only the
231 most important words are given here:

ń gischu, cattle in general;
ol oiñoni (el oiñok) or (very rarely) ol mögira, bull;
ol geteń (el moñi), ox;
eń geteń (ń gischu), cow;
eń geteń naigauo nabo, cow that has calved once;
eń geteń natolsch are, cow that has calved twice;
eń geteń 'lebon, cow that has calved a number of times;
eń geteń olobí, sterile cow;
ol gedari (el gedari), small calf in general, which stays near the kraal;
ol medimí (el medími), older calf that is pastureed farther away;
ol arám (el arami), older calf that grazes in the vicinity of the large livestock;
ol boñai (el boñaikog), male calf;
ol asche or ol ahe (el asche, el ahe), male calf;
en dáuo (en dáuno), female calf;
eńg asche (ńg asche), female calf;
os sigiria (es sirgon), donkey in general;
ol amuć (el amuschi), male donkey;
/176/ os sigiria oidoń (es oidoño), castrated male donkey;
es sigiria (es sirgon), female donkey;
es sigiria naigauo nabo, female donkey that has foaled once;
es sigiria eleboń, female donkey that has foaled several times;
ol gurarú (ei guraruani), male donkey foal;
eń gurarú (ń guraruani), female donkey foal;
os sitimá (es sitimán), full-grown male head of small livestock;

752 /192 cont./
that of an egg or even amputates the member (hand, finger, toe), if
[758] this seems to him absolutely necessary. After the operation the patient is given raw sheep kidney to eat and a considerable amount of liquid sheep fat to drink, whereupon severe diarrhea soon sets in. Often one has him go through a sweat cure in that he is set over glowing charcoal on which leaves of Barleria mucronata and sheep hair are thrown.

On a scorpion sting (a-tonjo eñ golówa) one has a woman who has given birth to twins or, lacking such, a pregnant woman spit and rubs the saliva over the painful spot. As long as the pain continues,
• [262] [791] the patient eats only raw goat liver, to which is ascribed some kind of marvelous effect -- as is also shown by the fact that it is the only solid food of the ol oiboni.

Into the wound caused by a poisoned arrow another person urinates
[757] as quickly as possible. At the same time the wounded one is given as an emetic a mixture of the juice of the fruit of en dulele (Solanum campylacanthum) and the amniotic fluid (eñ géba) of a gravid sheep, which is slaughtered for this purpose.

757 For conjunctivitis (eñg ea eñ goño) a tobacco extract (eñ gare ol gumbau) or the juice of leaves of ol ogildia (Coleus kilimandscharicus), ol dungui (Harrisonia abyssinica Oliv.) and ol assajet, or an extract of the leaves of ol gummi, is dripped into the eyes.

752 The surgeon removes the remains of a violently destroyed eye, by drawing it out of the eye socket, with an awl bent hook-shaped, far enough so that he can cut it off with the razor. The eye socket is then washed out with warm water and not bandaged afterwards.

A place that has suffered a sprain or bruise the El dorobo rub
[171] with the juice of ol gerigus (Iatropha spec.). Sometimes they also apply the same drug by the method of rubbing the powder of the charred twigs into small incisions that are made on that place.

/193/ Dislocated limbs are set again and placed in a splint bandage that is not stiff. For a lower-arm dislocation the surgeon sits on the ground in front of the patient, grasps his lower arm just above the wrist, and sets it again by a gradually stronger pulling exerted in the required direction. He then puts around the affected
[237] part, from the middle of the lower arm to that of the upper arm, which are drawn together at an angle of 135°, a padded bandage consisting of a strip of sheep leather that is covered with as much thick and soft hair as possible. The padded bandage is tied with a

/349 cont./

178 that are started with as a rule and which one therefore finds in all the
241 settlements. Yet despite the ease of production of the field crops,
the transition to agriculture nevertheless is taking place in a way
178 that is reducing the population in extraordinary fashion. First of all,
182 the acclimatization process slowly being accomplished demands a
164 great sacrifice of human lives. The Masai, little afflicted with
165 fever in the dry steppes, suffers with it quite seriously in the moist
regions in which mosquitoes are permanently at home. Thus on two
occasions in the same new settlement I found all the adults and many
children sick with fever. Another one had just been abandoned by
its inhabitants, leaving the sick behind. The ones left behind,
principally men and boys, were badly reduced by fever and, in
addition, suffered to a great extent from virulent leg ulcers, whose
great extent -- in many cases they covered the entire lower leg,
from knee to ankle -- probably is to be traced back to a general
weakening of the body by fever and lack of food; for such ulcers
are not common among nomadic Masai, and, where they occur,
/350/ they remain smaller and show a tendency to heal rapidly.
Other illnesses arise from the unfamiliar diet. The rapid transition
• [262] from an almost pure meat diet to an almost pure vegetable diet
makes demands on the stomach and intestines that a body weakened
by fever is seldom equal to. Sickness and death from this cause
are frequent and are increased further by the consumption of bad
water. Thus, more than half the people in one settlement com-
plained of painful diarrhea and bloody stools. All these acclimati-
[842] zation illnesses seem also to manifest their effect in decreased
[163] fertility of the women and increased child mortality. I was repeat-
edly struck by the small number of sucklings (two-year suckling
period) and older children. Thus early in 1902 in Ngaruka, between
Lake Manyara and Lake Natron, among a number of about 50 women,
I found only twelve children, three of them babies. According to
the statements of the parents, very many children had died of various
ailments, especially fever, stomach and intestinal affections, several
178 also had perished in Masai attacks. For the Masai who are becoming
619 sedentary, the ones still living among the "people" as nomads are
721 a scourge that scarcely falls short of the illnesses just mentioned in

/360 cont./

824 141. ol dürgŏ (Cordia gharuf [Forsk.] Ehrenb., Cordia quarensis Gürke). The inflamed eyes of livestock are washed out with a decoction of root or bark. About three finger-sized pieces of the [847] root are chewed to induce abortion. The roughly pea-sized vermilion fruits, called en gülülŭ, are edible. At times of food shortage they [862] constitute the chief food in some El kuafi settlements, for example, in Nguruman, where this large shrub occurs very abundantly. The European, after eating a few berries, feels as though his lips were stuck together.

142. ol ĕbĕrĕtĭ (Phyllanthus kilimandscharicus Volkens). A person who has stolen a head of livestock anxiously avoids breaking off a twig of this shrub, since it is believed that otherwise the one robbed would soon recognize the thief as such. The twigs are used as goat fodder.

143. ol ĕbĕnĭ (Cassia obovata Coll.). A decoction of the plant serves as a remedy for stomach-ache for children.

144. ol ĕbĭtĭrŏ (Dolichos kilimandscharicus Taubert). Named after ol bitir = the wild pig, which likes to eat the plant. One washes young livestock with an extract of the leaves to get rid of fleas.

145. ol eboloña (Vernonia).

146. ol ebuloña (Eragrostis superba Peyr.). Rich fodder for small livestock.

147. ol ĕbŭlŏt (Bridelia cathartica Bert.). An extract of the pounded root is used as an aid to digestion and is therefore regularly drunk by the warriors at the ol bul meals.

148. en ĕdĕrĕgĕ (Psychotria fuscula K. Sch.). The sword scabbard is made out of the wood.

149. ol ĕdĭrangŏn (Pedicellaria pentaphylla L.). Good fodder for small livestock.

150. ol ĕdŭrŭt (Epaltes gariepina). During the first days after delivery, the woman in childbed is given a decoction of the plant, to which is attributed a favorable effect on the recovery of the birth organs.

[751] 151. ol ĕgĭsĭkŏn (Cissampelos Pareira L.). Pieces of root are worn as amulets, mostly on the neck ring, for all possible illnesses, and, to be sure, both to prevent them and to cure them.

/360 cont./

824 152. ol ĕgŏgoĭa (Hibiscus micranthus L.). Shield hoops are made from the branches.

153. ol ĕgŏlĭa (Phyllanthus maderaspatensis L.). Good fodder for small livestock.

/361/ 154. ol egororom (Duvernoia interrupta Lindm.). The berrylike fruits are eaten. [262]

155. ol ĕgŭrŭgĭ = en dĕmĕschŏ.

156. ekum (Spilanthus Acmella L.). If the noses of little children, especially babies, become sore because of the flies that during the day are almost always sitting on the nostrils, the mother chews the herb and smears the sore spots with the chewed-out juice. The plant is chewed as a loosening agent for coughs. Moreover, the mother gives the baby afflicted with feverish bronchial catarrh the extract obtained by her from chewing a small piece of the pungent root, mixed with milk, to drink.

157. ol eleschua (Tarchonatus camphoratus). On account of its fragrance, ropelike neck rings are made from various parts of the plant, smelling strongly like vanilla.

158. ol ĕmbŭrĭăsch (Andorpogon intermedius R. Br., var. punctatus [Roxb.] Hack.). The livestock in general does not like to eat the grass, which, according to the statements of the Masai, is not harmful.

159. en ĕmĕrĕgĕsch (Eragrostis superba Wawr. et Peyr.). Good fodder grass, especially for sheep.

160. ol ĕmŏrĭăn (Ocimum canum Sims.). The peppermint-like herb is powdered and used as snuff in the absence of tobacco.

161. ol ĕmŭdŏnŏl (Pelargonium multibracteatum Hoch.). Good fodder for livestock.

162. ol ĕndĭănŏgĭ = ol ĭndĭănŏgĭ.

[262] 163. ol enda 'njugi. The fruits are eaten.

164. ol ĕngĭjĕbĕ (Duvernoia interrupta Lindm.). Good fodder for small livestock.

/382/

824 170. eńg ĕrĕmrĕm (Senecio longiflorus D.C.). Fodder for small livestock.

171. ol ĕramrĕm (Cissus Oliveriana [Engl.] Gilg.). Fodder for small livestock.

172. ol ĕrbat (Achyranthes aspera L.). Fodder for small livestock.

173. ol ĕrbat kĕtĕ (Achyranthes spec.). Fodder for small livestock.

174. en kĕrĕrĕm (Cuscuta cotusiflora A.B.K.). Fodder for small livestock.

175. ol ĕsĕbĕnĕ (Helinus mystacinus [Act.] Hemsl.).

176. ol ĕtĕnok (Hoslundia verticillata Vahl.). Edible fruits.

177. ol ĕligurĕsĕnĕ (Pavonia Kraussiana Hoch.). Fodder for small livestock.

178. eń gĕbĕlĕsĕs (Boscia coriacea Pax.). Edible fruits. The Shrub is regarded as prized fodder for donkeys.

179. eń gadardar (Ochna Merkeri Gilg). Secret medicine of the ol goiatiki. Clubs and ear plugs are carved out of the hard, beautifully marked wood.

180. eń gailowai (Commiphora spec.). Fodder for small livestock.

181. eń gaiĕtuai (Physalis minima L.). A few twigs are placed in the first bath of the newborn child as protective magic against sicknesses of all kinds.

182. eń gaisĕdjoi (Oxygonum sinuatum [Hochst. et Std.] Bth. et
[291] Hk.). Fodder for small livestock. These sorrel leaves are eaten along the way as thirst-quenching.

183. eń gaisĕdjoi ĕtĕtĕ eń gĕre (Oxygonum sinuatum). The stems
[291] are chewed as thirst-quenching.

184. eń gaisedjoi kitok (Rumex abyssinicus Jacq.). Livestock fodder.
[291] The leaves are eaten along the way as thirst-quenching.

185. eń gaisedjoi os sobugo. Use like the above species.

186. ol gĕlĕ (Phaseolus aff. Schimperi Taub.). Fodder for small
• [262] livestock. Children eat the roots.

187. eń gĕlĕechŏ (Oldenlandia Schimperi T. And.). If cattle have fever, they are given the plant, sprinkled with wood ashes, to eat.

188. eń gĕmĕrĕkĕs. As protective magic against lions, the person
[789] [825] spending the night alone in the open steppe or in the bush ties a twig on a stick and plants this in the ground beside him.

824 /362 cont./

189. ol gilechi. Ropes are made out of the bast.

190. ol germilelai (1)

1. The red blooming Talinum cuneifolium Willd. and Talinum caffrorum (Thbg.) Eckl. u. Zeyh. are likewise designated as ol germalasia.

(Portulaca oleacea L.). Yellow blossoms. Good fodder for small livestock. El kuafi and impoverished El masai eat the leaves as a spinachlike vegetable.

[262]

191. ol gauri. Good fodder grass, especially for cattle.

192. ol gewiwi (Claytia kilimandscharica Engl.). The leaves are chewed in the case of throat catarrh and are supposed to have a loosening effect.

193. en gewiri (Sporobolus cordofanus Hoch.). Good fodder grass, especially for cattle.

194. ol gohanja (Combretum spec.). /363/ Cattle sick with ehg ga om benek are given an infusion of an extract of the pounded leaves and fruits as a strong laxative.

195. ol gobiri i ŋ giri (Sphaeranthus microcephalus Willd.). An extract of this herb is added to the first bath of the newborn child. During the first days after the delivery, the woman in childbed drinks a decoction of this plant, to which is attributed a favorable effect for the recovery of the birth organs.

196. ol gobiri i ŋ giri ol sirgum (Sphaeranthus suaveolens D.C.). Popular fodder for donkeys: it has the advantage that it only rarely dries up, even in the drier period.

197. en gogo ohbo (Ericomamma verticillatum [L.] Engl.). Gravid goats are said frequently to miscarry after eating this plant.

198. en gogoi gewi u ol eberti (Phyllanthus kilimandscharicus Volkens).

199. ol gili (Teclea uniflolata Engl.). The decoction of approximately ten finger-sized pieces of root is drunk unmixed for gonorrhea, mixed with milk and fresh blood as a tonic for the wounded.

/364 cont./

824 216. ol giramatian (Enteropogon monostachyon [Vahl] Pilger). Good cattle fodder.

217. eá girkó (Eruca trum leptopetalum [DC.] Engl.). Good goat fodder. The leaves are also eaten as a vegetable by the el kuafi.

[362] 218. ol gíshil (Olinia Volkensii Gilg.). The simple dose of this nerve-stimulating remedy consts of the decoction of a piece of bark approximately five square inches in size, which is drunk as desired in the course of the day.

219. ol girgiri (Pterolobium lacerans R. Br.). Shield hoops are made from the twigs.

220. ol giriabori (1)

1. Here and there Indigofera Bazleana Vike. was also called this.

(Tephrosia anthylloides Hoch.). Goats are said to die if they eat a great deal of this.

221. ol gríka (Aristida adscensionis L.). In general good fodder grass, but cattle do not like to eat it when it blooms, because they dislike the smell of the blossom.

222. ol gríka olbor. Good cattle fodder.

223. ol gríghi (Acacia pennata Willd.). The wood is used to make bows and shield hoops. Root powder is blown into the noses of calves and small livestock to drive away the maggots of the warble fly.

224. eá glechingí (Microneria biflora [Ham] Bth.).

225. ol gíkoid (Haemanthus nov. spec.). The extract of a cut-up, approximately flat-sized bulb is one of the means of inducing the ol bochona sickness. The use of this drug is not as common as that of the other stimulants.

[271] 226. ol gá ŕembóla (Stathmostelma globuliflorum K. Sch.). The large tuber is eaten to quench thirst on the march.

227. ol gíkilgí (Clerodendron Hildebrandtii Vike.). To cure the e' bujalgat sickness the cattle are given an infusion of leaf extract mixed with some milk.

/364 cont./

824 228. ol gobĕrĕsai. Fodder for small livestock.

229. eṅ gŏbŏnĭ. The leaves are chewed as a loosening remedy for coughs.

230. ol gŏdĭt ŏnjŭgi (Andropogon schoenanthus L.). After /365/ eating this grass, calves are afflicted with severe diarrhea, which often leads rapidly to death.

231. ol gŏdjĭt (Eragrostis spec.). Good fodder grass, especially for cattle.

232. ol gŏdjĭta ŏnjŭgi (Themeda Forskahlii Hack.). The grass, growing very thick, remains fresh in its lower part even during the dry season and for this reason is particularly valued as cattle fodder, though it is regarded as only middling in its goodness.

233. ol gŏdjŭk. The decoction of five finger-sized pieces of root is mixed with beef broth and is a stimulant often consumed at the meat meals of warriors.

234. eṅ gŏgĭ (Lycium cf. arabicum Schwfth.). A root decoction, mixed with milk or meat broth, is drunk to cure the ol dododoi l en dare sickness.

235. ol gŏgŏrĭsĭai. Babies are given an infusion of a root decoction if their behavior makes one think of illness and one is uncertain about its nature.

236. eṅ gŏgŏ mŏtŏnj (Boerhavia spec.).

237. ol gŏgŭrŏi (Berkheyopsis diffusa [Oliv.] O. Hffm.). Good fodder for small livestock.

• [262] 238. ol gŏiăngne (Ipomoea spec.). Children eat the roots.

239. ol gŏisĕrĕrĭe (Kedrostis spec.). Fodder for small livestock.

240. ol gŏiĭlĭ (Ficus spec.). The bast is used for binding the switches in the hut construction.

241. eṅ gŏloechŏ (Capparis galeata Fres.). An extract of the pounded shrub is given to feverish children to drink for curing purposes. The orange-colored, figlike fruit is edible.

242. eṅ gŏmăni. A decoction of a piece of bark half a square foot in size is drunk as a nerve stimulant and is said to make it possible for the warrior to cover great stretches in rapid march.

/369 cont./

824 [301] 322. ol mogoŋgora, a liana not infrequent in the river forests. The root bark, smelling strongly like vanilla, is twisted, ropelike, and worn by men and women as a neckband. It also finds use as a secret medicine of the ol oiboni and the ol goiatiki.

323. ol mokotan (Albizzia anthelmintica Brongn.). One or two hand-sized pieces of trunk bark or root bark are pounded with a club into fibers and held for a few minutes in boiling meat broth for steeping. This soup is used by warriors as a nerve stimulant, by [832] women as an aphrodisiac. To cure gonorrhea, one adds a small amount of honey to the broth before drinking it. An extract that is made with double or /370/ triple the amount of bark is used to get rid of taeniae and ascarids, or also as an emetic for bilious fever. The fresh bark bast is chewed for constipation.

[262] 324. ol momoi (Solanum nigrum L.). Children eat the berrylike fruits.

325. ol mŏrǎn (Ocimim suave Willd.). A root decoction is used as an emetic.

326. ol moridjoi or ol morijoi (Acocanthera abyssinica). The arrow poison is obtained from the roots and wood by boiling.

327. ol marok l on dare.

328. 'mtaŋguju (Maerua rigida Oliv.). From the powdered root [751] the ol oiboni makes an amulet that is supposed to protect one against colds and fever.

329. ol muguti kitok (Caralluma spec.). The soft, fleshy twigs [291] are eaten by warriors on the march, by boys tending cattle, to quench thirst.

330. ol muguti l ol ňŏdjĭnĕ (Euphorbia spec.). Hyenas allegedly eat this plant.

331. ol muguti l ol ugaru.

332. ol mŭmĭnj (Acacia abyssinica Hoch.). Fodder for small livestock.

333. ol munjagara (1)

1. Also called eň gĭtǎmbŭ.

(Acalypha indica L.). Good fodder for small livestock.

*136 to most kinds of life, and certainly a barrier to normal wildebeest movements. If this area were less desiccated in previous times, it probably would have been the only point of contact between the eastern and western races of wildebeest. The Roosevelt collections from the Suswa area, however, would indicate that there had not been significant mixing of the races there, implying that any recent contact would have been on a small scale and any significant connection had been in the far past.

*136 184 224 *233 182 (262) No wildebeests remain in the northern area of the Rift. There are fenced ranches now south of Lake Naivasha and in the Rift adjoining the Suswa area. The remaining wild animals (kongonis, gazelles, etc.) are hunted on some of these ranches as food for labor. It appears that after the former wildebeest population of this area became isolated from the populations farther west (through Masai overgrazing in the Mosiro area) it was gradually hunted out. Kongonis and Thomson's gazelles are still found in this area.

Summary

*13 121 Masailand is centrally located in the system of grassland belts of Africa. The grassland ecosystems of Masailand are typical of the most biologically productive

123 824 Our use of the capture gun to capture and mark wild animals was of particular interest to the Masai. 123 461 824 They would often come up to watch us. Masai are famed for their refusal to carry out manual labor of any sort hence are regarded in East Africa as poor helpers on safari. However, labor, where it involves animals, is another matter. Sometimes Masai would come up and voluntarily help us handle captured animals, and this they did very well. We even experienced Masai coming to our camps to talk about our capture work that they had observed from a distance.

123 262 609 When we had extra meat from animals that we collected, we took it to the nearest Masai village. Most writers have reported that Masai will not eat the meat of most wild animals. We found, however, that they gladly accepted it in most cases. They always wanted to know what animals were involved. In several cases, when we first approached a village those who came out to meet us would refuse the meat. Then someone who knew us or knew of us would appear and accept the meat, explaining that the others did not know us.

123 757 Virtually all visitors to Masailand are regarded as a sort of travelling dispensary by the Masai. This is true throughout the world for most people who do not have

362 started in and under the dung it is similar to a peat fire and virtually impossible to put out.

708 Masai also sometimes abandon a boma, or at least the house involved, if a person dies in it.

751 People who are very seriously ill are removed from the boma at least during the day, often to a small thorn boma with a shelter constructed nearby. They may remain there at night also. It was difficult to learn much definite about this practice. A disabled person spending the night outside a boma is very likely to end up

[177] inside a hyaena. The administration frowns on this

[178] efficient method of disposal and consequently the Masai have become reticent to talk about it. The sick persons' bomas that we saw looked to have been occupied nights as well as days.

262 Food: Traditionally the Masai are supposed to survive entirely on blood and milk (Gunther, 1955). In Western Masailand the Masai diet consists of posho

234 (maize meal), milk, meat, and occasionally blood. The

462 cows and sometimes goats are milked by the women and little

234 girls. The milk is collected in large calabashes. These

415 calabashes, ochre colored and sometimes ornately

[531] decorated with beads, are almost as much a symbol of the

[384] Masai as the ochre blankets or cloaks, moran spears and

[291] hair styles.

234 hair styles. The gourds are grown by nearby cultivators
415 and purchased or traded by the Masai. The calabashes
[264] are cleaned between usings by washing in water (if available) and then purified with a mixture of urine and wood ash. After being carried in one of these containers the milk has a rather characteristic, somewhat smoky-sweet taste that may stay with one for several days.

443 The maize meal is purchased or traded from the dukas or trading post cum general stores which are found at Narok, Loliondo, and at other points around the periphery of the area.

• 262 Meat comes from the Masai livestock and occasionally
272 game. The old traditions laid down specified rules for who in the tribe might eat what kind of meat, and at
[701] what times. Apparently the warriors had a right to demand milk and sometimes meat from anyone, at least in their section. Milk and meat were not to be consumed on the same day, but blood could be mixed with the milk.

701 When not fighting the warriors could carry out
[562] an olpul, or meat camp. They would take goats or a bullock and make camp in the bush, kill and eat the animals. The olpul might take from a week to a month,
[826] depending on the available time and meat. We presume that

CHAPTER 10

Masai Herds and Mara Lions

I

THE Masai have won respect by their contempt for civilization and all that it has offered them. For half a century Europeans have been tempting them with all the material bribes, indeed even non-material ones, for which every Bantu and Nilotic people is avid. There is scarcely an African of the fat lands who would not sell his soul for a school certificate. The Masai have rejected school certificates with a proud and lofty disdain.

Will a certificate fatten a bullock or swell the belly of a cow? Masai hearts are with their cattle; they desire no finer destiny for a son than to walk in the dust of a larger herd than his father's. The young man who dreams of glory sees fine white bulls and brindled cows and green grass knee-high, he does not see the stone bungalow, the shining motor-car, the well-cut suit, the framed diploma so alluring to his darker fellow-countrymen. He likes to wear his hair in matted pigtails smeared with red ochre and rancid butter, to stand with one foot against the other knee, to eat a compound of bullock's blood and curdled milk, to carry his long spear and to keep his women in their beads and coils and fly-infested mud burrow as his ancestors did—those ancestors whose lion head-dresses and painted shields filled the hearts of lesser breeds with terror, and won the right of conquest over the steppes of eastern Africa from their northern Somali deserts to their southern tsetse bush.

For the Masai have pride, and pride is a quality we recoil from in ourselves and half-admire, half-deplore in others. An Englishman today must stamp with the hob-nail boots of equality upon the little shoots of pride that cannot help but spring up in his heart; but when he sees the fine, free growth of it in others, an envious respect attacks him. For

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

262 884 opened a vein and drank the blood fresh from the animal. This proceeding of our voracious young friends was a wise though repulsive one, as the blood thus drunk provided the [263] salts so necessary in the human economy; for the Masai do not partake of any salt in its common form. This sanguinary draught concluded, they proceeded to gorge themselves on the flesh, eating from morning till night—and keeping their cook steadily at work. The half-dozen men were quite able to dispose of the entire animal in a few days, and then they returned to the kraal to resume the milk diet.

884 836 If they lived an ascetic life in the matter of food, they could not be said to do so in other ways. Life in the warriors' kraal, as may easily be conceived, was promiscuous in a remarkable degree. They may, indeed, be described as a colony of free lovers. Curiously enough the "sweetheart" system was largely in vogue, though no one confined his or her attentions to one only. Each girl, in fact, had several sweethearts, and, what is still stranger, this seemed to give rise to no jealousies. The most perfect equality prevailed between the Ditto and El-moran, and in their savage circumstances it was really pleasant to see how common it was for a young girl to wander about the camp with her arm round the waist of a stalwart warrior.

884 517 701 Till a war-raid was planned, Moran, our interesting *protégé*, found he had nothing to do but make acquaintances and amuse himself with the girls. His cattle were looked after by some poor menials, and though the kraal was stationed near a dangerous neighbour, yet no fighting took place. It was, however, a rule in the warrior kraals that no fence for protection was allowed, hence the utmost vigilance had to be exercised. Moran thus in the course of his duty had frequently to act as watch. At other times he practised various military evolutions, and he kept up his muscle by the peculiar mode of dancing described in the Taveta chapter. Unlike negro tribes, they led what might be called a serious life. They had no rollicking fun, no moonlight dancing, no [533] lively songs, no thundering drums. No musical instrument [534] whatsoever enlivened the Masai life, and their songs were entirely confined to such occasions as the return home from a successful raid, or the invocation of the deity. As soon as darkness fell upon the land the guard was appointed, the cattle milked, and everything hushed up in silence.

624 Shortly after joining the kraal, Moran was called upon to record his vote in the election of a *Lytunu* and a *Lygonani*.

M 10 233 (ii) *The Masai.*

The Masai are a pastoral tribe whose sole occupation is the tending of large herds of cattle, sheep and goats. It has been estimated that they have about 25 head of cattle, and twice as many sheep and goats, per head of the population.

M 262 261 [263] The staple articles of diet are meat, milk, and blood. The blood is drawn from the living animal by puncture of the jugular vein with an arrow. Various roots and barks are used to make infusions which are used either with boiled meat or with milk. The men, while in the "moran," or warrior class, subsist practically entirely on these articles of diet. The rest of the population, in addition to these four items, which form the main part of their food, eat also some bananas, beans, millet, arrowroot, maize, sugar and honey, as these are available. The use of maize, which was introduced only a few years ago, is increasing.

M [177]

For the greater part of the year there is no scarcity of meat, blood and milk, but in periods of severe drought, when, in spite of the large herds, the milk supply is inadequate, the consumption of these vegetable foods is increased, and even the "moran" may be compelled to supplement their meat and milk diet.

M [484] [843] [146] Berries are eaten by the warriors when on safari, *i.e.*, on hunting or fighting expeditions. It appears also to be customary to send the pregnant women into the bush to eat berries. The berries would make an insignificant contribution to the main constituents of the diet, but it is probable that they are of considerable importance as an antiscorbutic addition.

M [184] One section of the tribe, the Loitokitok, have adopted a frankly mixed diet. It is of interest that pica among the Masai is confined to this section, who use edible earths from various sources with their vegetable foods.

(*b*) Chemical Composition of Native Foodstuffs, Edible Earths, and Mineral Waters.

Ka M K 146 The results of the chemical analysis of 153 samples of substances used in the dietary of the two tribes are given in Appendix I. Certain points of interest are discussed below.

(i) *Foodstuffs.*

In the following table a comparison is made between the analyses of the chief Kenya foodstuffs and analyses of similar products grown in other regions, probably in Europe or America, as quoted by Sherman (1926). All the figures are given as grams per 100 grams dry matter.

Kq
[262]

It has been noted, however, that the tendency throughout the reserve is for men to eat much less of the green leaves than the women do. It is stated that in some districts they eat none. A reason given for this, in a reply to the questionnaire from one of the native chiefs, is that " . . . such food prevented them from being swift of foot if defeated in battle by the Masai."

Estimations of manganese were made in some foodstuffs (Appendix I, Table II). The level in white millet and maize was found to be similar to that found in these foods grown elsewhere, but the manganese content of Kenya green leaves was found to be very much higher than that of edible leaves in this country. The following table shows the nature of the differences found (Richards, 1930) :—

Manganese in mgms. per 100 gms. Dry Matter.

Kenya Samples.		*Home-grown Samples.*	
Red millet	40·19	Oatmeal	6·9
White millet	2·55	Barley	2·01
Green leaves	8·93 to 51·31	Cabbage	1·50
Average	30·0	Lettuce	13·30

The manganese content of plant ash used as a salt substitute was also found to be very high, the values for two samples being 418 mg. and 352 mg. per 100 gms.

(ii) *Salt Substitutes and Mineral Waters.*

The ashes of water plants (Appendix I, Table IV) largely used as salt substitutes by women, especially during pregnancy and lactation, contain significant amounts of calcium and sodium. The average calcium content of seven samples, procured at native markets or in the villages, is 3·4 per cent., and the average sodium content 7·3 per cent. One of the samples analysed stands out from all the others by reason of its high calcium content, which is 10·60 per cent. as compared with values ranging from 1·0 to 1·5 per cent. for the others. This sample was bought at Wandiga's market, and the ash from this market, and that from neighbouring swamps on the Kagumo River, which is probably identical with it, appears to be more in demand than any of the others mentioned in replies to the questionnaire.

As compared with the other vegetable foodstuffs, the leaves stand out as being high in nitrogen, total and soluble ash, and in calcium, and they are appreciably higher in chlorine. The incorporation of these materials in the mixed cooked foods thus tends to make up for the marked deficiency of calcium, which occurs in all of the simple foodstuffs used by the natives. These calcium figures all appear as high even when compared with the recorded data for such material as alfalfa (1·26 per cent.); red clover (1·07 per cent.) and the highest figure obtained for a highly cultivated British pasture (1·76 per cent.). Three samples of leaves stand out from the remainder, namely, Hatha leaves, and one sample of Mathoroko leaves, with a calcium content of 4·5 per cent. against an average of 2·66 per cent. for the 18 samples, and Muyuyu leaves, which are comparatively low in calcium 0·85 per cent., but exceptionally high in potassium, 10·64 per cent., against an average figure of 5·35 per cent.

TABLE IV.—*Plant Ashes and Extracts.*

	Percentages in Dry Matter.			*Grams per litre.*
	Mararia.	Marura.		Aqueous extract of Itatema root.
	1 sample.	Aver. of six samples.	Range.	
	Per cent.	Per cent.	Per cent.	
Nitrogen ..	0·52	0·16	0·06– 0·45	0·05

Manganese .. (mgrs. per 100 grs.)	418·0	352·0	—	0·016

Note.—Under Marura, there is one sample, namely that which was obtained at Wandiga's market, which stands out from all the others with a calcium content of 10·60 per cent. The other five are all of the order 1·0–1·5 per cent.

Two types of plant ash were submitted, namely, Mararia, the ash of a swamp reed, and Marura, the ash of a papyrus plant. The former is considerably richer than the latter in calcium, potassium, and chlorine. One of the samples of Marura ash is very much lower in both sodium and chlorine than the other five, but this is probably due to the fact that the particular sample was by no means so completely burnt as the others. Considerable variations may, therefore, be expected in this type of material, due to the conditions of ashing by the native. These materials will make up to some extent for the low calcium and sodium content of the foodstuffs, if added to them during cooking.

Itatema is a short, reedy, swamp plant and the aqueous extract used by the natives, as supplied, was "an infusion of the entire sod, including adherent earth," and contained 2·83 gs. of total solids per litre.

/32 cont./

When the livestock have been driven out of the kraal to pasture, the women and children start to clean it. Then the fire is lighted in the huts and on it are placed the pots filled with water in which the vegetables are to be cooked. These pots (e modi, 'modio) are not made by the Masai themselves, but are bought from sedentary tribes or also from the Wandoróbo, who presumably learned the potter's art from them. They are a foot high and globular. In contrast to the warriors, all the occupants of the family kraal, especially since the cattle epidemics, eat vegetable food which they buy from the neighboring peoples, since they themselves do not engage in any agriculture at all. Their favorite foods, however, are, of course, milk, meat, and blood. Milk is always drunk by healthy people uncooked, as fresh (eṅ gule) or sour (eṅ gule naoto); boiled milk is food for the sick and as such is usually mixed with pulverized grains of ol lodoa (Maesa lanceolata). Sheep milk is especially popular because of its very high fat content. Blood of cattle, sheep, and goats is drunk fresh or eaten in the clotted state. Milk mixed with fresh or /33/ cooked blood (en jiwŏt) is greatly appreciated; this drink is highly esteemed as invalid soup for the wounded. Cheese making is unknown. Butter is made by agitating the cream in a large gourd-bottle (en diagolgol). Fat, rendered in a pot, is used as an ingredient in other foods, especially meat broth, but is also drunk without any admixture. Meat is prepared without adding salt; it is cooked either with various spices or roasted on a stick at the open fire. One does not eat in one day cooked meat and milk /Ill. 13 appears here/ together (1).

1. This was also forbidden for the Hebrews, according to the 2nd Book of Moses 23, 19-34, 26, passages which are part of the so-called Yahwist documents, that is, the oldest sources of the Pentateuch.

because the latter together with the ol mokotan spice (bark of

/33 cont./

462

C. G. Schillings phot.

Ill. 13. Women cleaning the kraal.

262 Albizzia anthelmintica) always used in the cooking of meat is
272 supposed to cause severe diarrhea. Therefore milk that is offered
[753] is often refused in the hope that a meal of meat will be obtained
• [263] on the same day. One who wishes to partake of both foods in one day -- and where is there a Masai who could resist an invitation to a meal of meat?! -- vomits first before eating the meat, for which he produces the necessary stimulus by means of a blade of grass stuck in the throat. If one has eaten cooked meat today, then /34/ one first drinks some blood in the morning before the milk, not out of considerations of health, but rather because it is believed that the livestock would give less milk as a consequence of neglecting this custom. Bringing milk into contact with meat
[231] is most scrupulously avoided, because, according to the general view, through that the udder of the cow from whom that milk came would become permanently diseased. For this reason the

/34 cont./

262 Masai only most reluctantly and infrequently sell cow's milk, for
272 the buyer indeed could in the above-mentioned manner make their
cows sick with it. The Masai scorn any kind of game meat, as
[136] well as birds and even fish, of the latter of which species of Barbus, Chromis, Clarias, and the sheatfish-like Synodontis occur almost everywhere in larger brooks.

252 The preparation of the principal vegetables is the following:
262 batatas (ol muruṅgu, el muruṅguni -- Ipomoea batatas) are cooked
263 in water with a little steppe salt (e munján), then drained, mashed with a whisk (ol gibere, el giberen), and stirred with fresh milk. The finished dish is called el muruṅguni. Unripe bananas (ol marigo͡i, el marigo -- Musa paradisiaca) are peeled, cut up, and cooked in water with salt. After they have been drained, a little butter (eṅ gorno) is added. Unripe dried bananas (ol kitâuo, el kitâuón) are cooked in water, drained, and then stirred with milk and butter. Maize kernels (ol ba͡legi, el ba͡leg) are cooked in water without the addition of salt. Beans are cooked with salt. One distinguishes ol bombo͡i -- el bombo (Dolichos lablab), eṅ giú --eṅ giñn (with which both Cajanus indicus and Vigna sinensis are designated), furthermore os sigorio͡i -- es sigorio (Phaseolus vulgaris), ol gámuri -- el gámuri (Phaseolus radiatus). Eleusine coracana (en dabá -- 'n dabán, or en drigá -- 'n drigán or also called eṅ guruma -- 'n guruman) and Sorghum vulgare (ol birirí -- el biririn) are cooked to a thick porridge and lightly salted. Dioscorea abessynica (ol geré -- el gerén) and Colocasia antiquorum (which the Masai on Kilimandscharo designate with the Dschagga /Chagga/ word maduma) are cooked in salted water.

Honey (en aischo -- 'n aischi) is eaten unmixed and is also used as an addition to various medicaments. They buy tobacco
276 (ol gumba͡u, Nicotiana rustica), which the Masai
[439] consume in quantities, from sedentary Negroes, who put it on the market in loose, bast-wrapped packets (Fig. 4) of various sizes or in the shape of solid balls about five centimeters in diameter.
[415] For the preparation of this, the tobacco leaves,
→ picked ripe, are tightly packed, tied up with

Fig. 4

721 /93 cont./
726 forest meal (1),
791
[264]

1. Ol bul or, if an en dorosi has taken place, ol bul en dorosi, or, in short for that, en dorosi, with which the present-day language also designates every forest meal prior to a war expedition.

in order to strengthen yourselves. Then you will set out for war on the day ol gadet. On the following day, ol ondjori, you will pass an old camping place. Then, before you reach your camp, you will meet a single Kahe boy. Do not kill him, but bring him to me; otherwise you would be defeated. On the ol onjugi day you will
726 fight and conquer, etc. etc." If something does not fit in, it is due
714 to the carelessness or mistakes of the warriors. Furthermore, for the
791 spies sent ahead of the expedition, the ol oiboni gives them a few
789 amulets (e mascho ol oiboni), which make their wearers invisible. The amulets contain one of his magic remedies and are tied around the wrist or to the spear or shield. Another war medicine consists of a mixture whose chief ingredient is snake eggs (mossor ol assurai). A large leg-bell (ol dualla kitok, Fig. 19) is filled with the medicine. In war it is tied to a club and hurled at the enemy offering resistance, so that he will flee, or it is tossed into his herd in order to drive apart the livestock, which then is caught by the Masai. In order to have the expected effect, it is desirable that the medicine be hurled by a left-handed warrior. The speakers convey
726 the chief's answer to the warriors, who have most impatiently awaited their return. Hastily they prepare themselves for the forest meal; weapons, pots, and the livestock needed are gathered together, and two by two the es sirit set out together for the nearest bush. Whereas
• [263] in the ordinary meat meals only relatively few spices are used, for
[276] the en dorosi in particular all the many vegetable agents that the

Fig. 19. 1/6

/93 cont./
726 Masai know for stimulating the nerves find use. Their effect will be
• [263] discussed in a later section (2).
[276]

2. cf. XIX, Nerve Ailments: the em boechona sickness.

If the opponent is particularly strong, a forest meal sometimes lasts a whole month by order of the ol oibani.

722 /94/ During this the boys pose as lords in the warrior kraal, but the girls bravely defend themselves with sticks. Every day in connection with their dances the girls sing songs of prayer: May 'Ng ai make the warriors strong and strongest of all the ol sandja, etc. The mothers, on the other hand, pray silently in their huts for the same purpose.

726 Still in the forest the El móran put their weapons, ornaments, and clothing in order. Upon their return from the meat meal they remain only a few hours in the kraal, in order to fetch something
[782] forgotten and to take along livestock as travel provisions. Here a few fathers and mothers have already appeared in order to call down

Ill. 36. Consultation on the war expedition.

/185 cont./

757 For gonorrhea they use a whole number of medicaments, to some of which they attribute only or chiefly a diuretic effect, to others a healing effect as well. The principal remedies are the following: decoction of the bark of ol jani 'ajugi (Embelia kilimandscharica), often mixed with calf urine; furthermore of ol sapuraram (Rauhinia reticulata), ol dabani (Acacia cfr. verugia Schwfth.), ol molotao (Albizzia anthelmintica) and ol gelai (?); a root decoction of the latter is also used, as well as of ol orondo (Cissus quadrangularis Gilg), ol amamlai (Cyrtis tenuifolia Engl.), ol dapuna, and, finally, decoctions of the dried root bark of o'remit (Salvadora persica) and of the wood of a Rhus species (ol mesigie keta), which is regarded especially as a diuretic.

[164] /184/ For cystic catarrh one drinks a weak decoction of the root of o'remit (Salvadora persica).

832 A bark decoction of ol dimigimani (Pappea capensis) is regarded as an aphrodisiac for men, one made out of ol molotao (Albizzia anthelmintica) for women. The bark of the trees ol gilerti (Acacia abyssinica) and ol ekitangi, used as seasoning for meat broth, is supposed to have the opposite effect among the warriors.

[263]

These last two remedies, however, are by no means regarded as sedatives, but, on the contrary, as stimulants. The people explain the effect ascribed to them here with the words: the warrior does not like the odor of the girl, by which probably a specific foreign urinary /stink of urine/ more or less clinging to the clothing of all women is to be understood.

[147]

Nerve Ailments

757 With headache (edg ga ol ogunja) a blister is produced on each of the temples and on the nape with the fire twirler (ol bipu) rubbed hot; more rarely one ties a cord rather tightly around the forehead and the occiput. The latter remedy is not peculiar to the Masai, but has been adopted in places from other peoples.

[164]

[177]

[164] For earache (edg ga Ni gia) one pours warm butter into the ear.

The process of moving.

The Masai are fond of moving, and if they happen to be staying in a place where the grazing is poor, they move to another spot.

When they move, they saddle their donkeys with skins and pack-saddles in which they put their gourds, and the women carry bags.

Should they stop in a place where the grass is not good, they do not build proper huts, but they live in the so-called il-ngobori, i. e. in huts made of skins. When they go to a good grazing ground, they build huts.

The women do the work of building. They procure poles, and put one end in holes, which they dig in the ground; they then bind the poles together with cord made from trees; after which they cover the framework with long grass. When they have finished this, they plaster the whole of the outside with cow-dung and mud.

Masai warriors' kraals and slaughter-houses.

Masai warriors do not live in the kraals of the married people; they have their own kraals, where they dwell with their mothers and lovers.

When they go to the woods to eat meat, they live in the slaughter-houses[1] with their boy-servants.

[264] [1] Meat may not be eaten in the manyat, or warriors' kraals, and special places, called il-puli, are erected in the woods, to which the warriors retire when they slaughter cattle.

The trees which are used for fumigating the milk gourds: 824 264

The women clean the milk gourds with cows' urine and a twig of the doum palm (*Hyphaene thebaica*, Mart.), the end of which has been chewed till it resembles a brush.

The gourd is then fumigated by means of a smouldering piece of wood, after which it is dusted out with a cow's tail kept especially for this purpose. [237 412]

The trees which are used for fumigating are:

1. *Olea chrysophylla*, Lam.
2. *Cordia Rothii*, Roem. and Schult.
3. *Zanthoxylum sp.*
4. *Premna oligoericha*, Baker.
5. *Grewia sp.*

The trees which the warriors and girls use for scent: 824 302

1. The flowers of *Justicia Fischeri*, Lindau.
2. The roots of *Lantana sp.*
3. The leaves of *Tarchonanthus camphoratus*, Houtt., which they wear in their ears.
4. The leaves of *Urticaceous sp.*, which grows at the water's edge.
5. *Indigofera sp.* This is plaited and hung round the neck.
6. The flowers and leaves of *Ocimum suave*, Willd.

[1] Ol-oirien means both the heart-wood of a tree and the wild olive.
[2] Lit. the warrior's tobacco.

561 moran, acting as their guardians and instructors. But after the period devoted to family matters the newly made elders also start thinking about their protégés. Thus, at the moment, the Dwati are responsible for both ages of moran, Kisale and Merisho, yet the Dareto are already engaged in the preliminary ceremonies, *endungore* and *engibata*, of the future moran. This means that under the age grade system, two generations of elders are responsible for two generations of moran for a short time (note overlap on chart). But the elders who shoulder most political responsibility are the il *piron* or guardians of the main body of moran. The matter is by no means clear, but there exist vestiges of a ceremony now practised in conjunction with fertility rites, etc., whereby the senior elders retire and hand over the government to the junior elders.

So it should once more be stressed that after his service as a warrior a Masai does not settle into a dead level of elderhood. The different generations keep themselves aloof in such matters as deputations to the Laibon (though at times they combine) and in the meetings preceding [264] and ceremonies following such deputations. A modern tendency to be noted is that when camped at cattle auctions each generation will cook and eat by itself. It is natural that men of equal age should associate, but the age grade system provides a clear-cut means of providing for this.

561 162 The following table, compiled in 1939, gives some examples of the distribution of population amongst the then existing age-grade generations. It is probable that there were a few more Nyangusi and Laimer than the table indicates, but that they had been exempt and omitted from the tax-registers which were used as the basis of enquiry.

Distribution of Population by Generations.

		Kibaya.	*Samatwa.*	*Engasumet.*	*Longido.*	*Total.*
Nyangusi	...	1	—	—	—	1
Laimer	...	2	1	—	1	4
Dalala	...	14	12	8	23	57
Dwati	...	58	52	23	26	159
Dareto	...	49	69	38	62	218
Total Elders	...	124	134	69	112	439
Kisale	...	82	123	55	200	460
Merisho	...	41	36	11	34	122
Total Moran	...	123	159	66	234	582
Grand Total	...	247	293	135	346	1021
% Moran to Total	...	49.9	54.3	48.9	67.6	57.0

The two most striking facts that emerge from this table are that more than half the adult male population were at the time moran, and that the Merisho or left hand age formed only a quarter of the moran population.

561 182 The basic function of the age grade system is doubtless military, and now that the necessity for maintaining a standing army has been removed it might be thought that the early demise of the system is an object to be desired and encouraged. True, modern conditions make

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

561 Prior to the meat *Ol-Ng'esher* the men must eat meat in the forest or bush.
[264] They build a small round stockade, called *Ol Pul*, of thorns with one entrance about
[343] 2 ft. 6 ins. high through which one must crawl. Here they store the meat, and sleep. They may eat the meat either within or without the *Ol Pul*. There is a picture of an *Ol Pul* opposite p. 292 in Hollis.

[252] The meat is pierced by a wooden spit about 18 ins. long. This is stuck in the ground by the fire and the meat is toasted. Soup is also made of fat and water and the bark of *Il Kitoloswa* or *Il Kiluretti* trees. The decoction of these barks
[296] makes the warriors fierce. They also ascribe to this cause the curious hysterical
[158] fits into which they frequently fall when excited. I can vouch for the *Il Kitoloswa*, small doses of which do, in fact, produce a fierce and unbalanced state of mind. I have never tried the *Il Kiluretti*.

561 When the warriors sleep in an *Ol Pul* they pray to God at sunrise on behalf
782 of their age-group. Each one takes his skewer and rubs it in the ashes of the fire
539 in the *Ol Pul*. He then goes out of the entrance and strikes the sides of it and walks towards the East reciting his prayer and striking trees with the skewer. While
[533] returning he sings the war song *Eng-ipolossa* of his age-group. As he re-enters the *Ol Pul* he thrusts the skewer into the thorns at the entrance on his right and leaves it there. There are nearly always a bundle of skewers to be seen in this position.

The prayer is as follows :—

"*Na Ai aatomono atabukua olemeānikino enkila etabukutua linono lemaar il ogarak ol lughunya. Na iye Eng Ai aatomono injoki iyook ingishu naang'ang'unyi. Naa iye Eng Ai naatejo Na Ai taānyiki iyook ol poror naa ol kilo. Naa iye Eng Ai naatejo injoki iyook nemear il ogurak il lughuny otabukua il omunyak neinguaa kulikae omunyak nemear il ogarak il lughung. Aatomono Na Ai uasen ai engolong meilepu t'ol ondolu tangoro iyook il tiil-omunyak.*"

Here is the translation :—

"O God I have prayed Thee having come out hither with my garment unbound. Thy (warriors) have come out here, let not wild beasts hurt my head. And Thee O God I have prayed give us the cattle which prosper steadily. And Thee O God I have prayed bind together for us the age-group in one garment. And I have said to Thee O God let not the wild beasts hurt the heads of the fortunate ones who have come out here and let them not hurt the heads of other fortunate ones who come from far away. I have prayed Thee God, my beloved, when the sun rises from the valley, strike thou us with the rays which are lucky."

Each age-group has a different song. The song of the Il Kitoip is "*Tangoroki*
[533] *iyook t'alema tauwa neduru indonata o asurui nemetii ol morani le sayet elobi.*" I cannot translate it because, like other Masai songs, it is couched in rather cryptic language.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

latter is of little economic significance, except that it is the duty of the warriors to get cattle by raiding. In the division of work, the people mainly concerned are the uncircumcised boys, the girls, and the women. The boys do most of the herding, assisted by the elders. Women and girls milk and act as servants to the warriors. The girls do household work till they are old enough to become lovers of the warriors, when they do very little work. The greater part of the work thus falls on the older women, who besides doing or supervising the milking and other ordinary household tasks like fetching water and firewood, build the huts, load and drive the donkeys when moving, prepare skins for clothing, and trade with neighbouring tribes for food and other things. The warriors used to be occupied exclusively either with war or preparations for war, or with dancing, visiting, and making love. Their military activities have today been replaced by certain tasks connected with cattle, and by cattle-stealing and raids on neighbouring tribes. The senior elders are occupied with political matters, and some of them with the instruction and control of the initiates and younger warriors; they also help with the herding, and take part in trading with the neighbouring peoples.

The only specialists in the economic sphere are the smiths, *il-kunono*, sing. *ol-kunoni*, who live segregated from the rest of the Masai, and marry among themselves. They have a distinctly inferior status, and are despised by the Masai, who oil their hands before taking anything from a smith. At one time the smiths lived near deposits of iron ore, such as those in the Matapato river; but nowadays the availability of trade-iron has given them greater freedom of domicile. They make the iron-work used by the Masai, including spears, swords, and ornaments.[6]

Though according to Hollis a few Masai women made pottery, the Masai as a rule buy their pots from the Bantu.

Food

Except among the agricultural Masai, no cereal or vegetable food at all is grown, nor was it eaten in the old days by warriors, whose diet consisted of meat, milk, and blood, the latter providing the necessary salt. The animals eaten included their own cattle, buffalo, *ol-osowuan*, and eland, *o-sirua*, which they considered to be related to cattle, and therefore fit to eat.[7] Warriors were not allowed to eat honey, to drink honey-wine, or to take tobacco, though some took snuff. Children and married people eat vegetable food, and the meat of cattle which die a natural death. Warriors when they want to eat meat, build a rough shelter called *ol-pul* in the bush where, accompanied by a boy to do the work, small groups feast upon the meat of an ox supplied by the father of one of their number. The elder who supplies the ox is given some of the meat, and this is one of the regular sources of meat for married people, for meat eating is the regular practice of warriors. Men and women do not eat together, and fish, fowls, eggs, and game other than buffalo and eland are not eaten by any Masai.

Trade

Since the Masai are not self-supporting, they have to trade with the Bantu agriculturists, *il-meek*, whom they despise, in order to get what they want. Their chief suppliers are the Kikuyu, Chaga, and Taveta; and for certain things, notably ivory and honey, the Dorobo. The media of exchange are cattle (old, barren, and otherwise unsatisfactory cows), old and thin goats and sheep, donkeys, butter, and hides. The principal goods bought are food (beans, millet, maize) and tobacco, which they get from the Bantu; the chief suppliers of meal are Indian traders, often Sikhs,

[6] Leakey says that the Masai buy their swords from the Kikuyu (*JRAI*, LX, p. 209); this may well be the case near the Kikuyu border, though it is perhaps a recent development.

[7] The Galla also consider the buffalo to be the equivalent of the ox. Bahrey, *Historia Gentis Galla*, chap. XX, Guidi.

/31 cont./

517 For the most part an atmosphere of dullness and boredom lies
535 over the kraal of the married (eng an el moruak). Only on moon-
[533] lit evenings /32/ do the women amuse themselves with song, especially if a few warriors are there on a visit and give the impetus for the gaiety. Women and warriors dance in separate groups. For dancing the women station themselves in a row, move forward a short distance, then make a "right turn" and, with short steps, dance in a row back to the former place. The married men dance only on festive occasions, but by themselves. The text of the accompanying song naturally refers to the life prevailing here.

517 Otherwise quiet prevails in the family kraal after darkness has
521 set in; in good weather the people will sit for a while in front of
513 the huts, silently or softly conversing, and go to rest already at 8:00 o'clock or 8:30.

621 Even 12-14 years ago, before the Masai lost their huge
592 livestock-holdings in two great epidemics, each family had its
178 own kraal; now, on the other hand, almost everywhere several
233 families live together.
731

In the morning life begins around 4:00 o'clock, at which time
512 the women fetch the quite young calves from the compartments
[462] and take them to the cows, where they remain for the driving out
[233] to pasture. At daybreak the milking commences, for which all
[234] the women appear. After it is finished, breakfast, consisting of
• 264 fresh milk, is taken. Milk, soups, and thin porridge are drunk
[512] from gourd bottles; foods of greater consistency are put in the
[262] mouth with the fingers. Meat is partially cut up with a knife and
[415] completely torn into bits with the teeth. The hands are not washed
[412] before a meal. Smacking and belching while eating show good breeding. Men and women eat apart and have their separate vessels for eating and drinking. Those of the latter are shared by the children. If the man wishes to eat in the hut, the woman has to leave it beforehand.

/36 cont./

512 [264] [462] [517] 524

At one o'clock in the afternoon, the noon meal is eaten, after the men who have looked after the cattle in the pasture have returned. After the meal one takes a nap, plays a little game, or picks up some manual work (making articles of clothing or adornment, clubs, gourd bottles, etc.). The principal game

Fig. 8. 3/10.

of the Masai is the board game (en dodoi, en dodo) (Fig. 8). Two rows of six to ten depressions or compartments running side by side in a longitudinal direction are carved into a thick board about two feet long. The rules of the game are as follows: the board stands between two players; to each of them belongs the row facing him (ol mátua, el mátuan). Now each one places in each compartment (en qurtóto, 'n qurtót) of his row four stones (os sóld, es sóldo) (2).

> 2. One uses for this round river-pebbles or the fruits of the ol gúlangulu (Caesalpinia Bonducella Roxb.).

The player who starts takes the four stones out of one of the compartments of his row and puts one of them into each of the next compartments to the right. From the compartment in which he placed his last stone and in which there are now five, he removes these and, as before, places them in the next compartments, whereby he passes from his own row to that of the opponent. He proceeds in this manner until the last of the stones taken from a compartment happens to fall into an empty compartment.

/36 cont./

524 Now the partner starts in the same way playing in his row, /37/ to let the other play again as soon as he has placed a last stone in an empty compartment. The one who places a last stone in an empty compartment of his own row takes it and the ones lying in the adjacent compartment of the opponent's row for himself, and so on until, according to the rules, no more stones can be taken out of play. The one who has removed the most stones has won the match and gives himself a point. Serving as counters [802] are small, finger-thick, and spindle-shaped ivory sticks 15-20 [237] centimeters long (ol alai, el ala) (1).

1. As tooth generally is called tusk of the elephant, ivory.

Before the game starts, there is an understanding as to how many points are to be played. Women never play this game, warriors rarely. The latter usually prefer the en gehé ('n gehén), which is played in much the same way, except that in any case about eight players for each side take turns and each row has 40 to 50 compartments, which are not chiseled into a board, but are scratched into the ground.

415
531

Fig. 9. (1/12).

234
264
262

When the livestock has come home from pasture, it is milked, as in the morning, and after that the evening meal, consisting of fresh milk, is taken.

[Warrior Kraal]

/84 cont./

701 As long as the latter stays in the kraal, his girl is obliged to
836 remain faithful to him, but if he leaves it, even for only one day, she is entitled to console herself with another kraal companion, provided that between her and him -- as is also a condition for her relationship with her os sandja -- there is no obstacle such as the above-mentioned obstacles to marriage based on lineage affiliation.

233 The tending of the livestock falls to the boys. Even at night
857 they sleep outside in order to watch them and are assisted in the watch by the mothers, who take turns several times every night and frighten off wild animals by shouting.

361 Within the ring of huts there is a circular kraal of thorns for
/85/ the cattle and near that a narrower one for goats and sheep,
233 while beside almost every hut there is a small lean-to for the young
417 calves and a barricade of branches for the older calves of the in-
[343] dividual ones. Thus everyone remains responsible for the barricading
[672] of his calves and, if at night they should find their way to the cows, *has no excuse for starting a quarrel with others in the morning on ac-*
701 count of the lack of milk. Milk is the only food that the Ol morani
262 takes in the kraal, and the lack of it is therefore especially grievous.
• 264 Outside of it, only meat serves the warriors as food, and, to be sure, only that from cattle, sheep, and goats. They do not take vegetable
[273] food, honey beer, and tobacco. The meat meals are always held
[276] outside the kraal; a slaughtered head of small livestock is consumed a few hundred meters from the kraal, behind a bush, whereas for the consumption of a head of cattle a more distant spot under a shade tree in the bush /Fig. 18 appears here/ or forest is chosen. For these
701 forest meals (ol bul, e buli) mess companies are formed in every
262 warrior kraal, which are designated sirit' ol bul and which consist of
264 five or six members, each of whom is called os sirit ol bul. Such
574 banquets take place once or twice a month for each mess company and last three or four days each time, during which an ox is consumed. Besides the warriors, one to three girls also take part, and also a few boys as servants for fetching pots, water, and firewood, as well as for kitchen work. Prior to the slaughtering each mess company splits up into two equal-sized parts, each of which is called
000 ol gibet and prepares its own camp. Under a shade tree with thick

[Warrior Kraal]

701 /85 cont./ Under a shade tree with thick
361 foliage a spot about 20 to 25 square meters in size is cleared and en-
342 closed with a barricade of branches. During the rainy season in place of this kraal a small hut (Fig. 18) is built out of leaves. Its approximately circular ground plan has a diameter of two to three meters. On the side opposite the
701 entrance opening is the common
342 sleeping place of the ol gibet com-
35 panions; between this and the door, the hearth; beside the door the space for firewood.

Fig. 18.

a) Sleeping place. b) Drinking bag.
c) Pole for meat.
d) Hearth. e) Firewood.
f) Entrance.

[415] Close beside the sleeping
[237] place hangs the stomach or
[276] bladder -- from the head of cattle just slaughtered -- filled with an extract of roots and barks that acts as a nerve stimulant and is drunk whenever one is thirsty (ol oōni).

[251] In the vicinity of the hearth the meat supply, is hung on sticks (ol
701 alele). In the vicinity of the warrior hut the serving boys build them-
342 selves their own, considerably smaller one. One calls kraal or hut eng adji ol bul. Each ol gibet receives a longitudinal half of the
701 slaughtered head of cattle, from which, however, it immediately
262 gives back the pieces intended for cooking for the common meals
• 264 of the day. /86/ The picked-out fat is cooked together with this
[252] meat, and to the whole are added extracts or decoctions from roots
[276] and barks (especially from ol getalassua (1),

1. Myrica kilimandscharica Engl.

ol giloriti (2),

2. Acacia abyssinica.

which have a strong stimulating effect. The rest of the meat, roasted at an open fire, is then eaten by each ol gibet in common, and, to be sure, at a morning and an evening meal. The head of cattle is furnished in turn by the participants or their fathers.

The longest forest meal takes place as a rule in the month kiper. Since the pasture is poor then, the livestock gives so little milk that the warriors sometimes live for a whole month on almost only meat.

701
537
[293]
[237]

At the head of the warriors of a kraal stands the speaker (ol aigwenani or ol airohani). The badge of his office is an especially beautifully worked club or rhinoceros horn (4)

4. The straight horn of a species of Rhinoceros bicornis not yet described to my knowledge, which the author found at the beginning of 1896 in the steppe southeast of Kilimandscharo, is especially popular for making these clubs. The horns of this species (or variety) differ from those of the ones described thus far by the fact that they are quite straight and in cross-section never round, but rather so strongly compressed laterally that they appear sword-shaped; the front horn is often shorter than the back one.

or ebony wood. It is swung like a baton in connection with the speeches accompanied by numerous gestures, in order to give emphasis to individual words. This is also achieved in the manner of speaking, by the fact that one pronounces the emphasized words long drawn out and repeats the emphasized sentence several times. The speech to a larger gathering is always delivered very loudly and vigorously. While the listeners squat on the ground, the orator stands erect, his glance directed alternately toward one or the other of the chief persons among the listeners. What the orator lacks in logic he tries to make up for by verbosity, dialectic, and higher pitch in tone. The members of the audience often give the impression of rapt attention, their glance is almost continually directed at the one

[516]

[Warrior Kraal]

512 /89 cont./
701 Life in the kraal begins at sunrise, when the mothers and the
462 girls start milking the livestock. Not until around seven o'clock,
[233] when the boys drive the livestock to pasture, do the warriors get up
[234] to take the first meal (en daã e dadegenja = food in the morning),
[264] consisting of fresh milk. Then the women apply themselves to the

Ill. 33. Dance in the warrior kraal II.

512 cleaning of the cattle stalls and other work, as well as to start the
701 cooking of their food, consisting of purchased vegetables. This is
462 eaten around two o'clock in the afternoon (en daã e kat' aré, that
[262] is, the second meal), while then the warriors at the same time
[264] drink the rest of the morning milk, which has already become
[272] somewhat sour (eñg ule naisedjo = slightly sour milk). After that
512 the old women take a nap or busy themselves with sewing and making
535 ornaments, while the warriors along with the girls /90/ amuse
701 themselves with dance and song (os siñgólio) under a nearby shade
tree. For this a row of warriors stands opposite a row of girls. The
former dance in place by slightly lifting the feet and bending the

[Warrior Kraal]

/90 cont./

512 knees. The row of girls moves forward up to the warriors with short,
535 stamping steps, bending their knees and swaying their upper bodies.
701 As a rule the dance ends when each girl whose lover is absent ap-
[836] proaches one of the dancing warriors in short high-jumps. This is an
[832] invitation to a rendezvous, which the one concerned answers in
[533] similar fashion as a sign of consent. The dance is always accompanied by singing. Shortly before sunset all return to the kraal.

701
535

Ill. 34. Dance in the warrior kraal III. 1/4 C. G. Schillings phot.

512
701 Soon afterwards the livestock returns home, and, after it is milked,
[234] the people take the evening meal (en dai̇̄ e téiba = food in the even-
• [264] ing), again consisting of milk. After that the dancing of warriors
[272] and girls begins anew on a small open place in the kraal, close to
[535] the entrance, and is interrupted only from time to time in order to moisten with milk the throats shouted dry. During this time the
512 mothers are still busy with the livestock. It takes quite a while
234

1, [Illustrations 34 and 35 (on p. 119), despite the differences in captions, apparently were both taken at the same location, with only a slight time differential--Analyst]

/92 cont./

721 en dorosi, the en doros. For the warriors this consists of three or four
726 leather strips cut from the apron of their favorite girls, which are
714 adorned with stitched-on beads and, beside them, tied-on pieces of wood (from twigs of the ol araschi and os siaiti trees), while the leaders wear as en doros the borrowed tobacco box of a married man or his fly switch. The en dorosi obliges every warrior to take part in the ex-
703 pedition. Anyone who nevertheless stays away out of fear is most deeply despised and outlawed; any warrior may kill him without penalty. In order to give the fainthearted courage, the most daring ones not infrequently stick a ball, which has a diameter of 10-12 centimeters and is made out of black ostrich feathers, on the tips of their spears. Through this they express their firm determination to attack the opponent and to stand up to him in hand-to-hand combat, for the ball may be removed from the spear point only by one's running it into the body of the enemy.

721 The purpose of a war is always only the capture of livestock, and, to be sure, only cattle. War is not undertaken for goats and sheep. Boys may go to steal small livestock! Only the capture of cattle is worthy of a warrior; he only takes small livestock along as well when he can directly achieve this together with the cattle.

721 In order to get permission for the war expedition, the speakers
791 together betake themselves to the ol oiboni and put before him the wishes of the warriors. None of the latter accompany them, since they would behave too uncouthly in the presence of the great man, who wishes calmness and clarity in the consultations.

721 /93/ The ol oiboni keeps himself accurately informed both about
726 the strength of the individual warrior kraals and about all the condi-
791 tions of the surrounding sedentary tribes coming into consideration for a war, so that he is in a very good position to judge accurately the prospects of victory for either side with great probability. He also keeps himself posted about unimportant and secondary matters with regard to the opponent and weaves all this knowledge adroitly together in his answer, so that it sounds like a seer's pronouncement and is taken as such by the speakers and warriors. His answer -- as the speakers report it -- runs, for example: "You will attack the Kahe
[264] area; it is strong, and you will therefore first hold a twelve-day

721 /93 cont./
726 forest meal (1),
791
[264]

1. Ol bul or, if an en dorosi has taken place, ol bul en dorosi, or, in short for that, en dorosi, with which the present-day language also designates every forest meal prior to a war expedition.

in order to strengthen yourselves. Then you will set out for war on the day ol gadet. On the following day, ol ondjori, you will pass an old camping place. Then, before you reach your camp, you will meet a single Kahe boy. Do not kill him, but bring him to me; otherwise you would be defeated. On the ol onjugi day you will
726 fight and conquer, etc. etc." If something does not fit in, it is due
714 to the carelessness or mistakes of the warriors. Furthermore, for the
791 spies sent ahead of the expedition, the ol oiboni gives them a few
789 amulets (e mascho ol oiboni), which make their wearers invisible. The amulets contain one of his magic remedies and are tied around the wrist or to the spear or shield. Another war medicine consists of a mixture whose chief ingredient is snake eggs (mossor ol assurai). A large leg-bell (ol dualla kitok, Fig. 19) is filled with the medicine. In war it is tied to a club and hurled at the enemy offering resistance, so that he will flee, or it is tossed into his herd in order to drive apart the livestock, which then is caught by the Masai. In order to have the expected effect, it is desirable that the
726 medicine be hurled by a left-handed warrior. The speakers convey the chief's answer to the warriors, who have most impatiently awaited their return. Hastily they prepare themselves for the forest meal; weapons, pots, and the livestock needed are gathered together, and two by two the es sirit set out together for the nearest bush. Whereas
[263] in the ordinary meat meals only relatively few spices are used, for
[276] the en dorosi in particular all the many vegetable agents that the

Fig. 19. 1/2

234 hair styles. The gourds are grown by nearby cultivators
415 and purchased or traded by the Masai. The calabashes
[264] are cleaned between usings by washing in water (if available) and then purified with a mixture of urine and wood ash. After being carried in one of these containers the milk has a rather characteristic, somewhat smoky-sweet taste that may stay with one for several days.

443 The maize meal is purchased or traded from the dukas or trading post cum general stores which are found at Narok, Loliondo, and at other points around the periphery of the area.

262 Meat comes from the Masai livestock and occasionally
272 game. The old traditions laid down specified rules for who in the tribe might eat what kind of meat, and at
[701] what times. Apparently the warriors had a right to demand milk and sometimes meat from anyone, at least in their section. Milk and meat were not to be consumed on the same day, but blood could be mixed with the milk.

701 When not fighting the warriors could carry out
[562] an olpul, or meat camp. They would take goats or a bullock and make camp in the bush, kill and eat the animals. The olpul might take from a week to a month,
[826] depending on the available time and meat. We presume that

/103 cont./

619 After a battle of the Masai among themselves, the conclusion of
728 peace is that the speakers, in the presence of a number of warriors of both parties, exchange their skin capes and sandal thongs. This is called etabaschage megitin = exchange of skin capes.

726 The length of the stretches covered on war expeditions, in com-
701 parison to that of their neighbors carrying on agriculture, is often
484 astonishing. Performances of 60 to 80 kilometers a day, three or four days in succession, are by no means exceptions. If one considers,
[702] however, that the training of warriors consist only of marching, that,
[276] aside from their weapons, they carry nothing heavy, and before their marches, as well as during them, they partake copiously of stimulants, their performances in no way exceed those of a German infantry
701 troop. The tales of the caravan people relate miraculous things about
182 the speed and endurance of the Masai warriors, and even European
147 travelers have contributed to the spread of this legend in that they compare the physical performances of the Masai with those of the
• 271 Europeans in the tropics. The untenableness of such a comparison is obvious. One also often hears how the Masai are admired for their alleged ability to be able to give up the drinking of water on their marches. Presumably this rumor arose from the fact that these people, in contrast to other tribes, never carry a gourd bottle of water on their
701 long migrations. The Masai, however, knows perfectly every little
182 spot of the steppes, he knows every rocky basin, every tiny spring,
271 he also knows where an apparently dry brook bed carries subterranean
[823] water. Where water has collected in old hollow trees, and especially in baobabs, this is accessible to him through a series of steps made
[824] out of foot-long taps bored in horizontally. Finally, there are a number of water-rich roots and tubers, which, chewed, are very well suited
701 by their water content to quench thirst. They serve him, /104/ just as
182 the wild honey, not infrequent in the steppes, also serves as food on the
222 march. A cuckoo bird, the honey indicator (Cuculus indicator, called
[825] eñ johoroi by the Masai), leads the Masai to the concealed honey holes.
[136] As soon as it sees human beings it calls with a strident sound and then flies slowly to the nearest honey place, to which the people follow it
[825] in order to take out the honey. If the amount found is still not sufficient for the warriors, they bury the chewed comb, whereupon the bird, after

A root decoction is drunk to treat muscular rheumatism.

261. ol gischiré (Farsetia stenoptera Hoch.). Fodder for donkeys.

[271] 262. eh gailigé (Rivea kituiensis [Vtke] Hall.). The tuber is chewed en route on marches to quench thirst.

/367/ 263. ol ilairia (Anticharis linearis Bth.). Fodder for small livestock.

264. eh ilairia l ol asurai ilro l ol jahiz subugi (Barleria inscrunata Lindau). A person bitten by a snake is set over a wood fire on which are thrown leaves of the plant, together with sheep hair, to cause him to perspire profusely from the smoke thus created.

265. ol idoldoh on dare = eh gaisedjoi.

[751] 266. ehg ischoigi. From the plant the ol olbeni makes an amulet against fever.

267. ol iogeno (Boerhavia plumbaginea Cav.). Good fodder for small livestock.

268. ol iogiroi (1)

1. Designation of the Masai.

(Pentas zanzibarica [Kl.] Vtke.). Older men drink a root decoction as a remedy for muscular rheumatism.

269. en iboi (Tephrosia aff. Uhligii Harms). Good fodder for small livestock.

270. en iligoi (Gerwia spec.). Good fodder for small livestock.

271. ol imi inoi (Turraea Volkensii Gürke).

272. ol imi ereki (Bersama Volkensii Gürke). The warriors like to use the soft twigs for making bed padding on marches.

273. ol imi emuai (Glossonema Revolii Franch.). Good livestock fodder.

274. ol imi l ol sirgon (Cadaba farinosa Forsk.). If donkeys eat a great deal of this, it causes severe constipation, which is said to be frequently fatal.

/369 cont./

824 [801] 322. ol mogolgura, a liana not infrequent in the river forests. The root bark, smelling strongly like vanilla, is twisted, ropelike, and worn by men and women as a necklaid. It also finds use as a secret medicine of the ol oiboni and the ol gotatiki.

323. ol mokoran (Albizzia anthelmintica Brongn.). One or two hand-sized pieces of trunk bark or root bark are pounded with a club into fibers and held for a few minutes in boiling meat broth for steeping. This soup is used by warriors as a nerve stimulant, by [832] women as an aphrodisiac. To cure gonorrhea, one adds a small amount of honey to the broth before drinking it. An extract that is made with double or /370/ triple the amount of bark is used to get rid of taeniae and ascarids, or also as an emetic for bilious fever. The fresh bark bast is chewed for constipation.

[862] 324. ol mimut (Solanum nigrum L.). Children eat the berrylike fruits.

325. ol mirin (Ocimum suave Willd.). A root decoction is used as an emetic.

326. ol meridjot or ol merijot (Acocanthera abyssinica). The arrow poison is obtained from the roots and wood by boiling.

327. ol marok 1 ee dare.

328. 'mashgeju (Maerua rigida Oliv.). From the powdered root [751] the ol oiboni makes an amulet that is supposed to protect one against colds and fever.

329. ol muguri kinok (Caralluma spec.). The soft, fleshy twigs [271] are eaten by warriors on the march, by boys tending cattle, to quench thirst.

330. ol muguri 1 ol kolijiok (Euphorbia spec.). Hyenas allegedly eat this plant.

331. ol muguri 1 ol ngara.

332. ol mumbai (Acacia abyssinica Hoch.). Fodder for small livestock.

333. ol munjagara (1)

1. Also called ol gilambi.

(Acalypha indica L.). Good fodder for small livestock.

FL12 Masai FL12

776 In connection with the decided belief of the Masai in a God, it may be noted that they have also some minor deity called Neiterkob—apparently, as far as I could learn, an [754] earth spirit. They have faith in witchcraft, though the efficacy of the lybon, or medicine-man, lies not in any innate ability of his own, but in his power of intercession with Ngăi, who works through him, and imparts magical virtues to various objects. Their conception of the Deity seems to be marvellously vague. I was Ngăi. My lamp was Ngăi. Ngăi was in the steaming holes. His house was in the eternal snows of Kilimanjaro. In fact, whatever struck them as strange or incomprehensible, that they at once assumed had [782] some connection with Ngăi. Their prayers to him were incessant. Nothing could be done without hours of howling, whether it was to seek direction where to slaughter their 824 enemies, or to ward off a disease. The most sacred thing among 778 them is the grass. Held in the hand, or tied in a sprig to the dress, it is a sign of welcome and peace. Thrown at any one, or into some mysterious place, it is an invocation for a blessing on the person, or a propitiatory offering. Next to the 712 grass comes the milk. No liberties may be taken with it. 778 The milk must be drawn into calabashes specially reserved for its reception, into which water is not allowed to enter—*cleanliness* being ensured by woodashes. To boil it is a heinous offence, and would be accounted a sufficient reason for massacring a caravan. It is believed that the cattle would [231] cease to give milk. The cows, it may be remarked, are never milked except in the dark.

885 Moran found married life sadly dull after his warrior experiences, and to kill time he accompanied one or two war-parties. But that was exceptional. His time henceforward was chiefly occupied in eternal and interminable discussions on the most trivial questions, or wandering long distances on visits to his friends, while his wife stayed at home to milk the cattle, or occasionally made journeys to neighbouring hostile tribes to buy grain. She, however, was in her element when a caravan came round, and then she enjoyed the double pleasure of an intrigue and a lovely present of iron wire and beads.

595 In time Moran's first wife became old and ugly, and he took to himself a second—the former being stripped of all her iron wire for the purpose of decking the new comer. At last the day closed for both of them, and one after the other, they 764 formed the subject of horrible hyenas' laughter. These fierce

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

561
894

warriors may have sexual relations with initiated women. This is regarded as being the first stage in a warrior becoming an elder.

The warriors have their heads shaved—usually by their mothers—at the close of the *E-Unoto* ceremony, but they allow the hair to grow again, and plait it into a pig-tail when long enough. [302]

Milk Drinking by Warriors.—A warrior may not drink milk unless it is handed him by another of his age-group. They must therefore always go about in parties of two or more. The procedure on arrival at a village where they want some milk is as follows :— 561 574 272

The warriors enter the village and stand in the open space within the circle of the huts till one or more of the old men comes to greet them. They ask for a hut of their age-group, or, failing that, a hut of an elder of their *Ol Piron*. On being shown a hut to enter they go in and sit down on a bed or the stool, and wait till milk is handed to one of them (for description of hut *see* p. 463 ff.) He shakes up the milk, removes the cap of the gourd, and hands it to his companion, who drinks it. If only one gourd is brought they share it, handing it from one to the other. If a second gourd is brought the warrior to whom the first gourd was originally handed may open it and drink it himself provided that he has given the first gourd to his companion. Belching after a drink of milk is a sign of repletion and is good manners, showing the guest's appreciation of the hospitality of his host.

Ol-Ng'esher of Milk.—This ceremony is performed by each warrior individually. He is given milk by an elder in his mother's hut, and drinks it by himself. He shaves his head and does not grow a pigtail again. Thereafter he may drink milk by himself. He usually marries very soon after this ceremony, and is no more regarded as a warrior after it. The ceremony usually takes place nowadays a year or two after the *E-Unoto* owing to Government policy of reducing the period of warriorhood as much as possible. In the Purko, most of the *Il-Salaash* have already performed their milk *Ol-Ng'esher*, although there is as yet no left-hand age-group for their generation. 561 [272] [302] [148] [177]

I have heard it said that in some tribes there is a ceremony of handing over warriorhood from one generation to a junior one. Among the Masai there was no such ceremony. When the young warriors of a new generation became strong enough they fought and defeated the old ones, taking on the warriorhood by force.

Meat Feasts.—No man may eat meat which has been touched by an initiated woman until he has performed the second *Ol-Ng'esher* ceremony, called the *Ol-Ng'esher of meat*. After that he may eat meat which a woman has touched if he likes. The Il Meruturut and Il Kitoip age-groups of the Purko were said to be going to have their meat *Ol-Ng'esher* in June, 1930; but I left Africa before it was due, and therefore cannot describe the ceremony. [262]

A man of the generation immediately older than the warriors must not be seen eating or drinking milk by a warrior until one of the warrior age has given him a heifer.

/32 cont./

512 When the livestock have been driven out of the kraal to pasture,
[462] the women and children start to clean it. Then the fire is lighted
[351] in the huts and on it are placed the pots filled with water in which
[252] the vegetables are to be cooked. These pots (e modi, 'modio) are
[415] not made by the Masai themselves, but are bought from sedentary
[439] tribes or also from the Wandorobo, who presumably learned the
potter's art from them. They are a foot high and globular. In con-
262 trast to the warriors, all the occupants of the family kraal, espe-
[241] cially since the cattle epidemics, eat vegetable food which they
buy from the neighboring peoples, since they themselves do not
262 engage in any agriculture at all. Their favorite foods, however,
• 272 are, of course, milk, meat, and blood. Milk is always drunk by
[158] healthy people uncooked, as fresh (en gule) or sour (en gule naoto);
boiled milk is food for the sick and as such is usually mixed with
pulverized grains of ol lodoa (Maesa lanceolata). Sheep milk is
especially popular because of its very high fat content. Blood of
cattle, sheep, and goats is drunk fresh or eaten in the clotted
[158] state. Milk mixed with fresh or /33/ cooked blood (en jiwot) is
greatly appreciated; this drink is highly esteemed as invalid soup
[234] for the wounded. Cheese making is unknown. Butter is made by
agitating the cream in a large gourd-bottle (en diagolgol). Fat,
[252] rendered in a pot, is used as an ingredient in other foods, especially
[263] meat broth, but is also drunk without any admixture. Meat is
prepared without adding salt; it is cooked either with various
spices or roasted on a stick at the open fire. One does not eat in
[252] one day cooked meat and milk /Ill. 13 appears here/ together
[153] (1).
[263]

[171] 1. This was also forbidden for the Hebrews, according to the 2nd Book of Moses 23, 19-34, 26, passages which are part of the so-called Yahwist documents, that is, the oldest sources of the Pentateuch.

because the latter together with the ol mokotan spice (bark of

262 Albizzia anthelmintica) always used in the cooking of meat is
• 272 supposed to cause severe diarrhea. Therefore milk that is offered
[753] is often refused in the hope that a meal of meat will be obtained
[263] on the same day. One who wishes to partake of both foods in one day -- and where is there a Masai who could resist an invitation to a meal of meat?! -- vomits first before eating the meat, for which he produces the necessary stimulus by means of a blade of grass stuck in the throat. If one has eaten cooked meat today, then /34/ one first drinks some blood in the morning before the milk, not out of considerations of health, but rather because it is believed that the livestock would give less milk as a consequence of neglecting this custom. Bringing milk into contact with meat
[231] is most scrupulously avoided, because, according to the general view, through that the udder of the cow from whom that milk came would become permanently diseased. For this reason the

/34 cont./

262 Masai only most reluctantly and infrequently sell cow's milk, for
• 272 the buyer indeed could in the above-mentioned manner make their
[136] cows sick with it. The Masai scorn any kind of game meat, as well as birds and even fish, of the latter of which species of Barbus, Chromis, Clarias, and the sheatfish-like Synodontis occur almost everywhere in larger brooks.

252 The preparation of the principal vegetables is the following:
262 batatas (ol muruṅgu, el muruṅguni -- Ipomoea batatas) are cooked
263 in water with a little steppe salt (e munján), then drained, mashed with a whisk (ol gibere, el giberen), and stirred with fresh milk. The finished dish is called el muruṅguni. Unripe bananas (ol marigol, el marigo -- Musa paradisiaca) are peeled, cut up, and cooked in water with salt. After they have been drained, a little butter (eṅ gorno) is added. Unripe dried bananas (ol kitauo, el kitauón) are cooked in water, drained, and then stirred with milk and butter. Maize kernels (ol balegi, el baleg) are cooked in water without the addition of salt. Beans are cooked with salt. One distinguishes ol bombol -- el bombo (Dolichos lablab), eṅ giú --eṅ giñ (with which both Cajanus indicus and Vigna sinensis are designated), furthermore os sigoriol -- es sigorio (Phaseolus vulgaris), ol gámuri -- el gámuri (Phaseolus radiatus). Eleusine coracana (en dabá -- 'n dabán, or en drigá -- 'n drigán or also called eṅ guruma -- 'n guruman) and Sorghum vulgare (ol birirí -- el biriríṅ) are cooked to a thick porridge and lightly salted. Dioscorea abessynica (ol geré -- el gerén) and Colocasia antiquorum (which the Masai on Kilimandscharo designate with the Dschagga /Chagga/ word maduma) are cooked in salted water.

Honey (en aischo -- 'n aischi) is eaten unmixed and is also used as an addition to various medicaments. They buy tobacco
276 (ol gumbau, Nicotiana rustica), which the Masai
[439] consume in quantities, from sedentary Negroes, who put it on the market in loose, bast-wrapped packets (Fig. 4) of various sizes or in the shape of solid balls about five centimeters in diameter.
[415] For the preparation of this, the tobacco leaves,
→ picked ripe, are tightly packed, tied up with

512 cleaning of the cattle stalls and other work, as well as to start the
701 cooking of their food, consisting of purchased vegetables. This is
462 eaten around two o'clock in the afternoon (en dal e kat' aré, that
[262] is, the second meal), while then the warriors at the same time
[264] drink the rest of the morning milk, which has already become
[272] somewhat sour (efig ule naisedjo = slightly sour milk). After that
512 the old women take a nap or busy themselves with sewing and making
535 ornaments, while the warriors along with the girls /90/ amuse
701 themselves with dance and song (os siligólio) under a nearby shade
tree. For this a row of warriors stands opposite a row of girls. The
former dance in place by slightly lifting the feet and bending the

[Warrior Kraal]

/90 cont./

512 knees. The row of girls moves forward up to the warriors with short,
535 stamping steps, bending their knees and swaying their upper bodies.
701 As a rule the dance ends when each girl whose lover is absent ap-
[836] proaches one of the dancing warriors in short high-jumps. This is an
[832] invitation to a rendezvous, which the one concerned answers in
[533] similar fashion as a sign of consent. The dance is always accompanied by singing. Shortly before sunset all return to the kraal.

701
535

Ill. 34. Dance in the warrior kraal Ill. $\frac{1}{4}$

512 Soon afterwards the livestock returns home, and, after it is milked,
701 the people take the evening meal (en dai e tiba = food in the even-
[234] ing), again consisting of milk. After that the dancing of warriors
[264] and girls begins anew on a small open place in the kraal, close to
• [272] the entrance, and is interrupted only from time to time in order to
[535] moisten with milk the throats shouted dry. During this time the
512 mothers are still busy with the livestock. It takes quite a while
234

1. [Illustrations 34 and 35 (on p. 119), despite the differences in captions, apparently were both taken at the same location, with only a slight time differential--Analyst]

/173 cont./

233 [561] [857] Small livestock and donkeys are tended by little boys, cattle by older boys, under the supervision of a few old men. Dogs are no longer used for this now; rather the livestock heeds the whistle or call of the herdsmen. To what extent this is the case is best demonstrated when Masai flee with herds of livestock. A number of men, shouting and whistling, run before and behind the herd, which rages across the steppe in a mad chase. In former times the herdsmen quite generally used dogs. The dogs did not serve so much to keep the herd together, but more for guarding. They announce the approach of predatory animals by barking or by hastening to the herdsmen. [231] [978]

231 [362] [272] /174/ As has already been mentioned above, fresh livestock blood alone or mixed with milk forms a food prized as quite particularly nourishing. The blood for this is drawn off the living cattle and goats in the following manner: A strap is tied around the animal's neck in such a way that the blood returning to the heart in the large vein is blocked by it and breathing is not affected. Then a man shoots an arrow (Fig. 8) with a bulb-shaped, thick tip (ol horet), from which projects a scale-shaped sharp piece of sheet iron six to eight millimeters long and equally wide, into the swollen vein, whereupon the blood squirts out in a stream and is caught in a gourd bottle (ol bugut). The bleeding is stopped by a simple untying of the strap after the operation is finished. From a strong bull or ox approximately four to five liters of blood are drawn at one time, from a cow only half a much, and this is repeated every month. No blood is drawn from good milch cows and cows with young calves. Blood is drawn from sheep by means of an incision in the depression above the eyes or between the eye and the middle of the forehead. The slaughtering of cattle is done by a stab in the neck after the front and hind legs have been fettered; goats and sheep are suffocated by having their mouths and noses held shut. Cows are never slaughtered, not even when they are too old to be used for breeding. [411] [415]

231 242 561 Livestock that has died is eaten. As soon as the animal is dead, one removes the skin from the neck, severs the neck veins, and catches the blood flowing out in the skin. The cutting up of a head of cattle is done with the greatest care; almost every single muscle is carved

/209 cont./

796 782 [842] [539] In the songs the following prayer is constantly repeated: 'Ng ai stasaia, 'J' oschiage aomon, kiamon ag' ije kiamon eñ gera, eñ golobi en aischo, i.e., God, I implore you always; I pray, we pray to you alone, we pray for children, for birth for the barren woman.

Whereas the supplication feasts are usually held on the es sobiaÑ days (from the 18th to the 20th of the month), a joint supplication-prayer, ol dogóm, often takes place on the day of the new moon. The people of the kraal gather in the evening and, from a buffalo or cattle horn, drink a mixture consisting of milk, a cold extract of eñ gaitetojai twigs (Commelina Merkeri K. Sch.), and a white powder obtained from the ol oiboni, while they say the /210/ prayer: 'Ng ai jo ijok eñ gischon, jo ijok ñ gischu, jo ijok eñ gera! That is, may God give us well-being, livestock, and children. If a larger supplication feast is to be held in a month, the joint supplication feast always precedes it on the first day of the month. [272] [237] [415] [824] [539]

782 783 [784] If a small child of one not long detached from the warrior standing dies, he not infrequently sees in it a punishment from God for his having killed a pregnant woman on an earlier expedition, provided that he once killed a woman who might have been in this condition. In order to obtain forgiveness, he offers God a black gravid sheep, and, to be sure, close to the spot where at that time he committed the deed. Before he kills the animal, he prays to God, mentions the purpose of the sacrifice, and asks for pardon. As penance for his misdeed, he throws the blood and amniotic fluid (eñ gepa) of the sacrificial animal, as well as the fetus and uterus, both cut into pieces, upon the spot where it occurred. He takes along neither meat nor skin of the slaughtered animal, but leaves everything lying there when, after the concluded sacrifice, he returns to his kraal.

825 826 775 613 The lineage of the El kiboron believes that the bones of the buried corpses of their married men turn into snakes. They therefore do not kill these animals, like the other Masai, but are happy about their presence in the kraal and by the huts and, as soon as a snake appears, set on the ground a shallow dish with milk and honey as food for it. Snakes in and near El kiboron kraals are not rare.

/373 cont./

824 411. ol osidja gutok (Asystasia gangetica [L.] T. Amd.). One washes young goats and sheep with an extract of the crushed plant to get rid of fleas.

/374/ 412. ol osigiria l en djoi. If a cow has fever, one ties a twig on its tail, with which it then whips its body. The milk of such a cow is drunk by pregnant women, since it is believed that through that the child expected will not be susceptible to fever.

[843] [272]

413. e' rano 'l ogunja (Pentanisca uranogyne S. Moore). Fodder for small livestock.

414. o' rarait (Cissus rotundifolia [Forsk.] Vahl). The leaves are placed on wounds as a plaster. A root decoction mixed with bull-meat broth is drunk for muscular rheumatism.

415. o' remit (Salvadora persica L.). The pieces of twig chewed to resemble a brush are used as toothbrushes. A paste of powdered root takes the place of our mustard plaster. A decoction from about five finger-sized pieces of root to be drunk is regarded as a cure for gonorrhea and cystic catarrh.

416. e' rikáru (Andropogon papilionus Hochst.) is a good fodder grass (1).

1. On the southern end of Lake Natron a Panicum species was also called e' rikaru.

417. o' rikáru (Cynodon dactylon Pers.) is a good fodder grass.

418. o' riroi, also called o' riroi l om bŋ (2)

2. Eulophia Shupangae Krzl. was also called this.

(Gladiolus nov. spec.). The juice obtained by chewing the bulb serves as glue to fasten the feathering on the arrow.

419. o' ropande (Commiphora spec.). The extract or decoction of a piece of bark the size of two or three hand-palms, mixed with meat broth, is taken as a remedy for abdominal pains. Since its effect is considerably milder than that of similar remedies, it is preferred by pregnant women.

234 hair styles. The gourds are grown by nearby cultivators
415 and purchased or traded by the Masai. The calabashes
[264] are cleaned between usings by washing in water (if available) and then purified with a mixture of urine and wood ash. After being carried in one of these containers the milk has a rather characteristic somewhat smoky-sweet taste that may stay with [illegible] several days.

443 The maize meal is purchased or traded from the dukas or trading post cum general stores which are found at Narok, Loliondo, and at other points around the periphery of the area.

262 Meat comes from the Masai livestock and occasionally
• 272 game. The old traditions laid down specified rules for who in the tribe might eat what kind of meat, and at
[701] what times. Apparently the warriors had a right to demand milk and sometimes meat from anyone, at least in their section. Milk and meat were not to be consumed on the same day, but blood could be mixed with the milk.

701 When not fighting the warriors could carry out
[562] an olpul, or meat camp. They would take goats or a bullock and make camp in the bush, kill and eat the animals. The olpul might take from a week to a month,
[826] depending on the available time and meat. We presume that

562 eat meat from wildebeests and gazelles. When I shot an elephant near one boma the Masai women turned out in [252] force. They spent most of the day cutting off strips of [462] subcutaneous fat and some flesh. A few elders joined [825] the women in the cutting. Several Masai requested fat from a lion I had shot (which had been raiding their boma), but they said that their use was for medicine rather than food. We have records, therefore, of Masai eating (or taking to eat) wildebeest, Grant's gazelle, Thomson's gazelle, elephant, buffalo, eland, and kongoni.

Cattle are usually eaten when they die. Cows are rarely slaughtered, although bullocks sometimes are killed for food and prize ones are killed and eaten [562] by men at ceremonies. We have watched women picking up the remains after livestock have been slaughtered, and Willais (1920) spoke of Masai women eating offal and other remains of oxen or sheep after the men were through eating.

231 Bleeding of cows and sheep is accomplished by • 272 tying a thong about the animal's neck so the jugular swells, then shooting a partially blocked arrow into the jugular vein and catching the spurting blood in a gourd.

231/ When they have enough blood, the thong is released and
• 272 the small wound covered with mud or dung, and the animal runs off apparently none the worse for wear. The blood is drunk warm, or mixed with milk.

146 Although they are thin, the Masai appear adequately nourished, and they have great physical endurance. The Ministry of Health doctors told us that Masailand was the only part of East Africa in their experience where the children did not show signs of Kwashiorkor or the other diseases of malnutition that are so common with Africans. Gale (1960) noted that the greatest defect in the diet of the East Africans is lack of animal protein, but this is true of the Masai only in times of extreme drought.

291 [384] <u>Clothing, Jewelry and Weapons</u> The traditional clothing of Masai men and women is an ochre colored cloth of cloth usually gathered over one shoulder. Some wear (292) skins, usually of sheep. A cow hide is used for a rain coat. Most Masai men wear sandals made from heavy leather or old rubber automobile tires. Very little else is worn by either Masai men or women, except near villages where the women occasionally wear more concealing cloths.

262 [915]

Ore 'n-gulye-tikitin náinoi.

in gourds. Some drink it pure; others mix it with milk[1].

There are a few other things which the Masai eat.

276

Enyasi il-mórusk oo 'Ngorôyok ol-kumbu áitushu-laki e-makat o ol-kumbu loo-'l-murua. Netii 'l-oook too-'n-gumeshi ol-kumbu oidoîgo, ntji en-giangi. Netii sii kulikae oook too-'l-mótio.

Some old men and women chew tobacco mixed with salt and *Ocimum suave*, whilst others sniff ground tobacco up their nostrils: this latter is called snuff. Others again smoke pipes.

Ñok sii 'l-murua, kake mtok pikin. Menyasi ninje 'l-ayok ariki 'n-doiye ol-kumbu, nemtok; etoni aka.

Those of the warriors who like it also take snuff. The boys and girls, however, neither take snuff nor chew tobacco[2].

437 276 [349]

Metumii-Maasae ol-kumbu, ama maiytio satutura; kake eiyaîgu too-'l-mook, áinoye eng-orno oo 'n-dare tasati.

The Masai do not grow tobacco themselves, for they do not know how to dig. They buy it from savages, exchanging it for butter and lean goats.

Meniraki 'l-Maasae 'l-mook in-giaho ayyati, 'n-giaho oiupin aka oo nemesta kulia, oo náiha 'l-aiho, ninje aka emiraki 'l-mook, oo 'n-dare mórusk oo 'n-dasati.

The Masai do not sell good cattle to the savages; they only give them barren cows, or those which have no milk, or which do not care for their calves. These and old or lean goats and sheep are the only animals they part with.

273

Ntok sii 'l-mórusk in-aishi, neiyaîgu 'l-marusu o en-jui too-'l-mook.

The old men drink honey-wine, and they purchase from the savages two kinds of beer, called Ol-marua and En-jui.

262

'N-gura aka náinoi en-aisho najun. Pikii en-dikii nainoi il-mórusk ta-'n-aisho najun il-dangaro aka.

It is only the children who like wild honey: old men eat the comb full of grubs[3].

[171]

[1] This custom is also common among the Bari (Kerbaoan, *Bibliography*, p. 170).

[355] [198] [126] [322]

[2] In olden days it was the privilege of rich old men and their chief wives only to take tobacco, which was called ol-ekani loo-'ng-ayok, the opportunities.

[3] 'The Masai obtain their honey by following the *Indicator* bird.'

3:Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

poison is being made and when honey wine is being brewed. During the time that a man is making poison (eight days) he is treated almost as an outcast. He must leave his house at 4 a.m. and not return till 7 p.m., when he must rub clay on his body. He may not eat when the sun is above the horizon; he may only relieve nature far away from the kraal; and he must sleep alone. If he were to break any of these rules it is believed that the poison would be useless. When honey wine is to be brewed a man and a woman are selected for the purpose, neither of whom has had sexual intercourse for two days. A hut is set apart for them to live in until the honey wine is ready for drinking (six days), during which time they may not sleep together. As soon as the honey wine is ready they receive payment, and go to their respective homes. Were they to have sexual intercourse during the six days that the honey wine is brewing, it is believed that the wine would be undrinkable, and the bees that made the honey would fly away.

634
271
634
273

Mothers-in-law and their sons-in-law (*ong-ayoniani*) must avoid one another as much as possible, and if a son-in-law enters his mother-in-law's hut she must retire into the inner compartment and sit on the bed, whilst he remains in the outer compartment; they may then talk. Own brothers-in-law and sisters-in-law (*o-sindani ki-angit* and *o-sindani o-ongit*) must also avoid one another, though this rule does not apply to half-brothers-in-law and sisters-in-law (*o-sindani* and *o-sindani*). This rule is possibly due to the fact that when a man dies his own brother may not marry his widow, though there is no objection to his half-brother (paternal) or one of his paternal cousins taking her to wife. In fact, the only person who may marry a widow is one of the deceased husband's half-brothers or paternal cousins. It frequently happens, however, that widows never re-marry but live with their children in the kraal of the eldest living brother of their late husband, who becomes the guardian of their children.

606
607
606
607
587
[illegible]

Divorce is almost unknown amongst the Masai, and it is only barren women who may be divorced. But if a woman is barren it is usual for her husband to give her some of his children by another wife to bring up. Daughters are usually selected; but if there are several sons the youngest and the youngest but two may be given to the sorcerer. When a barren woman is a bad woman and is disliked by her husband and his other wives, she may be divorced, in which case her father or his heirs must refund the cattle paid for her, and she is at liberty to re-marry.

586

6:Thomson K-3 (1883-1884)1887
F112 Masai F112

abandoned, and, though meat and milk were still the main items of his eating, he could now vary it with vegetable food obtained by his wife from neighbouring agricultural tribes. Luxuries, also, he might now indulge in. He sported a fancy snuff-box and tobacco-box of ivory or rhinoceros' horn, and delighted to rap up his contents as he handed it to a friend. He chewed tobacco (mixed always with natron), though he never smoked. Then, as often as convenient, he liked to foregather with his friends, and have a jolly carouse over beer or mead.

It is pleasant to know that with this change in his mode of life there was a corresponding alteration (very much for the better) in his views of things. He delighted to talk with the traders whom before he had gloried in killing or enslaving, and would in token of good-will cordially exchange the courtesies of life by spitting upon them and being spit upon. In his conversation he showed an intelligence far superior to any specimen of the Bantu tribes. He had no suspicions, and was communicative about his affairs and beliefs. He would even at times exercise a friendly guardianship of passing traders, and was able to ward off many a disaster by judicious warning. He was not stinted in his generosity, and generally gave far more than he got. He has been known even to protect abusyed persons, and tend sick men left behind.

The suffering down of his ferocity reacted upon his face. The habitual scowl gradually died away, and was replaced by a more pleasing and genial expression. His thoughts turned more to the strange mystery of life. He, alas! had little that was cheering to look forward to. He believed in the existence of a Supreme Being, and yet had not the faintest conception of an after-life. Unlike the men of the Bantu race, he did not believe in ghosts or spirits. He had no theory of dreams, and did not imagine like the negro that when he dreamed he was really experiencing all that was passing through his brain, and that his soul or spirit was actually travelling around somewhere, having a good time of it, unclogged by his body. Moran believed nothing of that; indeed, whether he had any idea on the subject, I have not been able to determine. When the man died, he was finished utterly, except so far as he might go pleasantly to build up the body of a hyena, a vulture, or a manabout stork. The Masai believes in annihilation. To bury a corpse would, they think, be to poison the soil; it must be thrown to the wild beasts without ceremony.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

After going through the ceremony, the new elders can drink milk alone, eat meat that married women have seen, carry short bladed spears (*emdoro ayeu*) in place of the long polished warrior's spear; in fact all the customs of warriorhood are abandoned. 561

On return to their homes those who are not yet married do so at the earliest opportunity. Those who are married, if their fathers are still alive, move off from the paternal home; for they are now in complete control of their cattle, and if they stayed with their fathers there would be constant bickering on animal husbandry matters. 571 578

From the foregoing it may be concluded that the average Masai male spends at least 10 years of his life as a moran. What are his economic duties and privileges during this period? In olden times his primary duty was to defend the country and, by raiding other tribes, to maintain and increase the cattle population. But European intervention has deprived him of his main occupation, and the only duties which the moran by custom seem bound to perform to-day are (a) drawing water from wells for his father's cattle or superintending their watering at flowing streams, (b) cutting the thorn tree branches which form the fence of the boma, and (c) escorting home night-bound cattle or searching for lost beasts. It was natural that few everyday tasks should be imposed on the standing army, but although the military duties are now in abeyance, the moran have retained the privilege of freedom from responsibility together with many other perquisites. These include access to the unmarried girls and the right to demand milk in any boma. In the matter of bullocks for slaughter in *al pul*, the camp at which the moran may alone eat meat, the warriors seem to have a fairly free hand; if an elder withholds his consent, his moran son (with friends) will frequently help himself. It is not improbable that with the prohibition of raiding the moran exert these privileges to greater degree than they used to. If the elders are to be believed they spent a considerable portion of their time as warriors absent from home on raids, living in the bush on stolen cattle preparatory to stealing more. Consequently the time which they spent wandering round the boma making their demands must have been considerably curtailed. 648 718

Another duty, or rather, restriction placed on the moran was abstinence from tobacco and beer. The former is largely breaking down, but fortunately the latter still holds to a considerable extent. This is not so with the Arusha, amongst whom drunken brawls between groups of moran are not infrequent. 272 276 184

The above largely refers to the unmarried moran; once they settle down, even before the *eighoro* ceremony, their mode of life is practically indistinguishable from that of a newly made elder.

Elderhood is in itself marked by different stages, each of which has its own privileges and responsibilities. The members of the generation immediately above that of the moran are mostly concerned in family matters, establishing their own *gaina*, marrying and performing ceremonies to ensure the fertility of their wives. The generation next above the most junior elders, as explained earlier in this chapter, is responsible for the

684 *Boyhood. Sex Life.*—In past times uncircumcised boys were severely punished by the warriors if they had sexual intercourse with a girl of any sort. This is no longer the case, probably because the warriors are afraid of Government interference should they ill-treat the boys. [178] [648]

Should an uncircumcised boy have intercourse with a married woman he may, when his time comes to be circumcised, fail to find an elder who will sit behind him according to custom and hold him during the operation, but may have to sit unsupported. In an instance which I observed a boy who had so offended was circumcised in due form on payment of a fine of four oxen. [304]

881 561 The elders who decide when a new circumcision is to take place are those of the *Ol-Piron* generation to that which is about to be circumcised.

Ol-Piron means a firestick, and its significance is explained below under organization of generations and age.

Ceremony of Seizing the Ox by the Horns.—The Masai call this ceremony *Kodolosi o al-Gitoy*, which means the tearing of the ox. *Ol-Gitoy* is the general word for an ox and is not confined to the one used at the ceremony. It must be performed first by the Il Kakonyuki section. I have not seen it performed.

881 *Circumcision.*—I will endeavour to describe a circumcision as I saw it. On my arrival a few minutes before sunrise the two boys who were candidates were standing naked and shivering outside one of the village gates. They had previously been completely shaved. An old man poured a little water over each from a pannikin. Ox hides were brought out and each boy sat on one. Each boy was held by an elder sitting behind him. They were just outside the village with their backs to the thorn fence which encircles the village. The operator appeared and circumcised each in turn. He was a Kikuyu and performed the operation with a dirty-looking razor of a type made in Birmingham or Germany. [304] [413]

As soon as the operation was finished new sandals were put on the boy's feet by the elders; and the elder who was sitting behind him stood up, still holding him, and walked him off backwards through the village gate.

As soon as both boys had been circumcised the operator rushed off to repeat the performance at a village near by before the sun was high. I went back into the village with the elders. One of them drew blood from the neck of an ox for one of the candidates. We went into the hut of the mother of one of the candidates, where the boy sat silent on a bed while we elders refreshed ourselves with honey wine. The boy is not allowed to speak for a period after the ceremony, but I have forgotten the length of the period. [203]

A branch of a tree is tied to the front of the boy's mother's hut by leather thongs passed through the wall.

561 178 *The Novitiate.*—Nowadays the novices do not need to remain in this stage till all the other candidates have been circumcised, but shave after a few months. They

12: Fox G-5 (1925-1930) 1930 FL.12 Masai FL.12
Kenya

995 The Masai know nothing of a life after death, but it is thought that *Loibons* may live on in the form of black snakes.

968 If a death occurs in a hut it is not evacuated until the village moves in the ordinary way (the Masai being nomadic, seldom stay for long in one village). If, however, the village only moves to a new site close to the old one, the family in which the death has occurred must move further away and remain away for two or three months.

989 If a woman has lost her oldest male child she binds a few turns of iron wire below the knees of her next surviving son, in order to make him look like a girl* that death may pass him by. A man still wears these coils of wire even when he is old. Such a man is nicknamed *Ol o ngingi* (*the man of the iron wire*).

965 If the head of the family dies a white or a black bullock is slaughtered, and the people smear the fat from the front of the ribs on their bodies and on the garments of the deceased.

957 *Sickness and Medicine.*—The Masai have their treatment for numerous diseases. Members of the Il Dorowo clan appear to be the most skilled in medicine. They have often shown me herbs which they use, but I have for the most part forgotten the Masai names for them, and lack of botanical knowledge prevents me from giving their scientific names. Such Masai as understand the use of herbs have never shown any reluctance to tell me about it.

Sheep's fat plays an important part in nearly all their medicines. For instance: (*a*) If a Masai is bitten by a mad dog (disease called by Masai *Nang's gatok*, presumably rabies) a sheep must be immediately slaughtered and the fat boiled with bark of *Il Kilawiti* trees. The sufferer drinks this mixture and his skin is smeared all over with the contents of the sheep's stomach. This is said to be a certain preventive if done at once. I described the treatment in greater detail in an appendix to the Narok District Intelligence Report for April, 1929, and it is probably still on file in the Government office.

(*b*) *Anthrax* (Masai *Endorit*).—When this disease appears as an external sore a sheep is slaughtered and the sheepskin is bound round the affected part. The patient drinks the fat of the sheep. He must on no account be allowed to drink water or milk, and if he does so he is almost certain to die. This disease is fairly common among the Masai, but they usually recover from it. In the opinion of some Europeans the Masai treatment is more efficacious than ours.

973 *Honey Wine* (Masai *En-Aidai*).—This is much used at religious ceremonies and other occasions of importance. It is a very pleasant beverage. To make it, honey and water are mixed in about equal quantities in a special gourd called *E-Masai*, literally "the egg." To this are added the dried fruits of the Sausage

[301]

* Masai girls wear big ornaments of iron wire.

12: Fox G-5 (1925-1930) 1930 FL.12 Masai FL.12
Kenya

tree (I do not know its scientific name) cut in pieces lengthwise (Masai call them *E Sapuro*). The mixture is put in a warm place to ferment for two, three, or four days. The alcoholic content varies according to the time it has fermented and the proportion of honey to water. It is sometimes very potent. The *E Sapuro* are removed when it is fermented enough. An inferior quality of wine can be made by substituting sugar for honey. 073

Clans.—The Masai clans are patrilineal. The clan organization governs marriage, adoption, and inheritance. The two last will be discussed later. The clans are therefore of domestic rather than political importance. The clan organization extends throughout all the Masai, largely independent of the territorial section organization. The following instances, however, would seem to indicate that they follow territorial grouping to a slight extent :— 614

Loitokitok contains about equal numbers of *'Lorok Kitong* and *'Lorobo Mongi* (terms explained below). The Kaboloi are predominantly Il Molelian, but the other clans are represented. The Il Dalalegutuk are nearly all of the Laitayok clan. In the Purko the Laitayok clan is unrepresented.

The clan name Laitayok may or may not have a connection with the small territorial section of the same name situated in Tanganyika Territory. In Kenya Laitayok is a true clan which divides into sub-clans, and it is as such that I propose to treat it.

All the Masai clans[1] are contained within two main groups called *'Lorok Kitong*, meaning "the [people] of the black ox," and *'L-orobo mongi*, meaning "the [people] of the red bullocks." (I do not know the origin of these terms.)

If the warriors make a successful raid the raided stock is first divided into two parts, one part for each of these main groups, which then subdivide the spoil amongst themselves.

The *'Lorok Kitong* are comprised by the following main clans :—*'L Aiser*, *'Loghumao*, *'L Aitayok*, Il Bartimaro. Sometimes these are loosely grouped together and all called *'L Aiser*.

The *'L-Aiser* clan proper has the following sub-clans :—*'Il-kitongi*, Il Purkomati (?), Il Lokotoi, Engoji Nanyuki, *'Lorobo Kiuku*.

The *'L Aitayok* subdivides as follows :— Siria, Il Pujua, Il Makuperia, Il Marumai.

I cannot remember the sub-clans of the *'Loghumao* or the Il Bartimaro.

The *'Lorobo Mongi* contains the following main clans :—Il Molelian, Il Dorsoro, Il Magwan. I cannot subdivide them from memory.

I once wrote down a table of clans and sub-clans, but have not got it to hand. It required considerable labour, because a Masai himself seldom knows to which main clan to assign sub-clans other than his own.

[1] Cf. Rollin, p. 299. But the information there given is only partially correct.

/35 cont./

276 adds some natron salt and beef fat, frequently also pulverized bark of *ol amara* (*Ocimum suave* Wild.), and mixes the whole by further grinding.

[415] [287] [531] [136] Small boxes (*en dulet* -- *'n duleta*) made out of wood, bamboo, cattle or sheep horn, or even out of the horn of the *Rhinoceros bicornis*, which often are quite attractively carved and decorated with beads, serve as snuffboxes (Fig. 6). They are worn around the neck on thin chains made out of iron wire.

[673] [4] 273 Another luxury, also intended only for married men, is a kind of honey beer (*en alacho naroga*) (Fig. 7). One dissolves honey in

[124] water and adds a piece of the root of the *mappe* shrub, *en ngwuli*, /36/ or a peeled and cooked piece of the root of the so-called liver-sausage tree (1)

Fig. 7. (Neu) Vessel for the preparation of honey beer.

1. Named after the resemblance of the fruit to a liver sausage.

(*ol dathi* -- *Kigelia aethiopica*), both as a taste corrective and to hasten the fermentation. The mixture is allowed to stand and ferment three to five days in a warm place, say, in the vicinity

[124] of the hearth fire. Before it is drunk, one often puts in a few bunches of leaves from the *ol gonjer* bush, I suspect in order to stop the vinegar fermentation. The honey beer is quite strongly intoxicating, so that a drinking bout usually ends with complete

[439] drunkenness. Other brews, which the sedentary Bagoyes bring to the kraal for sale and which are made out of bananas and Eleusine, maize, or sorghum, are milder. The Maasi do not distinguish these with names, but rather call them generally *ol mara*.

[Warrior Kraal]

/94 cont./

701 836 As long as the latter stays in the kraal, his girl is obliged to remain faithful to him, but if he leaves it, even for only one day, she is entitled to console herself with another kraal companion, provided that between her and him -- as is also a condition for her relationship with her *ol sandja* -- there is no obstacle such as the above-mentioned obstacles to marriage based on lineage affiliation.

233 857 The tending of the livestock falls to the boys. Even at night they sleep outside in order to watch them and are assisted in the watch by the mothers, who take turns several times every night and frighten off wild animals by shouting.

361 233 47 [343] [472] Within the ring of huts there is a circular kraal of thorns for /ol/ the cattle and near that a narrower one for goats and sheep, while beside almost every hut there is a small lean-to for the young calves and a barricade of branches for the older calves of the individual ones. Thus everyone remains responsible for the barricading of his calves and, if at night they should find their way to the cows, has no excuse for starting a quarrel with others in the morning on account of the lack of milk. Milk is the only food that the Ol moran takes in the kraal, and the lack of it is therefore especially grievous. Outside of it, only meat serves the warriors as food, and, to be sure, only that from cattle, sheep, and goats. They do not take vegetable food, honey beer, and tobacco. The meat meals are always held outside the kraal: a slaughtered head of small livestock is consumed a few hundred meters from the kraal, behind a bush, whereas for the consumption of a head of cattle a more distant spot under a shade tree in the bush /Fig. 18 appears here/ or forest is chosen. For these forest meals (*ol bul, o bull*) mess companies are formed in every warrior kraal, which are designated *olori ol bul* and which consist of five or six members, each of whom is called *ol olori ol bul*. Such banquets take place once or twice a month for each mess company and last three or four days each time, during which an ox is consumed. Besides the warriors, one to three girls also take part, and also a few boys as servants for fetching pots, water, and firewood, as well as for kitchen work. Prior to the slaughtering each mess company splits up into two equal-sized parts, each of which is called

[273] [276]

701 242 224 [274]

000 *ol olori* and proceeds to a separate clearing. Under a shade tree with their

824 351. ol ɓɔlɔ̌ l ol bɔ̌rɔ̌l (Rhynchosia caribaea D.C.). Good fodder for small livestock.

352. ol ɓɔ̌ɔ̌l (Erythrina tomentosa R. Br.). Approximately six finger-sized pieces of wood are cooked in goat-meat broth. The soup is drunk as a cure for gonorrhea.

353. ol odoa (Maesa lanceolata). One chews several (approximately six to ten) of the pungently spicy grains for constipation. The frequent consumption of the pounded grains in beef blood acts as a nerve stimulant for the warriors.

354. ol oduerai = ol asajet.

355. ol oduŋ ginowi. If children eat the root -- mistaking it for the ol dirgolan plant -- they have pains in the rectum.

356. ol ogildia (Coleus kilimandscharicus Gürke). The juice of the peppermintlike-smelling leaves is dripped into the eyes of cattle to cure inflammation.

357. ol ogildia gte. The cow is given a leaf decoction to hasten the expulsion of the afterbirth, if this takes an abnormally long time.

358. ol ɔ̌ɔ̌ɔ̌ (Boerhavia diffusa L.). A root decoction is drunk for articular rheumatism.

359. eng ɔ̌ɔ̌ɔ̌ɔ̌ (Justicia flava Vahl.).

360. ol ogor l olɔ̌ɔ̌k (Pennisetum spec.). Good fodder grass, valued especially for bulls.

361. ol ogowdo. Good fodder grass.

362. ol ogwddim.

363. eng olbarasi (Ampelocissus abyssinica Pl.). The blue, grapelike fruits are edible.

364. ol olbor benek (Dregea rubicunda K. Sch.). The root bark, together with that of ol mogolgora, is used to make necklands. Powdered root is sprinkled in the hair as perfume. A root decoction is popularly added to the honey beer as a taste corrective. It is also regarded as loosening for catarrh and, for this, is drunk with meat broth, or, as a laxative, between the consumption of milk and meat.

365. ol olbergebe = ol olborkebe (Trichoiaena rosea Nees) is a good fodder grass.

FL12 Masai FL12

101 634 claim to belong to them live elsewhere. Merker gives as the principal divisions three provinces, Kisongo, Loita, and
101 634 Olbruggo. This is perhaps not according to Masai traditions, but is not incorrect as a practical description of the present
635 distribution of the tribe. The Loita and Olbruggo, also known as Elburgon and Purko, are both subdivisions of the Naivasha district, of whom the former acquired importance by refusing to accept the present Laibon, Lenana, and following instead his brother Sendeyu. Besides these districts, there
614 are four clans representing genealogical not territorial divisions: Aiser, Mengana, Mokesen, and Molelyan. The Aiser seem to enjoy a certain primacy. The medicine men all belong to this clan, which is specially connected with Mount Ngong (to the south of Kikuyu), also called Ol-doinyo loo-l-Aiser, the mountain of the Aiser.

561 According to the social system of the pastoral Masai the male sex is divided into boys, warriors, and elders. The first
[304] stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circum-
561 884 cised about the same time (see p. 26: for details) are said to belong to the same age, and are known collectively by a distinctive name, such as 'the White Swords' or 'the
[304] Invincibles.' After circumcision the warriors plait their
[291] hair, but, except for a small skin hanging over the shoulders, and their arms and ornaments (which are described by Mr. Hollis),
[316] go absolutely naked. They subsist entirely on meat, milk,
[316] and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in
342 separate kraals with the immature unmarried girls, with
836 whom they are allowed to cohabit freely. Tradition[1] (see
561 p. 117) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the diminishing numbers of the race. Besides this, female morality after such a girlhood was naturally low, even when
[177] the Masai kept to themselves. Now that they have come
[164] into contact with civilization, prostitution and venereal disease
[298] have become deplorably frequent. About the age of twenty-
561 seven or thirty, or nowadays when raiding is forbidden
885 somewhat earlier, a warrior marries and settles down. If he

[1] It is said that among the Dinka, Bari, and Shilluk there are similar customs of free love.

in gourds. Some drink it pure; others mix it with milk[1].

There are a few other things which the Masai eat.

Some old men and women chew tobacco mixed with salt and *Osiman sauce*, whilst others sniff ground tobacco up their nostrils: this latter is called snuff. Others again smoke pipes.

Those of the warriors who like it also take snuff. The boys and girls, however, neither take snuff nor chew tobacco[2].

The Masai do not grow tobacco themselves, for they do not know how to dig. They buy it from savages, exchanging it for butter and less grain.

The Masai do not sell good cattle to the savages; they only give them barren cows, or those which have no milk, or which do not care for their calves. These and old or lean goats and sheep are the only animals they part with.

The old men drink honey-wine, and they purchase from the savages two kinds of beer, called Ol-murua and En-jei.

It is only the children who like wild honey: old men eat the comb full of grubs[3].

[1] This custom is also common among the Bari (Kandhoro, Antinori-Casati, p. 1[illegible]).

[2] In olden days it was the privilege of rich old men and their chief wives only to take tobacco, which was called ol-dumi loo-'lag-enyuk, the operation.

[3] The Masai obtain their honey by following the Honey-indicator bird.

The divisions of the day[1].

The Masai have various names for the divisions of day and night.

There is day (as compared to night) and evening.

The evening is the time when the cattle return to the kraals just before the sun sets (6 p.m.).

There is also the time called Nightfall, or the hour for gossip (8 p.m.); this is the hour before people go to bed.

Then there is the night, midnight, and the time when the buffaloes go to drink—this latter is the hour before the sun rises, which the Swahili call *daa kumi* (4 a.m.).

There is also the time called The blood-red period or When the sun decorates the sky: this is the hour when the first rays of the sun redden the heavens (5 a.m.).

Then there is the morning; this is after the sun has risen.

There are also the hours called The sun stands or is opposite to one (midday), The shadows lower themselves (1—2 p.m.), and Afternoon.

[1] The Dinka divide their day in much the same manner as the Masai (Kaufmann, *Schilderungen*, p. 150).

abandoned, and, though meat and milk were still the main items of his eating, he could now vary it with vegetable food obtained by his wife from neighbouring agricultural tribes. Luxuries, also, he might now indulge in. He sported a fancy snuff-box and tobacco-box of ivory or rhinoceros' horn, and delighted to sup up its contents as he handed it to a friend. He chewed tobacco (mixed always with natron), though he never smoked. Then, as often as convenient, he liked to foregather with his friends, and have a jolly carouse over beer or mead.

It is pleasant to know that with this change in his mode of life there was a corresponding alteration (very much for the better) in his views of things. He delighted to talk with the traders whom before he had gloried in killing or annoying, and would in token of good-will cordially exchange the courtesies of life by spitting upon them and being spat upon. In his conversation he showed an intelligence far superior to any specimen of the Baute tribes. He had no superstitions, and was communicative about his affairs and beliefs. He would even at times exercise a friendly guardianship of passing traders, and was able to ward off many a disaster by judicious warning. He was not stinted in his presents, and generally gave far more than he got. He has been known even to protect strayed persons, and tend sick men left behind.

The softening down of his ferocity reacted upon his face. The habitual scowl gradually died away, and was replaced by a more pleasing and genial expression. His thoughts turned more to the strange mystery of life. He, also, had little that was cheering to look forward to. He believed in the existence of a Supreme Being, and yet had not the faintest conception of an after-life. Unlike the men of the Baute race, he did not believe in ghosts or spirits. He had no theory of dreams, and did not imagine like the negro that when he dreamed he was really experiencing all that was passing through his brain, and that his soul or spirit was actually knocking around somewhere, having a good time of it, unencumbered by his body. Moses believed nothing of that; indeed, whether he had any idea on the subject, I have not been able to determine. When the man died, he was finished utterly, except so far as he might go piecemeal to build up the body of a hyena, a vulture, or a murderous stork. The Masai believe in annihilation. To bury a corpse would, they think, be to poison the soil; it must be thrown to the wild beasts without ceremony.

9:Foebrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

After going through the ceremony, the new elders can drink milk alone, eat meat that married women have seen, carry short short bladed spears (*emberre serr*) in place of the long polished warrior's spear; in fact all the customs of warriorhood are abandoned. 561

On return to their homes those who are not yet married do so at the earliest opportunity. Those who are married, if their fathers are still alive, move off from the paternal home; for they are now in complete control of their cattle, and if they stayed with their fathers there would be constant bickering on animal husbandry matters. [571] [578]

From the foregoing it may be concluded that the average Masai male spends at least 18 years of his life as a moran. What are his economic duties and privileges during this period? In olden times his primary duty was to defend the country and, by raiding other tribes, to maintain and increase the cattle population. But European intervention has deprived him of his main occupation, and the only duties which the moran by custom seem bound to perform to-day are (a) drawing water from wells for his father's cattle or superintending their watering at flowing streams, (b) cutting the thorn tree branches which form the fence of the boma, and (c) escorting home night-bound cattle or searching for lost beasts. It was natural that few everyday tasks should be imposed on the standing army, but although the military duties are now in abeyance, the moran have retained the privilege of freedom from responsibility together with many other perquisites. These include access to the unmarried girls and the right to demand milk in any boma. In the matter of bullocks for slaughter in ol pul, the camp at which the moran may alone eat meat, the warriors seem to have a fairly free hand; if an elder withholds his consent, his moran son (with friends) will frequently help himself. It is not improbable that with the prohibition of raiding the moran exert these privileges in greater degree than they used to. If the elders are to be believed they spent a considerable portion of their time as warriors absent from home on raids, living in the bush on stolen cattle preparatory to stealing more. Consequently the time which they spent wandering round the bomas making their demands must have been considerably curtailed. [696] [718]

Another duty, or rather, restrictions placed on the moran was abstinence from tobacco and beer. The former is largely breaking down, but formerly the latter still holds to a considerable extent. This is not so with the *Arusha*, amongst whom drunken bouts in recent groups of moran are not infrequent. [677] [678] [681]

The above largely refers to the unmarried moran; once they settle down, even before the *eunoto* ceremony, their mode of life is practically indistinguishable from that of a newly made elder.

Elderhood is in itself marked by different stages, each of which has its own privileges and responsibilities. The members of the generation immediately above that of the moran are mostly concerned in family matters, establishing their own *gates*, marrying and performing ceremonies to ensure the fertility of their wives. The generation next above the most junior elders, as explained earlier in this chapter, is responsible for the

54 Prior to the meat *Ol-Ng'oshe* the men must eat meat in the forest or bush.
54 They build a small round stockade, called *Ol Pul*, of thorns with one entrance about
343 2 ft. 6 ins. high through which one must crawl. Here they store the meat, and sleep.
They may eat the meat either within or without the *Ol Pul*. There is a picture of
an *Ol Pul* opposite p. 291 in Hollis.

355 The meat is pierced by a wooden spit about 18 ins. long. This is stuck in the
ground by the fire and the meat is toasted. Soup is also made of fat and water
and the bark of *Il Kidaiowo* or *Il Kiborotti* trees. The decoction of these barks
396 makes the warriors fierce. They also ascribe to this cause the curious hysterical
158 fits into which they frequently fall when excited. I can vouch for the *Il Kidaiowo*,
small doses of which do, in fact, produce a fierce and unbalanced state of mind. I
have never tried the *Il Kiborotti*.

54 When the warriors sleep in an *Ol Pul* they pray to God at sunrise on behalf
98 of their age-group. Each one takes his shower and rubs it in the ashes of the fire
539 in the *Ol Pul*. He then goes out of the entrance and strikes the side of it and walks
towards the East emptying his prayer cast striking trees with the shower. While
533 returning he sings the war song *Eng-ipolosos* of his age-group. As he re-enters the
Ol Pul he thrusts the shower into the thorns at the entrance on his right and
leaves it there. There are usually always a bundle of showers to be seen in this
position.

The prayer is as follows :—

" Na Ai ntimonoo ntabukua ilmenkiliai enkiki ntabukuiai kiawa kumar il
ngorok il laghanga. Na ipo Eng Ai ntimonoo injaki ipuak ingiaka nanaj'ang'angi.
Kuo ipo Eng Ai nentaja Na Ai tainyiki ipuak il gawa nna il kiki. Kua ipo Eng Ai
nentaja injaki ipuak nanaar il ngorok il laghang ntabukua il ennangak nainguana kulkua
ennangak nanaar il ngorok il laghang. Ainimonoo Na Ai ncura ni engalang nentaja
l'al ntabiko tangaro ipuak il tiil ennangak."

Here is the translation :—

" O God I have prayed Thou having come out hither with my garment unbound.
Thy (warriors) have come out here, let not wild beasts hurt my head. And Thou
O God I have prayed give us the cattle which prosper steadily. And Thou O God
I have prayed bind together for us the age-group in one garment. And I have said
to Thee O God let not the wild beasts hurt the heads of the fortunate ones who have
come out here and let them not hurt the heads of other fortunate ones who come
from far away. I have prayed Thee God, my beloved, when the sun rises from the
valley, strike them as with the rays which are lucky."

Each age-group has a different song. The song of the *Il Kinyip* is " *Tangaraki*
533 *ipuak l'ulumu ninono nadiaro indimoto o ancrai nanaiti al nanaai la angai ahiki.*" I
cannot translate it literally, like other Masai songs, it is couched in rather cryptic
language.

[56] [55] [300] [illegible] and the whole body is smeared, from the crown of the head down, with a mixture of red mud and beef fat. The dancers gather together into groups of a dozen or more, all facing towards towards a small open space. One young man steps forward into the space, makes a few prancing dance steps, and then starts to jump perpendicularly up and down, his long hair flying up above his head into a kind of halo at the top of each jump.

262 Masai only most reluctantly and infrequently sell cow's milk, for
272 the buyer indeed could in the above-mentioned manner make their cows sick with it. The Masai scorn any kind of game meat, as
[136] well as birds and even fish, of the latter of which species of Barbus, Chromis, Clarias, and the sheatfish-like Synodontis occur almost everywhere in larger brooks.

252 The preparation of the principal vegetables is the following:
262 batatas (ol murúgu, el murúguni -- Ipomoea batatas) are cooked
263 in water with a little steppe salt (e munjén), then drained, mashed with a whisk (ol gibere, el gibereni), and stirred with fresh milk. The finished dish is called el murúguni. Unripe bananas (ol marigo, el marigo -- Musa paradisiaca) are peeled, cut up, and cooked in water with salt. After they have been drained, a little butter (en gorno) is added. Unripe dried bananas (ol kitáno, el kitánón) are cooked in water, drained, and then stirred with milk and butter. Maize kernels (ol bálegi, el bálegi) are cooked in water without the addition of salt. Beans are cooked with salt. One distinguishes ol bombó -- el bombo (Dolichos lablab), en gíó --en gíón (with which both Cajanus indicus and Vigna sinensis are designated), furthermore en sigorió -- en sigorio (Phaseolus vulgaris), ol gámuri -- el gámuri (Phaseolus radiatus). Eleusine coracana (en dabá -- 'n dabán, or en drigá -- 'n drigán or also called en gurumá -- 'n gurumán) and Sorghum vulgare (ol birír -- el birírín) are cooked to a thick porridge and lightly salted. Dioscorea abessynica (ol geré -- el gerén) and Colocasia antiquorum (which the Masai on Kilimandscharo designate with the Dschagga /Chagga/ word maduma) are cooked in salted water.

Honey (en alacho -- 'n alachi) is eaten unmixed and is also
• 276 used as an addition to various medicaments. They buy tobacco
[439] (ol gumbó, Nicotiana rustica), which the Masai consume in quantities, from sedentary Bagweli, who put it on the market in loose, bast-wrapped packets (Fig. 4) of various sizes or in the shape of solid balls about five centimeters in diameter.
[415] For the preparation of this, the tobacco leaves,
→ picked ripe, are tightly packed, tied up with

Fig. 4

/34 cont./

• 276 other leaves, for example, from the banana, and then left to ferment for several days. Then they are hung up to dry in the shade or in the hut, and, as soon as they are sufficiently dry, they are packed together in the above-mentioned packets. To make the ball tobacco, on the other hand, /35/ one lightly pounds in a mortar the fermented and dried leaves, after they have been sprinkled with water, without, however, thoroughly breaking up the leaves. The very moist mass is then shaped into balls, which are left to dry in the sun. The

[436] Maori pay a guarikia for two packets of about half a pound each or for ten balls. Only the old people use tobacco. The men smoke, sniff, and chew it, while the women content themselves with chewing and sniffing. The tobacco intended for smoking is coarsely cut. The tobacco pipes (Fig. 5) consist of a thin wooden tube about a foot long (ne [illegible]) and a centrally shaped clay or wooden bowl (ul [illegible]). The latter is carved by the Maori themselves, whereas they buy the clay bowls. For chewing one uses

Fig. 5 (34)

[422] [437]

Fig. 6 (34)

the same tobacco and chews it with a little pea-sized piece of native salt (e ranga). To prepare the tobacco for snuff, the smoking tobacco is first cut as fine as possible and then ground to powder with a round stone in a piece of gourd shell. To this one

/to cont./

• 276 adds some carrot salt and beef fat, frequently also pulverized bark of ol [illegible] (Grimm mare WGA.), and mixes the whole by further grinding.

[415] [417] [531] [134] Small boxes (ny dulet -- 'n dulet) made out of wood, bamboo, cattle or deer horn, or even out of the horn of the Rhinoceros bicornis, which often are quite attractively carved and decorated with beads, serve as mailboxes (Fig. 4). They are worn around the neck on thin chains made out of iron wire.

Fig. 4. (to) Vessel for the preparation of honey beer.

[27] [4] 273 Another luxury, also intended only for married men, is a kind of honey beer (ny ziehe mengi) (Fig. 5). One dissolves honey in water and adds a piece of the root of the mapu vine, or ngorth. /M/ or a peeled and cooked piece of the root of the so-called liver-sausage tree (1)

1. Named after the resemblance of the fruit to a liver sausage.

[124] ny darbi -- Kigelia aethiopica), both as a taste corrective and to hasten the fermentation. The mixture is allowed to stand and ferment three to five days in a warm place, say, in the vicinity of the hearth fire. Before it is drunk, one often puts in a few handfuls of leaves from the ol gorjer bush, I suspect in order to stop the vinegar fermentation. The honey beer is quite strongly intoxicating, so that a drinking bout usually ends with complete drunkenness. Other beers, which the ordinary Dagoon bring to the blood for sale and which are made out of bananas and Eleusine, maize, or sorghum, are milder. The blood do not distinguish these with names, but rather call them generally ol mbiru.

/77 cont./

blood. Light colors are the symbol of fairness, frivolity, flighty, childish, and childish sentiment; they are not proper for adult men with a serious conception of life. The haori men show a month as a rule. During it the youths practice handling the weapon, tell each other grievous war stories, which they have heard from warriors or invented themselves, and thus stimulate their imaginations, just as the reading of Indian and pirate stories does this on occasion among European boys. They artificially make themselves positively wild, to which also the taking, still strange to them, of various roots and herbs with a nerve-stimulating effect (which will be discussed later), which they add to the cooking oven, contribute a great deal. All their yearning is directed toward war and murder, everything in them is pressing toward killing an enemy, and exercise for them are all unknown. Each of them would like now to be no longer an *ohar class* a white, that is to say, not yet dyed with blood, novel. But unfrequently they turn against defenseless coreans if such happens to be in the vicinity. Whether or not spoils are to be taken in this is of no importance, only killing and murdering, they do not think any further. Many atrocie on coreans have come about in this way. Such apparitions, however, are always certain for individual coup of youths.

The rule is a war expedition against a enemy tribe. After the fighting, the *ni hanar* again return to the personal level to live there a few more years. During this time they attack defenseless men and more closely to the warriors, in order to learn from them and to improve themselves in the art of war. They accompany the warriors on their raids and now and then also take part in their forow month. Nevertheless they do not gain admittance into the warrior level, which is just as wounding to their self-confidence as the circumstance that they are looked down upon by the warriors and control clique like boys. The wish to be on an equal footing with the warriors grows ever keener in them. But they will lack two things for that: the cause for their age class and the droid ancestors.

In order to request the bestowal of the honor from the *ni ohara*, a gathering *(ni ganmon)* (1)

1. Any gathering for a consultation is called this.

[illegible]

/[illegible]/

As long as the latter says to the head, the girl is obliged to remain faithful to him, but if he leaves it, even for only one day, she is entitled to remain herself with another head companion, provided that between her and him — as is also a condition for her relationship with her [illegible] — there is no obstacle such as the above-mentioned obstacles to marriage based on lineage affiliation.

The residing of the livestock falls to the boys. Even at night they sleep outside in order to watch them and are assisted in the watch by the mothers, who take turns several times every night and frighten off wild animals by shouting.

Within the ring of huts there is a circular kraal of thorns for /[illegible]/ the cattle and near that a narrower one for goats and sheep, while beside almost every hut there is a small kraal for the young calves and a barricade of branches for the older calves of the individual men. Thus everyone remains responsible for the herding of his calves and, if at night they should find their way to the cows, has no excuse for having a quarrel with others in the morning on account of the lack of milk. Milk is the only food that the Ila consume raw in the bush, and the lack of it is therefore especially grievous. Outside of it, only meat serves the natives as food, and, to be sure, only that from cattle, sheep, and goats. They do not take vegetable food, bonny bean, and tobacco. The meat meals are always held outside the kraal: a slaughtered head of small livestock is consumed a few hundred meters from the kraal, behind a bush, whereas for the consumption of a head of cattle a more distant spot under a shade tree in the bush /Fig. 13 appears here/ or farther is chosen. For these farm meals (ul kal), a hall meat companion are formed in every village kraal, which are designated [illegible] ul kal and which consist of five or six members, each of whom is called [illegible] ul kal. Each bachelor takes place once or twice a month for each meat company and lasts three or four days each time, during which he is consumed. Besides the members, one to three girls also take part, and also a few boys to serve for fetching pots, water, and firewood, as well as for kitchen work. Prior to the slaughtering each meat company splits up into two equal-sized parts, each of which is called [illegible] and prepares its own camp. Under a shade tree with their

[Warrior Kraal]

/55 cont./ Under a shade tree with thick foliage a spot about 20 to 25 square meters in size is cleared and encloses with a barricade of branches. During the rainy season in place of this kraal a small hut (Fig. 10) is built out of leaves. Its approximately circular ground plan has a diameter of two to three meters. On the side opposite the entrance opening is the common sleeping place of the *ol gilat* companions; between this and the door, the hearth; beside the door the space for firewood. Close beside the sleeping place hangs the monsch or bladder -- from the head of cattle just slaughtered -- filled with an extract of roots and barks that acts as a nerve stimulant and is drunk wherever one is thirsty (cf. 20).

a) Sleeping place. b) Drinking bag.
c) Pole for meat.
d) Hearth. e) Firewood.
f) Barrier.

In the vicinity of the hearth the meat supply, is hung on sticks (cf. *sisin*). In the vicinity of the warrior hut the serving boys build themselves their own, considerably smaller one. One calls kraal or hut *ofa ol* of *hui*. Each *ol gilat* receives a longitudinal half of the slaughtered head of cattle, from which, however, it immediately gives back the pieces intended for cooking for the common meals of the day. /56/ The picked-out fat is cooked together with the meat, and to the whole are added extracts or decoctions from roots and barks (especially from *ol gerimoge* (1).

which have a strong stimulating effect. The cow of the meat, roasted at an open fire, is then eaten by each of gilar in common, and, to be sure, at a morning and an evening meal. The head of cattle is furnished in turn by the participants or their fathers.

The longest feast meal takes place as a rule in the month kiyi. Since the pasture is poor then, the livestock give so little milk that the warriors sometimes live for a whole month on almost only meat.

At the head of the warriors of a local stands the speaker (of) sigoyant or of sinkanji. The hedge of his office is an especially beautifully worked club or dikwawa here (4)

4. The weight here of a species of Rhinoceros bicornis not yet described to my knowledge, which the author found at the beginning of 1896 in the steppe southwest of Kilimandscharo, is especially popular for making these clubs. The horns of this species (or variety) differ from those of the ones described thus far by the fact that they are quite straight and in cross-section never round, but rather so strongly compressed laterally that they appear sword-shaped. The front horn is often shorter than the back one.

or ebony wood. It is swung like a horse in connection with the speeches accompanied by numerous gestures, in order to give emphasis to individual words. This is also achieved in the manner of speaking, by the fact that one pronounces the emphasized words long drawn out and repeats the emphasized sentence several times. The speech to a larger gathering is always delivered very loudly and vigorously. While the listeners squat on the ground, the orator stands erect, his glance directed alternately toward one or the other of the chief persons among the listeners. When the orator begins to begin he tries to make up for by velocity, dialectics, and higher pitch in tone. The members of the audience often give the impression of rapt attention, their glance is almost continually directed at the one

/100 cont./

After a battle of the Ideal among themselves, the custom of peace is that the speakers, in the presence of a number of warriors of both parties, exchange their skin capes and medal flange. This is called ceremonial regalia or exchange of skin capes.

The length of the marches covered on war expeditions, in comparison to that of their neighbors carrying on agriculture, is often astonishing. Performance of 50 to 60 kilometers a day, three or four days in succession, are by no means exceptions. If one considers, however, that the training of warriors consists only of marching, that, aside from their weapons, they carry nothing heavy, and before their marches, as well as during them, they partake copiously of stimulants, their performance is no way exceed those of a German infantry troop. The tribe of the Caravan people relate miraculous things about the speed and endurance of the Ideal warriors, and even Europeans travelers have contributed to the spread of this legend in that they compare the physical performance of the Ideal with those of the Europeans in the region. The unsuitableness of such a comparison is obvious. One also often hears how the Ideal are admired for their alleged ability to be able to give up the drinking of water on their marches. Personally this rumor stems from the fact that these people, in contrast to other tribes, never carry a good bottle of water on their long migrations. The Ideal, however, know perfectly every little spot of the steppes, for hours every only basis, every day during, for also known where an apparently dry brook bed carries subterranean water. Where water has collected to old hollow trees, and especially in bamboo, this is accessible to him through a series of maps made out of their long age based to horizontally. Finally, there are a number of water-rich roots and tubers, which, chewed, are very well suited by their water content to quench thirst. They serve him, /100/ just as the wild honey, not infrequent in the steppes, also serve as food on the march. A curious fact, the honey indicator (Cuculus indicator, called ul jabuni) by the Ideal, leads the Ideal to the concealed honey holes. As soon as it sees human beings it calls with a sudden sound and then flies slowly to the nearest honey place, to which the people follow it in order to take out the honey. If the amount found is still not sufficient for the warriors, they bury the chewed roots, whereupon the bird, after

[illegible]

The months of the [illegible] were: 1. [illegible], also called [illegible], that is, the tied-up bulls. As a result of the rich fodder of the [illegible] months, they have become wild; in the pasture they could be commonly fighting with one another, hence they are separated. 2. [illegible] (= middle) [illegible], or also, but more rarely, called [illegible]. 3. [illegible], that is, cold; cool weather distinguishes this month.

The [illegible] are with the month [illegible], that is, snow and [illegible]. The pasture is sparse and as a consequence the cows give too little milk to satisfy all the people. Everyone tries to appropriate for himself some of the milk from the livestock of others, through which [illegible] and [illegible] arise. Finally the milk no longer extends to sacrificial actions, and the majority of the women with a few [illegible] cows [illegible] for most eating, which usually lasts not only through the snow month, but also even over the next month of [illegible] or [illegible] of [illegible], since even then the milk is still very scant. The snow seems to be formed from the word [illegible] = food scarcity. Not until the beginning of the third month, of the [illegible], do they return to the herds. From the [illegible] month they feel very strong, and the heavy use of [illegible] consuming can be affected their nerves to a high degree, and almost daily one or another has a fit of rage (5).

5. Cf. III. Nerve Ailments.

The Maasai do not count years. Rather, they designate the year after the overwintering to them the most important one that happened during it, for example, after a livestock epidemic, a drought, the death of the high chief, a war expedition especially rich in spoils, etc. (5).

5. Just as for Babylonians, even in the 3rd millennium B.C., did not count the years, but gave each year a name after an overwintering event in it, especially after the death of its king. One proceeded similarly

/154 cont./

With toothache (alg ga ni sisi) one hires an a very hot mixture of fat with the aching tooth. Pieces of twigs of o'wauk (Salvadora persica L.) and ni sisiwa (Dodonaea viscosa L.) chewed to resemble a brush or one end serve as toothbrushes.

For rheumatic pains in the muscles one makes use of massage, which is practiced by the women, or one makes poultices with the pulp of the pulverized root of o'wauk (Salvadora persica), which also finds use otherwise as a "mustard plaster." Married men have themselves massaged by their wives to get rid of pains in the leg muscles after long marches, whereas the warriors seem this help as unmanly. Furthermore one administers a root decoction, probably mixed with a brew from some roots, of o'wauk (Cissus cornifolia [Pamb.] Vahl.) or of ni tagalog (Pouzolzia zeylanica [Kl.] Wiln.), or also a decoction of the wood of ni gaugil (Mussaenda [illegible] [Merk.]). For rheumatic pains in the back one drinks a root decoction, sweetened with honey, of ni mania [illegible] (Cissus cornifolia Engl.). To cure articular rheumatism a root decoction of ni ngiau (Gardenia [illegible] L.) is administered. Besides these remedies, those that are regarded as diaphoretic, especially the above-mentioned ni [illegible] (Momordica cochinchinensis Kl.) and nig [illegible] (Sambucus [illegible] K. Sch.), are also given.

Often then for curative purposes the warriors regularly, and, to be sure, for the entire duration of their membership in the warrior society, take various secret /155/ stimulants. These are taken especially on war expeditions and, even more, during the most feasts forming the preparation for these. One of the most popular stimulants is the bark of the frequently mentioned ni mulaua (Albizzia [illegible]). One pounds a piece of bark but the size of two hand-palms with a club and then lets it soak for a few minutes in still hot water. The other stimulants are ni dugai or ni [illegible] (Cissus quadrangularis) an arm-long piece is cut up and boiled in water. The extract is taken mixed with gun-meat broth. Equally strong in effect is the root of ni [illegible] (?). One takes a piece of root three centimeters thick and approximately ten centimeters long, chops it twice, and cooks it with beef broth. The decoction smells disgusting.

/145 cont./

276. The effect of *ol gerdiken* (*myrica hillmanderkarica*) is weaker. To prepare the ordinary dose, one cuts 50 finger-long pieces from a thumb-thick twig and boils them. The decoction is taken mixed with goat bouillon. The effect of *ol gotjok* (?), the wood, bark, and root of which are leached out cold, is said to be similar. The root of *ol gibeki* (*dracula abyssinica*) is regarded as particularly strong. For one dose one takes a thumb-thick piece three quarters of a screw long and cuts it into finger-long parts, which are leached out in cold water. The extract is mixed with beef soup. Other stimulants are obtained from the fruits of *ol ndow* (*Grewia bamoensis*), the bark of *ol jani 'ongi* (*Rubrella hillmanderkarica* Hagl.) and of *ol jani* (*Acacia mayai* Oel.), the bulb of *ol ngilodo*, a still unnamed species of Euphorbia, and a few other plants.

The effect of these seven stimulants, when taken frequently, is expressed in fits of rage with partial loss of consciousness. Several days, four to ten, before the attack the person in question will suffer from more or less violent crying fits, especially in the morning before sunrise and in the evening shortly after sunset. During the day these occur only if exciting events take place in his vicinity, such as wedding or brawls, and then the crying fit is accompanied by a violent rattling in the muscles, especially in those of the limbs. The eyes are very red, the skin color appears noticeably darker than usual, and the patient refuses almost all food, he is restless and sullen, as though distracted. His companions are familiar with the danger that an attack of the patient would cause them and other people and therefore keep watch over him day and night. Often a dispute or a wedlike that the patient observes provides the immediate cause of an attack, but it also often occurs without any external cause. During an attack, breathing is markedly heightened and accompanied by deep groans, tears flow copiously, the body rotates as though in cramps, foam appears at the mouth, and — as I afterwards heard from several patients — during his everything appears to them red-red blood-red. Fainting is as unusual in /146/ rage for violence, the outbreak ceases — if this is possible he lies — a great crowd, flaken away with it, and structures running him, whereby no inhabitants seldom wounds and death occur. In the latter case it is said that

/[illegible]/

• 276 consciousness returns immediately and the attack passes over into a quiet spell of weeping, whereas after a slight wounding followed an overlay, the patient's unconsciousness is said to become further. If the outbreak of the attack -- which usually occurs toward evening -- is ushered in time by the various squatting around the patient, a number of them throw themselves upon him, force him to the ground, and hold him firmly until the attack passes. This occurs, as a rule, after half an hour or an hour, but often is into somewhat longer. Then a various sleep follows, interrupted several times by fits of crying and flow of saliva, until toward morning, when a second, somewhat weaker attack occurs, during which the patient is treated as before. This second attack is often somewhat briefer than the first and turns into a spell of weeping gradually becoming quieter, which as a rule is soon succeeded by general relaxation, which ends in deep sleep. After this the patient usually goes on to a speedy recovery; there rarely is appears as though still another relapse is to follow, which will be expressed by greater violence of the weeping fits. That there is no third attack is traced back by the people to the fact that the patient was already fatigued during the second one. His companions now guard him more carefully and keep away from him any opportunity for unfortunate -- even a glimpse of weapons. To hasten a cure, large quantities, a liter and more, of liquid fat is poured into the patient, which he usually also gets even in the preceding stage to alleviate the expected attack. The blood call the attack *ma lambana*, and the one suffering from it *ni manai lambana*.

As frequent as the seven faces of *ma lambana* is -- since every member suffers from it several times in the course of his earlier period, and it is rare if one of them remains spared altogether -- the European will nevertheless usually be able to observe only the much more commonly occurring mild form. Here the long pre-stage is entirely absent or is limited to a few hours or even only minutes, during which the patient sits gloomily and weeps. The attack lasts from about a quarter of an hour to half an hour and ends with general relaxation followed by sleep. It should also be mentioned that among the mahoney Dayak tribes who live in close contact with the Malay and

/1.01 cont./

• 2% 1.01 (1-4) have played many of their seasons and believe the overture regard becoming stricken with the *ear hearing* as a sign of true, feminine overtures, and they frequently circulate it for this reason. Outside sleeping cries the stricken with spear is least taken out of the camp and would surely not inflict an injury on anyone, even if — as in the /1.01/ case observed among the Wadelbaggs — a few people did not immediately run after him, seize him, and lead him back.

2% 1.02 (5-12) The lack of any control over overtures and lactations probably also plays a not unimportant role in the occurrence of *ear hearing*. This cause seems to me, however, to be entirely in the secondary use of the aforementioned overtures, so that the tissue would not serve at all if they were avoided completely or were taken only in a very considerably lesser volume. Their beneficiaries can be observed almost daily among the overture in an abnormal state of nervous irritability. This view is based on my observations (+10) which all the outcomes on this point made to me by the tissue agent that only the overture, that is, the young, strong, healthy men, are stricken with *ear hearing* while boys and youths, before they enter into the association of the overture, and even during the first period as such, and furthermore married men, as well aights and women, remain completely immune to it. These persons, however, either do not take any of the stimulants spoken at all, or only in very small measure.

2% 1.03 (13-20) In the description of *ear hearing* was in partially consisted of the running amok of the Malays. Only the complete of symptoms is similar, however, while the etiology and the prognosis are entirely different. Whereas running amok as a rule ends with the death of the person concerned, *ear hearing* is cured within a few days. Whereas the effect of opium as the original cause of running amok is today no longer regarded as decisive, in every case of *ear hearing* the repeated use of these agents only a short time before will be indicated.

Wounds and Surgeons.

952

If a Masai warrior is shot, and an arm or leg broken, the surgeons are able to mend it.

952
339

They cut through the flesh, take out the splinters and bring the edges of the bone together, after which they stitch up the wound with the sinew from the back of an ox, and bind the limb securely.

The only food that is given to a man with a broken limb is roast meat and the thick-smoothing milk-slime obtained from donkey slaughtering.

[illegible]

Should a man be shot in the belly so that the intestines protrude, the wound is washed and the intestines returned to their place; sheep's fat (a quart or more) is poured into the wound, which is then stitched up.

Again, if a man is shot and a rib broken, the flesh is skinned from the wound, and a sheep's rib is inserted in place of the broken one. Sheep's fat is then poured into the wound, after which it is sewn up.

The wounded man is not allowed to drink milk, and may only eat meat.

If a man is shot with a poisoned arrow, a pregnant cow is slaughtered, and he is given the soul fat to drink. This causes him to vomit and he recovers.

952

If the surgeons see that a man's bone cannot be mended, they fasten

[illegible] consanguineal (e-mapi) a girl of the same sub-class as himself, or one who is more nearly related to him than third cousin, and only then if the terms of address used are *ó-le* (elder sister) and *ma-e* (elder brother); and no marriage may subsist with the wife of a member of his own age-grade if that man is married to one of his own relations, or to a daughter of his sub-class.[1]

The payment of the bridal price authorises a Mawai to review the children which his wives bear as his own; it further gives him a full measure of control over both his wives and children, and they do all the household work and tend and look after his herds and flocks. Dug though individual marriage is recognized, sexual promiscuity or something very like it prevails between all the men of one age-grade and the women of the corresponding age-grade, subject to the rules of propinquity and relationship, which forbid a man to marry or have sexual intercourse with a woman of his own clan or with a near relative. In other words the Mawai may be said to live in a state of group marriage, based on the organization of the whole community in age-grades, and restricted by the exogamy of the sub-clans and the rules regarding incest.

If a man is knowingly guilty of incest, or has sexual intercourse with a daughter of his own sub-clan, he is punished by his relatives, who flog him and slaughter some of his cattle. If he fornicates or commits adultery with a daughter of a member of his own age-grade, he is punished by the members of his age-grade. His kraal is destroyed, he is severely beaten, and a number of his cows are slaughtered. If a married or boy commits adultery with a wife of a man belonging to his father's age-grade, he is severely caned by the members of that age-grade. Unless he pays the elders two cows, one for them to eat and the other to enable them to buy honey wine, and pays them to remove the curse, it is supposed he will die.

If a man unintentionally commits incest—and it is quite conceivable that a man might not know his fourth or fifth cousin, for instance, should the two live in different districts—he has to present a cow to the girl's relatives in order to "kill the relationship" (*a-ur ma-ungit*).

A man must abstain from having sexual intercourse with his wife as soon as she becomes pregnant, and he may not again have connection with her until the child cuts the two middle lower teeth of its upper and lower jaws. Should this rule be broken it is believed that the child will never be strong. In the event of a man having intercourse with a pregnant woman, and thereby causing her to abort, he must submit to a punishment which is called *ó-ñaborem*. All the women of the neighbourhood collect together and, having stripped, seize the guilty person and flog him, after which they slaughter as many of his cattle as they can, enraging and suffering the animals with their gaments.

Other occasions when the sexes may not have sexual intercourse are when

[1] For the rules regarding hospitality see *The Mawai*, p. 201. Age-grade members of all three sets who are circumcised at one of the four festivals held during every 15 years. See *The Mawai*, p. 180.

S-Shelfie G-5 (c.a. 1894-1984) 1910 F'L.10 Wanzi F'L.10

poison is being made and when honey wine is being brewed. During the time 634
that a man is making poison (eight days) he is treated almost as an outcast. He 635
must leave his house at 4 a.m. and not return till 7 p.m., when he must rub clay
on his body. He may not eat when the sun is above the horizon; he may only
relieve nature far away from the kraal; and he must sleep alone. If he were to
break any of these rules it is believed that the poison would be useless. When 634
honey wine is to be brewed a maid and a woman are selected for the purpose, 635
neither of whom has had sexual intercourse for two days. A hut is set apart for
them to live in until the honey wine is ready for drinking (six days), during which
time they may not sleep together. As soon as the honey wine is ready they
receive payment, and go to their respective homes. When they to have sexual
intercourse during the six days that the honey wine is brewing, it is believed that
the wine would be undrinkable, and the beer that made the honey would fly
away.

Mothers-in-law and their sons-in-law (ungwenkwini) must avoid one another 606
as much as possible, and if a son-in-law enters his mother-in-law's hut she must 607
retire into the inner compartment and sit on the bed, whilst he remains in the
outer compartment; they may then talk. Over brothers-in-law and sisters-in-law
(o-shalini k-angel and o-shalini o-angel) must also avoid one another, though this
rule does not apply to half-brothers-in-law and sisters-in-law (o-shalini and
o-mdalini). This rule is possibly due to the fact that when a man dies his own 606
brother may not marry his widow, though there is no objection to his half-brother 607
(paternal) or one of his paternal cousins taking her to wife. In fact, the only 607
person who may marry a widow is one of the deceased husband's half-brothers 608
or paternal cousins. It frequently happens, however, that widows never re-marry 609
but live with their children in the kraal of the elder living brother of their late
husband, who becomes the guardian of their children.

Divorce is almost unknown amongst the Mawi, and it is only barren women 566
who may be divorced. But if a woman is barren it is usual for her husband to
give her some of his children by another wife to bring up. Daughters are usually
selected; but if there are several sons the youngest and the youngest but two
may be given to the separation. When a barren woman is a bad woman and is
disliked by her husband and his other wives, she may be divorced, in which case
her father or the barren wife refund the cattle paid for her, and she is at liberty
to re-marry.

3. *Acacia nilotica Adansonii* (Hochst.), Dtb. and Hook. The Dorobo obtain poison for their arrows from this tree, and Masai elders purchase it from them. 824A [811] [811]

4. *Balanites* sp. With the thorns of this tree the Masai pierce their children's ears. The sap, called gum or frankincense, is chewed by women, and is used for mending the gourds when they break. [812] [24.1]

5. *Rubia cordifolia*, L., and *Plumbago zeylanica*, L. There are two plants called ol-ngurianduo, from one of which a dye is obtained which is used for colouring the shoulds red, whilst the other is used for tattooing. [386]

The latter kind is what girls like, and they tattoo themselves[1] with it on the forehead and the sides of the face to make themselves look beautiful; but it is only done by those who wish, it is not done by force. 304 [124]

Girls also scratch the skin off their bellies with thorns, or make isolaiore with grass round their navels, but they do not rub anything into these cuts.

Some warriors do this too, but only those who wish.

6. *Terminalia* sp. The tannin of this tree is used by the women for curing skins with. It is also given to cattle when they are suffering from gall fever. 824 [381]

7. *Lonicera salicifolia*, Jacq. The leaves and fruit of this plant are [302]

[1] An illustration of tattooing round a Masai woman's eyes is given in Sir H. H. Johnston's book, p. 800. A somewhat similar instance of tattooing amongst the Latukas is given in Baker's *The Albert Nyanza*, vol. i, p. 216. [113]

[30] [31] The fur-plastered 'helmet' outfitter is open to the objection that it soon spoils in the rain and the wearer adopting the style will have, if the weather is at all doubtful, a 'sou-wester' attached round his neck and dangling down the back of his neck. This is a little hood of finely prepared skin from a goat's stomach and gives full waterproof protection to the head-dress in case of need.

[32] In fact, however, the 'helmet' style is heavy and uncomfortable with its tight forehead string and is worn for special occasions and short periods only. The fur is then washed off, a sheep put back on the forehead and the pigtail left to dangle comfortably or fur divided into several smaller and lighter pigtails, the bases of which are arranged asymmetrically so that the pigtails tend to fan out instead of hanging closely together.

Ill. 46. Maori women with needlework.

283 The only European article that one sees now and then, but still
[illegible] always rarely, is the umbrella, which the Maori use as protection against the sun.

• 281 Rather unusual animal skins still today, occupy few places in the clothing. The preparation of the skins that are not supposed to have the fur removed (worn capes and leather to sit on) is a primitive chamois dressing. The skins are stretched out and thoroughly dried. Then they are rubbed several times with butter or fat and usually beaten each time. Swelling the skins is known as little as is removing the superfluous fat clinging to them at the end of the treatment. The finished leather feels greasy and soft.

[illegible]

[illegible] The other skins, after they have been well dried and [illegible] softened by scraping with a dull knife, are covered by a vigorous rubbing with a rounded scraper. The back of Tyrannosaurus Rexus rex. (Ancient Rex). (or Rexus) is pounded and made into an account by being heated in water. The finished leather is soft and pliable. Leather dressing is woman's work. The scraped-off cattle hair is carefully hidden in the dark fibers of the hoof, so that the cattle do not see it and become sick from it.

The sole article of clothing of the ancient is the skin cape or weight, weighing 6 ounces of calf skins sewed together into a strip approximately 110 centimeters long and 70 centimeters wide. The entire strip of skin is folded over seven centuries, and of its four corners the two top ones, lying one on the other, are sewed or tied together. One puts the cape on by sticking the head and left arm through the hole on the right shoulder, chest, back, and left hip are covered, left shoulder and right hip bare; the lower so that the sword found there is free. The ancient cape is the only article of clothing that is never dishonest. The face side is worn on the outside and, if carefully chosen in color, is often quite attractive, since only the silky-lustrous skin of eleven calves or a day or two old are used. Often the upper and lower edges of the cape are sewed with one or two rows of small red or white beads. Only very rarely is it also made of silver skins then, the collar are two made out of furs of the dark-green long-eared monkey(Acrophthorus ellipsiform). Boys and men wear red and even the men to the sword belt a three-cornered piece of leather to sit on (Fig. 10) (or gehenna, or gehennah), made of ram's hide or cotton, for protection when sitting, against the thorns and prickly spikes of the grasses scattered everywhere in the steppe. Boys wear a very short cape (or jerga, a jerga), covering only the belly and back:

THE COIFFEUR OF THE MAASAI WARRIOR

By H. F. I. Elliott

It is surprising to find that in Hollis' standard work on the Masai there is no precise description of the head gear of the 'moran' or warrior. No doubt the fashion has been described somewhere, but some details of present day practice in Tanganyika Maasailand may perhaps be put on record here.

Of all the distinctive features of the Masai, this is the one which attracts most attention from the casual traveller and invites references to 'Roman Dandies', 'Bad Indians' and the like. Its advertisement value is certainly considerable and not ignored by the Masai in their conscious or unconscious efforts to preserve their identity. Certainly removal of the ochre and its accompaniment red ochre has a surprising effect in eliminating Hamitic characteristics of features and bringing out those derived from the new Nilotic adventure of 'Bantu' blood.

It is still an customary for youths after circumcision to adopt the traditional garb, even though they may be sons of progressive parents and themselves have been to school, that there might well be an 'old school pigtail' for graduates of the Masai school. It is by no means unusual to hear a pair of pig-tailed and ochred 'moran' discussing their performances in some non-house football match of their school days, while leaning on their spears in the precincts of a cattle market.

There are many variations of head gear to be found in Tanganyika, one, two, three or more pigtails, the 'ridged helmet' style, heavily plastered and heavily braided styles, but it seems to be purely a matter of fashion and not linked with clan, section, age set or even locality (except in so far as fashions naturally tend to be localised). The construction of all is basically the same and the result is covered by the single term 'Ol daika'.

The materials used in the head gear are as follows:

(i) a length or lengths of pliant but straight stick one foot to fifteen inches long, cut from the tree known as 'O-otoni' (*Tamarindus indica* L., the name is also applied to the shrub *Croton* which may serve the same purpose at highland altitudes).

(ii) a strip of the inner skin of a sheep an inch wide and two or more feet in length.

(iii) several feet of fine string made from ox gut or tendon.

(iv) a foot or two of cord made from the 'ol-ewari' tree. This tree is, I think, correctly identified by Hollis with a species of fig, *Ficus Sycomorus*, the cord being prepared from the aerial roots. But there is some doubt in the matter which perhaps a reader of this note may get an opportunity to clear up. For Bellewaite

[illegible]

[illegible] Now and then the recumbentes are also replaced by two possible
[illegible] pack-holders (*ul dorsali*, *ul ventrali*), one tied on the other. These
[illegible] have the oval shape of a shield and consist of a wooden frame that
[illegible] is covered with a plaited web of leather thongs or ropes. Otherwise they serve to hold the pack loaded on the donkey and exercises also on oxen. Men are unknown: dressed near-skins take their place. Women are also unknown.

[illegible]

[illegible] Closer family relationships. — Kinship designations. — Traces of [illegible] for relatives.

[illegible] Since every wife and every thongs are descended from a [illegible] tribal ancestress, the tribal and thongs constitute considerable more or less distant relatives. The family, one's own as well as, [illegible] according, those of the father and of the mother, form the closer [illegible] relationship. The child follows the father's family (father right). [illegible] Relatives are not responsible for punishable offenses, fines, or debts [illegible] of a relative. Legally they need not support them either in con- [illegible] nection with imprisonment or release from captivity; it is such a general custom, however, that probably no one ever evades it.

[illegible] *[illegible]* The tribal language is poor in particular kinship designations: most of them are made up of words for father, mother, brother, sister, son, daughter, etc.

Father: [illegible].

Mother: [illegible].

Another wife of the father: [illegible].

Principal wife: [illegible] [illegible], that is, the great woman, or [illegible], that is, the line to the head.

Every other wife: [illegible].

Brother (1):

1. Brother and sister come from the same wife, half brother and half sister from different wives of the same father.

/1,00 [illegible]/

[illegible] and are fastened to the center. The wing is hinged from the back [illegible] of centre. As a bearing reply are often which a weight of [illegible] of bale from the /1,00/ side extend around the bow. The [illegible] of the screen (Fig. 1/1) (see [illegible]) is [illegible] the customary "[illegible] deeper" or is lower-shaped or [illegible]. In wing, as either side, have a right row of bale made by switching. It sticks [illegible] a wooden draft, the lower end of which is notched and hence a flower-pot, crowded fastening [illegible] from the feeders of the centre [illegible] which are always [illegible] to grain

Fig. 1/1

[illegible]

[illegible] is dressed on the moon going from the [illegible] toward the heels. Most common are the caps out of [illegible] square [illegible] or of [illegible] a foot, or the size of the [illegible] [illegible] [illegible] resembling a circus performer in appearance. Furthermore they are the size of the leopard [illegible] spots, Indian leopard [illegible] [illegible] a [illegible] [illegible] a [illegible] [illegible] [illegible] a [illegible], for only those the gods and [illegible] [illegible]. Colobus monkey, perhaps, and [illegible] [illegible]. A strap behind the cap [illegible] [illegible] [illegible]

/[illegible]/

[illegible] [illegible] wrapped, whereupon the tips of the strands are wrapped with hair to the length of an inch. The back hair, lengthened up to 50 centimetres, is placed around a four-long stick and on this wrapped tightly with hair or goat leather except this, so that it forms a stiff braid (el [illegible]) reaching to the waist. Over this braid one set frequently finds one to three similar ones. Often the tips of the little couple braids (sing. el [illegible] / el [illegible]) are joined with that of the little [illegible] braid (el [illegible] / el [illegible]) and the former tied together under the chin with a string (braids of [illegible]) (3).

[illegible]

1. This hair style has the purpose of preventing the head from the harmful influence of the sun's rays. For that, one first let the hair grow long and, since the long strands fell annoyingly into the face at every movement, put it together into "braids." The Tuareg helpful females were simply, in that they shaved the front part of the head and left the prevention of the thick padding of hair at the back part of the head.

[illegible]

The hair is often perfumed with the sun powder of el [illegible] (Cassia spec.). /[illegible] /Fig. 40 and 51 appear here./

[illegible] The white facial painting of the newly circumcised has already been mentioned. Younger people, especially warriors and young girls, on all festive occasions, anoint the entire body insofar as it is not clothed, with red paint, which they like to perfume with the pulverized leaves of el [illegible] (Lippia [illegible] Kuch.), which smell like vanilla. With one finger the warriors then often strip it off the skin hence in separation lines (el [illegible], el [illegible]), so that a kind of drawing is produced. One who has killed an enemy in war paints his body at the following dance festivals with white and red earth in stripes (Fig. 47). This painting is called [illegible] /Figs. 47-49 appear here/ [illegible]. At festivals one also often sees on the face of the warriors a red triangle, its apex starting at the eye and widening out up to the middle of the cheek (Fig. 48). When boys

342 out of material available everywhere. Like every task in the
[462] kraal, hut construction is the duty of the women. After the site for the individual hut (Fig. 3) is cleared of grass and brush and then leveled, the spiral-oval ground plan is undertaken in that the woman scratches it on the ground with her foot. They do not
[804] use any auxiliary means for measuring it: measuring by eye is sufficient for the woman who, even as a child, helped her mother with this work. Into the ground plan, at foot-long intervals, poles
342 (ol ōmi, el ōm) about 1 1/2 meters long are stuck in the ground
335 and joined lattice-like with thumb-thick cross-switches (ol gereni, el gerenen). Then in the longitudinal diagonal seven to eight supports (em bogischi) are dug in, over which a longitudinal bar (ol ereschena, el ereschenan) is put from one end of the hut to the other. Over this the poles are arched and the opposite ends lashed
[284] [824] together with papyrus grass (es sedja). By interplaiting finger-thick switches (en jaschoi, n jascho) walls /24/ and roof are made
342 tight. The lattice-like framework is about 1 1/2 to 1 3/4 meters high, 4 to 5 meters long and 3 meters wide. Neats' skins served
[237] [731] principally for roofing before the rinderpest raged among the livestock around the year 1890. Now, /Figs. 2 and 3 appear here/
[824] when the Masai herds have become vanishing small in contrast to former times, the switch framework is first packed with a
[237] layer of dry, long-bladed grass (ol gudjeda or ol godjeda) 15 to

/40 cont./

415 Now and then the receptacles are also replaced by two pouchlike
492 pack-holders (ol deretal, el derēta), one tied on the other. These
[283] have the oval shape of a shield and consist of a wooden frame that
is covered with a plaited work of leather thongs or ropes. Other-
wise they serve to hold the pack loaded on the donkey and some-
• 285 times also on oxen. Mats are unknown; dressed neat-skins take
237 their place. Mortars are also unknown.

III.

000 Closer family relationships. -- Kinship designations. -- Terms of address for relatives.

602 Since every tribe and every lineage are descended from a
[613] tribal ancestor, the tribal and lineage members consider themselves
[614] more or less distant relatives. The family, one's own as well as,
ascending, those of the father and of the mother, forms the closer
[611] relationship. The child follows the father's family (father right).
[672] Relatives are not responsible for punishable offenses, fines, or debts
of a relative. Legally they need not support them either in con-
nection with impoverishment or release from captivity: it is such
a general custom, however, that probably no one ever evades it.

601 /41/ The Masai language is poor in particular kinship designations: most of them are made up of words for father, mother, brother, sister, son, daughter, etc.

Father: baba.

Mother: jējo.

Another wife of the father: eng afhji e jējo.

Principal wife: e' ṅgorojoni kitok, that is, the great woman, or en altero eng aṅ, that is, the first in the kraal.

Every other wife: e' ṅgorojoni.

Brother (1):

1. Brother and sister come from the same wife, half brother and half sister from different wives of the same father.

ARCHITECTURAL OBJECTS AND FURNITURE.

C 342

NATIVE HUT (Numba). Model much too small, and door proportionately too high. (See figs. 6, 7, and 8.)

Wa Chaga tribe; Moshi District, Mount Kilima-Njaro, East Africa. 151818

NATIVE HUT. Model made by Chaga boy. Usual dimensions 10 to 11 feet high and 12 to 15 feet diameter.

Height, 4 inches.

Wa Chaga tribe; Moshi district, Mount Kilima-Njaro, East Africa. 151804

WICKER-DOOR (Molle). Model. The door in native huts slides between two upright sticks and the door jamb.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151797

C 352 [322]

WOODEN STOOL with four legs. Cut out of a log of wood, and smeared with red ocher.

Height, 8½ inches; depth, 7½ inches.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151816

WOODEN STOOL with three legs. Painted with red ocher.

Height, 7 inches.

Wa Chaga tribe; Moshi district, Mount Kilima-Njaro, East Africa. 151792

M 352 513 285

MAT. Made of skin. Placed on the ground for sleeping during a journey. Other tribes carry mats of bulrushes. Bought of Masai war party, probably from N'jiri, met with on the Tsavo River.

Width, 18 inches.

Masai tribe; Mount Kilima-Njaro, East Africa. 151301

C 251 417

FOOD-HOOK (Kiwili). Natural forked branch, peeled. Hung in huts for the suspension of articles to protect them against vermin.

Length, 14½ inches.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151798

C 343

GRANARY (Kikombi). Model of a conical thatched hut woven of rods. Entrance under the eaves. The usual size is about 8 feet high, 4½ feet in diameter. Model made by a Wa Chaga boy. These huts are set up on four stones.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151794

GRANARY (Kikombi). Model, differing from the other granary by being placed on supports.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151796

101 634 claim to belong to them live elsewhere. Merker gives as the principal divisions three provinces, Kisongo, Loita, and 101 634 Olbruggo. This is perhaps not according to Masai traditions, but is not incorrect as a practical description of the present 635 distribution of the tribe. The Loita and Olbruggo, also known as Elburgon and Purko, are both subdivisions of the Naivasha district, of whom the former acquired importance by refusing to accept the present Laibon, Lenana, and following instead his brother Sendeyo. Besides these districts, there 614 are four clans representing genealogical not territorial divisions: Aiser, Mengana, Mokesen, and Molelyan. The Aiser seem to enjoy a certain primacy. The medicine men all belong to this clan, which is specially connected with Mount Ngong (to the south of Kikuyu), also called Ol-doinyo loo-'l-Aiser, the mountain of the Aiser.

561 According to the social system of the pastoral Masai the male sex is divided into boys, warriors, and elders. The first [304] stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circum- 561 cised about the same time (see p. 261 for details) are said 884 to belong to the same age, and are known collectively by a distinctive name, such as 'the White Swords' or 'the [302] Invincibles.' After circumcision the warriors plait their [291] hair, but, except for a small skin hanging over the shoulders, and their arms and ornaments (which are described by Mr. Hollis), [262] go absolutely naked. They subsist entirely on meat, milk, [276] and blood, and in particular may not smoke or touch intoxi- 342 cants. They do not live with the married people, but in 836 separate kraals with the immature unmarried girls, with 561 whom they are allowed to cohabit freely. Tradition[1] (see p. 117) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the diminishing numbers of the race. Besides this, female [177] morality after such a girlhood was naturally low, even when [764] the Masai kept to themselves. Now that they have come [548] into contact with civilization, prostitution and venereal disease have become deplorably frequent. About the age of twenty- 561 seven or thirty, or nowadays when raiding is forbidden 885 somewhat earlier, a warrior marries and settles down. If he

[171] [1] It is said that among the Dinka, Bari, and Shilluk there are similar customs of free love.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

is a man of wealth and importance he may be elected chief[1], in which case he is responsible for the discipline of the warriors and their appearance when summoned to fight, though he does not go to the wars himself. As with most East African tribes an elder's ideal of existence seems to be ease, not unmixed with drunkenness. Proverb No. 64 (p. 249), 'Don't lie with your feet against a post like the father of many sons,' meaning 'Don't give yourself airs,' is a vivid picture of the Masai pater familias taking his ease in the primitive posture of lying on his back with his feet against a post, while his family do all the work for him.

Masai women, unlike the men, are carefully dressed in leather garments, but a rare, and according to our ideas most unbecoming, custom forces them to shave their heads. Before marriage they are circumcised, and signalize their change of state by wearing large circular earrings and necklaces of brass and iron wire. Both girls and women have their legs and arms encased in iron ornaments, so that they can sometimes hardly walk.

This military organization of the Masai made them a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or polity analogous to the kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship and desirous only of military glory. Retirement from this band of warriors as a chief was honourable, but seems to have been recognized as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.

The nearest approach to a central and superior authority among the Masai is the medicine man or Laibon (more correctly Ol-oiboni; see p. 324, &c.). They all belong to the Kidongi family of the Aiser clan, and are said to be descended from a personage called Ol-le-Mweiya, who came down from heaven and was found by the Aiser sitting on the top of Mount Ngong. This was nine generations ago, the genealogy having been preserved. The influence of the

[1] The chief is elected from the warriors, but leaves their ranks at once and becomes an elder.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

881 "ask the boy (candidate) various questions as to his past behaviour, and he is put on oath to answer truly". [70] Apparently no special ordeal such as we find among the Kipsigis is attached to this testing.

b) The operation may be performed "in the morning or the evening according to the particular custom of the family concerned" (Fox). Generally it takes place early in the morning. The operator [648] is said never to be a Masai. Generally he is a Dorobo, and sometimes a Kikuyu (Fox). This peculiarity is worth noting, especially if it is compared with the great care observed in selecting all other leaders or officers out of the pure Masai. [71]

881 Before the operation is performed, the candidates take a cold 304 bath in order to make their body insensible, or remain "shivering in a state of nudity until the sun rises" (Bagge). [72] Candidates are then operated upon, outside the village near the right-hand post of the gate. The patient must not betray any sign of suffering. That would disgrace him and all his family. A few elders assist and support the patient during the operation, and help him to his mother's house after the wound has been washed. Once inside he is given food (fresh blood) and a special beverage, called *eng alipeta*, after which he is allowed to speak.

881 The circumcised youth is presented by his mother's brother [591] with new sandals, and henceforth he is not supposed to make use of any garment worn before the ceremony. A procession by four girls (cfr. Fox), waving branches takes place to the entrance of the [594] boy's hut. The elders are again entertained with meat and beer;

[595] wife of a man has her independent house where she lives with her children and cattle. But the whole homestead belongs to the father, and it would be quite correct, though not as precise, to say: the house of the candidate's father.

[70] We may assume that these questions are connected with the candidate's moral and sexual behaviour. Fosbrooke states that "prior to circumcision [834] no youth may have intercourse with a circumcised woman. This is a rule most strictly adhered to". The same custom is observed among the Nandi-speaking peoples.

[71] Cfr. the election of the *Ol Ol opolos* at the *Embolosat*; of the *ol amal* boys, the *aigwenani*, and the *mejengema* at the *Endungore-Engibata*; of the *ol aunoni* at the *unoto*.

[72] Leakey states that it is "absolutely essential that the cattle shall be [231] in their enclosure during the whole of the ceremony". No further details are given nor are reasons offered for this fact which is not mentioned by any of our Massai authorities. However, it shows that circumcision is not related to the cattle aspect of Massai culture.

#648 175 Sir Charles Eliot's report.

In his report on the East Africa Protectorate, dated the 10th of June, 1901, Sir Charles Eliot describes the Masai as "perhaps the most remarkable people in East Africa. . . . . The greater number are still warlike nomads, who roam about over the Rift Valley and the plains between Kilima Njaro and Nairobi. . . . .

"The spread of law and order has somewhat curtailed their exploits, but the men are still all warriors by profession. . . . . .

"The Masai are found in both German and British territory. When the last Chief, Batyan, died, a dispute arose between his sons, Lenana and Sendeyo, as to the succession, and the tribe was divided. The former is now recognised as Chief of the Masai in the British sphere, and the latter of those in the German. Sendeyo has several times had trouble with the German authorities, but has always been defeated. Fortunately for us, Lenana's familiar spirit advised him that he had better make peace with the white men, because they were invincible, and he has proved our best friend and ally among the natives. In return, he receives £6 13s. 4d. a month, which is a very moderate stipend for a monarch of such considerable powers, both real and imaginary. Though I see no reason to anticipate that Lenana will change his present attitude, I regard the Masai as the most important and dangerous of the tribes with whom we have to deal in East Africa, and I think it will long be necessary to maintain an adequate military force in the districts which they inhabit."

[791 [787]

At this date, the Masai in the East Africa Protectorate had been placed in a district of their own, called the Masailand District, whose headquarters were at Nairobi.

Inclusion of Uganda Provinces in East Africa Protectorate.

By an Order of the Secretary of State for Foreign Affairs, dated the 5th of March, 1902, the Kisumu and Naivasha Provinces of the Uganda Protectorate were included in the East Africa Protectorate, and the Naivasha Masai therefore came under the control of the latter Protectorate.

Uganda Railway.

The construction of the Uganda Railway was commenced in 1895, and the line reached the Lake in 1901. Throughout the construction period the Masai gave no trouble whatsoever to the workers on the line.

Sir Charles Eliot's report, April, 1902.

In his report on the East Africa Protectorate, dated the 18th of April, 1902, Sir Charles Eliot writes:—

"I agree with those who do not think the Masai are a formidable element in East Africa. It would, of course, be unwise to irritate them, and there is always some danger of misunderstandings in dealing with a people of whose language we are profoundly ignorant. But it appears to me that, even within the last year, the Masai have become more amenable. They have taken to wearing red blankets, and the astonishing exhibitions of nudity, which were common a year ago, are now comparatively rare. Lenana even wears a greatcoat and is one of the judges at the Nairobi cattle show."

[791 [78]

Later in his report he writes:—"The troops, which are under the direct management of the Military Department of this Protectorate, form the 3rd Battalion of the King's African Rifles . . . . . One company at Nairobi is composed of Masai. There is no doubt of the warlike powers of this tribe under their own system, but military authorities differ as to their qualifications for service in a disciplined army. Colonel Hatch's last report on their capacities is, however, very favourable, and his only criticism on them is that they cannot stand service on the coast. There are many advantages in employing the Masai as soldiers and police, for they are little disposed to cultivate, and if we are effectively to stop their ancient occupation of cattle raiding, we must give them something else to do. In some ways they answer very well: they are extraordinarily active, and have better notions of honour and loyalty than most tribes, but it would clearly be rash to trust too much to Masai troops and Masai police in Masailand."

174 disaster fell upon them shortly after, in a raid against their
628 brethren of Kisongo. The saying that misfortunes never come singly was well exemplified by their case, for nature took up the work of ruin. A cloud of locusts settled on the land, and left not a blade of grass or other green thing, so that the cattle died in enormous numbers through starvation.

MASAI MARRIED WOMAN, NJIRI.

While the Wa-kwafi were in this unhappy plight, the Masai of the plains to the west fell upon them and smote them hip and thigh, and thus broke up and revenged themselves upon the most powerful division of the tribe. Great numbers having lost their cattle and been reduced to starvation, were compelled to throw in their fortunes with tribes they had
174 hitherto despised. Some found an asylum in the forests of
166 Taveta and Kahè, and the lower slopes of Mount Meru or

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

855 was not even put through the horrors of the tub. Some-
515 times, however, his mother, in a fit of affection, and imbued with the belief that some day he would make a name for himself as a smasher of skulls and a lifter of cattle, would make up an unctuous and odoriferous composition of grease and clay, and anoint him therewith till he shone forth with a splendour dear to the Masai heart. On these occasions he would strut forth with all the pride proper to a small boy who has just had a suit of new clothes.

858 And so life went on, and he was promoted to the rank of
291 a boy proper. He was provided with a real bow and arrow. A square piece of sheep-skin was tied over the left shoulder,
304 leaving the legs quite bare. He now began to cultivate, not a moustache, but his ear-lobes; that is to say, he took means to stretch them out till they would almost touch his shoulder, and he could nearly put his fist through the distended portion. This is done by first putting a slender stick through the lobe, and gradually replacing it by a bigger, till a piece of ivory six inches long can be inserted lengthwise.

857 Our hero now looked longingly forward to the day when he should be a warrior; but meanwhile he must employ himself herding the goats and sheep. This was his first
[361] occupation. He had by this time acquired some notion of the geography of the country around, as his parents had not been stationary, having been compelled to move about from place to place according to the pasturage. The donkeys on
[492] these occasions conveyed their household gods, though his
[482] mother had to carry nearly as much, and build the hut after. He had also to accompany his parents in moving up from the plains to the highlands in the dry season and *vice versâ* in the wet season. Beyond these studies in practical geo-
869 graphy his education proceeded in a very irregular fashion. He learned something of the mystery of the universe by hearing his elders continually howl out prayers by the hour together to some unseen Being called Ngăi (God, or the heavens). He heard also that the place of Ngăi was among the eternal snows of Kilimanjaro, or that the thunders of
[823] Donyo Ngăi (an active volcanic mountain) were His voice.

It is very pleasing to think of Moran at this period reclining under a bush or standing watchfully over his flock
[516] with one foot brought up to his knee and supported by his bow, trying to penetrate the great problem as to the where, whence, and whither of life. We can imagine him appeal-

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

881 sandals, they chose a handsome shield of buffalo hide,
[714] beautifully made, elliptical in shape, and warranted to stand a tremendous blow from a spear. The price being asked, a bullock was mentioned as the very lowest cost price. But the unfortunate maker had to be content with a scraggy sheep—and a blow. This purchase accomplished—for the Masai never *make* shields or spears, though there is nothing in the possession of which they pride themselves so much—
881 they returned to the kraal, and then called for an El-konono.
563 This is an inferior race kept in servitude to the Masai, for whom they make spears and swords. They do not go to war, and are not allowed to intermarry with their superiors. They all speak Masai, though it is believed they have a language of their own. In response to the call a miserable, half-starved object appeared with a selection of most
881 murderous-looking weapons. After a careful examination
411 Moran selected a spear, with a blade two feet and a half long, a wooden handle fifteen inches, and a spike at the end about one foot and a half. The blade had an almost uniform width of from two to three inches, up to near the top, where it abruptly formed a point. A sword and a knobkerry of formidable appearance completed his warlike equipment.

881 These important acquisitions made, our hero now pro-
[302] ceeded to dress himself up as became his new character. He first worked his hair into a mop of strings, those falling over the forehead being cut shorter than the rest. Instead of the ivory ear-stretcher hitherto used, he put in a swell
[301] ear ornament formed of a tassel of iron chain. Round his neck he put a bracelet of coiled wire, and round his wrists a neatly formed bead mitten. On his ankles he bound a strip of the black hair of the *colobus* (monkey) of Central Africa. A glorious layer of grease and clay was plastered on his head and shoulders. This completed, he donned a very
[291] neat and handsomely decorated kid-skin garment, of very scanty dimensions, which served to cover his breast and shoulders, but hardly reached below the waist, and thus stood forth the complete military masher, ready for love or war.

882 And now the great step of his life was taken. Thus far he had lived in the kraal of the married people, and accordingly had to comport himself as "only a boy." Now he proceeded to a distant kraal in which were none but young, unmarried men and women. To keep up his dignity and supply him with food his father provided him with a number

[text continues on p. 250]

FL12 Masai FL12

882 of bullocks. Reaching the kraal, our friend found himself among a large number of splendidly built young savages—indeed the most magnificently modelled men conceivable. And here let me for a moment pause in my story to indulge in a passing word of description.

There is, as a rule, not one of the El-moran under six feet
142 (I am speaking of a superior clan). Their appearance, however, is not suggestive of great strength, and they show little of the knotted and brawny muscle characteristic of the ideal Hercules or typical athlete. The Apollo type is the more characteristic form, presenting a smoothness of outline which might be called almost effeminate. In most cases the nose is well raised and straight, frequently as good as any European's (though passing into the negro type in the lower class, such as Wa-kwafi). The lips also vary from the thin and well-formed down to the thick and everted. The eyes are bright, with the sclerotic whiter than is common in Africa. The slits are generally narrow, with a Mongolian upward slant. The jaws are rarely prognathous, while the hair is a cross between the European and the negro, rarely in piles, but evenly spread over the head. Hair is scarcely in any case seen on the face or any part of the body. The cheek-bones are in all remarkably prominent, and the head narrow both above and below. The teeth and gums of almost every one
[304] are such as I have already described, though I think I have neglected to mention that the two lower middle incisors are extracted. Tatooing is not practised; but every Masai is branded with five or six marks on the thigh.

Such are the main characteristics of the El-moran; but before we resume our narrative let us note a few facts about the young damsels—the Ditto—who are soon to be flirting with our hero.

Happily facts support the verdict of gallantry when I say that they are really the best-looking girls I have ever met with in Africa. They are distinctly ladylike in both manner and physique. Their figures are slender and well formed, without the abnormal development about the hips characteristic of the negro. They share, like the men, the dark
[302] gums, and the bad sets of teeth. The hair is shaved off totally, leaving a shiny scalp. As to dress, they are very
291 decent, and almost classical, if a stinking greasy hide can have anything to do with things classical. They wear a dressed bullock's hide from which the hair has been scraped. This is tied over the left shoulder, passing under the right

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

arm. A beaded belt confines it round the waist, leaving only 291
one limb partly exposed. Frequently it is slipped off the
shoulder, and depends entirely from the waist, leaving the
bosom exposed. Their ornaments are of a very remarkable 301
nature. Round the legs from the ankles to the knees tele-
graph wire is coiled closely in spiral fashion. So awkward
is this ornament that the wearer cannot walk properly, she
cannot sit down or rise up like any other human being, and
she cannot run. Round the arms she has wire similarly
coiled both above and below the elbow. Round the neck
more iron wire is coiled—in this case, however, horizontally
—till the head seems to sit on an inverted iron salver.
When the leg-ornaments are once on they must remain till
finally taken off, as it requires many days of painful work to
fit them into their places. They chafe the ankles excessively,
and evidently give much pain. As they are put on when
very young, the calf is not allowed to develop, and the con-
sequence is, that when grown up the legs remain at a uniform
thickness from ankle to knee—mere animated stilts, in fact.
The weight of this armour varies according to the wealth of
the parties, up to thirty pounds. Besides the iron wire, great
quantities of beads and iron chains are disposed in various
ways round the neck.

Such, then, were the people that now greeted Moran, who, 262
being a novice, had to suffer a good deal of chaff from both 884
sexes. He was, however, soon initiated into the mysteries
of a warrior kraal, and had seen a bit of life. The strictest
diet imaginable was the rule. He had to be content with
absolutely nothing but meat and milk. Tobacco or snuff,
beer or spirits, vegetable food of all kinds, even the flesh of
all animals except cattle, sheep, and goats, were alike
eschewed. To eat any of those articles was to be degraded [578]
—to lose caste; to be offered them was to be insulted in the
deepest manner. As if these rules were not strict enough,
he must needs not be seen eating meat in the kraal, neither
must he take it along with milk. So many days were
devoted entirely to the drinking of new milk, and then, when
carnivorous longings came over him, he had to retire with a
bullock to a lonely place in the forest, accompanied by some
of his comrades, and a Ditto to act as cook. Having scrupu- [757]
lously made certain that there was no trace of milk left on [231]
their stomachs by partaking of an extremely powerful pur-
gative, they killed the bullock either with a blow from a
rungu or by stabbing it in the back of the neck. They then

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

creatures, with the vultures and the storks, tore their flesh 764
under the light of the moon. Nothing remained but a couple of grim skulls and some bloody bones when the sun rose over the grassy plain in the morning; and the young urchins of [524] the kraal kicked them about and laughed as they threw them at one another.

MASAI MARRIED WOMEN, NJIRI.

Such is the history of the commonplace life of Moran as 114
retailed to me by men who had lived with him as boy, warrior, and husband, and for whose accuracy and truthfulness I can vouch. The next traveller will listen to the same story, and will doubtless be able to verify the main features of the narrative.

is called an *ol smal*. The boys may carry knives for defence but not 561
spears, for it is said that a spear is a sign of force, and their quest
is a peaceful one. Each boy must carry a bow, for the bow is a [411]
token of peace. Furthermore it ensures that any reasonable request
the boys may make during the *ol smal* will be granted. No Masai
may refuse the request of one who carries a bow in his hand. The [574]
boys take no arrows with them. They visit all the principal villages
and in dance and song they announce the object of their visit. They
then seek out all the bigger boys of the village and add them to their
number. If they wish to spend a night at a village they beg an ox
for food from the elder of their sponsor's age-group. Elders of other
age-groups present them with milk to drink. In this way the news
is spread far and wide and finally the boys, now of considerable [431]
numbers, return to the elders who despatched them, taking as a gift
a large quantity of honey. Then a special village is erected in which [361]
only the boys' sponsors and their families may live. The boys borrow
ostrich feathers and lion mane head-dresses from the warriors and [237]
on the appointed day they collect at the elders' village. [714]

The ceremony commences with a dance called *englbata;* for this, [535]
the boys form three files, one wearing ostrich feather head-dresses,
the second wearing lion mane head-dresses, and a third, of boys who
have decorated their bodies with broad stripes of white earth to
resemble zebras.

The latter must be quite nude; those who wish may wear thigh- [291]
bells. They may not carry weapons of any sort, but each carries a
thin wand, the length of a spear. After much dancing, the boys
form a procession and walk round inside the circle of huts following
two leaders, one of whom blows a Kudu horn from time to time. [782]
The procession then halts and the leader prays aloud to *Engai Narok*
—the Black God, to shower his blessings on the boys. This prayer
has been taught them beforehand by the elders, some of whom stand
by and prompt when necessary. When the prayers are over, the
elders take the boys outside the village and spend some time instructing them in their duties to their sponsors and to the tribe. A return
is then made to the village and the elders bring a fire-stick, the one
called *ol-piron*, also a male circumcision knife and a small dead bird.
This bird may be of any kind other than a dove. The elders break
the fire-stick before the assembled boys. They then place a curse
upon the circumcision knife and taking the dead bird they break one
of its legs and pierce one of its eyes—presumably as an indication of
the ill which will befall any boy who dares to be circumcised before
the curse is taken off the knife.

In this way, the elders formally lay claim to the sponsorship of
a new age-group. From that time the boys refer to their sponsors as
Il-piron, whilst the elders refer to the boys as *Il-piron*.

particular relation. The naming ceremony is as follows:—When the child can run 553
about a small run is chosen and killed by the women of the village and eaten by them (and not by any men). The child is then given a name which is chosen by the assembled women. It is usually named after some friend of the family either living or deceased, and great care is taken that the person after whom the child is named is (or was) good-looking and of good character, as otherwise the child would grow up ugly and of an evil nature. This is the name used by the family and by friends, but 551
after initiation a boy is always called "Son of 'so-and-so,'" and not by his own name (except by his family). After a man is married and has named sons of his own he is called "Father of 'so-and-so.'"

Tooth Extraction.—As soon as a child of either sex has cut all its milk-teeth the 304
two central lower incisors are knocked out, and this operation is repeated when the permanent teeth grow. There is no ceremony attached to this removal of the teeth, [852]
which is performed with a small, sharp two-edged knife. The reason given for this [412]
practice is, that in the case of any illness, if the patient keeps his mouth tightly closed, [758]
water and gruel can be poured in through the hole so formed.

Ear Piercing.—At the age of about 6 or 7, children of both sexes have holes pierced in the cartilage round the upper part of the ear, and as soon as the boys start herding cattle and the girls start drawing water they have the lobes of the ears pierced. Ears are pierced in order to prepare them for carrying ornaments, and the holes are stretched to the size which the individual requires by means of a gradual increase in the size of the inserted stretching plug of rough wood.

Games.—All sorts of childish games are played by the children during their 524
early days, but I could not obtain any details from my informants.

Clothing.—From a very early age children are given small bits of skin as clothing, 291
and the boys have small sandals made for them.

Food.—The food of children is the same as that of grown-ups and is restricted 242
to milk, fat, and meat, as no crops are grown.

PART II.—BOYHOOD.

Herding.—As soon as they are considered old enough (and this depends upon the 857
number of other boys in the family available for this work), boys are sent to help herd the sheep and cattle, and they continue to do so until they are old enough to start preparing for initiation.

Sex Life.—Initiation is often delayed until some little time after puberty, and is 836
is not considered in any way wrong for these boys to begin indulging sexually as soon 883
as they like, provided that they observe certain restrictions. They may do as they 684
like with the younger girls in the neighbouring villages, provided, of course, that they [834]
observe the law forbidding sexual relations with any member of their own sub-clan,

[P. 466 - B]

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

Betrothal

584 A man usually chooses his wife himself and, after obtaining the girl's consent, asks his father to approach her parents; if they agree the girl's head is smeared with fat, and she may no longer live in the same kraal as her betrothed. According to Hollis, a man makes the first approach to the girl's father himself, giving him first tobacco, and later on when the girl is older, more tobacco and honey. It is considered wrong for a girl to become pregnant during the betrothal period, and the engagement may be broken off, a custom of which advantage is taken by girls who are betrothed to a man they do not wish to marry, since betrothals are sometimes arranged without the girl's consent. Fathers, for instance, sometimes arrange betrothals between their young sons and daughters in order to strengthen the bonds of friendship between them (as also among the Nandi); and betrothals may take place between warriors and babies, and even unborn girls.

Regulation of Marriage

582 614 This depends on three things: clan, age-set, and kinship. (*a*) According to Hollis, marriage between clans is allowed, but sub-clans are exogamous groups (see below, p. 119); a man may marry a woman of another sub-clan of his own clan. Merker says he may not marry a woman of his mother's sub-clan. Tombo ole Mbaei, however, says that though intermarriage between clans is allowed, each clan is an exogamous group; Fosbrooke agrees that the clan is the exogamous group (see p. 120). (*b*) A man may not marry a woman who is by custom considered as belonging to the age-set (*ol-porror*) senior to his own, to his own age-set, or (if he belongs to the Right-hand Circumcision) to a woman of the Left-hand Circumcision. But he may marry one of the same generation[19] (*ol-aji*). See below, p. 117, for details of the age-set system. (*c*) A man may not marry a woman whose relationship to him is closer than that of third cousin, and then only if they call each other *o-le-sotua* and *en-e-sotua*.

Bridewealth

583 Payment of bride-cattle establishes the husband's rights in his wife's procreative faculties and over the children she bears him. The numbers of stock paid seem to vary slightly. Merker gives them as three cows and one ox to the girl's father (the ox being eaten at the marriage feast), and a ewe and ram to her mother (the ram also being eaten). Hollis says the bride's father is given three heifers and two oxen, one of which is slaughtered "at the door of the hut"; on account of the other ox the man and his father-in-law call each other *pa-kiteg*, "giver and receiver of an ox." To the bride's mother are given two rams, which are slaughtered, and a ewe, on account of which he and his mother-in-law call each other *pa-ker* (sheep). Fosbrooke gives the number as two oxen and three cows or heifers, including the "*pa-kiteg*" ox.

Marriage

585 There appears to be little ceremonial at a wedding. The chief occurrence is a feast at the bride's home, of which the bride and bridegroom do not partake. This is followed by a ceremonial journey of the bride to her husband's home; she wears a freshly oiled garment, carries a gourd ornamented with cowries, and is accompanied by two men and two old women; on her arrival, she is given a child to feed. [291] Thomson says that on the day of marriage and for a month afterwards (if I understand him aright) the husband wears female dress.[20] If the husband is still a warrior he may not have sexual intercourse with his wife, though they may live together at

[19] Merker, p. 47.

[20] Discrepancies between authorities may sometimes be due to difference of tribe, and not always to incorrect information or mere misunderstanding.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

631 chief; but in that year it was recognized that he was in fact no such thing, and the native administration was reconstructed with 14 Native Councils, one for each
648 division (Il-Purko, Il-Damat, etc.), to replace the original council of the *ol-osho*. These Councils were composed of *il-aiguenak*, elders, and senior warriors; and the presidents of each formed a Central Masai Council which met twice a year. Under the Councils were 46 headmen, some of them *il-aiguenak*. The Reserve was divided into nine locations, the numbers of headmen varying according to the population of the locations. In 1930 these Councils were replaced by a Native Tribunal and an Appeal Tribunal in each of the two administrative districts, Narok and Kajiado, into which the Reserve was then divided. The headmen were divided into two grades, headmen (styled chiefs) and sub-headmen.

In Tanganyika, the laibon was at first regarded as the head of the Kisonko; but since this recognition proved unsatisfactory to the people themselves, a Masai Council was formed as Native Authority, consisting of headmen and elders, but possessing only advisory powers. Later, a local council was set up in each area with representatives of age-sets and clans on it; representatives of each local council sit on the Masai Council. There are 41 paid headmen.

MAIN CULTURAL FEATURES

CRAFTS

Housing

342 The Masai hut, *enk-aji*, pl. *ink-ajijik*, is a low structure with a flat or flattish
361 roof. It is made of a framework of poles which are bent over and tied together. The interstices are filled with grass or brushwood, and the whole, including the top, is plastered over with mud and cow-dung. In wet weather hides are laid on top to keep out the rain. Huts are not isolated, but are grouped together in kraals. (See above, p. 107.) The huts of the agricultural Il-Tiamus have thatched roofs of the normal East African pattern (p. 111). A temporary skin hut called *ol-gobor* is used for a temporary halt where pasture is poor.

Dress and Ornaments (Traditional)

714 Warriors wear a small calf- or goat-skin cape tied over one shoulder, and a small back apron of skin fastened to the belt. Their battle-dress consists of a head-dress of ostrich feathers or of lion-skin, a cape of vultures' feathers, a cap made of a goat's bladder, a calf-skin garment, leg-ornaments of monkey-skin, and a piece
[301] of goat-skin fastened to the belt. The distinctive warrior's ornament is the horn arm-clamp called *e-rrap*, which has two points sticking upwards and is worn on the upper arm. Warriors also wear ear ornaments, necklaces, bracelets, and leg-bells. A type of garment called *en-toros* is worn by warriors on certain occasions: Hollis says when going on a raid after electing an *ol-aunoni* (*ol-otuno*); John Tombo ole
● 291 Mbaei, when they go on a raid after making a vow to conquer or die. Elders wear
[556 skin garments fastened over one shoulder; rich elders wear ivory arm-rings. Boys
301] wear a sheepskin.

Married women wear a skin cape and a skin skirt held in place by a broad belt.
291 They wear coils of iron wire on the arms and legs, often on both the upper and lower arm, and from knee to ankle. All married women wear flat discs of coiled
301 iron wire, *i-surutia*, hung by straps from the ear-lobes (like the Nandi *tsoh*), and some wear wide collars made of coiled iron wire which stand out round the neck, and are about 6 or 8 ins. wide. They also wear a profusion of necklaces and neck ornaments. Girls wear skin garments tied at the shoulder and fastened round the waist with a belt. They also wear coils of iron wire on the arms and legs, and necklaces.

Emil Müller phot.

Ill. 1. Masai woman from below Kibongoto.

177 That various customs of theirs and words of their language also f[illegible]d entry among the Negroes follows automatically.

619 While some travelers recognize at least a certain relationship
144 between the three branches, others claim to have observed such
142 great somatic differences between them that one might be doubtful
114 about their racial unity and ask oneself whether the Wadoróbo and the Wakuafi of certain colonies should not be counted among the Negroes. This error is explained by the fact that those travelers have come into contact with them only superficially, /12/ drew conclusions going too far from isolated individuals to the generality, so that they regarded the Wakuafi, strongly mixed with Negroes, as pure, and Negroes strongly mixed with Masai blood as Wakuafi.

/12 cont./

619 142 144 In connection with the somatic view of the three Masai branches the following is to be considered. The band that immigrated last, the true Masai, have kept themselves quite pure as a race. They [727] practically never subscribed to the kidnapping of women and children in war, otherwise customary everywhere in Africa, they did not [171] [582] marry Negresses and did not take Negroes into their community. [563]

291 301 142

Fonck II phot.

Ill. 2. Three Masai women.

619 142 144 Therefore they most clearly show the racial characteristics peculiar to the Masai people. The same was true of the Wakuafi until the [178] time when they became sedentary. Then, however, they needed [361] not only replacements for their lost cattle, but also many hands trained in the cultivation of the soil. For this reason on war expe- [727] ditions they dragged off, not only the livestock of the enemy, as before, but also the women and children. The degree of mixture between Wakuafi and Negroes is very different in the individual [i.e., the Masai, Wakuafi and the Wandorobo --Analyst]

619
197

/15/ Even though, in general, one should be very careful in ethnology about drawing conclusions from linguistic bases, it seems permissible here, on behalf of the three branches' belonging to one people, to point to their language as well.

As a matter of fact, we find the same language among the Masai and Wakuafi, with the limitation that for the latter, with the great number of Masai dialects, sometimes this one, sometimes that one is their own, according to the location of their area, whereas the very widely ranging Masai probably understand almost all the dialects. In addition, for the Wakuafi, in places, according to the degree of their mixture with Negro tribes, a language of the latter's is more or less familiar. Of the Wandoróbo, the El gasurek speak only the language of the Masai, whereas the Asá and

P
197

175
619 /20 cont./
791 understand what such a success meant. Mbatyan demanded thou-
727 sands of workers, and they moved obediently, in endless long lines,
466 men, women and children, toward the steppe area of Kisongo, lying
[46]

791

175
619 Ill. 4. Zendeo, the present chief of the Masai.
791 west of the mountain, where the mighty one resided, like his
727 ancestors. There they had to dig a long water channel, whereby --
466 a further particular humiliation -- the men had to work in rank
[462] and file with the women. Encouraged by these and other successes,
175 the Masai became more and more arrogant, and they extended
648 their war expeditions farther and farther. It was not only the
721 Negro tribes of the interior who had to suffer under their lust for robbery and murder, they even penetrated into the immediate hinterland of the coast and directly approached the coastal cities of Mombasa, Tanga, Bagamoyo, and others.

175 The belief in the magic means for healing purposes which
791 Mbatyan gave those seeking help, and whose chief ingredient
755 quantitatively was the vanilla-scented, pulverized wood of the ol mogongora liana, was so deep-seated in the people /21/ that it was often supposed to have actually brought to the people

/25 cont./

342 the nearby hearth (en gema), which is formed by three stones lying
[354] beside one another in a clover-leaf shape. Good firewood is scarce
[313] on the steppe; one must therefore use the smoky brushwood. At the opposite end of the hut is the sleeping place for the woman (e ruat kětě = small bed) and beside it that for the man (e ruat kitok = big bed). A latticework of poles and switches, which is covered with grass and cattle dung, like the hut walls, close the two off from each other and from the rest of the space in the hut. From the

The carbine standing by the hut belongs to a soldier of the Protectorate Troops.)

342 latter a separate entrance leads into each of these compartments.
[352] The bed consists of a pad of dried grass over which two dehaired
[237] neat-skins are spread. Opposite the door is found a small enclosure (ol ale l el ascho) into which young calves are put for the night.
[233] There is often found beside the door yet another enclosure (ol ale l ol balelon) for young goats and sheep, if these are not housed in small pens built beside or on the hut.

361 /26 cont./
417 are separated from one another by thorn barricades, and the huts
35 are often protected from damage by the cattle by means of thorny
824 branches placed around them.
233 One distinguishes between kraals for the married (eṅg aṅ el
621 moruak) and such for the warriors (ol manjata). In the former live
361 the married men (ol moruo, el moruak) with their families, in the latter the warriors (ol morāni, el móran) with their mothers and the half-grown, uncircumcised girls /27/ (en dito, n doje). One sometimes also finds several kraals built together into one. The author found a village that consisted of five kraals built next to one another, three of which were El moruo kraals. A dense thorn-barricade extended around the entire kraal complex.

595 The married man on the average has five to six wives, wealthy
[556] men have in addition also a few secondary wives to whom they
[736] are not legally married. The secondary wives are made up of widows who may not marry again or who have not remarried and

854 the ground. The father almost never carries the child on his arm, but only picks it up now and then /53/ for a moment. As soon as the child cries, even at night, the mother, or in her absence another [533] woman, gives it the breast. If this does not help, one tries to quiet the little one or lull it to sleep by rocking it in the arms or by singing. One such familiar lullaby is the following: oh, jejai, tobolo l 539 airorif baba telai l eig an ai kitok ai: in free translation: Oh, you 854 my little rascal, I say to you, grow and become big in my big kraal. 533

Ill. 15. Masai woman with child on her back.

142 301 854 291 ←

Another song, which, like most songs, first originated during the singing and refers to recent events, runs roughly: "What then do these El mulelyan want here (two women belonging to the tribe of the El mulelyan were standing nearby), they who did not bring the woman in childbed (that is, in this case, the woman singing the song) anything to eat? The Mulelyan are fools because they are not pleased about the children. In the future the woman in childbed will have to sit down in the shade in order not to feel so hungry, or she will /54/ have to ask for food in the kraal of a warrior who brought home booty from a war against the El datua." In the last words there is mockery insofar as the brother of one of the two El mulelyan women, along with other warriors, had been recently driven back by the El

/56 cont./

wamping maré, whereby, singing, it is prayed to 'Ng ai that he may let the boy become big and /57/ make a strong warrior out of him, one who will capture much livestock and then in old age may own a kraal as large as this one is here: then the people enter the kraal where the men again apply themselves to finishing the honey beer, while the women amuse themselves with dancing, for which they sing with shrill voices songs of praise and prayer for 'Ng ai. The success of a festival is judged by the degree that the men's intoxication and the women's gaiety reach at the end of it. Soon after the first name-giving, the second follows, at which the boy receives a name from his father, by which only the latter calls him. More rarely

Ill. 25. Warriors.

561 It is to be inserted here that the girls who have been circumcised in the period from the beginning of a series of circumcision years to the beginning of the next series are counted in the age class in which the boys circumcised within the same period up to the en gebita festival are reckoned.

/73/ As long as the members of an age class still belong to the warrior standing, those living in each area have their own head, the speaker (ol aigwenani), whom we shall meet again in the warrior
561 kraal. But if those belonging to one ol borõr are all married, they
634 are given a head for the entire district, the ol aunoni, whom not only the people of his age class, but also those of all younger age
[791] classes are obliged to obey. It is the business of the ol oiboni to arrange matters so that in each district only one holds this rank. The discussions with regard to his appointment begin even before all the ol borõr members have left the warrior standing. The speakers of the district go to the ol oiboni and put their request before him.

/73 cont./

561 634 [791] [787] After he has counted off the little stones of his oracle game for a while, he decides that N., the son of M., is to become ol aunoni. This session is secret, and the speakers also have a duty to keep its result secret for the time being. A man can only become ol [554] aunoni who is distinguished by physical beauty, faultless build, strength, and health. After the speakers have returned home again to their area, they call together all the ol borõr members there and, with these, again set out for the ol oiboni. Then a very large hut (os siñgira otunigi) is built there. When it is finished, the speakers take a number of warriors into their confidence and tell them who has been named ol aunoni. Then all gather in the hut, in the center of which stands a new, neatly carved wooden stool, toward which the one named is inconspicuously pushed by those who know. As soon as this has been accomplished, a few of those standing around him [301] [291] push him down onto the stool, others place a string of blue ring-beads (ñ gonoñgo) around his neck, tie the spiral ear ornament made of copper wire (e surudia), such as is worn by old men and women, into his ear lobes, remove his short, skin-apron (e megiti) of the warrior, and in its place drape around him the long one of the married (the ol gela l ol moruak). Finally all those present cheer the new ol aunoni and cry out tadarawá jo ijõk eñ gischon, that is, remain poor, [556] bring us luck. The Masai in general maintain that every ol aunoni has remained poor; if he were to put livestock in his kraal, he would soon die, his wives would bear him few children, wealth would remain [431] denied him. But he does not need it, for every man under him is obliged to give to the ol aunoni visiting him a fat ox and milk. Hence he is constantly on visiting trips, which explains why he has neither a large stock of cattle nor numerous progeny. In his kraal the lord who keeps the women at work is missing, and the latter in turn indeed have no incentive to work, for, by means of the gifts that fall to their husband, an excess of foodstuffs always prevails.

[574] After the ol aunoni festival is over, the other ol borõr members wander back home and celebrate a long meat feast (ol bul), where- [721] upon they /74/ usually set out on a war expedition, while the ol aunoni himself goes back to his kraal and remains there.

/74 cont./

561
701

The strict organization of the Masai war power rests primarily on the institution of the age classes. With circumcision the youth enters the army to perform his -- the universal -- military service, and, to be sure, as ol barnoti. His age class is that of the recruits and usually forms, together with the next higher one, that of the warriors, the peacetime strength of the standing army.

The next age class, the youngest of the married men, which performs no war service in peacetime, but also sets out in times of war, may /75/ be regarded as reserves and counted in the standing army. The older age classes take up arms only to defend their own district. There are two exceptions to this regular procedure. If a warrior feels still too young to leave the warrior standing along with the other ol borōr members, he joins the next younger age class and is designated as ol gaitul (pl. el gaitu) of it. This is done especially often by those who belong to the last course of an ol borōr, the el oirogua. The other instance occurs when a youth is heir to large herds of livestock and he lacks another man to be concerned

291
142

Ill. 26. Older men.

/75 cont./

561 701 with managing them. He must then take over the property himself, and he marries soon after circumcision. He is taken into the youngest age class of the married ones and designated as ol ñosaniki (pl. el ñosanik) of it. In the age class of the recruits as well as in that of the warriors, those living in one district form a company 100 to 200 men strong. In order to prevent a company from becoming too large through the presence of too great a number of boys fit for circumcision, which would be injurious to discipline, they have the remedy of circumcision by divisions. Then a special company is formed out [791] of one or even two annual courses, which the ol oiboni does by the bestowal of a special name. /76/ Otherwise every age class gets only one name at first, which is then often replaced by a new one after a successful, larger war expedition as a distinction for bravery shown or, more correctly, for particularly rich spoils, but only when [791] the ones concerned have become older warriors. The ol oiboni gives the next name to the ol boroŋ after it has received an ol aunoni; he bestows the last one with the union of two el boroŋi into an ol adji, which then bears this new name until it dies out.

561 The present (that is, 1901) youngest age class is called el gischoñ; it is the first of an association whose second has not yet been formed. The next association consists of the younger el kipuani and the older el meruturut. The latter were called el ñgarebut as youths and were given the name el merututut after a successful war against the Ukamba area. The next association is the 'L aimerr, consisting of the younger el kitoib and the older el merischo. The former, as recruits, were called el maŋguscha; after a war against Uhehe, el ñgischaŋgob; and after the selection of the ol aunoni, el kitoib. The el merischo as youths were called el metaroñi; after a successful war against Laikipia as el moraŋ, they received the name es sogon; and after the ol aunoni selection; their present name.

Merker phot.

• 291 142 ← Ill. 27. Very old man.

/76 cont./

561 According to this, the institution of the age classes together
701 with the existence of the age grades, which were more sharply defined and made more prominent in their meaning by the former, seems so important for the maintenance of a constantly war-ready troop that the thought obtrudes as to whether that institution did not first become formed out of a striving for such a band of warriors.
[703] The warriors' living together as a valuable impetus for comradeship and esprit de corps, in which lies a chief condition for success in war, leads further to celibacy and then to free love; one can see as its sequel the women's society that belongs to an age class. This in turn then is the first step for mother right, of which, indeed, we also find remnants among the Masai.

X.

000 Introduction of the youths to the warrior life. -- Their first war expedition. -- The ol oiboni gives them the name for the age class. -- Shield escutcheon: its individual constituent parts and their meaning. -- The youths become warriors.

701 As soon as the circumcision wound has healed, the circumcised
702 exchange the long apron (ol gelí, el gelíni) for the short skin-cape
561 (e megiti, /77/ megitin), again put on their ornaments, anoint their
[291] bodies with red paint and, after they have once more shaved their
[302] heads, set out as el barnot (sing. ol barnoti, formed from barno = bald-headed), armed with spear, club, sword, and shield, into the bush to celebrate the ol geteń l oń gutui. Spear, shield, and sword are gifts from their fathers; they have carved the club themselves. As we shall learn later in connection with the warriors, they divide themselves into mess-groups of five or six. In the forest they erect
[342] a kraal of thorns for themselves or even build small huts out of leaves.
701 The festival consists of consuming large quantities of meat and noth-
702 ing but meat. For this each participant furnishes a fat ox obtained
561 from his father, which must be plain-colored, black if possible.
527
[262]
[822]

/77 cont./

561 of all the age-fellows is first convened, so that they /78/ may choose
791 a delegation from their midst. To it belongs in the first rank the speaker, then a rather large number of the strongest and handsomest el barnot. All are provided with rich adornment, as well as beautiful weapons. Each ol barnoti has brought along a fine head of
[431] cattle. The large herd formed by this is taken along by the delegates as a gift for the ol oiboni. When they have then presented their request to the mighty one, he directs them to come the next day, when he imparts the answer by giving them, for example, the name el gischon. The ones circumcised during the period from 1896 to 1901 were given this one. It is supposed to mean: the generation after those weakened and impoverished by the rinderpest. After the

714 influence of the Moschi military station better. The answer to the
531 question concerning the meaning of the black bows was almost always
634 merely that they probably served as ornamentation, since, with the
184 application of the warrior emblem on the one side, the other half
791 of the shield would look unattractively empty, and only a few old men
174 opined that it was originally a lineage emblem of the En gidoñ. This conception seems to me the right one, and it would explain why the emblem /81/ has been commonly used in Kisongo from time immemorial and then also came to Loita after Mbatyan's death.

714 The lineage emblem is almost never found on the shields of
531 today; thus I did not come across it until I had drawn by a number of
613 old men the shield escutcheons carried by them in their youth. The illustrations of Plate 2[1] show a collection of lineage emblems. We see there that the emblem is sometimes applied on the front of the shield surface, sometimes on the back of the shield. While the
[561] warrior emblems have remained the same for a long time, the lineage emblems were always quite variable, and it seems that each age class made up its own.

the two lineages or the two tribes make war on each other insofar as they live in one district; a conflict that is equivalent to a small civil war arises. Members of these lineages or tribes who live in a more distant district do not take part in the fight.

[192] [926]

A war in which Masai stand against Masai is called ol arabal (pl. el arabali), not en djóre (n djorĩn) as a war between Masai and foreign tribes is called.

701 574

/89/ In peacetime the warrior spends only the least time in his own kraal; for the most part he gads about on visits in neighboring ones, often several days' march away. Never may all leave the kraal together in peacetime; a guard of at least ten men always remains at home for the protection of the girls and the livestock, while the rest stop to visit at an ol bul (forest meal, see p.111 above) or with other people.

[Warrior Kraal]

512 /89 cont./
701 Life in the kraal begins at sunrise, when the mothers and the
462 girls start milking the livestock. Not until around seven o'clock,
[233] when the boys drive the livestock to pasture, do the warriors get up
[234] to take the first meal (en daã e dadegenja = food in the morning),
[264] consisting of fresh milk. Then the women apply themselves to the
[272]

512 cleaning of the cattle stalls and other work, as well as to start the
701 cooking of their food, consisting of purchased vegetables. This is
462 eaten around two o'clock in the afternoon (en daã e kat' aré, that
[262] is, the second meal), while then the warriors at the same time
[264] drink the rest of the morning milk, which has already become
[272] somewhat sour (eñg ule naisedjo = slightly sour milk). After that
512 the old women take a nap or busy themselves with sewing and making
535 ornaments, while the warriors along with the girls /90/ amuse
701 themselves with dance and song (os siñgólio) under a nearby shade
tree. For this a row of warriors stands opposite a row of girls. The
former dance in place by slightly lifting the feet and bending the

/98 cont./

727 it for the night. Thus captives are not taken. The men from the enemy who can be taken are killed, but not mutililated; the women, on the contrary, are usually spared and freed. It also happens, however, that those warriors who are undertaking their first expedition also strike down women, in order not to return as ebor além. But [784] even in this case pregnant women are spared, for it is believed that God punishes the murderer of a pregnant woman by the death of his own children. Only very exceptionally does one take along a few [583] women or children. The latter, however, do not become slaves; rather, the captured woman very soon becomes the lawful wife of the one who captured her, just as he also regards the kidnapped child [599] exactly like his own. A ceremony of adoption does not exist; the man simply hands the child over to his wife, who treats it like her own. The next day they march on toward the home kraal; in the evening a thorn fence is again built, and at the same time the share of the booty destined for the ol aunoni is set apart. The total booty of every war expedition is given a name. This is determined on this second evening, while the men sit eating. It is called, for example, kirima, because men fell on both sides. Other names are: [411] [701] [291] [516] → bögöret if the provisions in living livestock taken along on the expedition did not last, and the warriors, out of hunger and contrary to the existing custom, had to eat tree fruit; ñgöre if the El móran suffered on the way because of a shortage of water; ñgnírïa, formed from the call matiñgiria ñpo, that is, approximately: "only courage, if it is not possible, what does it matter," a frequent saying [703] if one believes oneself inferior to the opponent in strength. The next morning, early, before the departure, the leaders distribute the booty

000 Clothing and adornment. -- Cloth materials. -- Leather dressing. -- The individual articles of clothing. -- "Beautifying" the body, head hair, beard, body hair. -- The hair style of the warriors. -- Painting of the face and body. -- Caustic and incised decorative scars. -- Teeth. -- Fingernails.

• 29 | 177 [439] Cloth materials, such as the caravans from the coast engaged in the ivory trade in the Masai steppes take along trade goods, have not yet ever really succeeded in being adopted among the Masai.

For the trade this is, of course, regrettable, but for one who comes into frequent, daily contact with the people it is really fortunate, for there is scarcely an uglier and more repulsive sight than a native decked out as completely as possible in European clothing, especially if one sees him thus amidst his fellow tribesmen in their traditional garb exactly suitable for them. Not only is the eye offended, however, but also the nose and further many another. One should merely consider that the people have never learned how to manage with such clothing and that generations will pass before its use has to a certain extent become part of their flesh and blood. [296] /136/ A cleansing of the things therefore does not occur and likewise the regular drawing off and on. The native hangs on his body whatever he gets and keeps it on until it falls off by itself, so to speak. [515] [147] Naturally he always stinks and as a rule also harbors all kinds of vermin. One day I met with a European caravan a Masai youth whose former master had departed some six weeks previously and, upon leaving, had given him a pair of shoes. The boy told me quite innocently that he had put the shoes on at the time and had never removed them since! The people of the caravan, European and Colored, confirmed this statement. Such aesthetic aberrations are very rare exceptions among the Masai, however. Every sensible person disdains bedecking himself with such trash, and that boy would also /Ill. 43 appears here/ come to his senses again when the shoes were in shreds. From then on I always saw him only in Masai dress.

/136 cont./

281 The other skins, after they have been well dried and /137/ dehaired
by scraping with a sharp ax, are treated by a vigorous rubbing with
[824] a tanning extract. The bark of Terminalia Brownii Fresen var.
Merkeri Engl. (ol bugol) is pounded and made into an extract by
being boiled in water. The finished leather is soft and pliable.
[462] Leather dressing is women's work. The scraped-off cattle hair is
carefully hidden in the thorn fence of the kraal, so that the cattle
do not eat it and become sick from it.

• 291 The sole article of clothing of the warrior is the skin cape
[294] (e megiti, megiti): it consists of calf skins sewed together into a
strip approximately 110 centimeters long and 64 centimeters wide.
The entire strip of skin is folded over once crosswise, and of its four
corners the two top ones, lying one on the other, are sewed or tied
together. One puts the cape on by sticking the head and left arm
through the knot and on the right shoulder, chest, back, and left
hip are covered, left shoulder and right hip bare: the latter so that
[294] the sword found there is free. The warrior cape is the only article
of clothing that is never dehaired. The hair side is worn on the
outside and, if carefully chosen in color,
is often quite attractive, since only the
silky-lustrous skin of claves unborn or a
day or two old are used. Often the upper
[294] and lower edges of the cape are sewed
with one or two rows of small red or white
[136] beads. Only very rarely is it also made
of other skins: thus, the author saw two
made out of that of the dark-green long-
tailed monkey (Cercopithecus albogularis).
Boys and men wear tied over the seat to
the sword belt a three-cornered piece of
leather to sit on (Fig. 38) (ol gobomo,
el gobomoi), made of ram's hide or
calfskin, for protection when sitting,
against the thorns and prickly spikes of
the grasses scattered everywhere in the steppe. Boys wear a very
short cape (en jerpu, n jerpu), covering only the belly and backs

Fig. 38

/137 cont./

291 married men wear a similarly cut, but considerably longer cape, which is called ou ilcha (u ilchka) and usually, but not always, is undoubled. For protection against the often sharp cold, especially in the rainy season, the warrior wears no other article of clothing, but, while sitting, simply draws the cape also over the left shoulder and -- the man. The ai nagki is made by a sister or the favorite girl of the ai nagki. The clothing of the women is not quite so simple, but also is certainly not luxurious. It consists of two large leather aprons made out of goatskins sewed together. The lower one (ai ogomaka, ai ogomanai) is put around the hips and much fat by means of a tucked-in corner, or held fast with a leather belt (ai ollada, a ollada) embroidered in a zigzag pattern with colored beads. The other, upper one (ai ogichuka, ai ogichukan) is hanged on the right shoulder and /138/ leaves the left shoulder and left breast free. The upper garment is rarely decorated with a few beads, the lower one almost always. Most common is a row of small colored beads running around the lower edge; often too the inserted patches have beads sewed around them. Old men and furthermore boys and girls during the healing of the circumcision wounds wear an apron that has the same form as the upper garment of the women, but a considerably greater length. It is called ai gaid (ai gaidu) and, depending on its weave, is designated as ai gaia i ai nakwak, ai gaia i ai ellalia, ai gaia i ai ailja. Among the men it is hanged at hip and shoulder on the right side, among the girls /139. it appears here/ fastened under the arms with a strap and around the hips with a belt, whereas by the ai ellalia it is mostly slung around the body toga-fashion.

The sandal (Fig. 59) is in ceremony shape (ou ilaga, a ilaga) forms the footwear for all without distinction as to sex and age. It is made from the thick back-hide of the bulls.

301 As among all primitive peoples, the richness of the ornamentation stand in contrast to the simple clothing. This is most manifold among the warriors and the young women.

/108 cont./

• 291
301

Ill. 44. Women's costumes.

301 [291] /108/ The favorite dance and war ornament on the head of the warrior is the well-known face frame with ostrich feathers stuck around it. Ill. 45 and Figs. 39 and 40 appear here/ of two leather disks sewed one on the other, the front one of which bears a row of narrow ovales stitched on a strip of thin goat leather, which serve for holding the feathers. The most popular ones, as the name *ua ulei*, /140/ "the beautiful" (which, incidentally, also holds for ornamentation in general), says, are those of black feathers; if made of white feathers it is called *ua ulei'i*, and if it bears only one white feather at the top, *ua ulei'i*. Besides that, they have such frames made out of the best wood of a tiare runner. [292] [294] As their highest point is stuck the tail of a Coleboa monkey

301 ornament is bent W-shaped out of Ilaua wood and hung with feathers (el mareigumth [Fig. 41]). Also popular among the warriors in the field and for dancing, but rarer, are the four-high, pointed warrior caps, ollugaru, with the designation of the skin added, made out of the skin of wild animals. The cap usually consisted of only one type of skin; more rarely a narrow strip of

291 291 297

• 291 /140 cont./
another skin is sewed on the seam going from the tip toward the
[292] back. Most common are the caps out of lion manes (ol ugaru kitok
[136] or ol gîatumi = lion) or the skin of the baboon (ol ôdîâl, Papio cynocephalus), resembling it almost perfectly in appearance. Furthermore they use the skin of the leopard (ol ugaru gêri; gêri = spotted), Indian leopard (Cynaelurus guttatus, ol /141/ genja l ascho = calf-devourer), serval (Felis serval, eê gerami = biter, he only bites the goats and sucks their blood), Colobus monkey, jackal, and hyena dog (ol olhor gidodoi). A strap holds the cap fast under
[294] the chin. The warrior sews the cap himself. Awl (ol dedo, el dedi
[283] [Fig. 41]) and a twined cattle tendon (eê obinî) serve as needle and thread for all needlework. Another cap worn by warriors, boys and
[531] older men has the shape of a baby's bonnet (Figs. 42 a and b); it is made out of the honeycomb of a head of cattle and often adorned on the edges with small beads.

301

Fig. 42

Ill. 48. Ear ornament of the men.

/144 cont./

301 yellow long-tailed monkey (Cercopithecus pygerithrus, en dorasch),
237 the black long-tailed monkey (C. albigularis, ol gema), the honey
[136] badger (Mellivora ratel, ol beles), and a few other smaller animals.

301 Around the right wrist, often covering almost the entire lower
554 arm, those warriors who are generous and benevolent, the ñ gamnini, wear a cuff (Fig. 56) that consists of rows of iron beads (el dorongen or el gabaten) put close together, in whose place in more recent times appear ordinary small -- especially blue -- glass beads. The iron beads are made by pounding flat small wire rings and then /145/ putting these, strung on thin strips of sheep leather, around the lower
[431] arm and knotted on the inner side of the arm. Those people who constantly enjoy the kindnesses of the ñ gamnin express their gratitude from time to time by giving a string of such beads, so that, as was said, the ornament often extends almost to the elbow. More rarely than among warriors, the ornament is also found on one or
[431] another of the young girls living in the warrior kraal. If a girl has
[593] no brother belonging to the warrior standing, but does have a wealthy father, she receives from the latter both milch cows and an occasional

301
291

Ill. 47. Arm and leg ornaments of the women.

301 /145 cont./
[564] piece of slaughtered livestock. She then generously distributes milk
[43] and meat and thus acquires the position of benefactress.
[593] The arms and legs of a beauty, except for the thighs, are stuck into a more or less complete armor of tubes of iron wire, which often leave only the knee and elbow free, while among poorer women this adornment shrinks to a few coils. These tubes are called es segeńgeĩ = iron wire, and are differentiated according to their location as es segeńgeĩ ol berańgasch for the upper arm, es segeńgeĩ eń dagúle for the lower arm, es segeńgeĩ ol oreschet = what is worn on the lower leg (below the knee). This ornament, like the neck spiral (es segeńgeĩ e murt), /146/ is wound directly onto the body part in question and can therefore not be taken off, but only unwound again, which usually does not occur until death. The weight
[481] of the ornamentation seriously impairs the mobility of the women and not infrequently gives them a waddling gait.

Warriors in dance ornamentation wear around their hips a leather strap embroidered with small beads (eńg ene om bolós; eńg ene is any strap, om bolós = the hip). Little girls also wear a
[291] like-worked strap; it then bears a row of small chains in front as a fig leaf and is called en doré (pl. en dorén). Older girls and women wear around their hips an inch-wide belt likewise stitched with beads (Fig. 57), which holds the leather apron together. Boys
[237] and younger men often wear below the knee and above the calf a ring made out of white neat's hide, with an end five centimeters long and one centimeter wide hanging down in front and in back (Fig. 58), and around each ankle a small bell (en duál, eń /Figs. 57-61 appear here/ duĩlín [Fig. 59]) tied on with a little strap, which, by its widely audible tinkle in the silent steppe, is supposed to frighten off predatory animals lying in the grass. Finally with the war and dance ornamentation belong the long-haired black and
[237] white strips of skin (e mónge, e móngen) that the warriors tie around their ankles and that are made out of the skin of the white-tailed colobus (Colobus caudatus).

Figure 21.

A Masai junior elder from Tanganyika. He has served his period as a warrior, then at the olngesherr ceremony he shaved off his pigtail hair-do and became a junior elder. The facial scarification marks him as belonging to one of the fringe sub-sections of the Masai tribe.

362 started in and under the dung it is similar to a peat fire and virtually impossible to put out.

708 Masai also sometimes abandon a boma, or at least the house involved, if a person dies in it.

75 People who are very seriously ill are removed from the boma at least during the day, often to a small thorn boma with a shelter constructed nearby. They may remain there at night also. It was difficult to learn much definite about this practice. A disabled person spending the night outside a boma is very likely to end up [177] inside a hyaena. The administration frowns on this [178] efficient method of disposal and consequently the Masai have become reticent to talk about it. The sick persons' bomas that we saw looked to have been occupied nights as well as days.

262 <u>Foods</u> Traditionally the Masai are supposed to survive entirely on blood and milk (Gunther, 1955). In Western Masailand the Masai diet consists of posho 234 (maize meal), milk, meat, and occasionally blood. The 462 cows and sometimes goats are milked by the women and little 234 girls. The milk is collected in large calabashes. These 415 calabashes, ochre colored and sometimes ornately [531] decorated with beads, are almost as much a symbol of the [384] Masai as the ochre blankets or cloaks, moran spears and [291] hair styles.

231 272 When they have enough blood, the thong is released and the small wound covered with mud or dung, and the animal runs off apparently none the worse for wear. The blood is drunk warm, or mixed with milk.

146 Although they are thin, the Masai appear adequately nourished, and they have great physical endurance. The Ministry of Health doctors told us that Masailand was the only part of East Africa in their experience where the children did not show signs of Kwashiorkor or the other diseases of malnutition that are so common with Africans. Gale (1960) noted that the greatest defect in the diet of the East Africans is lack of animal protein, but this is true of the Masai only in times of extreme drought.

291 [386] <u>Clothing, Jewelry and Utensils</u> The traditional clothing of Masai men and women is an ochre colored cloak of cloth, usually gathered over one shoulder. Some wear (292) skins, usually of sheep. A cow hide is used for a rain coat. Most Masai men wear sandals made from heavy leather or old rubber automobile tires. Very little else is worn by either Masai men or women, except near missions where the women occasionally wear more concealing cloaks.

The circumcision.

The following is a Masai custom:

A Masai child cannot be circumcised until the father has observed a custom called The passing of the fence.

The man who wishes to have his eldest child circumcised brews some honey-wine, and calls his neighbours together while it is being prepared.

A hut is then built for him outside the kraal, and he stays there for four days alone. He also sleeps there, and his food is taken to him.

During these four days he only approaches the kraal to look after his cattle when they are grazing outside.

881 292 [237] Neisbopito 'n-dōkitin oo-'l-muran—ol-alem, o em-bere, o ol-kuma, o el-loñgo, o engeranda, oe-aidai, ool-mairutya,

He must don the clothes, ornaments, and weapons of a warrior—the sword, the spear, the club, and the shield, the cap made from the

881 561 tive unit, and class, leaders are carefully selected and practically trained. It is from the outstanding senior members of the class, i. e. from those who have come to the fore since the very beginning, that leaders, whatever their function in Masai society, emerge.

881 561 203 The messengers (*il emal* – message) wear warriors' garments and decorations but no arms. "Their quest is a peaceful one" (WHITEHOUSE). *

Only two of the deputation will be introduced to the class-leader (*eigwenan*) by some of the elders. The message is delivered on behalf [431] of all class candidates to the leader with some presents of honey. The matter is discussed by the leader and his council, and the messengers are advised of the date for the feast.

881 561 It is at this point that, according to WHITEHOUSE, *Endungore* is performed.

The ceremony is started by a dance (*Engibata*) in full array * followed by a prayer to God (*Ngai Narok* – the black God) for the candidates. The elders then take the candidates apart and instruct them on their duties towards the elders and their seniors generally. As soon as this is over, a fire-stick, a male circumcision knife, and a small dead bird (other than a dove) are produced. The elders break the stick, pierce the eyes of the bird and break its legs, and lay a curse on the knife. "In this way, the elders formally lay claim to the sponsorship of a new agegroup. From that time the boys refer to their sponsors as *Il Piron* whilst the elders refer to the boys as *Il-Piron*" (WHITEHOUSE). Indeed, it should be noted, as FOSBROOKE points out, that though the term *il piron* is frequently used with reference to the elders, it is a reciprocal term expressing a mutual relationship.

The symbolism of the *Endungore* ceremony is plain: the ceremony closes an initiation period.

When the *Endungore* is over, some of the elders (presumably the *eigwenan*) and three or four of the candidates go with presents to inform the prophet that the firesticks have been broken. They say – *Ol piron lang ele, kiro nale.* "This is our fire stick, we are one", which probably means that a new firestick is used to produce

* It is not clear whether the number of boy messengers is fixed. LEAKEY states that the *emal*-boys number from six to twelf, DAWSON 10, FOSBROOKE 9. Probably no significance is attached to the actual figure.

[301] [300] [315] * Three rows are formed, each distinguished by proper decoration, the first wears ostrich-feathers, the second wears lion-mane head-dresses, and all the members of the third have their bodies decorated with white stripes.

2: Bernardi E, M-4 (no date) 1955 FL12 Maasai FL12

561 [539] "I say, thou art no longer *el morua* (a circumcised, a warrior), but *el morua* (an elder). Take care of thy cattle, goats and sheep, and have regard for them. Give up the occupations of the warriors thou art now an elder".

"After this feast", remarks MERKER, "it all depends on the warrior whether he chooses to take a greater or lesser part in raids. Usually he gets married at once and lives with his wife either in [541] his father's kraal or in the warriors' kraal (*manyatta*) until all his age-mates have married. Only then he is recognised as *el morua*; 561 [534] each one builds his own kraal and lays aside the clothes, decorations and the pigtail of the warriors".

[542] It is evident that the effect of the ceremony is rather limited. It allows an initiate to take a wife, but, even after that, the initiate is not yet "recognised" as an elder. It is as if he were given the elder's status in anticipation of the time when all his age-mates are married. At which time only the status of elder becomes for all purposes official.

561 A very detailed description of "the *spokerr* of milk" is given by J. V. DAWSON, but the ceremony is mentioned also by other authorities. FOX,[108] states that "this ceremony is performed by each warrior individually",[109] and DAWSON tells us that it occurs at the village of the initiate's father and that four *piron*-elders take a special part in it.

[535] The ceremony is preceded by a dance. The candidate is clothed [542] in women's clothes and the first two of the elders place women ear- [501] rings (*ewetya*) on him.[110]

A test follows, in which the candidate is expected to confess [583] how many times he has "stolen milk", i. e. taken milk by himself [585] or with people other than his age mates. Two heads of cattle are usually paid as a fine by a guilty candidate. He is then solemnly instructed by one of the elders, apparently the most senior, about "what he must and must not do after he has drunk and become an elder". He now drinks the milk, "very little however" at this

[108] FOX, *l. c.*, p. 422.

[109] He says also that "the ceremony usually takes place nowadays a year or two after the *E-unot* owing to the Government policy of reducing the period of warriorhood as much as possible".

[110] These ear-rings, *ewetya*, are also worn by elders. For this reason some of our authorities describe the earrings put on by candidates as the elder's ear-rings or decorations. But the whole attire of candidates is undoubtedly of a feminine type.

8:Whitehouse U-3 (no date) 1933 FL12 Masai FL12
I'Sigirari

MASAI SOCIAL CUSTOMS.

By L. E. Whitehouse.

101 These notes have been prepared from information collected from the Masai who occupy the south-east corner of the Southern Reserve, between Kilimanjaro and the Chyulu Hills. They belong to a large [614] section of the tribe called I'Sigirari. This section unlike other Masai sections is divided into two sub-sections, the Ingidongi, to which all "medicine" men belong and the Il-Kiwanga, the majority of whom live in Tanganyika Territory.

The Kiwanga living in Kenya distinguish themselves from those of Tanganyika by assuming yet a third name "Il Oitokitok." This name is undoubtedly derived from that of a spring "Engutokitok," meaning "bubbling water." It was in the vicinity of this spring that the Masai settled when first they inhabited that part of the country.

561 I propose to deal with certain customs and ceremonies connected with the founding of a new age group. For the benefit of those who may not be conversant with this form of tribal government, may I briefly explain that the Masai tribe is divided into age groups called *il poror or il-ayi*. All youths circumcised during a specified period of years are said to belong to the same warrior age and together they form one age-group. In some sections an age-group is formed of two distinct divisions, a senior and a junior, known as the right-hand circumcision and the left-hand circumcision. Later a group passes from the status of warriors to that of elders and thus make way for a new age-group to rise to warrior rank.

[981] Masai boys are circumcised usually between the ages of seventeen and twenty-five. The ceremonies which commence about every seven years extend over a period of about five years. When the majority of the youths are circumcised and a warrior age-group of considerable number is assured, a movement is made to prevent any more boys from joining that group. Those responsible for the movement are the elders of the age-group next senior to the warriors at the time. These elders are to become sponsors and instructors to the members of a new age-group for the formation of which they make preparations.

They first send for a few of the bigger uncircumcised boys and explain that it is proposed to form a new age. In order to do this a ceremony called *enkipaat* must be held. The boys receive their instructions and immediately don short cloaks made from black calf skins and anoint their heads with red earth that they may resemble warriors. They then set off in procession round the country on what

[282]

If however there is to be no left-hand circumcision the *Il piron* elders arrange to hold the fire-drilling ceremony. 561

This ceremony finally binds together the *Il piron* elders and their moran charges. The warriors and the *Il piron* elders decide on the suitable site for the first warrior village. The warriors, together with their mothers, sisters and cattle move in close to the site chosen and for the time being occupy any deserted village in the vicinity. When the warriors announce that they are in readiness, the elders give orders that on the morrow all the cattle are to move to a new village. Next morning at sunrise, the *Il piron* tell the warriors to bring the heifers, four *sarie*, four calves (all black). The heifers must have perfect eyes, straight tails, each must have four teats, in fact they must be perfect in every way. The warriors must find also a young bull, either a black one, or a fawn one; it must be perfect in eye, have erect horns, and its dam must still be alive.

The warriors are warned that after the ceremony, the bull must not be castrated, or sold, or slaughtered for food.

The nine cattle having been selected, eight moran are called for, and eight girls. The warriors must have unblemished eyes, must not have killed a Masai, or have committed any serious offence against tribal laws; also they must not all be right-handed. [828]

The girls, too, must be free from blemish and must not have reached the age of puberty. The warriors don a short coat of black calf skin, make a circle of white round the eyes, down each cheek meeting under the chin, and each carries a bow in his hand. The warriors and girls then drive the cattle to the centre of the chosen site and prevent them from running away. The rest of the warriors watch this proceeding until as soon as the ceremonial bull and the heifer have taken up their positions; the remainder are driven forward to the waiting group. The warriors then seize the ceremonial bull by the horns and twist its head so that the right side of its face is uppermost. A piece of hide which must have been cut from the back of an ox which when slaughtered was found to be in perfect health, is then placed on the bull's upturned face. The *Il piron* elders who performed the first ceremony were dressed in robes made from sheep skins. Now fire-sticks are then produced, placed on the bull's cheek and fire made by drilling, by the *Il piron* elders. [372] [372]

The smouldering charred wood falls on the hide, pieces of frayed cedar bark are added, and the glowing ember is blown into a flame, when a fire will start with dry clean wood. The fire is then placed on the ground in the centre of the village; the place is given the name *enjaye*. *Large pieces of wood are added. One elder in their half to look after the fire whilst the others walk in a circle round the assembled*

As only those candidates who belong to a given village may be operated on in that village, it is seldom that there is more than one circumcised at a time, but should there be two or three candidates belonging to a single village they would be circumcised together on the same day at the same time. There is no elaborate ceremonial accompanying the operation or preparatory to it. A boy will continue herding his cattle until the late afternoon of the day before that fixed for his circumcision. He is then fetched back to the village and has his hair shaved off by his mother, and has new sandals and a new skin dress given to him. This dress must be made of the skins of four rams sewn together, and will be worn the following day during the operation. The actual operation takes place next day, either early in the morning or in the middle of the day. If it is in the morning, the cattle are kept in the yard until the ceremony is over, but if it is in the middle of the day the cattle must be brought into the yard and kept there during the ceremony, for it is absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony. Sheep and goats are not included in this rule. The boy (or boys) sits on an ox-skin in the courtyard in front of his mother's hut wearing his new ram-skin dress and sandals, and the operator performs the operation with a special small knife without any elaborate ceremonial. The boy then retires to his hut to convalesce. A fat ram is killed for the patient, who is fed on meat boiled in fat and on plain cold fat, "so that he may get well quickly." After about five or six days the other boys in the district who have already been circumcised and have recovered, call for the boy, and he joins their band for the period of their novitiate.

The Novitiate.—The period of novitiehood varies in length of time, as a boy must remain in the novice stage from the time that he is circumcised until every other candidate has been circumcised too. Usually a period of about two years elapses between the time of the bull-raising ceremony and the time when the last candidate has been operated upon. Then the group undergoes the hair-shaving ceremony which marks their transfer from the novice stage to the warrior stage; thus, the last few to be circumcised may only have a few weeks in the novice stage, while others may be about two years in that stage. During the novitiate, there are certain rules and regulations which must be observed by the novices. They wander about the country in bands armed with bows and bird-arrows visiting more especially those villages where they hear that fresh candidates have just been circumcised, and enlisting them in their groups. During the whole novitiate period the novices must not cut their hair at all, nor may they indulge in any form of sexual intercourse, nor may they use red ochre, but only plain fat on their bodies. They are required to shoot as many birds as they can, and to skin them and stuff them roughly with grass, and tie them to their hair as a decoration. Short and narrow skins are selected for this head-dress as the months go by, until at length a boy has a complete wig of stuffed bird skins. Certain birds must on no account be so used, notably birds such as pigeons, doves, and

553 and three old men. If it has not previously received a name, it may have been
852 called by the name of its father's father; but at the naming ceremony it receives a name which may be that of its father or a name not connected with any relative. People are also given nicknames referring to their physical or other peculiarities.
551 There is much uncertainty about Masai names; but every man has a patronymic, consisting of *O-le*, "son of," preceding his father's name; this he appears to assume after circumcision. Girls after circumcision may be referred to as *E-se*, "daughter of," preceding their fathers' name. At marriage, the husband gives his wife a new name. The practice of tecnonymy is a regular feature. Before the circumcision of his eldest son, a man becomes known as "the father of" So-and-so, *i.e.*, if his son is called Sendeu, he becomes Menye Sendeu; his wife similarly becomes Ijoto Sendeu, the mother of Sendeu.

551 The name of a dead child, woman, or warrior is not spoken again, and if the
768 name is an ordinary word, that word is no longer used by the family. Thus, if a man called Ol-onana, "the gentle one," died, on his death the word *nana* would be replaced in his family by some such word as *polpol*, "smooth."

Circumcision (E-murrata)

881 Boys' circumcision ceremonies take place at intervals of about three years, and
304 the circumcision period is "open" for about four years. Though the operation may be performed on boys singly or in small groups, the whole number of those circum-
[711] cised at the same time throughout Masailand forms an associating group corresponding in some degree to the Nandi *mat* (see pp. 31 and 49). Judging by the published accounts, circumcision was a much less prolonged and ceremonious affair than among the Nandi. Before a boy can be circumcised, the father must submit to what is called *em-polosais e-nita*, "the passing of the fence." After making honey-wine, he stays alone in a small hut outside his kraal, dressed as a warrior. After four days, some elders bring him back to his kraal, where he is told to remove the warrior's clothes and become an old man. His son may then be circumcised.

Circumcision begins with the shaving and bathing of the initiate; in the afternoon after this has been done an ox or sheep is killed and eaten by the warriors and elders of the neighbourhood. On the second day, the boy cuts a tree called at
[824] this time *e-latian*,* which the girls of the kraal carry to the door of the hut [in which the boy sleeps?], where it is planted. On the third morning the boy gets up early and sits outside to get cold; after sunrise he is circumcised, the operator being often a Dorobo. From the fourth to the seventh day he remains at home, and then goes out, shooting with blacked arrows at the girls, and with other arrows at small birds
[834 which he wears hung from his head. This is his occupation till he has recovered; during this time he is known as *o-sipolosi* and wears the dress of a married woman,
292] including the *i-suratia* cor-rings, and an ostrich-feather on his head. After recovery he is shaved, given weapons and warrior's clothes, and becomes *ol-barani*, "the shaved one," *i.e.*, a junior warrior. Till his kraal company forms its *manyata*, he lives at home.

Girls undergo the operation of clitoridectomy in preparation for marriage. There are no special times for this. An ox or sheep is killed before the operation. During the period of recovery they are known as *e-sipolosi*, and wear on their heads a wreath of the Hyphaene palm, *ol-merisian*, or of grass, instead of an ostrich feather.

Age-sets

564 Unlike the cyclic age-sets of the Nandi division, those of the Masai are of linear type, that is, they do not work in recurring cycles and do not come into existence till they are required. Nevertheless, it is clear from the lists of Krapf (1854), Hollis (1905), and Fosbrooke (1948), as well as from the Taveta age-sets (Hollis, 1901), that some at least of the names are fixed and recur. In 1870 the names Il-Kiaale

* *Dalbergia melanoxylon*; normally *ol-ti, il-ilati*.

calling on every man to love his neighbour, and the crowd then call '*Hai-yoo*' three times—a form of 'amen.' In the centre of the arena—about 70 yards across—some long poles were 'set up' in the ground. To the tops of these were tied some of the ostrich-feather headdresses which Masai mamas like to wear; and on the branches of nearby trees were more of these and also a number of the conical hats made from lions' manes—not unlike guardsmens' bearskins—which are worn on ceremonial occasions by those who have killed a lion with a spear.

during an attempted livestock raid.

861 The child is probably never beaten before it is at least two years old. But even at an older age beatings are very rare and then never cruel. Boxing the ears or blows on the head are generally forbidden because they might injure the health. If correction is necessary, the mother -- and, to be sure, only she -- strikes the child rather [392] lightly on the training surface with the belt that she wears after each confinement.

895 As soon as the children are weaned, they are left to themselves the whole day and, appear in the maternal hut only for eating, drinking, and sleeping. They develop rapidly, are lively, bright, and often quite pretty, if their faces are not marred by running eyes. The latter is very common, for the countless flies in the kraals prefer to settle on the nostrils and eyes of the children. It is only natural that they quickly lose their childish innocence, if one pictures the 857 life that surrounds them. There is a time, however, when they still 524 enjoy naiveté and amuse themselves with childish games. Little girls like to play with dolls or also "cooking." A foot-long fruit of the Kigelia aethiopica, similar to a liver sausage in appearance, is the doll. Sometimes it is carried on the back, sometimes held at the breast, then anointed with water or earth, in place of fat, or, with the assumption that it is crying, rocked in the arms or on the back. For cooking, they make themselves small clay pots out of the clay of the termite hills, place them on three small stones, and fill them with grass and leaves, which are supposed to represent their favorite foods. They also imitate the grinding of flour by rubbing sand between two stones. With the fruits of the Solanum campylacanthum they play at catch in twos or by turns, whereby the one who drops the "ball" must let the other drink a couple of swallows of milk out of his gourd bottle. Boys and girls also play "husband and wife"

/61 cont./

881 question for the next circumcision period. These choose for this, as the site of the festival, a recently built family kraal, which is
[842] then designated as ehg ad 'n ainage 'l ajjok. Decked out with a
[535] costume in imitation of the warriors, but without weapons and, in-
[533] stead, a long stick in the right hand, the boys amuse themselves with dance and song in the vicinity of the kraal. When they crowd into the kraal after the first dance, in order to moisten their parched throats with milk, they are /62/ sprinkled with honey beer by an old man standing at the entrance and congratulated with the words en dabolio, en daret ijik, en dabo loncho, that is, roughly: may you become ever more numerous, make us rich, and bring prosperity to the country. During the festival the boys choose a spokesman or speaker (ol aigwenani) from their midst, whose task is to train them in comradeship and corps spirit. When the festival has lasted two days, the boys move into the various neighboring areas in order to repeat it there. In this way an ol gubiko often lasts a month. It is
881 also to be mentioned that very many women appear at these festi-
842 vals, and especially all who have up to then remained barren. The former appear in part as mothers of the celebrating boys, in part as companions of the barren ones, and the latter for their part come in order to have themselves pelted by the boys with -- fresh cattle dung, because through that they will become fruitful, according to a con-
881 viction prevailing generally among the Masai. In each of the following four to five circumcision years (l ol oudunyaki 'l ajjok) a similar festival is celebrated. It should be mentioned further that the
[231] cattle whose meat is used to feed the participants at the ol gubiko festival are not killed, as is customary, by a stab in the neck, but rather by suffocation.

Let us now consider the circumcision festival.

[301] A few weeks beforehand one already sees the boys, adorned with as much ornamentation as possible, singing and dancing every day in their own and the neighboring kraals, through which they express their joy over soon being able to enter the privileged standing of the
[300] warriors. On the day before the operation the boy's head is shaved, and the hair is thrown under the bed of the children in the maternal
[298] hut. The boy takes off his skin cape and ornaments and dresses himself

/82 cont./

881 in a long leather apronreaching to the feet (ol gelé, el gelíni),
[292] which his mother has made for him for this purpose. On the following day all the boys tobe circumcised appear before sunrise at a place in the vicinity oa kraal, chosen by the three or four operators needed each time. Th warriors also assemble there at the same time in order to be present at the operation. Since the latter is very painful, the coolest pat of the day is chosen. The boys pour cold water over each other,in order to become numb. The operation,
[752] which is professionally erformed by old men., especially Wandorobo,
[889] is the following /the blowing paragraph has been translated from the Latin of the origins source/:

881 After the outer sit of the penis has been drawn back and the
304 inner lamella of the foskin nearest the back of the glans has been cut around with a knife the glans lies in an elongated sheath, which is then cut on top so tht the glans passes through. Half of the skin that thus hangs far dow below the glans is removed, and the rest grows together within 5 days and, after healing, looks like an ovula (1).

1. The following should also be mentioned here /the rest of th footnote has been translated from the Latin/: Inorder to look cut (circumcised), boys sometimes smear the glans with the juice of an herb of te genus Euphorbia, called "ol jogi." The swiling glans prevents the foreskin from sliding loward.

[412] /83/ A finger-long pointed, and double-edged knife serves as
[952] instrument. During theoperation the boy sits with legs apart on the leather apron spread outon the ground. After it, the wounded part is washed with milk, wich, caught in the apron together with the blood lost, is carried bythe circumcised boy, who strides backwards for this, into his mothers hut and is poured on the ground there. An
[Bac.] [Bac.] [Bac.] [

/66 cont./

881 place, they wait until that day. Shared pain is half the pain, and a certain coyness is part of good breeding among the brown Masai maidens too. The circumcision of boys and girls on one day takes place at different spots, and, while no female creature may come near the boys' place, so too no man or boy may enter the hut where, in the presence of her mother, the daughter is circumcised. On the day before the latter's head has been shaved and her hair tossed under the skin of the bed. She has removed all her ornaments and has clothed herself with a long apron (el gila, el gelasi), which her mother has made. The latter is now trying /67/ to make the parts coming into question numb

with cold water and, during this, encouraging her little daughter sitting on the ground with beating heart. The operation is a simple excision of the clitoris and is performed with a sharpened piece of sheet iron (el meremja) such as is used to shave the head. Then the small wound is washed with milk, which, together with the blood shed, seeps into the ground. A blood-staunching agent is not used here either. Until complete healing the girl remains, as en eluali (pl. en eluaiish), in the hut of her mother. Instead of the bird skins and ostrich feathers that the boys put on, she wears around her forehead a ring plaited out

301 ornament is bent W-shaped out of Ilima wood and hung with feathers (ol mereigwech [Fig. 40]). Also popular among the warriors in the field and for dancing, but rarer, are the foot-high, painted warrior caps, ol ngaro, with the designation of the skin added, made out of the skin of wild animals. The cap usually consisted of only one type of skin; more rarely a narrow strip of

/140 cont./

another skin is sewed on the seam going from the tip toward the back. Most common are the cups out of lion manes (ol ugaru kiuak or ol gisrani = lion) or the skin of the baboon (ol ddoli, Papio cynocephalus), resembling it almost perfectly in appearance. Furthermore they use the skin of the leopard (ol ugaru giri; giri = spotted), Indian leopard (Cynaelurus guttatus, ol /141/ gerja l ancho = calf-devourer), serval (Felis serval, ol gerani = biter, he only bites the goats and sucks their blood), Colobus monkey, jackal, and hyena dog (ol ulbor gidodai). A strap holds the cap fast under the chin. The warrior sews the cap himself. Awl (ol dedo, ol dedi (Fig. 41)) and a twisted cattle tendon (ol ohtol) serve as needle and thread for all needlework. Another cap worn by warriors, boys and older men has the shape of a baby's bonnet (Figs. 42 a and b); it is made out of the honeycomb of a head of cattle and often adorned on the edges with small beads.

Fig. 41. Fig. 42 b.

Fig. 42 a.

Fig. 43. The ornament of the cows.

231/ When they have enough blood, the thong is released and
232 the small wound covered with mud or dung, and the animal runs off apparently none the worse for wear. The blood is drunk warm, or mixed with milk.

194 Although they are thin, the Masai appear adequately nourished, and they have great physical endurance. The Ministry of Health doctors told us that Masailand was the only part of East Africa in their experience where the children did not show signs of Kwashiorkor or the other diseases of malnutrition that are so common with Africans. Sale (1960) noted that the greatest defect in the diet of the East Africans is lack of animal protein, but this is true of the Masai only in times of extreme drought.

291 [384] Clothing, Jewelry and Ornaments. The traditional clothing of Masai men and women is an ochre colored cloth of cloth usually gathered over one shoulder. Some wear
(292) skins, usually of sheep. A cow hide is used for a rain coat. Most Masai men wear sandals made from heavy leather or old rubber automobile tires. Very little also is worn by either Masai men or women, except near towns where the women occasionally wear more concealing clothes.

CATALOGUE.*

DRESS AND ADORNMENT.

Dress. Of tanned goat skins, rubbed with red ochre, beaded on the edges. Sections of skin are pieced together into a sort of sheet. There are no sleeves and apparently no means of fastening the garment. Worn by boys and girls.

We Chaga tribes; Mount Kilima-Njaro, East Africa.

Dress. Of dressed goat skins dyed with red ochre, fringed on three sides.

We Chaga tribes; Marikanu, Mount Kilima-Njaro, East Africa.

Face-guard. Of ostrich feathers, fastened between two oval plates of leather. The rims of the plates are decorated with a line of red paint on a white ground. Worn around the border of the face in war. Loops on the front are for insertion of white ostrich plumes, generally two in number. (Fig. 5, page [11].)

Dimensions, 18 by 14 inches.

Masai tribes; Mount Kilima-Njaro, East Africa.

The manner of wearing this ruff is shown in one of the plates in Fischer's "Masailand", Mitthell. Geog. Gesellsch. in Hamburg, 1882-3, Heft, x.

Face-guard. Of black feathers sewed between oval pieces of leather. Worn around the face by Chaga warriors in imitation of the Masai.

Outside dimensions, 18 by 16 inches.

We Chaga tribes; Mount Kilima-Njaro, East Africa.

Face-guard. Halo of dark plumes set into an oval structure of leather. Worn around the face by warriors in imitation of the Masai.

We Chaga tribes; Mount Kilima-Njaro, East Africa.

Face-guard. Oval ring of leather without feathers. Worn around the face in war.

Masai tribes; Njiri, East Africa.

Ostrich Plumes. Used as ornaments on apex of face ruffs.

Masai tribes; Mount Kilima-Njaro, East Africa.

Now disease broke out amongst Sendeyo's people, many of whom died, their cattle all perished, and they were defeated by the Germans; whilst those people who remained with Lenana did not fall ill, and they obtained cattle, as Mbatian had predicted. 173 [illegible] [illegible] [illegible]

The two rivals waged war for many years, and eventually Sendeyo was beaten. He came in tears to beg his brother to allow him to live with him, and peace was concluded between the two parties.

Before Lenana dies he will select whichever of his sons is acquainted with the work of the medicine-men to succeed him. [illegible]

The principal badge of the medicine-man's office is the iron club[1]. If the medicine-man sends a messenger to tell his people anything, he also sends his club so that it may be known that the message comes from him. [illegible] [illegible]

Should a medicine-man strike anybody with the iron club, that [illegible]

supported by the 'l-oloi (i.e. the Masai of the 'l-oito ash-diatoo, near Kilima Njaro), with whom he lived for many years. The warriors of the two parties frequently met in deadly strife, and carried each other's cattle. In [illegible] Sendeyo gave up the hopeless conflict, and agreed to acknowledge his brother as chief. He now lives not far from Naivasha. Lenana himself says that he and his three brothers Sendeyo, Sulong, and Nitiko were circumcised by their father a short time before the latter's death, and as he possessed a better knowledge of the work of the medicine-men than his brothers, he was given the iron club, &c., and chosen by the elders as Mbatian's successor. [illegible] [illegible] [illegible] [illegible]

[1] On one occasion the iron club was lost. A messenger was sent by Lenana to the Government authorities at Naivasha, and when crossing the Uganda Railway he was overtaken by a train. He jumped on one side and saved his life, but dropped the club, which was never found again. Its place was taken for some years by a small iron pokoo, but another club has now been made.

[954] * The Kunnas and Sonies seem to hold much the same position among the Masai as the Tumbels (smiths) and Sonis (hunters) among the Somali. No free Masai enters a smithy, or shakes hands with a smith; none takes a wife from this stock, or gives his daughter to a member of it. The Tumbels are spread over the whole of Somaliland as the Kunnas over Masailand, and no instance is known of them giving up the trade. Still more debased and poorer are the Sonis, who, like the Dorobo, live by trapping game. Cp. Seligman, The History of Abyssinia, vol. ii, p. 1[illegible].

pawn sickness and dies. It is said that Kinetim often struck people with his club, and waited until they were about to die, when he gave them medicine and cured them. Lemana, however, is a gentle man and does not kill people in this manner.

The smiths *.

All Masai do not know how to make spears and swords; this is the work of the smiths. It is they who make the weapons, and the others purchase from them.

The smiths use in the forge a stone, a hammer, pincers, and bellows, and they make needles, knives, axes, anklets, weapons, and other things.

The iron which they work with they purchase from the Swahili, or they smelt the ore which they find in the bed of the Mainyanin river.

Every clan has its smiths; but there is one clan, the Kipuyani, to which most men of this clan belong.

The other Masai do not marry the daughters of the smiths, for it

300. The fez-plastered 'helmet' coiffeur is open to the objection that it soon spoils in the rain and the warrior adopting the style will have, if the weather is at all doubtful, a 'sou-wester' attached round his neck and dangling down the back of his neck. This is a little hood of finely prepared skin from a goat's stomach and gives full waterproof protection to the head-dress in case of need.

301. In fact, however, the 'helmet' style is heavy and uncomfortable with its tight forehead string and is worn for special occasions and short periods only. The fez is then washed off, a sleep put back on the forehead and the pigtail left to dangle comfortably or be divided into several smaller and lighter pigtails, the bases of which are arranged asymmetrically so that the pigtails tend to fan out instead of hanging clumsily together.

which have a strong stimulating effect. The use of the meat, roasted at an open fire, is then eaten by each of other in common, and, to be sure, at a morning and an evening meal. The hard of cattle is furnished in turn by the participants or their fathers.

The longest feast meal takes place as a rule in the month Mpiti. Since the pasture is poor then, the livestock give so little milk that the warriors sometimes live for a whole month on almost only meat.

At the head of the warriors of a kraal stands the speaker (of sigwanati or of sinkwali). The badge of his office is an especially beautifully worked club or Rhinoceros horn (4)

4. The straight horn of a species of Rhinoceros bicornis not yet described to my knowledge, which the author found at the beginning of 1890 in the wuyo southeast of Kilimandjaro, is especially popular for making these clubs. The horns of this species (or variety) differ from those of the ones described thus far by the fact that they are quite straight and in cross-section never round, but rather so strongly compressed laterally that they appear sword-shaped; the front horn is often shorter than the back one.

so showy wood. It is wrong like a horse in connection with the speeches accompanied by numerous gestures, in order to give emphasis to individual words. This is also achieved in the manner of speaking, by the fact that one pronounces the emphasized words long drawn out and repeats the emphasized sentences several times. The speech to a larger gathering is always delivered very loudly and vigorously. While the listeners sit on the ground, the orator stands erect, his glance directed alternately toward one or the other of the chief persons among the listeners. When the orator lacks in logic he tries to make up for by verbosity, dialectic, and higher pitch in tone. The members of the audience often give the impression of rapt attention; their glance is almost mechanically directed at the one

Ill. 48. Newel women with needlework.

• [291] [297] The only European article that we now use and then, but still always rarely, is the umbrella, which the Newel use as protection against the sun.

[291] [298] Rather tanned animal skins still today, occupy first place in the clothing. The preparation of the skins that we use appears to have the far removed (reaction caper and leather to air sac) is a primitive chamois dressing. The skins are scratched out and thoroughly dried. Then they are rubbed several times with leaves or fat and usually leaves each time. Swelling the skins to leaves so little as to removing the superfluous fat clinging to them or the end of the treatment. The finished leather feels greasy and soft.

[illegible]

[illegible]

[illegible]

[illegible] The only European article that one sees now and then, but still always rarely, is the umbrella, which the blacks use as protection against the sun.

[illegible] Rather covered mixed skins still today, occupy first place in the clothing. The preparation of the skins has not suffered in a primitive chemical tanning. The skins are stretched out and thoroughly dried. Then they are rubbed several times with butter so fat and exactly beaten each time. Combing the skins is heavy so little as is removing the superfluous fat clinging to them at the end of the treatment. The finished leather feels greasy and soft.

/108 Cont./

23 The other skins, after they have been well dried and /107/ dehaired by scraping with a sharp ex, are treated by a vigorous rubbing with
[914] a tanning extract. The back of Terminalia Bentii Fenon var. [illegible] Hegl. (of bugg) is pounded and made into an extract by
[942] being boiled in water. The finished leather is soft and pliable. Leather dressing is women's work. The scraped-off cattle hair is carefully hidden in the thatch house of the head, so that the cattle do not eat it and become sick from it.

29 The sole article of clothing of the warriors is the skin cape
• [914] or mogri, mogrigi; it consists of calf skins sewed together into a strip approximately 110 centimeters long and 54 centimeters wide. The entire strip of skin is folded over once crosswise, and of its four corners the two top ones, lying one on the other, are sewed or tied together. One puts the cape on by sticking the head and left arm through the hole in the right shoulder, chest, back, and left hip are covered, left shoulder and right hip bare; the latter so that the sword hand there is free. The warrior cape is the only article
[914] of clothing that is never dehaired. The hair side is worn on the outside and, if carefully chosen in color, is often quite attractive, since only the silky-lustrous skin of clever antlers or a
[914] shy or two old ox used. Often the upper and lower edges of the cape are sewed with one or two rows of small red or white
[142] beads. Only very rarely is it also made of other skins; then the collar are two snake out of fur of the dark-green long-tailed monkey (Cercopithecus albogularis). Boys and men wear tied over the seat to the sword belt a four-cornered piece of leather to sit on (Fig. 59) (of gabona, of gabonnoy), made of men's hide or calfskin. In exercise when sitting, against the thorns and prickly spikes of the grasses scattered everywhere in the steppe. Boys wear a very short cape (no jrogy, 1 jrogy), covering only the belly and back

Fig. 59

/121 cont./

291 married men wear a similarly cut, but considerably longer cape, which is called [illegible] and usually, but not always, is undeluted. For protection against the often damp cold, especially in the rainy season, the warrior wears no other article of clothing, but, while sitting, simply draws the cape also over the left shoulder and — the man. The [illegible] is made by a sister or the favorite girl of the [illegible]. The clothing of the women is not quite so simple, but also is certainly not luxurious. It consists of two large leather aprons made out of goatskin sewed together. The lower one [illegible] is put around the hips and held fast by means of a carried-in corset, or held fast with a leather belt [illegible], a [illegible] embroidered in a zigzag pattern with colored beads. The other, upper one [illegible] is fastened on the right shoulder and /122/ leaves the left shoulder and left breast free. The upper garment is rarely decorated with a few beads, the lower one almost always. Most common is a row of small colored beads running around the lower edge; often too the inserted patches have beads sewed around them. Old men and Hottentots boys and girls during the healing of the circumcision wounds wear an apron that has the same form as the upper garment of the women, but a considerably greater length. It is called [illegible] and, depending on its wearer, is designated as [illegible]. A young man is fastened on hip and shoulder on the right side, among the girls /11. an apron here/ fastened under the arm with a snap and around the hips with a belt; whereas by the [illegible] it is merely slung around the body [illegible].

The [illegible] (Fig. 11) is in ceremony shape (or longer, a longer form the footwear for all without distinction as to sex and age. It is made from the thick back-side of the hide.

301 As among all primitive peoples, the richness of the ornamentation stand in contrast to the simple clothing. This is most constant among the warriors and the young women.

/[illegible]/

another skin is sewed on the seam going from the tip toward the back. Most common are the caps out of lion manes (of young black or of glossy) + lion) or the skin of the baboon (of adult). Their crown-cylinder, resembling a sinuse perfectly in appearance. Furthermore they use the skin of the leopard (of young girls girl + spotted), Indian leopard (Cryseliaus galtonia, of /[illegible]/ gazin ; cache + calf-dammer), serval (Felis serval, of gazan) + lion, he only blow the goats and cattle their blood), Colobus monkey, jackal, and hyena dog (of other girlsfal). A strap holds the cap fast under the chin. The warrior sews the cap himself. Red (of dada, of dada (Fig. 41)) and a colored cattle needle (of ghost) serve as needle and thread for all needlework. Another cap worn by warriors, boys and older men has the shape of a baby's bonnet (Figs. 40 a and b) + b) is made out of the beadwork of a band of cattle and often adorned on the edges with small bands.

(505) Clothing and adornment. — Cloth materials. — Leather dressing. — The individual articles of clothing. — "Beautifying" the body, head hair, beard, body hair. — The hair style of the sections. — Painting of the face and body. — Cosmetic and tattooed decorative scars. — Tools. — Fingernails.

[illegible] Cloth materials, such as the canvas from the ruses engaged in the ivory trade in the latest empire rule along trade goods, have not yet ever really succeeded in being adopted among the blacks.

For the trade this is, of course, regrettable, but for me who comes into frequent, daily contact with the people it is really fortunate, for there is scarcely an uglier and more repulsive sight than a native decked out as completely as possible in European clothing, especially if one sees him this outside his fellow citizens in their traditional garb scarcely suitable for them. Not only is the eye offended, however, but also the nose and further many sense. One should scarcely consider that the people have never learned how to manage with such clothing and that generations will pass before we see him to a certain extent become part of their flesh and blood. /[illegible]/ A changing of the things therefore does not occur and therefore the regular dressing off and on. The native keeps on his body whatever he gets and keeps it as long it falls off by itself, so to speak. Naturally he always stacks and as a rule also harbors all kinds of vermin. One day I met with a European carrier a black youth whose former master had departed some six weeks previously and, upon leaving, had given him a pair of shoes. The boy told me quite innocently that he had put the shoes on on the time and had never removed them since! The people of the carriers, Europeans and Colonist, confirmed this statement. Such authentic observations are very not exceptions among the blacks, however. Every sensible person dislikes hindering himself with such tools, and the boy would also /[illegible]/ all appear here/ come to his senses again when the shoes come to decay. Pure then as I always see him only in bleed state.

Figure 31.

A Sioux Indian elder from Tongawiha. He has worn his partial skin shirt, which is the ceremonial garment he wore at his vision quest. Note on the shoulders, he has shaved off his right hair-lock and braided a junior eagle. The facial decorations denote him as belonging to one of the Kiowa sub-societies of the Heart Order.

FL12 Masai FL12

If he
is a man of wealth and importance he may be elected chief[1], in which case he is responsible for the discipline of the warriors and their appearance when summoned to fight, though he does not go to the wars himself. As with most East African tribes an elder's ideal of existence seems to be ease, not unmixed with drunkenness. Proverb No. 64 (p. 249), 'Don't lie with your feet against a post like the father of many sons,' meaning 'Don't give yourself airs,' is a vivid picture of the Masai pater familias taking his ease in the primitive posture of lying on his back with his feet against a post, while his family do all the work for him.

Masai women, unlike the men, are carefully dressed in leather garments, but a rare, and according to our ideas most unbecoming, custom forces them to shave their heads. Before marriage they are circumcised, and signalize their change of state by wearing large circular earrings and necklaces of brass and iron wire. Both girls and women have their legs and arms encased in iron ornaments, so that they can sometimes hardly walk.

This military organization of the Masai made them a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or polity analogous to the kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship and desirous only of military glory. Retirement from this band of warriors as a chief was honourable, but seems to have been recognized as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.

The nearest approach to a central and superior authority among the Masai is the medicine man or Laibon (more correctly Ol-oiboni; see p. 324, &c.). They all belong to the Kidongi family of the Aiser clan, and are said to be descended from a personage called Ol-le-Mweiya, who came down from heaven and was found by the Aiser sitting on the top of Mount Ngong. This was nine generations ago, the genealogy having been preserved. The influence of the

They wear one garment and a belt round their waists similar to the warriors.

Women wear nothing round their waists except a broad belt with which they fasten their garments.

They also wear two circlets, one called ol-ekumma, and the other ol-kilidinkiye.

Note with regard to the women's ear-rings, they are of great consequence amongst the Masai, for no woman ventures to leave them off during her husband's lifetime.

Were a woman to take off her ear-rings and hang them up while doing her work, she would run into her hut on hearing her husband approach, and put them on again, so that he should not see her without them.

If a man goes away from home, his wife does not dare to take off her ear-rings, for were the other men to see her without them, they would tell her that her husband will hate her.

When the warriors have elected their chief, they slaughter cattle, and wait for four or five months, at the expiration of which they proceed on a raid. This is called The (fulfilment) of the vow *or* The (selection) of the chief.

Neiahop 'l-karash ooji aii 'N-dorosi, nepik il-arash.

They wear cotton cloths[1], called The vow[2], on which are sewn the seeds of the ekirikiti tree[3].

Nepik aii 'n-gāk e-'syaiti 'murto naaji 'mangāk, ne'ya 'l-kulikae 'l-kidoōigi lo-'l-kumbau araki 'l-lenyok le-menye.

They also wear necklaces made of twigs of the e-syaiti tree[4], and called Mangāk, and some carry their fathers' snuff-boxes or fans with them.

[1] Before cotton cloths were introduced, dressed skins sewn together were worn. 'N-dorosi garments are worn like the Spanish poncho, a slit being made in the middle for the head to pass through.

[2] A raid undertaken after a long peace is also called en-oo-'n-dorosi. Any warrior who shirks his duties on an occasion of this sort can be put to death, and his murderer will not be punished.

Whenever anybody passes this spot he throws a stone on to the heap, and this is done for all time.

If a Masai woman gives birth to a boy after the death of one of her sons, a small piece is cut off the ear of the newly-born babe and he is called Nawaya, i.e. from whom it has been snatched.

When the child grows up his name is changed to Ol-owara, which has the same meaning.

Sometimes children's ears are not cut, in which case they wear a special kind of bracelet, called En-daret, and a ring on one of their toes[1].

Mourning.

When a father of a family dies, the whole family mourns for him.

His widows lay aside their ear-rings, necklaces, and beads; his daughters leave off their chains, beads, armlets, and anklets; and his warrior sons and boys shave their heads.

His wives wait for a whole year before they put on their ornaments again.

If any other person dies, the women of the family leave off their small neck ornaments but not the iron rings or the ear-rings, and the men shave their heads. The mourning lasts for one month.

[1] The second toe of the right foot.

881 561 tive unit, and class, leaders are carefully selected and practically trained. It is from the outstanding senior members of the class, i. e. from those who have come to the fore since the very beginning, that leaders, whatever their function in Masai society, emerge.

881 561 203 The messengers (*ol amal* – message) wear warriors' garments and decorations but no arms. "Their quest is a peaceful one" (WHITEHOUSE). [31]

Only two of the deputation will be introduced to the class-leader (*aigwenan*) by some of the elders. The message is delivered on behalf [431] of all class candidates to the leader with some presents of honey. The matter is discussed by the leader and his council, and the messengers are advised of the date for the feast.

881 561 It is at this point that, according to WHITEHOUSE, *Endungore* is performed.

The ceremony is started by a dance (*Engibata*) in full array [32] followed by a prayer to God (*Ngai Narok* = the black God) for the candidates. The elders then take the candidates apart and instruct them on their duties towards the elders and their seniors generally. As soon as this is over, a fire-stick, a male circumcision knife, and a small dead bird (other than a dove) are produced. The elders break the stick, pierce the eyes of the bird and break its legs, and lay a curse on the knife. "In this way, the elders formally lay claim to the sponsorship of a new agegroup. From that time the boys refer to their sponsors as *Il Piron* whilst the elders refer to the boys as *Il-Piron*" (WHITEHOUSE). Indeed, it should be noted, as FOSBROOKE points out, that though the term *il piron* is frequently used with reference to the elders, it is a reciprocal term expressing a mutual relationship.

The symbolism of the *Endungore* ceremony is plain: the ceremony closes an initiation period.

When the *Endungore* is over, some of the elders (presumably the *aigwenani*) and three or four of the candidates go with presents to inform the prophet that the firesticks have been broken. They say = *Ol piron lang elle, kira nalo.* "This is our fire stick, we are one", which probably means that a new firestick is used to produce

[31] It is cont lear whether the number of boy messengers is fixed. LEAKEY states that the *amal*-boys number from six to twelf, DAWSON 29, FOSBROOKE 9. Probably no significance is attached to the actual figure.

[32] Three rows are formed, each distinguished by proper decoration, the [301] [302] first wears ostrich-feathers, the second wears lion-mane head-dresses, and all [292] the members of the third have their bodies decorated with white stripes.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 "I say, thou art no longer *ol moran* (a circumcized, a warrier),
[539] but *ol morou* (an elder). Take care of thy cattle, goats and sheep, and have regard for them. Give up the occupations of the warriors thou art now an elder".

"After this feast", remarks MERKER, "it all depends on the warrior whether he chooses to take a greater or lesser part in raids. Usually he gets married at once and lives with his wife either in
[591] his father's kraal or in the warriors' kraal (*manyatta*) until all his age-mates have married. Only then he is recognised as *el moruo*;
561 each one builds his own kraal and lays aside the clothes, decora-
559 tions and the pigtail of the warriors".

[587] It is evident that the effect of the ceremony is rather limited. It allows an initiate to take a wife, but, even after that, the initiate is not yet "recognised" as an elder. It is as if he were given the elder's status in anticipation of the time when all his age-mates are married. At which time only the status of elder becomes for all purposes official.

561 A very detailed description of "the *ngeherr* of milk" is given by J. V. DAWSON, but the ceremony is mentioned also by other authorities. FOX,[155] states that "this ceremony is performed by each warrior individually",[156] and DAWSON tells us that it occurs at the village of the initiate's father and that four *piron*-elders take a special part in it.

[535] The ceremony is preceded by a dance. The candidate is clothed
[292] in women's clothes and the first two of the elders place women ear-
[301] rings (*surutya*) on him.[157]

A test follows, in which the candidate is expected to confess
[183] how many times he has "stolen milk", i. e. taken milk by himself
[685] or with people other than his age mates. Two heads of cattle are usually paid as a fine by a guilty candidate. He is then solemnly instructed by one of the elders, apparently the most senior, about "what he must and must not do after he has drunk and become an elder". He now drinks the milk, "very little however" at this

[155] FOX, *l. c.*, p. 453.

[156] He says also that "the ceremony usually takes place nowadays a year or two after the *E-unoto* owing to the Government policy of reducing the period of warriorhood as much as possible".

[157] These ear-rings, *surutya*, are also worn by elders. For this reason some of our authorities describe the earrings put on by candidates as the elder's ear-rings or decorations. But the whole attire of candidates is undoubtedly of a femine type.

disaster fell upon them shortly after, in a raid against their brethren of Kisongo. The saying that misfortunes never come singly was well exemplified by their case, for nature took up the work of ruin. A cloud of locusts settled on the land, and left not a blade of grass or other green thing, so that the cattle died in enormous numbers through starvation.

[142]
[291]
[301]

MASAI MARRIED WOMAN, NJIRI.

While the Wa-kwafi were in this unhappy plight, the Masai of the plains to the west fell upon them and smote them hip and thigh, and thus broke up and revenged themselves upon the most powerful division of the tribe. Great numbers having lost their cattle and been reduced to starvation, were compelled to throw in their fortunes with tribes they had hitherto despised. Some found an asylum in the forests of Taveta and Kahà, and the lower slopes of Mount Meru or

produced that unpleasant setting of the teeth which belongs to him in common with the whole of his race. The gums being tender, and the beef tough and leathery, the teeth acquired an outward projection unpleasant to behold, and, what was still worse, they seemed to become separated from each other, till they appeared as isolated fangs. It was noticeable also that his gums were of a very dark blue colour. Neither of these characteristics, however, were any disad- 855

vantage to the young Masai, as in his country to be hideous is to be beautiful.

As a boy Moran—for such we may call him for convenience' sake—was pleasing in the extreme—when his mouth was shut. He was the very ideal of an imp, and for diabolical versatility would doubtless have made an admirable page, such as were so much in vogue in former times. At a very early age Moran broke away from his mother's apron-strings, and with miniature bow and arrow aped the bigger boys in their play. As he had no linen to soil, he only roused his mother's laughter if he turned up encrusted with filth. He 857 855 515

881 sandals, they chose a handsome shield of buffalo hide,
[714] beautifully made, elliptical in shape, and warranted to stand a tremendous blow from a spear. The price being asked, a bullock was mentioned as the very lowest cost price. But the unfortunate maker had to be content with a scraggy sheep—and a blow. This purchase accomplished—for the Masai never *make* shields or spears, though there is nothing in the possession of which they pride themselves so much—
881 they returned to the kraal, and then called for an El-konono.
5B This is an inferior race kept in servitude to the Masai, for whom they make spears and swords. They do not go to war, and are not allowed to intermarry with their superiors. They all speak Masai, though it is believed they have a language of their own. In response to the call a miserable, half-starved object appeared with a selection of most
881 murderous-looking weapons. After a careful examination
411 Moran selected a spear, with a blade two feet and a half long, a wooden handle fifteen inches, and a spike at the end about one foot and a half. The blade had an almost uniform width of from two to three inches, up to near the top, where it abruptly formed a point. A sword and a knobkerry of formidable appearance completed his warlike equipment.

881 These important acquisitions made, our hero now pro-
[302] ceeded to dress himself up as became his new character. He first worked his hair into a mop of strings, those falling over the forehead being cut shorter than the rest. Instead of the ivory ear-stretcher hitherto used, he put in a swell
[301] ear ornament formed of a tassel of iron chain. Round his neck he put a bracelet of coiled wire, and round his wrists a neatly formed bead mitten. On his ankles he bound a strip of the black hair of the *colobus* (monkey) of Central Africa. A glorious layer of grease and clay was plastered on his head and shoulders. This completed, he donned a very
[291] neat and handsomely decorated kid-skin garment, of very scanty dimensions, which served to cover his breast and shoulders, but hardly reached below the waist, and thus stood forth the complete military masher, ready for love or war.

882 And now the great step of his life was taken. Thus far he had lived in the kraal of the married people, and accordingly had to comport himself as "only a boy." Now he proceeded to a distant kraal in which were none but young, unmarried men and women. To keep up his dignity and supply him with food his father provided him with a number

arm. A beaded belt confines it round the waist, leaving only one limb partly exposed. Frequently it is slipped off the shoulder, and depends entirely from the waist, leaving the bosom exposed. Their ornaments are of a very remarkable nature. Round the legs from the ankles to the knees telegraph wire is coiled closely in spiral fashion. So awkward is this ornament that the wearer cannot walk properly, she cannot sit down or rise up like any other human being, and she cannot run. Round the arms she has wire similarly coiled both above and below the elbow. Round the neck more iron wire is coiled—in this case, however, horizontally—till the head seems to sit on an inverted iron salver. When the leg-ornaments are once on they must remain till finally taken off, as it requires many days of painful work to fit them into their places. They chafe the ankles excessively, and evidently give much pain. As they are put on when very young, the calf is not allowed to develop, and the consequence is, that when grown up the legs remain at a uniform thickness from ankle to knee—mere animated stilts, in fact. The weight of this armour varies according to the wealth of the parties, up to thirty pounds. Besides the iron wire, great quantities of beads and iron chains are disposed in various ways round the neck. 291 301

Such, then, were the people that now greeted Moran, who, being a novice, had to suffer a good deal of chaff from both sexes. He was, however, soon initiated into the mysteries of a warrior kraal, and had seen a bit of life. The strictest diet imaginable was the rule. He had to be content with absolutely nothing but meat and milk. Tobacco or snuff, beer or spirits, vegetable food of all kinds, even the flesh of all animals except cattle, sheep, and goats, were alike eschewed. To eat any of those articles was to be degraded—to lose caste; to be offered them was to be insulted in the deepest manner. As if these rules were not strict enough, he must needs not be seen eating meat in the kraal, neither must he take it along with milk. So many days were devoted entirely to the drinking of new milk, and then, when carnivorous longings came over him, he had to retire with a bullock to a lonely place in the forest, accompanied by some of his comrades, and a Ditto to act as cook. Having scrupulously made certain that there was no trace of milk left on their stomachs by partaking of an extremely powerful purgative, they killed the bullock either with a blow from a rungu or by stabbing it in the back of the neck. They then 262 884 [578] [757] [231]

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

ceived from the traders, he, of course, did not keep himself, but divided among his sweethearts of the kraal. 431

And so with war and women, life passed in happy fashion. His demeanour was serious, and his expression ferocious, though he acquired an aristocratic *hauteur* truly striking. He showed curiosity in a dignified manner. He rarely indulged in vulgar laughter, and smiling was hardly possible on a face which could only be called fiendish. 157

He passed some twenty years in this manner. At last his father was found to be on the point of death, and he was sent for. Shortly after his arrival, the old man succumbed. 764 885

EAR ORNAMENTS, MARRIED WOMAN.

It was not thought necessary to recognise this common-place occurrence in any way whatever, and therefore Moran lost no time in picking up the corpse and throwing it outside the kraal. Next morning, he smiled grimly as on going out, he kicked aside some freshly-picked bones, and glanced at some disgusting hyænas slinking away, in company with marabout storks, while vultures flapped grossly overhead.

He was now sole heir of his father's herds, for his younger brothers did not receive a single head of cattle, though they had captured in their raids considerable numbers of them. Any they might secure now, however, would be their own property. Moran decidedly preferred the free and easy life of the warrior's kraal, but, alas! he discovered, not that he was 428 885 885

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

885 becoming bald or developing grey hairs, but that he could not take the regulation dose of purgative as formerly. From this, coupled with the fact that he could not take such liberties with his stomach, he gathered that he was not quite so strong as formerly. We can imagine how he would curse his luck and look fiendish on discovering this unpalatable truth. There was nothing for it but to marry, and become a staid and respectable member of society. He had sown his wild oats.

583 Casting about, he fixed upon a damsel after his heart.
885 The preliminaries having been arranged—the number of bullocks to be paid, &c.—she was sealed to him. Then an
[304] operation was performed on the damsel. Recovered from its effects, she had to wait till the calving season, as abundance
[302] of milk is an indispensable requisite in the honeymoon. Meanwhile, she allowed her hair to grow till it assumed the
[301] appearance of an old shoe-brush clotted up with blacking. Round the head she wore a band of cowries from which depended a number of strings, forming in fact the bridal
585 veil. At last the happy day arrived, and the final seal was
885 put upon the marriage by both parties disposing of their chain earrings, and substituting a double disc of copper wire arranged spirally. The lady also shaved her head, laid aside the garment of the ditto, and clothed herself with two skins, one suspended from the waist the other from the shoulder. Strangest of all, however, and strikingly indicative of the fact that he had exchanged the spear for the distaff, Moran had actually to wear the garment of a ditto for one month. Just imagine what fun it would be in this staid and dignified country of ours, if a young man had to spend his honeymoon in a cast-off suit of his wife's maiden clothes. What our friend's feelings were in this guise, I do not know, and this veracious chronicle does not admit of conjecture.

837 And now Moran's sole idea was to rear a brood of young
885 cattle-lifters, and so that he got them, he was not very
[842] particular as to the manner of it. He was not jealous, asked no awkward questions, and employed no spies. If a friend should visit him, he was hospitable in a degree not consistent with a high level of morality. We shall here prudently follow his example of non-inquisitiveness; for we might find that the domestic affairs of our friend's household will not bear a too curious scrutiny.

885 He was now wholly a changed being—as indeed who is
262 not when he gets married? His strict rules of diet were

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

creatures, with the vultures and the storks, tore their flesh under the light of the moon. Nothing remained but a couple of grim skulls and some bloody bones when the sun rose over the grassy plain in the morning; and the young urchins of the kraal kicked them about and laughed as they threw them at one another.

MASAI MARRIED WOMEN, BURIC.

Such is the history of the commonplace life of Morua as retailed to me by men who had lived with him as boy, warrior, and husband, and for whose accuracy and truthfulness I can vouch. The next traveller will listen to the same story, and will doubtless be able to verify the main features of the narrative.

301

HAIR GROWN READY FOR PIGTAIL.

STYLE OF PIGTAIL MOST COMMON IN NABERERA AREA.

[facing p. 81]

(Common Trees and Wood Plants of Kenya Colony) gives the Masai name of *F. Hochstetteri* as 'Ol-edeti' and identifies 'Ol-retei' (the name used by my informants) with a small tree growing on highland forest edges called *Maesa lanceolata* Forsk. 302 [824]

(v) Fat, sheep fat for preference, but otherwise the best bovine rib fat. [237]

(vi) Red ochre (*ol Karia*). [386]

(vii) Ornaments, usually comprising a metal clasp, wire bangles usually strung with coloured beads (*engiok*) and double-lobed copper weights (*esekerwa*). [301]

The method is as follows: The hair is grown until it hangs on the shoulders, that is, about nine inches long. This it does naturally and only in exceptional cases has to be eked out with cow hair. During the growing period the hair usually remains in a mop, but occasionally is braided into short pigtails.

As soon as the necessary length has been reached, the hair is parted transversely across the top of the head, that is at right angles to the European fashion. The largest portion, that at the back of the parting, is painstakingly twisted by hand into braided strands which are then grouped round the end of the 'siteti' stick or sticks (according to the number of pigtails to be worn) and lashed on with the gut string. The stick and hair ends are then bound neatly with the sheep skin strip so as to taper to a point.

The hair in front of the parting is divided into three equal portions and braided. The ends of each portion are bound together with gut string. The two side pieces which fall in front of each ear are then tied together by a cord under the chin, tight enough to hold them flat against the face. The central forelock' is finished off with a metal clasp.

If the warrior wishes to wear the ultra-smart 'helmet' style, the single pigtail is brought forward over the top of the head and its tip bound to the tip of the 'forelock' but as the pigtail stick is pliant and would therefore pull the forelock up, the latter is bound down by a further cord, passing across the forehead and tied at either end to the tips of the 'side-locks', which as we have already seen are firmly tied down to the face by the chin cord. As soon as the pigtail is securely fastened in the ridge position, the whole coiffeur is liberally coated with fat, tinted with red-ochre, and the 'helmet' effect is complete. [237] [386]

The wire bangles with coloured beads pass through the top of the ear, and the copper weights are of course suspended from the earlobes, which have been carefully lengthened during many years of youth — initially by the insertion of wooden plugs. In extreme cases the ear lobe has been so stretched that if it is desired to get it out of the way, it can be hitched right over the crown of the head onto the opposite ear! 301 304

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Those candidates who are eligible to take part in the ceremony assemble on the day fixed for the proceedings. They come from all parts of the Masai country, north, south, east, and west, as there is only one ox-seizing ceremony in the whole of Masai country before a new age-group proceeds to initiation and circumcision. They wear ordinary everyday dress and carry sticks. The ox is brought into the village by the elders in charge of the ceremony, and the boys are lined up some distance away. A signal is given, and immediately the boys race to the ox, each boy endeavouring to get a firm grip of the ox's horns or of the hump. As soon as two boys have succeeded in gripping these parts firmly, all those boys of the same clan protect him with their sticks, while all the others endeavour to force the boys to release their grip. Should they do so and should boys of another clan succeed in taking their place, they in their turn are attacked by the other clans and defended by their own. After a time the elders stop the contest, and those who succeeded in keeping their grip are greatly lauded. The two boys who actually held the horns and hump respectively will be renowned for their success for the rest of their lives. It is a recognized thing that during the contest very many individuals receive more or less serious wounds. 881 561 [484] [614]

As soon as the contest has been stopped, the ox is slaughtered and eaten by all present at the ceremony, and the hide is cut up into small strips, in each of which a hole is cut, and a strip put as a ring on the middle finger of the right hand of each of the boys who participated in the contest. If any skin remains over after each boy has been thus decorated, it is cut into a long thin thong, which is given to a boy candidate of the Lukumai sub-clan (*i.e.* the sub-clan who provided the ox). This boy is called *olobolosoi elegeteng*. This thong must never be lost or parted with, but the small strips of skin placed on the boys' fingers must be removed a day or two later and thrown down in that part of the boy's mother's house where the calves sleep. [301] [230] [614]

When this ceremony is over the boys go to their own homes to await their turn for circumcision.

Circumcision.—The candidates are not circumcised in groups at local centres, but individually at their own homes, and as the number of operators is limited, candidates may have to wait for anything up to two years before their turn comes. The operators travel from district to district, visiting all the villages where there are candidates, and circumcising them at their own homes. During the interval between the end of the ox-seizing ceremony (before which none of the candidates may be circumcised) and the time when his turn to be circumcised arrives, each boy goes back to his cattle-herding and carries on with the normal routine life of an uninitiated boy. 881

The operators who circumcise the boys are never true Masai, but invariably "Wandorobo" living in Masai country, but no explanation of this could be obtained except that it had always been so from the beginning. [563]

881 As only those candidates who belong to a given village may be operated on in that village, it is seldom that there is more than one circumcised at a time, but should there be two or three candidates belonging to a single village they would be circumcised together on the same day at the same time. There is no elaborate ceremonial accompanying the operation or preparatory to it. A boy will continue herding his cattle until the late afternoon of the day before that fixed for his circum-
[309] cision. He is then fetched back to the village and has his hair shaved off by his
[292] mother, and has new sandals and a new skin dress given to him. This dress must be made of the skins of four rams sewn together, and will be worn the following day during the operation. The actual operation takes place next day, either early in the morning or in the middle of the day. If it is in the morning, the cattle are kept in the yard until the ceremony is over, but if it is in the middle of the day the cattle must be brought into the yard and kept there during the ceremony, for it is
[231] absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony. Sheep and goats are not included in this rule. The boy (or boys)
[304] sits on an ox-skin in the courtyard in front of his mother's hut wearing his new
[413] ram-skin dress and sandals, and the operator performs the operation with a special small knife without any elaborate ceremonial. The boy then retires to his hut to convalesce. A fat ram is killed for the patient, who is fed on meat boiled in fat and
[262] on plain cold fat, "so that he may get well quickly." After about five or six days the other boys in the district who have already been circumcised and have recovered, call for the boy, and he joins their band for the period of their novitiate.

881 *The Novitiate.*—The period of novicehood varies in length of time, as a boy
561 must remain in the novice stage from the time that he is circumcised until every other candidate has been circumcised too. Usually a period of about two years elapses
[884] between the time of the bull-seizing ceremony and the time when the last candidate has been operated upon. Then the group undergoes the hair-shaving ceremony which marks their transfer from the novice stage to the warrior stage; thus, the last few to be circumcised may only have a few weeks in the novice stage, while others may be about two years in that stage. During the novitiate, there are certain rules and regulations which must be observed by the novices. They wander about the country in bands armed with bows and bird-arrows visiting more especially those villages where they hear that fresh candidates have just been circumcised, and enlisting them in their groups. During the whole
[834] novitiate period the novices must not cut their hair at all, nor may they indulge in
[302] any form of sexual intercourse, nor may they use red ochre, but only plain fat on their bodies. They are required to shoot as many birds as they can, and to
[223] skin them and stuff them roughly with grass, and tie them to their hair as a
[301] decoration. More and more skins are added to this head-dress as the weeks go
[237] by, until at length a boy has a complete wig of stuffed bird skins. Certain birds must on no account be so used, notably birds such as pigeons, doves, and

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

are often called *I-Sipolio* or *'Laibartan* (*see* Hollis, p. 298, Pl. XIX). They shoot at girls with wax-headed arrows, and a girl who is shot must then give the novice a ring, which is usually, if not always, of a special type, being very much curled and twisted. The novices must observe the following rules :— [56] [178] [301]

They must enter the village before the cattle every evening.

Must not drink blood or cut meat or touch it with the hand.

Must not wash.

Must not have sexual intercourse with girls (this is not kept strictly).

Must not fight or be struck by anyone. Anyone who strikes a novice must put milk on his head.

Must not go out in the day time without the head-dress of stuffed birds.

O-Singolio, plur. *I-Singolion*, is the general word for any dance. (Cf., p. 191.) [535] [192]

Warriorhood.—The Age-group system plays such a large part in the tribal organization that I will deal with it in detail.

A right-side circumcision is called *E-Murata e tatene* = the circumcision of right. A left-side circumcision is *E-Murata e kedyanye* = the circumcision of left.[1]

Each of these groups is called *Ol poror*, an age-group. Each age-group takes a temporary name soon after circumcision and receives a new one at its *E-Unoto* ceremony. For example, the present age of Purko warriors was called *Il-Tiegi* prior to their *E-Unoto*, when they took the name of *Il-Salaash*.

A right and a left age-group together form a larger group, which I shall refer to as a generation in contradistinction to an age. The term for a generation is *Ol aji*, but it is also often loosely designated as *Ol poror*.

Speaking generally, each section has a different name for its warrior age-groups. The exceptions are (*a*) Loita and Siria. (*b*) Kabutei, 'L Odokilani and Matapato, who respectively share a single *E-Unoto* ceremony and therefore have age-names common to their respective groups.

The generation names emanate from the Kissongo in Tanganyika Territory and are common to all the Masai. They are given soon after the warriors of the combined ages have become elders. Thereafter the age-names tend to fall into disuse and be replaced by the generation-name. [184] [552]

A large number of names is given in Hollis, p. 263, but forms an indiscriminate mixture of age- and generation-names.

In the following table I have confined myself to names in everyday use in order to avoid errors and make for simplicity.[2] It will be noted that several sections do not have a left-side circumcision. In the remaining sections the right side is more popular than the left.

[1] I do not know the origin of the terms "right" and "left."

[2] For other generation-names *see* History, *infra*.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

775 The Masai know nothing of a life after death, but it is thought that *Laibons* may live on in the form of black snakes.

768 If a death occurs in a hut it is not evacuated until the village moves in the ordinary way (the Masai being nomadic, seldom stay for long in one village). If, however, the village only moves to a new site close to the old one, the family in which the death has occurred must move further away and remain away for two or three months.

789 If a woman has lost her eldest male child she binds a few turns of iron wire below the knees of her next surviving son, in order to make him look like a girl[1] that death may pass him by. A man still wears these coils of wire even when he is old. Such a man is nicknamed *Ol o segingei* (the man of the iron wire).

765 If the head of the family dies a white or a black bullock is slaughtered, and the people smear the fat from the front of the ribs on their bodies and on the garments of the deceased.

757 *Sickness and Medicines.*—The Masai have their treatment for numerous diseases. Members of the Il Darsoero clan appear to be the most skilled in medicine. They have often shown me herbs which they use, but I have for the most part forgotten the Masai names for them, and lack of botanical knowledge prevents me from giving their scientific names. Such Masai as understand the use of herbs have never shown any reluctance to tell me about it.

Sheep's fat plays an important part in nearly all their medicines. For instance: (*a*) If a Masai is bitten by a mad dog (disease called by Masai *Nang'a gotok*, presumably rabies) a sheep must be immediately slaughtered and the fat boiled with bark of *Il Kiluretti* trees. The sufferer drinks this mixture and his skin is smeared all over with the contents of the sheep's stomach. This is said to be a certain preventive if done at once. I described the treatment in greater detail in an appendix to the Narok District Intelligence Report for April, 1929, and it is probably still on file in the Government office.

(*b*) *Anthrax* (Masai *Enderit*).—When this disease appears as an external sore a sheep is slaughtered and the sheepskin is bound round the affected part. The patient drinks the fat of the sheep. He must on no account be allowed to drink water or milk, and if he does so he is almost certain to die. This disease is fairly common among the Masai, but they usually recover from it. In the opinion of some Europeans the Masai treatment is more efficacious than ours.

773 *Honey Wine* (Masai *En-Aisho*).—This is much used at religious ceremonies and other occasions of importance. It is a very pleasant beverage. To make it, honey and water are mixed in about equal quantities in a special gourd called *E-Mosori*, literally "the egg." To this are added the dried fruits of the Sausage

631 chief; but in that year it was recognized that he was in fact no such thing, and the native administration was reconstructed with 14 Native Councils, one for each
648 division (Il-Purko, Il-Damat, etc.), to replace the original council of the *ol-osho*. These Councils were composed of *il-aiguenak*, elders, and senior warriors; and the presidents of each formed a Central Masai Council which met twice a year. Under the Councils were 46 headmen, some of them *il-aiguenak*. The Reserve was divided into nine locations, the numbers of headmen varying according to the population of the locations. In 1930 these Councils were replaced by a Native Tribunal and an Appeal Tribunal in each of the two administrative districts, Narok and Kajiado, into which the Reserve was then divided. The headmen were divided into two grades, headmen (styled chiefs) and sub-headmen.

In Tanganyika, the laibon was at first regarded as the head of the Kisonko; but since this recognition proved unsatisfactory to the people themselves, a Masai Council was formed as Native Authority, consisting of headmen and elders, but possessing only advisory powers. Later, a local council was set up in each area with representatives of age-sets and clans on it; representatives of each local council sit on the Masai Council. There are 41 paid headmen.

MAIN CULTURAL FEATURES

CRAFTS

Housing

The Masai hut, *enk-aji*, pl. *ink-ajijik*, is a low structure with a flat or flattish
342 roof. It is made of a framework of poles which are bent over and tied together.
361 The interstices are filled with grass or brushwood, and the whole, including the top, is plastered over with mud and cow-dung. In wet weather hides are laid on top to keep out the rain. Huts are not isolated, but are grouped together in kraals. (See above, p. 107.) The huts of the agricultural Il-Tiamus have thatched roofs of the normal East African pattern (p. 111). A temporary skin hut called *ol-gobor* is used for a temporary halt where pasture is poor.

Dress and Ornaments (Traditional)

714 Warriors wear a small calf- or goat-skin cape tied over one shoulder, and a small back apron of skin fastened to the belt. Their battle-dress consists of a head-dress of ostrich feathers or of lion-skin, a cape of vultures' feathers, a cap made of a goat's bladder, a calf-skin garment, leg-ornaments of monkey-skin, and a piece
● [301] of goat-skin fastened to the belt. The distinctive warrior's ornament is the horn arm-clamp called *e-rrap*, which has two points sticking upwards and is worn on the upper arm. Warriors also wear ear ornaments, necklaces, bracelets, and leg-bells. A type of garment called *en-toros* is worn by warriors on certain occasions: Hollis says when going on a raid after electing an *ol-aunoni* (*ol-otuno*); John Tombo ole
291 Mbaei, when they go on a raid after making a vow to conquer or die. Elders wear
[556 skin garments fastened over one shoulder; rich elders wear ivory arm-rings. Boys
301] wear a sheepskin.

Married women wear a skin cape and a skin skirt held in place by a broad belt.
291 They wear coils of iron wire on the arms and legs, often on both the upper and lower arm, and from knee to ankle. All married women wear flat discs of coiled
301 iron wire, *i-suutia*, hung by straps from the ear-lobes (like the Nandi *taok*), and some wear wide collars made of coiled iron wire which stand out round the neck, and are about 6 or 8 ins. wide. They also wear a profusion of necklaces and neck ornaments. Girls wear skin garments tied at the shoulder and fastened round the waist with a belt. They also wear coils of iron wire on the arms and legs, and necklaces.

Emil Miller phot.

Ill. 1. Masai woman from below Kibongoto.

179 That various customs of theirs and words of their language also found entry among the Negroes follows automatically.

619 While some travelers recognize at least a certain relationship
144 between the three branches, others claim to have observed such
142 great somatic differences between them that one might be doubtful
114 about their racial unity and ask oneself whether the Wadoróbo and the Wakuafi of certain colonies should not be counted among the Negroes. This error is explained by the fact that those travelers have come into contact with them only superficially, /12/ drew conclusions going too far from isolated individuals to the generality, so that they regarded the Wakuafi, strongly mixed with Negroes, as pure, and Negroes strongly mixed with Masai blood as Wakuafi.

/12 cont./

619 142 144 In connection with the somatic view of the three Masai branches the following is to be considered. The band that immigrated last, the true Masai, have kept themselves quite pure as a race. They [727] practically never subscribed to the kidnapping of women and children in war, otherwise customary everywhere in Africa, they did not [171] [582] marry Negresses and did not take Negroes into their community. [563]

291 301 142

Fonck II phot.

Ill. 2. Three Masai women.

619 142 144 Therefore they most clearly show the racial characteristics peculiar to the Masai people. The same was true of the Wakuafi until the [178] time when they became sedentary. Then, however, they needed [361] not only replacements for their lost cattle, but also many hands trained in the cultivation of the soil. For this reason on war expe- [727] ditions they dragged off, not only the livestock of the enemy, as before, but also the women and children. The degree of mixture between Wakuafi and Negroes is very different in the individual

The Wakuafi protected what remained of their livestock by giving up their roving life, whereas the Wandorobo, by sacrificing their herds, were able to continue their fancied nomadic life as hunters; and neither of them needed to forgo the meat diet.

M
174
619
197

/15/ Even though, in general, one should be very careful in ethnology about drawing conclusions from linguistic bases, it seems permissible here, on behalf of the three branches' belonging to one people, to point to their language as well.

As a matter of fact, we find the same language among the Masai and Wakuafi, with the limitation that for the latter, with the great number of Masai dialects, sometimes this one, sometimes that one is their own, according to the location of their area, whereas the very widely ranging Masai probably understand almost all the dialects. In addition, for the Wakuafi, in places, according to the degree of their mixture with Negro tribes, a language of the latter's is more or less familiar. Of the Wandorobo, the El gamrek speak only the language of the Masai, whereas the Asá and

understand what such a success meant. Mbatyan demanded thousands of workers, and they moved obediently, in endless long lines, men, women and children, toward the steppe area of Kisalgo, lying

west of the mountain, where the mighty one resided, like his ancestors. There they had to dig a long water channel, whereby -- a further particular humiliation -- the men had to work in rank and file with the women. Encouraged by these and other successes, the Masai became more and more arrogant, and they extended their war expeditions farther and farther. It was not only the Negro tribes of the interior who had to suffer under their lust for robbery and murder, they even penetrated into the immediate hinterland of the coast and directly approached the coastal cities of Mombasa, Tanga, Bagamoyo, and others.

175
791
755

The belief in the magic means for healing purposes which Mbatyan gave those seeking help, and whose chief ingredient quantitatively was the vanilla-scented, pulverized wood of the ol mogongora liana, was so deep-seated in the people /21/ that it was often supposed to have actually brought to the people

[237] it consists of a stick on whose lower end is stuck a vertebra from a

/51 cont./

845 wife of her husband; often, however, she also nurses both herself.
[301] Soon after birth the twins receive a leather cord trimmed with cowrie shells hung around their necks, an expression of paternal pride, so that everyone will immediately recognize the child as belonging to
[203] a pair of twins. To be sure, the Masai living in a circle of two to three days' march are well acquainted with each other and are immediately informed of every bit of news through the constant intercourse between the individual kraals. "Every Masai coming from farther away, however, upon seeing a child unknown to him, always asks first of all: "Who is his father?" The birth of triplets is said not to occur. After the birth of a deformed or dead child, the young mother is beaten by the women of the kraal and the father over-
[843] whelmed with abuse from the other men. The woman is punished because it is assumed that she practiced sexual intercourse in far ad-
[784] vanced pregnancy and through that injured the fetus. But then an unnatural birth or a stillbirth is also regarded as a punishment of God for a sin, especially as one directed against a relative, a fellow lineage or tribal member, be it through inflicting an injury or
847 neglecting a bond of friendship or love. They admit the killing of newborn children only in case the child comes into the world very frail or was conceived out of wedlock by an old, sick man. There can be no doubt, however, but that they also kill deformed children immediately after birth, for one never sees cripples among them.

844 During the birth process the women of the neighborhood have streamed together in front of the hut of the woman in childbed, in order to bring her milk or also flour. First of all the other wives of
[626] her husband hasten there, as well as the women of her kin, her lineage or tribe. Good /52/ breeding demands it of them and they comply in order not to be subjected to the mockery and abusive language of the others. When the child is brought into the world, the women of the kraal sing and dance, in order to thank 'Ng ai for the successful birth, for which they receive an ox from the father of the newborn child, which they immediately consume outside the kraal. The next day a second ox is slaughtered, at the consumption of which
000 any guest is welcome. In the lineage of the El kiborón every newborn

/52 cont./

854 the ground. The father almost never carries the child on his arm, but only picks it up now and then /53/ for a moment. As soon as the child cries, even at night, the mother, or in her absence another [533] woman, gives it the breast. If this does not help, one tries to quiet the little one or lull it to sleep by rocking it in the arms or by sing-
539 854 533 ing. One such familiar lullaby is the following: oh, jejai, tobolo l airorié baba telai l eńg an ai kitok ai; in free translation: Oh, you my little rascal, I say to you, grow and become big in my big kraal. Another song, which, like most songs, first originated during the singing and refers to recent events, runs roughly: "What then do these El mulelyan want here (two women belonging to the tribe of the El mulelyan were standing nearby), they who did not bring the woman in childbed (that is, in this case, the woman singing the song) anything to eat? The Mulelyan are fools because they are not pleased about the children. In the future the woman in childbed will have to sit down in the shade in order not to feel so hungry, or she will /54/ have to ask for food in the kraal of a warrior who brought home booty from a war against the El datua." In the last words there is mockery insofar as the brother of one of the two El mulelyan women, along with other warriors, had been recently driven back by the El

/57 cont./

553 lacking such, some older man of her lineage or tribe, gives it to him. The festival that is celebrated in this connection is very similar to the one described above at the first name-giving, but considerably more sumptuous. It is never lacking, whereas the other one is often omitted.

He receives his next name as a warrior, after his return from a campaign in which he has killed or seriously wounded one or more enemies. /58/ In full battle array, but without weapons, the [714] warriors assemble toward evening in their kraal; they squat together, [535] with a large number of young girls standing around, while those of them who are to receive the warrior baptism perform war dances with astonishing endurance, spear and shield in hand. After the new names have been agreed upon and have been called out to the ones concerned, they are celebrated in improvised texts. The names refer to warrior virtues, military events, or even costumes that the ones honored today wore on the last campaign. This festivity is repeated on each of the next four or five days in a neighboring kraal, to which the ones newly named wander with a number of their comrades and a crowd of young girls. Thus the new names quickly become generally known and familiar.

551 Names that the mother or father give to their small sons, besides the ones previously mentioned, are the following: Kaiga = the long one who can reach up high; Lesehga, from es segehgei = iron wire; Masagga, after the like-named area; Jäkon, after a former chief of this name; Bartelito, after the cloud of dust that the cattle stir up while being driven, may the son acquire so many cattle that their cloud of dust is very great; Ol ongoscho = pesa, the copper coin commonly used in East Africa and worth two pfennigs. For a time it was [301] very popular among the Masai as an ornament and was worn on a small chain or on wire in the upper rim of the ear; Lebeleb = thick lip. Names that boys received as principal names at the age of four or five are: Lassawoi = the clever one; Kohoge or Sabug = the fat one; Narondari = the goat-milk drinker; Araijo or Matanje = darling; Ngaije = given by God; Nasilani, after a tree called silani, whose

/61 cont./

881 question for the next circumcision period. These choose for this, as the site of the festival, a recently built family kraal, which is [292] then designated as eṅg aṅ 'n aibage 'l aijok. Decked out with a [535] costume in imitation of the warriors, but without weapons and, in- [533] stead, a long stick in the right hand, the boys amuse themselves with dance and song in the vicinity of the kraal. When they crowd into the kraal after the first dance, in order to moisten their parched throats with milk, they are /62/ sprinkled with honey beer by an old man standing at the entrance and congratulated with the words: en dobollo, en daret ijōk, en dabo loscho, that is, roughly: may you become ever more numerous, make us rich, and bring prosperity to the country. During the festival the boys choose a spokesman or speaker (ol aigwenani) from their midst, whose task is to train them in comradeship and corps spirit. When the festival has lasted two days, the boys move into the various neighboring areas in order to repeat it there. In this way an eṅ gebāta often lasts a month. It is 881 also to be mentioned that very many women appear at these festi- 842 vals, and especially all who have up to then remained barren. The former appear in part as mothers of the celebrating boys, in part as companions of the barren ones, and the latter for their part come in order to have themselves pelted by the boys with -- fresh cattle dung, because through that they will become fruitful, according to a con- 881 viction prevailing generally among the Masai. In each of the following four to five circumcisionless years ('l ari otudunyeki 'l aijok) a similar festival is celebrated. It should be mentioned further that the [231] cattle whose meat is used to feed the participants at the eṅ gebāta festival are not killed, as is customary, by a stab in the neck, but rather by suffocation.

Let us now consider the circumcision festival:

[301] A few weeks beforehand one already sees the boys, adorned with as much ornamentation as possible, singing and dancing every day in their own and the neighboring kraals, through which they express their joy over soon being able to enter the privileged standing of the [302] warriors. On the day before the operation the boy's head is shaved, and the hair is thrown under the bed of the children in the maternal [292] hut. The boy takes off his skin cape and ornaments and dresses himself

881 /63 cont./
[626] trample underfoot. The one now scorned had also wanted /64/ to
[152] regale guests with it on that day, but no one came to him whose son
showed himself to be a tŏrŏnō. While the old people, as long as
[535] there is something to eat and drink, are only interested in that, the
[533] warriors, already early in the afternoon, start to dance and sing
with the young girls and amuse themselves in this way into the night.
Not until about ten o'clock do they go back to their kraal, to which
the girls presently follow them, after they have begged for a little
more milk, which they take along to their lovers. /Ill. 18 appears
here./

[158] The circumcised boys, soon after the completed operation, went
into the huts of their mothers and stayed there for seven days, until a
superficial healing of the wound has taken place. In order to hasten
this, they are particularly well cared for and are given only milk,
blood, and meat. During the following period, until complete
[411] healing, they roam in small bands with bow and arrow -- they do not
[223] use the ordinary bows, but ones only about half as long, made only
for this occasion: the arrows used with them have a wax ball at the
tip -- through steppe /65/ and forest, in order to shoot small birds,
the skins of which they string by the beaks on a cord, which they
place garland-like around forehead and occiput. Between the bird
[301] skins the es sibolio (sing. os siboli) -- as the newly circumcised ones
[302] are called during their recuperation -- stick an ostrich feather on
each side of their heads and paint their faces with white clay (en
doroto). On the first day they go out, they slaughter a white goat-
[262] buck on the steppe. After they have roasted and eaten its meat,
they throw the gnawed bones into the fire. This meal is called ol
gĭne l ol benek (ol gĭne = the goat buck, ol benek means the tree
with whose branches they make the fire). Every evening after their
excursions they return to the kraal and to the huts of their mothers.

881
591 As soon as the young girl, who until then has lived in the warrior
kraal in the most unrestrained freedom, concludes from certain

881 mother's hut. If several girls of the kraal are in the same situation,
[591] the mothers agree /66/ on a definite day (1)

[613] 1. The circumcision of the girls belonging to the El kiborón always takes place on the 24th day of the Masai month.

for which they then secure an old woman experienced in circumcision. Otherwise they wait a few more weeks; perhaps a girl who is ready will still be found, since one need not necessarily wait for the aforementioned indications, or, if by chance a circumcision of the boys is about to take

/66 cont./

881 place, they wait until that day. Shared pain is half the pain, and a certain coyness is part of good breeding among the brown Masai maidens too. The circumcision of boys and girls on one day takes place at different spots, and, while no female creature may come near the boys' place, so too no man or boy may enter the hut where, in the presence of her mother, the daughter is circumcised. On the day before the latter's head has been shaved and her hair tossed under the skin of the bed. She has removed all her ornaments and has clothed herself with a long apron (ol gěla, el gelani), which her mother has made. The latter is now trying /67/ to make the parts coming into question numb

with cold water and, during this, encouraging her little daughter sitting on the ground with beating heart. The operation is a simple excision of the clitoris and is performed with a sharpened piece of sheet iron (ol moronja) such as is used to shave the head. Then the small wound is washed with milk, which, together with the blood shed, seeps into the ground. A blood-stanching agent is not used here either. Until complete healing the girl remains, as es siboli (pl. es sibolio), in the hut of her mother. Instead of the bird skins and ostrich feathers that the boys put on, she wears around her forehead a ring plaited out

[304] [412]

[752]

[301] [302]

/67 cont./

881 of grass (ol márisian), into the front of which she sticks an ostrich
[301] feather, and, just like them, paints her face with white clay. On
[302] the circumcision day the women of the kraal arrange a feast among themselves, for which the girl's father has given a head of cattle
[583] and her mother has brewed honey beer. As soon as the bridegroom of the es siẽngiki (pl. es siẽngikin) -- this is the title for a circumcised girl and for a young woman -- learns that she is well again, he brings her father the last remainder of the bride price, whereupon nothing more stands in the way of the wedding.

The above-mentioned years counted as circumcisionless years for the boys do not come into consideration for the circumcision of the girls, as, indeed, is in the nature of the matter; rather, they may be circumcised at any time.

VIII.

000 Age grades. -- Designation of the members of the different age grades of both sexes. -- The terms of address, affected by membership in an age grade, among male individuals, female individuals, and male and female individuals between each other.

561 As among almost all culture-poor peoples, so too among the Masai the social position is assigned to the single individual in general
[562] by the age grade to which he belongs. That this is shown most clearly in the life of the man is explained by the mere fact that he is the lord living for his own pleasures; far below him stands the woman, who has a right to live only because of her labor power for him and her ability to bear children.

Until circumcision the male individual is regarded as a boy (ol aijoni, el aijok); during the preparation for circumcision and until after the healing of the wound, he is called os siboli (pl. es sibolio). Thereafter, for a space of time of about two years, he is introduced to the warrior's life and during this period is called ol barnoti (pl. el barnot). When this apprenticeship, during which folly and youthful exuberance are supposed to spend themselves, is over, he is regarded as a full-fledged warrior, ol morani (pl. el moran). As such the Masai spends his "best years," until he leaves the warrior standing at the age of 28-30 in order to get married and, as ol móruo (el moruak),

561 634 [791] [787] After he has counted off the little stones of his oracle game for a while, he decides that N., the son of M., is to become ol aunoni. This session is secret, and the speakers also have a duty to keep its result secret for the time being. A man can only become ol [554] aunoni who is distinguished by physical beauty, faultless build, strength, and health. After the speakers have returned home again to their area, they call together all the ol borōr members there and, with these, again set out for the ol oiboni. Then a very large hut (os siñgira otunigi) is built there. When it is finished, the speakers take a number of warriors into their confidence and tell them who has been named ol aunoni. Then all gather in the hut, in the center of which stands a new, neatly carved wooden stool, toward which the one named is inconspicuously pushed by those who know. As soon as this has been accomplished, a few of those standing around him [301] [291] push him down onto the stool, others place a string of blue ring-beads (ñ gonoñgo) around his neck, tie the spiral ear ornament made of copper wire (e surudia), such as is worn by old men and women, into his ear lobes, remove his short, skin-apron (e megiti) of the warrior, and in its place drape around him the long one of the married (the ol gela l ol moruak). Finally all those present cheer the new ol aunoni and cry out tadarawá jo ijōk eñ gischon, that is, remain poor, [556] bring us luck. The Masai in general maintain that every ol aunoni has remained poor; if he were to put livestock in his kraal, he would soon die, his wives would bear him few children, wealth would remain [431] denied him. But he does not need it, for every man under him is obliged to give to the ol aunoni visiting him a fat ox and milk. Hence he is constantly on visiting trips, which explains why he has neither a large stock of cattle nor numerous progeny. In his kraal the lord who keeps the women at work is missing, and the latter in turn indeed have no incentive to work, for, by means of the gifts that fall to their husband, an excess of foodstuffs always prevails.

[574] After the ol aunoni festival is over, the other ol borōr members wander back home and celebrate a long meat feast (ol bul), where- [721] upon they /74/ usually set out on a war expedition, while the ol aunoni himself goes back to his kraal and remains there.

[Warrior Kraal]

/84 cont./

836 701 Every warrior has his favorite girl (na sandja) (1).

1. /This footnote has been translated from the Latin in the original source./ Girls not yet "circumcised" live with the fighting men, sleeping with this one today, that one tomorrow. Pregnancy for a girl not yet circumcised is considered an outrage and is avoided either by interrupting cohabitation during the menses and the six days following or by withdrawing the penis before ejaculation. A pregnant girl gets rid of the fetus by an abortion brought about by medicaments. In wartime parents do not have intercourse for one or two months. Rupturing the hymen is neither a public custom nor a solemn rite.

[881] [848] [842] [847] [834] [833]

As long as he is at home she lives with him, takes care of his livestock, and makes part of his ornaments. The girl calls her lover os sandja and shows the others the coming about of this relationship by bringing a gourd bottle full of milk to the warriors squatting together and placing it beside the left leg of her lover.

326 ax or ten arrow points, a goat each; for the other things he is paid
[435] with milk. If the orderer furnished the iron wire, only half of the prices named is given as payment for the labor.

From thick brass and copper wire (os sojai, es soja; os sojai ebor, brass wire; os sojai adó, copper wire) the blacksmiths draw thin wire. For this they use as tools the en gâuo and the ol gamĕt. The former is an iron approximately a foot long (Fig. 26a), which is an inch thick in the middle and on both sides often tapers to points. In the center it has a few conical holes of different widths through which the wire is drawn. Not infrequently the en gâuo also consists only of a piece of strong sheet iron that /116/ is not pointed at the ends. The ol gamĕt (Fig. 26b) serves as tongs and has the shape of sugar tongs whose grasping arms are squeezed together by an iron spiral
325 drawn around them. The drawing of small pieces of wire is done by hand, whereby one man grasps the en gâuo, the other the tongs. For larger work the former with its two points is wedged into a forked

[413]

Fig. 26b.

wooden block, while the wire already drawn through is fastened to a roller resting on two forked branches. By a slow turning of it the wire drawing then proceeds. In order to make the wire still thinner, it is drawn a second time through an iron with a smaller hole. The
306 spiral-shaped neck-ornament of the Masai women (es segengei e
• 301 murt), the double-spiral earrings of thick brass wire (es surudiai,
325 surudia) the women and old men, the arm and leg cuffs of iron
462 wire (es segengei, with designation of the part on which they are worn), as well as the tin ear-pendants (ol aimír, el aimér), are made by

/116 cont./
306 the wives of the blacksmiths. Smaller ornamental objects of wire
• 301 are made by the other Masai women. The small chains of iron and
325 copper wire are not made by the Masai themselves, but are bought
[462] ready-made from the caravan people or the sedentary neighboring
[439] tribes.

XIV.

000 Character. -- National pride. -- Disrespect for foreigners. -- Designation of foreigners. -- The Masai in the service of the European. -- Attitude of the Masai living among his people toward the European. -- The Masai toward their kind. -- Hospitality -- Position of the woman. -- How the Negro illustrates the character of the Masai. -- Expression of emotions and other gestures. -- Strength of vision. -- Art sense. -- Color sense. -- Orientation ability. -- Song. -- Ideal of beauty of the human body.

186 The most outstanding trait in the character of the Masai is their
779 national pride which is based on the religious view that they are the
829 chosen people of God. God created the world and all that is in it
[181] only for them. All non-Masai are subject to the Masai people and their property belongs to them. This explains the haughtiness and the deep disdain toward the sedentary Negroes, who are not familiar with 'Ng ai and have no share in the good things created by him and who therefore are condemned to wrest their daily food from the
[461] soil in the sweat of work. On the other hand, God cares for the Masai as for his children, they need not work: "eṅ dobira mēti sidai = work is not good, everything belongs to them anyway, and, since the Negroes do not give it voluntarily, the Masai take it by force. In fact, the Negro, in the opinion of the Masai, only has justification for existence as keeper of the livestock created by 'Ng ai for the Masai.

186 In general the Masai designates all non-Masai as el meg (sing. ol megi), a term that is to be translated as "unbeliever." /117/ The Masai does not know friendship and loyalty toward the

/127 cont./

411 polished, seldom unpolished and black. The latter is not a sign of crudeness, but is supposed to prevent gleaming in the sun. The [439] spears carried by the Masai are not all made by the el konono, but [177] are also /128/ bought from sedentary Negroes, and, to be sure, chiefly from the Wadschagga of the Kilimandscharo, whose black-smiths make them for the warriors of their tribe or also on order for [177] Masai warriors. One therefore finds among the spears of the Masai

/137 cont./

291 married men wear a similarly cut, but considerably longer cape, which is called en jóriba (n joribán) and usually, but not always, is undehaired. For protection against the often sharp cold, especially in the rainy season, the warrior wears no other article of clothing, but, while sitting, simply draws the cape also over the left shoulder and -- the nose. The ol megiti is made by a sister or the favorite girl of the ol morāni. The clothing of the women is not quite so simple, but also is certainly not luxurious. It consists of two large leather aprons made out of goatskins sewed together. The lower one (ol ogessaña, el ogessanani) is put around the hips and stuck fast by means of a tucked-in corner, or held fast with a leather belt (eṅ ailieña, n ailieña) embroidered in a zigzag pattern with colored beads. The other, upper one (ol egíschobo, el egíschobon) is knotted on the right shoulder and /138/ leaves the left shoulder and left breast free. The upper garment is rarely decorated with a few beads, the lower one almost always. Most common is a row of small colored beads running around the lower edge; often too the inserted patches have beads sewed around them. Old men and furthermore boys and girls during the healing of the circumcision wounds wear an apron that has the same form as the upper garment of the women, but a considerably greater length. It is called ol gelā (el gelāni) and, depending on its wearer, is designated as ol gela l el móruak, ol gela l es sibolio, ol gela l eṅ dōje. Among the men it is knotted at hip and shoulder on the right side, among the girls /Ill. 44 appears here/ fastened under the arms with a strap and around the hips with a belt, whereas by the es sibolio it is mostly slung around the body toga-fashion.

[237] [294] [531] [294]

The sandal (Fig. 39) in its customary shape (en ámge, n ámga) forms the footwear for all without distinction as to sex and age. It is made from the thick back-hide of the bulls.

[237]

301 As among all primitive peoples, the richness of the ornamentation stand in contrast to the simple clothing. This is most manifold among the warriors and the young women.

/138 cont./

Ill. 44. Women's costumes.

301 [237] /139/ The favorite dance and war ornament on the head of the warrior is the well-known face frame with ostrich feathers stuck around it. It consists /Ill. 45 and Figs. 39 and 40 appear here/ of two leather disks sewed one on the other, the front one of which bears a row of narrow mesles stitched on a strip of thin goat leather, which serve for holding the feathers. The most popular ones, as the name os sidai, /140/ "the beautiful" (which, incidentally, also holds for ornamentation in general), says, are those of black feathers; if made of white feathers it is called eń gŭrărŭ, and if it bears only one white feather at the top, eń dărgĕ. Besides that, they have such frames made out of the bent wood of a liana runner. [237] [136] At their highest point is stuck the tail of a Colobus monkey

[TEXT CONTINUED ON PAGE 185]

301

Fig. 414. Fig. 415. Fig. 416.

301 ornament is bent W-shaped out of liana wood and hung with feathers (ol marakuch [Fig. 40]). Also popular among the warriors in the field and for dancing, but rarer, are the four-high, pointed warrior caps, ol ugam, with the designation of the skin added, made out of the skin of wild animals. The cap usually consisted of only one type of skin: more rarely a narrow strip of

291 291 292 237

/140 cont./

another skin is sewed on the seam going from the tip toward the back. Most common are the caps out of lion manes (ol ugaru kinak or ol gieroni = lion) or the skin of the baboon (ol ódóli, Papio cynocephalus), resembling it almost perfectly in appearance. Furthermore they use the skin of the leopard (ol ugaru gíri; gíri = spotted), Indian leopard (Cynaelurus guttatus, ol /141/ ganja l ancho = calf-devourer), serval (Felis serval, ol gerani = biter, he only bites the goats and sucks their blood), Colobus monkey, jackal, and hyena dog (ol olkor gidodai). A strap holds the cap fast under the chin. The warrior sews the cap himself. Awl (ol dedo, ol dedi (Fig. 41)) and a twined cattle tendon (ol obtai) serve as needle and thread for all needlework. Another cap worn by warriors, boys and older men has the shape of a baby's bonnet (Figs. 42 a and b); it is made out of the honeycomb of a head of cattle and often adorned on the edges with small beads.

Ill. 40. Ear ornament of the men.

/141 cont./

• 301 304 In order to make the ears suitable for holding ornaments, their lobes are pierced in early childhood with a strong acacia thorn and distended by the insertion of longer and longer wooden plugs. The [824] plugs (Figs. 43 a and b) are mostly made out of the wood of the [531] eń gadardar tree (Ochna Merkeri Gilg), often quite beautifully marked. The weight of the ornaments enlarges the holes still more, so that they often hang down extended ten centimeters. At the same time the upper edge of the ear is also pierced in one or two places. 301 In these the women wear bunches of four to eight small chains to 20 [237] centimeters long (Fig. 44); the men wear just as many el oimer [136] (sing. ol oimeri), a clock-key--shaped ornament made out of tin (Figs. 45 a and c) or out of brass wire (Fig. 45 b), often also a peas on a wire ring, a polished mussel shell, which ornament /142/ is called eń jili (n jil) (Fig. 46), or a wooden stick 15 centimeters long (ol benieť, el benieťa [Fig. 47, upper part]), or a quill of the porcupine (olaiai or oeai, Hystrix africae-australis). Around the lower part of the enlarged ring of skin of the ear lobe the men wear a tube four centimeters long (ol gisol, el giso [Fig. 47]), wound out of thin iron wire, /Figs. 47-51 appear here/ whose end coils are wrapped with copper wire, while on the rest of the [illegible] hang small chains 6 to 20 centimeters long (ol bisiai, el bisia). If these are only short, they are as a rule glued together with red paint (Fig. 48). In place of this ornament one also often sees an oval, [824] perforated tin disk (eń goholai, ń gohola) and other things, or a nut-shaped ornament that /143/ is carved out of the nut of the Hyphaena palm (Fig. 49). Married women and old men wear, tied in the ear lobes with a thin strap, the large double spirals (e (e surudiai, surudia) made out of thick brass wire. They are supported by a leather strap put over the crown of the head, since, because of their great weight, the ear lobe is unable to do so. It is [531] regarded as particularly beautiful if they are further decorated with a leather band sewed across them and stitched with four rows of small beads, on which hangs a row of small chains. This decoration, which, incidentally, is found only among women, is called ol [535] giriengata. For dancing, young girls often wear a string of beads (Fig. 50) around the forehead and occiput, or two strings of beads lying one above the other an inch apart (Fig. 51), which are joined, ladderlike, with small chains. The ornament is called er nilule.

Fig. 54. (1/1)

Fig. 55.

Fig. 56.

[824] Men and women wear a tangle of various rings around the neck. The ol orowíl and ol eleschua are wreaths twisted cordlike and smelling like vanilla, the former made out of the fragrant root bark of a liana (ol mojongora), the latter of various plant parts of Tarchonatus camphoratus. Especially popular among men are simple rings of iron wire (es segengel) with a bunch of small chains hanging on it in front (Fig. 52), while every Masai woman wears around her neck a large spiral of iron wire (es segengel e murt), whose outer and inner coil is often wrapped with thin brass or copper wire. The ornament is wound around the neck and can only be unwound again, not taken off. The many other neck-rings consist of small colored beads (e maitáni, maitáni), pea-sized white and blue beads (ol /144/

/144 cont./

• 301 duréschi, el durésch), oblong, bean-shaped white beads (es sambaïn), date-pit--shaped, multicolored figured beads (em boro), ring-shaped blue and green beads (eñ gonoñgoi, ñ gonoñgo), and various wire rings. The beads are either strung on wire and cord twisted out of cattle tendons, or also sewed on narrower or wider, flat leather rings. [531] In the latter case the beads are arranged, according to color, in rectilinear, mostly square designs (Fig. 53). Such a bead band is [237] called e mairenai. The middle piece of such circlets, lying on the chest, often consists of a taler sized piece of snail shell ground flat (ol gălásch, el gălaschi), on the beaded border of which hangs a row of small chains (Fig. 54). With this material consisting of beads, wire, and leather circlets the most varied and all conceivable combinations are formed, which everyone designates by the part of it most conspicuous to him, so that there is no fixed nomenclature for them. Special mention should be made of a string of beads regarded as particularly beautiful and chic for young women, in which em boro beads alternate with rows of small glass beads and spirals of brass wire two or three inches long and which is worn bandoleerlike over the left side of the chest.

301 237 As a war ornament the el morán often wear a sort of shawl, a cross between a cape and a ruff, consisting of vulture feathers. The ornament is called ol máiruti or ol motonj=the vulture; each individual cord on which the feathers are strung is called eñ gobír.

Besides a simple bead ring, a leather band stitched with beads (ol gilescho, el gileschoni) or an ivory ring (ol másaṅgus, el másaṅgusi), the men, especially the warriors, often wear on the left upper arm a bracelet of sheep horn in the form of a double chopping-knife (e ráb, [136] e rábbi [Fig. 55]). If one goes to a festival or goes to war there hangs on it a meter-long, twisted strip (ol kibaba, el kibabani) made out of the skin of leopard, Indian leopard, serval, jackal, furthermore of the genet (ol dolúgo, Genetta pardina), zoril (ol belés ăte, Jetonyx /Ictonyx/ zorilla), zebra mongoose (ol gischorén, Crossarchus fasciatus), tree conies (eñ gine os soito, Dendrohyrax validus), and of a squirrel-like animal (ol gidás eñ dare = goat-milker; the Masai generally relate that it sucks on the udders of the goat at night), the

/144 cont./

301 237 036 yellow long-tailed monkey (Cercopithecus pygerithrus, en dorasch), the black long-tailed monkey (C. albigularis, ol gema), the honey badger (Mellivora ratel, ol beles), and a few other smaller animals.

301 554 Around the right wrist, often covering almost the entire lower arm, those warriors who are generous and benevolent, the n gamnini, wear a cuff (Fig. 56) that consists of rows of iron beads (el dorongen or el gabaten) put close together, in whose place in more recent times appear ordinary small -- especially blue -- glass beads. The iron beads are made by pounding flat small wire rings and then /145/ putting these, strung on thin strips of sheep leather, around the lower [431] arm and knotted on the inner side of the arm. Those people who constantly enjoy the kindnesses of the n gamnin express their gratitude from time to time by giving a string of such beads, so that, as was said, the ornament often extends almost to the elbow. More rarely than among warriors, the ornament is also found on one or another of the young girls living in the warrior kraal. If a girl has [431] no brother belonging to the warrior standing, but does have a wealthy [593] father, she receives from the latter both milch cows and an occasional

• 301 /145 cont./
[564] piece of slaughtered livestock. She then generously distributes milk
[43] and meat and thus acquires the position of benefactress.
[593]

The arms and legs of a beauty, except for the thighs, are stuck into a more or less complete armor of tubes of iron wire, which often leave only the knee and elbow free, while among poorer women this adornment shrinks to a few coils. These tubes are called es segeńgeĭ = iron wire, and are differentiated according to their location as es segeńgeĭ ol berańgasch for the upper arm, es segeńgeĭ eń dagúle for the lower arm, es segeńgeĭ ol oreschet = what is worn on the lower leg (below the knee). This ornament, like the neck spiral (es segeńgeĭ e murt), /146/ is wound directly onto the body part in question and can therefore not be taken off, but only unwound again, which usually does not occur until death. The weight
[481] of the ornamentation seriously impairs the mobility of the women and not infrequently gives them a waddling gait.

Warriors in dance ornamentation wear around their hips a leather strap embroidered with small beads (eńg ene om bolós; eńg ene is any strap, om bolós = the hip). Little girls also wear a
[291] like-worked strap; it then bears a row of small chains in front as a fig leaf and is called en doré (pl. en dorén). Older girls and women wear around their hips an inch-wide belt likewise stitched with beads (Fig. 57), which holds the leather apron together. Boys
[237] and younger men often wear below the knee and above the calf a ring made out of white neat's hide, with an end five centimeters long and one centimeter wide hanging down in front and in back (Fig. 58), and around each ankle a small bell (en duál, eń /Figs. 57-61 appear here/ duálán [Fig. 59]) tied on with a little strap, which, by its widely audible tinkle in the silent steppe, is supposed to frighten off predatory animals lying in the grass. Finally with
[237] the war and dance ornamentation belong the long-haired black and white strips of skin (e mónge, e móngen) that the warriors tie around their ankles and that are made out of the skin of the white-tailed colobus (Colobus caudatus).

/146 cont./

• 301

Children, as well as young men and women, wear on the fingers as adornment rings (ol gissôi, el gisso) made out of four or five coils of copper wire, the ends of which, on the outside, often form flat spirals (Fig. 60). The first ring is stuck on the middle finger of the right hand, the second one on that of the left, the next ones on any other finger. It is not a rarity for a woman to wear rings on all her [751] fingers, including the thumbs. Mothers stick on the second toe of the right foot of their babies a /147/ simple ring of copper wire as protective magic against illness, if previously one or two of their children have already died at an early age. Now and then one also finds rings made out of sheet iron, on which the outer part of the circle bears shieldlike appendages above and below (Fig. 61). The [177] Masai call them es sagaŋgar and maintain that they stem from the Wakikuyu. It is certain that they are not made by the Masai.

302 Boys and married men frequently shave their heads so that the hair is scarcely more than an inch long. Women shave their heads even more often, and, to be sure, either entirely or only a strip all [412] around. For shaving /Figs. 62-63 and Ill. 48 appear here/ they use

M 824

/357 cont./

/footnote 1 continued/

This species is striking because of the silky sheen of the hair of the capitulum stalk and calyxes.

Inflamed eyes of cattle are washed with a decoction of extract of the bark bast for healing. Furthermore, secret medicine of the ol goiatiki.

94. ol darboi (Kigelia africana Bth.). The paste obtained by boring out scrapings of fresh young fruits is placed on wounds. /358/ A small piece of boiled fruit is placed in the fermenting honey beer to hasten fermentation.

95. ol dĕbĕlĕgi (Grewia spec.).

96. ol debĕsi (Acacia verrugera Schwfth.). The decoction of a hand-sized piece of bark (dose for one or two days) is drunk for gonorrhea until a cure is produced.

M [301]

97. ol degŏm (Cardiospermum halicacabum L.). The black, almost pea-sized seeds are strung on a string like beads and worn by the women as an ornament around their necks.

98. ol degoṅ.

99. en dĕlĕmĕt (Sesamum angustifolium [Oliv.] Engl.).

100. ol dĕmĕlĕm (Solanum setaceum Damm., Solanum Schumannianum Damm.). The decoction of about ten finger-sized pieces of root is mixed with meat broth and drunk to cure the ol dododoi 1 en dare sickness.

101. en dĕmĕschŏ. Warriors like to drink a bark decoction in meat soup as an aid to digestion.

102. en dĕmŭmŭŭ. Good fodder grass.

103. en demunjua (Pennisetum spec.). Good fodder grass.

104. ol dĕrĕgĕlĕ (Strychnos heterodoxa Gilg). The decoction of a square inch of bark is taken to get rid of taeniae and ascarids.

D [824] [231]

105. en dĕrĕwĕnj (Setaria verticillata P. B.). The burs are used by the El dorobo to make tight beehives that have become leaky.

106. en dĕrĕwĕnj ol godjita. Good fodder grass, especially for cattle.

107. en dĕrĕwĕnj on gĕg.

/369 cont./

824 322. ol mogoṅgora, a liana not infrequent in the river forests. The root bark, smelling strongly like vanilla, is twisted, ropelike, [301] and worn by men and women as a neckband. It also finds use as a secret medicine of the ol oiboni and the ol goiatiki.

323. ol mokotan (Albizzia anthelmintica Brongn.). One or two hand-sized pieces of trunk bark or root bark are pounded with a club into fibers and held for a few minutes in boiling meat broth for steeping. This soup is used by warriors as a nerve stimulant, by [832] women as an aphrodisiac. To cure gonorrhea, one adds a small amount of honey to the broth before drinking it. An extract that is made with double or /370/ triple the amount of bark is used to get rid of taeniae and ascarids, or also as an emetic for bilious fever. The fresh bark bast is chewed for constipation.

[262] 324. ol momoi (Solanum nigrum L.). Children eat the berrylike fruits.

325. ol mŏrǎn (Ocimim suave Willd.). A root decoction is used as an emetic.

326. ol moridjoi or ol morijoi (Acocanthera abyssinica). The arrow poison is obtained from the roots and wood by boiling.

327. ol marok l on dare.

328. 'mtaṅguju (Maerua rigida Oliv.). From the powdered root [751] the ol oiboni makes an amulet that is supposed to protect one against colds and fever.

329. ol muguti kitok (Caralluma spec.). The soft, fleshy twigs [271] are eaten by warriors on the march, by boys tending cattle, to quench thirst.

330. ol muguti l ol ňodjiňe (Euphorbia spec.). Hyenas allegedly eat this plant.

331. ol muguti l ol ugaru.

332. ol mŭmŭnj (Acacia abyssinica Hoch.). Fodder for small livestock.

333. ol munjagara (1)

1. Also called eň gĭtǎmbŭ.

(Acalypha indica L.). Good fodder for small livestock.

/371 cont./

824 351. ol ŏbĭtŏ l ol bŭrgĕl (Rhynchosia caribaea D.C.). Good fodder for small livestock.

352. ol ŏbŏnĭ (Erythrina tomentosa R. Br.). Approximately six finger-sized pieces of wood are cooked in goat-meat broth. The soup is drunk as a cure for gonorrhea.

353. ol odoa (Maesa lanceolata). One chews several (approximately six to ten) of the pungently spicy grains for constipation. The frequent consumption of the pounded grains in beef blood acts as a nerve stimulant for the warriors.

354. ol oduerai = ol asajet.

355. ol odun̓ ginowi. If children eat the root -- mistaking it for the ol dirgoian plant -- they have pains in the rectum.

356. ol ogildia (Coleus kilimandscharicus Gürke). The juice of the peppermintlike-smelling leaves is dripped into the eyes of cattle to cure inflammation.

357. ol ogildia ate. The cow is given a leaf decoction to hasten the expulsion of the afterbirth, if this takes an abnormally long time.

358. ol ŏgĭnŏ (Boerhavia diffusa L.). A root decoction is drunk for articular rheumatism.

359. eng ŏgĭrĭsĭĭ (Justicia flava Vahl.).

360. ol ogor l oiñok (Pennisetum spec.). Good fodder grass, valued especially for bulls.

361. ol ogoreño. Good fodder grass.

362. ol oguldim.

363. eng oibarasĕj (Ampelocissus abyssinica Pl.). The blue, grapelike fruits are edible.

364. ol oibor benek (Dregea rubicunda K. Sch.). The root bark, [301] together with that of ol mogoñgora, is used to make neckbands. [302] Powdered root is sprinkled in the hair as perfume. A root decoction [273] is popularly added to the honey beer as a taste corrective. It is also regarded as loosening for catarrh and, for this, is drunk with meat broth, or, as a laxative, between the consumption of milk and meat.

365. ol oiborgeba = ol oiborkeba (Tricholaena rosea Nees) is a good fodder grass.

/373 cont./

M 824

394. ol oja basej = ol oija basej.

395. ol ojengalini (Sesbania aegyptiaca Poir.). The decoction of a piece of bark approximately ten inches square in size is given the cow to hasten the expulsion of the afterbirth, if this is protracted for an abnormally long time.

396. ol okitini. The decoction of an approximately fist-sized piece of bark is regarded as loosening for catarrh.

D [824]

397. ol omej. Masai sometimes, El dorobo often, stick a branch of this on either side of the hut door as protective magic against predatory animals.

D M [825] [789]

398. ol omo. Valued by the El dorobo as a good honey plant.

399. ol onorua (Maesa lanceolata Forsk.). A nerve-stimulating agent of the warriors. They drink the decoction of approximately seven finger-sized pieces of the pungent-tasting root at the ol bul meals, as desired.

400. ol onoron. The berries are edible.

401. ol onu (Andropogon Schoenanthus). The livestock do not like the grass, because of its lemon smell. In places the grass is used to make a diaphoretic tea that is given for fever.

402. ol onunoi = ol gitende (Haemanthus nov. spec.).

403. ol orok olele (Justicia matamensis). Good fodder for small livestock.

M [825]

404. ol orondo (Cissus Paraguensis Gilg). Warriors en route and especially during the forest meals like to put the vines into the bed padding, because they are said to keep away insects.

M 824

405. ol orowil kete (Justicia calcarata Hochst.). Fragrant neckbands are twisted out of the bark bast, smelling like vanilla.

• 301

406. ol orowil kitok (Justicia Fischeri Lindm.). Use like that of the preceding.

407. ol orowil l el aijok (Ageratum conyzoides L.). Use like that of the preceding.

D 824 301

408. ol orowil l el dorobo (Neuracanthus sacani Kl.). The El dorobo make fragrant neckbands out of the scraped bark.

409. eng osida kitok. Good fodder for goats.

M 824

410. eng osida gutok (Barleria ventricosa Nees.). El dorobo make arrow shafts from the branches.

D 824

/375 cont./

824 [951] 452. os sinande. Secret medicine of the ol oiboni; ingredient of amulets that are supposed to protect one against wounds, sickness, and accidents.

453. os sinóni (Lantana salviifolia Jacq.). With the wood, /376/ whose smoke smells pleasant, one fumigates the gourd bottles to remove the unpleasant odor arising in them through use.

454. es sisiní (Corchorus trilocularis L.). Good fodder for cattle, goats, and sheep.

455. es sisíní (Schwabea esbolioides Lind.). Small-livestock fodder.

456. os sisiwet (Ocimim filamentosum Forsk.). Women like to use the bush as padding for the bed, on account of its plesant peppermint-like smell.

457. os siteti (Grewia bicolor Juss.). Fruits are edible. The straight, long, and very thin sticks that older men always carry with them are made from the branches. Pregnant women drink a tea made from the leaves, which has a laxative effect.

458. os sobugéi (Dombega).

459. os sodjo (Euclea fructuosa Hiern). Approximately one tablespoon of scraped root bark, mixed in honey beer, is taken as a strong laxative for pain and swelling of the spleen.

460. os sogonoi is an older large tree, which, in the younger stage, is called en doroniki. Its bark is used like that of the last one, but its effect is less vigorous.

[301] 461. os sońgoio (Indigofera spec.). The warriors make fragrant neckbands out of the bark bast.

[862] 462. os suguroi (Aloe). If the child is to be weaned, the mother smears on her nipples the bitter juice of the fleshy leaves and thus makes the breast repugnant to the baby. People who like to drink a great deal of honey beer steep in it two pieces of wood a hand-span long, which has been previously pounded with a club. This addition is supposed to prevent both the indisposition from carousing and an upset stomach. A piece of root is put in the fermenting honey beer for hastening the fermentation.

463. os sugurtuti = ol dinjai (Cissus quadrangularis L.).

464. os sumatégi (Embelia kilimandscharica Gilg). Edible fruits.

411 warriors also carry a narrow oval shield made of buffalo or giraffe hide on a wooden frame, and painted with insignia including the warrior's age grade and clan.

561 701 [712] [562] [836] Originally during the period of warriorhood the morani were not expected to do any work except fight. They lived in a separate village, called a manyatta, and were generally taken care of by the unmarried girls of the tribe. Discipline was reputed to have been extremely good. The warriors had older advisors whom they obeyed.

224 [223] [301] [411] Ostrich's were hunted to obtain feathers for ornaments, buffalo and giraffe for shields, and lion for the highly prized mane. Traditionally the moran was expected to blood his spear on a lion. The dramatic Masai lion hunts are famous. (Simon, 1962). At 177 178 present warfare and lion hunting are illegal. The obvious 561 701 result is a large body of young men with absolutely 224 nothing to do for a period of up to 15 years of what 721 could be the most energetic period of their lives. *[233] They tend the livestock some, but much of the time there is nothing for them to do. As a consequence discipline is breaking down. The elders apparently have much less influence or control over the morani than they did

301 Women and occasionally men wear necklaces of beads. Women have ornate jewelry consisting of rings, beads, beaded bracelets, and wire loops around their [304] neck, wrists and ankles. Both men and women pierce and stretch their ear lobes; the women wear large ear bangles through them and the men use them to carry snuff containers or other articles about the size of a 35 mm film casette.

411 Spears, simis, and knobkerries and shields may [714] be carried by the men. Elders often carry a long staff [561] instead of a spear. Cooking utensils are simple, some- 415 times consisting of a few pots and pans. Bedding consists [513] of hides, with sometimes a blanket. The gourds mentioned 492 above are always present. When moving from one place to another a pack saddle is used which consists of two large (two by three feet) flat rounded plates made of sticks bound and laced by leather thongs. These are tied above and on either side of the donkeys' backs, giving the appearance of semi-folded wings. Hides, lodgepoles, cooking utensils, and other kit are placed on 443 the donkey's back between these. Trade goods are purchased or traded from small dukas around the edge of the area or more recently from itinerate traders who visit the larger and more accessable bomas in trucks.

Masai FL12

CATALOGUE.*

DRESS AND ADORNMENT.

C

Dress. Of tanned goat skins, rubbed with red ocher, beaded on the edges. Sections of skin are pieced together into a sort of shawl. There are no sleeves and apparently no means of fastening the garment. Worn by boys and girls. 291 281 301

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151605

Dress. Of dressed goat skins dyed with red ocher, fringed on three sides.

Wa Chaga tribe; Machame, Mount Kilima-Njaro, East Africa. 151609

M

Face-ruff. Of ostrich feathers, fastened between two oval plates of leather. The rims of the plates are decorated with a line of red paint on a white ground. Worn around the border of the face in war. Loops on the front are for insertion of white ostrich plumes, generally two in number. [Fig. 5, page [12].] 292 531 237

Dimensions, 20 by 14 inches.
Masai tribe; Mount Kilima-Njaro, East Africa. 151199
The manner of wearing this ruff is shown in one of the plates to Fischer's "Massailand", Mittheil. Geog. Gesellsch. in Hamburg, 1882-'3, Heft, II.

C

Face-ruff. Of black feathers sewed between oval pieces of leather. Worn around the face by Chaga warriors in imitation of the Masai. 281 292 237 177

Outside dimensions, 23 by 16 inches.
Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151537

Face-ruff. Halo of dark plumes set into an oval structure of leather. Worn around the face by warriors in imitation of the Masai.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151538

M

Face-ring. Oval ring of leather without feathers. Worn around the face in war. 292 [illegible]

Masai tribe; Njiri, East Africa 151234

M

Ostrich plumes. Used as ornaments on apex of face ruffs. 301 331

Masai tribe; Mount Kilima-Njaro, East Africa. 151246

* The numbers in this catalogue relate to the entries in the Museum catalogue books of the Ethnological Series.

5: Abbott N-5 (ca. 1890) 1892 FN4 Chagga FN4
Masai FL 12

M 301 321 [304]

Ear-stretcher. An oblong block of wood, grooved, and buttoned in the widely-distended ear lobe.

Length, 4⅞ inches; width, 1⅞ inches; thickness, 1¼ inches.
Masai tribe; Mount Kilima-Njaro, East Africa. 151239

C 301 321 326

Ear-rings. One made of wood, wrapped with copper wire, and having two pendants of iron chain. The other is only a plain piece of horn, shaped for the framework of an ear-ring.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151234

Ear-ring. Of horn, with wrappings of beads, and fringe or tassels of iron chain.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151233

Ear-ring. Made of a quill, cut and bent into a loop at the upper end. At the lower end hangs a pendant of iron wire chain of native manufacture, so fine and neatly made as to resemble machine work.

Wa Chaga tribe; Machame district, Mount Kilima-Njaro, East Africa. 151235

Ear-rings. Coils of iron wire served at the ends with fine copper wire. Fringes of iron chain hang down from the coils. Worn by men.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151563

Ear-ring. Coil of wire, one turn at each end wound with fine copper wire. This coil is worn horizontally and from it depends a fringe of very fine iron chain, each strand spaced off at the top with a blue bead.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151564

Ear-ring. A worn and broken specimen of the same style as the foregoing.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151565

Ear-ring. Wooden ring and fringe of iron chain. Fastened in the ear by means of a stick run through the ring behind the lobe of the ear.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151566

Ear-ring. Staple of horn, to one prong of which is attached an iron chain with amulets of cow's bone. Worn by men.

Wa Chaga tribe; Kahe district; Mount Kilima-Njaro, East Africa. 151567

M 301 [326]

Necklace. Made of beads and brass wire on leather base; projecting ornament on the edge of the rim, made of a polished disk of shell; pendant, a fringe of small chains.

Masai tribe; East Africa. 151213

Necklace. Made of beads of different sizes on a band of leather. Partly fringed with small chains and beads.

Masai tribe; East Africa. 151214

C 301 321 326

Necklace. Made of beads, with an iron chain fringe.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151228

NECKLACE. Small blue and white beads, strung on a piece of stiff wire.

Masai tribe of Tokitoki; East Africa. 151211

NECKLACE. A band formed of strands of native beads, which are seeds rubbed down so as to join closely. Necklace opens at the back.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151571

NECKLACE. Made by looping on a cord a series of little bundles of bark.

Wa Chaga tribe; Kahe district; Mount Kilima-Njaro, East Africa. 151572

NECKLACE. Made of iron and wrapped with iron wire.

Masai tribe; East Africa. 151212

NECKLACE. Copper wire wound around core of brass wire. Worn by both sexes.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151219

NECKLACE. Ring of brass, with design chiseled on the exterior.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151220

N
[301]

NECKLACE. Brass chains, with neatly made pendants of brass wire coiled over iron wire.

Wa ny ika tribe; Mombasa, East Africa. 151798

NECK-RING. Of brass, with incised ornament on the back. Much abraded by use. Said to have come from Ugweno.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151558

NECK-RING. Of brass, with incised ornament on the back. Said to have come from Ugweno.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151580

NECK-RING. Copper wire wound around a core of iron wire. The ends bent so as to form a clasp.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151561

NECKLACES. Broad rings of leather closely beaded on the upper side, the beads being ground down to a flat surface, giving mosaic effect.

Masai tribe, of Tokitoki, East Africa. 151218

NECKLACE. Made of leather and beaded; hanging bavet or fringe, of iron chains. The leather is stiffened with an iron ring which goes round the neck; the lower piece fastens to the girdle.

Masai tribe; East Africa. 151217

NECKLACE. Leather ring, beaded; small fringe of iron chains.

Masai tribe; East Africa. 151215

NECKLACE. Round necklace, wound with beads, with loops at the ends for tying.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151218

claim to belong to them live elsewhere. Merker gives as the principal divisions three provinces, Kisongo, Loita, and Olbrugge. This is perhaps not according to Masai traditions, but is not incorrect as a practical description of the present distribution of the tribe. The Loita and Olbrugge, also known as Elburgon and Purko, are both subdivisions of the Naivasha district, of whom the former acquired importance by refusing to accept the present Laibon, Lenana, and following instead his brother Sendeyo. Besides these districts, there are four clans representing genealogical not territorial divisions: Aiser, Matgana, Mokonon, and Molelyan. The Aiser seem to enjoy a certain primacy. The medicine men all belong to this clan, which is spatially connected with Mount Ngong (to the south of Kikuyu), also called Ol-doinyo lop-i-Aiser, the mountain of the Aiser.

According to the social system of the pastoral Masai the [illegible] stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circumcised about the same time (see p. 161 for details) are said to belong to the same age, and are known collectively by a distinctive name, such as 'the White Swords' or 'the Invincibles.' After circumcision the warriors plait their hair, but, except for a small skin hanging over the shoulders, and their arms and ornaments (which are described by Mr. Hollis), go absolutely naked. They subsist entirely on meat, milk, and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in separate kraals with the immature unmarried girls, with whom they are allowed to cohabit freely. Tradition[1] (see p. 117) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the diminishing numbers of the race. Besides this, female morality after such a girlhood was naturally low, even when the Masai kept to themselves. Now that they have come into contact with civilization, prostitution and venereal disease have become deplorably frequent. About the age of twenty-seven or thirty, or nowadays when raiding is forbidden somewhat earlier, a warrior marries and settles down. If he

[1] It is said that among the Dinka, Bari, and Shilluk there are similar ceremonies of free love.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

is a man of wealth and importance he may be elected chief[1], in which case he is responsible for the discipline of the warriors and their appearance when summoned to fight, though he does not go to the wars himself. As with most East African tribes an elder's ideal of existence seems to be ease, not unmixed with drunkenness. Proverb No. 64 (p. 249), 'Don't lie with your feet against a post like the father of many sons,' meaning 'Don't give yourself airs,' is a vivid picture of the Masai pater familias taking his ease in the primitive posture of lying on his back with his feet against a post, while his family do all the work for him.

Masai women, unlike the men, are carefully dressed in leather garments, but a rare, and according to our ideas most unbecoming, custom forces them to shave their heads. Before marriage they are circumcised, and signalize their change of state by wearing large circular earrings and necklaces of brass and iron wire. Both girls and women have their legs and arms encased in iron ornaments, so that they can sometimes hardly walk.

This military organization of the Masai made them a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or polity analogous to the kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship and desirous only of military glory. Retirement from this band of warriors as a chief was honourable, but seems to have been recognized as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.

The nearest approach to a central and superior authority among the Masai is the medicine man or Laibon (more correctly Ol-oiboni; see p. 324, &c.). They all belong to the Kidongi family of the Aiser clan, and are said to be descended from a personage called Ol-le-Mweiya, who came down from heaven and was found by the Aiser sitting on the top of Mount Ngong. This was nine generations ago, the genealogy having been preserved. The influence of the

[1] The chief is elected from the warriors, but leaves their ranks at once and becomes an elder.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as difference of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the language of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

Shaving.

Masai elders, women[1], and children shave their heads and eyebrows, and pull out their eyelashes if they enter their eyes.

They also pull out or shave the hairs of the beard, armpits, and pubes, and some singe the hairs of their shins.

If warriors are not in mourning[2], they may not shave their heads until they have held the feast called e-unoto[3], and they grow pigtails.

When a woman gives birth to a child, neither she nor the child are shaved until the latter has four

[113] [171] [174] Sir H. Johnston, in commenting upon this, says (*The Uganda Protectorate*, p. 803): 'It may be this explanation has been invented recently to explain a very ancient custom inherited by the Masai from the Nilotic stock, which was their origin; for amongst these people the removal of the lower incisor teeth is a very common practice.' Hinde's explanation, however, appears to be very widely spread.

[171] [1] This very uncommon practice for women to shave their heads is also followed by the Dinkas, Baris, and Latukas (Cummins, 'Sub-Tribes of the Bahr-el-Ghazal Dinkas,' *Journal of the Anthropological Institute*, June, 1904; and Baker, *The Albert Nyanza*, p. 90, &c.).

Ten edol ol-Maasani en-gerai kiti neitu se-oloñg edol, nenotaki 'ng-amulak, nājo: 'Tubulu, tamoo 'ng-onyek o-'l-orere.'

Naa, ten edol en-gerai neitu se-oloñg edol, nenotaki 'ng-amulak, nājo: 'Torono enna-kerai'; kake ājo to-'l-tau lenye: 'Sidai enna-kerai'; amu āji, ten ājōki ol-tuñgani en-gerai: 'Sidai enna-kerai,' nemweiyu.

Spitting.

The Masai have two ways of spitting; one is used to show contempt, and the other astonishment. Besides this the medicine-men spit when they wish to heal people[1]. 201

If a Masai wishes to show his contempt for another man, he expectorates a small stream of saliva forcibly through the hole in his teeth into the man's face, and says at the same time: 'You are a dog.'

Formerly when the Masai saw Swahilis, they used to spit on the ground and say: 'These coast people stink like fowls.' They never went near them or touched them if they could help it. [177]

When a Masai sees a baby that he has never seen before, he spits on it slightly several times and says: 'Grow, become accustomed to the eyes of people.' 514 789 [856]

When he sees a child that he has never before beheld, he also spits on it slightly, and says: 'This child is bad.' To himself, however, he says: 'This child is good.' It is believed that if he praises a child it will fall ill. [753]

[1] Amongst the Dinkas it is also customary for the medicine-man to spit on their patients (Kaufmann, *Schilderungen*, p. 128). [171]

[2] The name by which the Swahili were formerly known.

How fire is obtained.

When the Masai move and go far[1], the men take with them, or cut on the spot where they intend to stay, a hard pointed stick and a flat piece of wood. They then search for some donkey's dung or dry grass, and produce fire in the centre of the new kraal by drilling the stick into a hole in the wood. When the fire has reached the grass they set light to some leaves of *Cordia ovalis* and throw wood on to the fire. The women obtain their fire from the one which the men have made.

The Masai say that the hard stick is a man and the flat piece of wood his wife.

The hard sticks are cut from *Ficus sycomorus* and *Kleberyia sp.*; the flat pieces of wood from any fibrous tree, such as *Kigelia africana*, *Cordia ovalis*, or *Acacia albida*.

[1] When the journey is a short one the women carry fire with them.

Ol-teigha lino eibuŝgi,
Tin idamu 'ng-aŝgite,
En-barnoti o-'l-Puruo.

Warriors' songs.

When Masai warriors kill barbarians in a fight, they paint the right half of their bodies red and the left half white. [302]

The comrades of those who have killed some of the enemy then sing their praises.

The following is an example of their songs:

Solo. The pig-tail on the top of your head
Is about to be seized
When you remember the kraals,
Chorus. O warrior son of Ol-Puruo.

Free Translation.

Son of Ol-Puruo,
Mighty in battle,
Dost thou remember
The kraals and the cattle
We took from the foemen,
What time in thy daring
We scarce held thee back by
The plaits thou wast wearing?

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

881 561 tive unit, and class, leaders are carefully selected and practically trained. It is from the outstanding senior members of the class, i. e. from those who have come to the fore since the very beginning, that leaders, whatever their function in Masai society, emerge.

881 561 203 The messengers (*ol asai* – message) wear warriors' garments and decorations but no arms. "Their quest is a peaceful one" (WHITEHOUSE). *

Only two of the deputation will be introduced to the class-leader (*oigwenan*) by some of the elders. The message is delivered on behalf [431] of all class candidates to the leader with some presents of honey. The matter is discussed by the leader and his council, and the messengers are advised of the date for the feast.

881 561 It is at this point that, according to WHITEHOUSE, *Endungore* is performed.

The ceremony is started by a dance (*Engibata*) in full array * followed by a prayer to God (*Ngai Nnok* – the black God) for the candidates. The elders then take the candidates apart and instruct them on their duties towards the elders and their seniors generally. As soon as this is over, a fire-stick, a male circumcision knife, and a small dead bird (other than a dove are produced. The elders break the stick, pierce the eyes of the bird and break its legs, and lay a curse on the knife. * In this way, the elders formally lay claim to the sponsorship of a new agegroup. From that time the boys refer to their sponsors as *Il Piron* while the elders refer to the boys as *Il-Piron* * (WHITEHOUSE). Indeed, it should be noted, as FOSBROOKE points out, that though the term *Il piron* is frequently used with reference to the elders, it is a reciprocal term expressing a mutual relationship.

The symbolism of the *Endungore* ceremony is plain: the ceremony closes an initiation period.

When the *Endungore* is over, some of the elders (presumably the *oigwenani*) and three or four of the candidates go with presents to inform the prophet that the firesticks have been broken. They say – *Ol piron lang ole, kiro nale.* "This is our fire stick, we are one", which probably means that a new firestick is used to produce

* It is not clear whether the number of my messengers is fixed. LEAKEY states that the *asai*-boys number from six to well, DAWSON 28, FOSBROOKE 8. Probably no significance is attached to the usual figure.

* Three rows are formed, each distinguished by proper decoration, the first wears ostrich-feathers, the second wear lion-mane head-dresses, and all the members of the third have [illegible] bodies decorated with white stripes.

[101] [illegible]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

fire as a symbol of the new relationship between the elders and the candidates.

The next stage of *Endungore-Engibata* is the election of the unit leader (*aigwenani*). This office is not popular with the boys,[48] and the election is kept as secret as possible from the person concerned. It is not very clear whether the election rest primarily with the boys or with the elders, both have a say in the matter since it is of common concern.[49] The selected person is chosen from the so called *ingopior*, i. e. "those who have shown ability and strength of character during the many debates already held" (WHITEHOUSE). This indicates that he must be a man of talent and personality. Some consideration is also given to the clan and family from which he comes.[50] The appointment is forced upon the boy, but only after the approval of his family has been obtained. The insignia of the *aigwenani* is a black club, which is presented to him by the leader of the elders. Prayers are also offered for the new elect.

The naming of the age-unit takes place now with great solemnity. Not all the candidates are present but only a few of them.[51] These are called *mojengwna*. They take part in the ceremony dressed up in full regalia and painted with red clay and chalk.[52]

On the following day a great sacrifice of two bullocks[53] is also

[48] For the same reason given for the *el opolos*.

[49] WHITEHOUSE states that "the names of possible candidates are submitted to the *il-piron* elders for consideration; the elders do not actually select a boy but prevent any unwise choice being made. The responsibility of making a choice rests with the boys themselves". On the other hand FOX, *l. c.*, p. 450, states that in the first instance the nomination is made by the elders, and if the candidates are dissatisfied with him they may ask for a change. MERKER, *l. c.*, p. 81, states the boys elect one of their number.

[50] Particularly, he must not be a member of the *Engidwapi* clan, the clan of the *laiko*.

[51] According to DAWSON, the *mojengwna* must be 49 if the ceremony is for the "right-hand" unit; 48, if the ceremony is for the "left-hand" unit. These boys must be pure Masai, and must never have killed a Masai.

[52] "The *mojengwna*", writes DAWSON, "assemble in the middle of the village and the *Aigwenani*, having poured honey beer into a trumpet made out of a *kudu* horn, blows two blasts on it and shouts the name. There is no answer as this name must never be mentioned by anyone. He again blows the horn and shouts out another name and is answered by a shout of 'He' from the *mojengwna*. He again shouts out the name and is again answered by a shout of 'He'". The name is later announced to the other candidates by the leader and the *mojengwna*.

[53] The sacrifice of the bullocks (one must be entirely white, the other entirely black!) is ended by great ceremonial. The two beasts are smothered and

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

monies are not performed by some selected individuals on behalf of others, as for *Embolosat* and *Endungore-Engibata*. Also from a territorial point of view all these ceremonies differ. A single performance of *Embolosat*, which opens the class-period, is valid for all Masailand; *Endungore-Engibata*, which opens the unit-period, is sectional; individual initiation is held at each village. The following diagram illustrates the correspondence.

A candidate's age for individual initiation is indicated by FOSBROOKE as 16-17 years. The principle for admission to initiation seems to be that the candidate must have passed his puberty, and his father must have performed " the passing of the fence " as described above. **

Circumcision is the central point of Masai individual initiation. The ceremony is performed in three stages, *a*) a testing of the past moral behaviour of the candidate; *b*) the ordeal of circumcision; *c*) a period of special segregation.

a) On the eve of circumcision day the candidate is completely shaved by his mother. The elders are entertained with meat and beer ** at the house of the candidate's mother. ** Then the elders

** Cases may occur of boys who have to be initiated at an earlier age for some special reason. FOSBROOKE, *l. c.*, p. 38 records the instance of a father's orphan having to be initiated in his early puberty in order to inherit.

** HOLLIS, *l. c.*, p. 297, states that a bullock is slaughtered and called *el-ciropshiniik* — the (animal) that has caused him to be taken out of the boys' ranks. FOX says that a number (4, 6 or 8) of gourds of beer are offered to the elders.

** There is no special meaning in the use of the mother's house. The custom is conditioned by the arrangement of a Masai polygynic village. Every

2: Bernardi E, M-4 (no date) 1955 FL.12 Maasai FL.12

the warriors with milk. This seems to be the feast that MERKER refers to as "the feast of the circumcised boys – *el ngor ld eljuk emurata*". The newly circumcised remain in his mother's house until the wound is healed.

c) At this stage all the newly circumcised assemble from the various villages; they form small bands and go around shooting at small birds with special small bows and arrows. They wear women's clothes, women's ear-decorations (used also by elders) and a special headdress to which they append the birds they kill. During this period they are called *ee ilkidie*, pl. *il-ilkidie* – the recluse, and are under strict regulations: At evening they must return home and enter the village before the cattle. They must not drink blood or cut meat or touch it with their hands. They must not wash. They must avoid girls. They must not fight with, or be struck by, any other: if this happens, milk must be put on their heads. They must not go out in the daytime without their special headdress.

The period of segregation may last for some months. At the end by order of the elders they are shaved by their mothers (hence they are called the shaved ones – *el kerusi* pl. *il kerusi*) and presented by their fathers with the arms of the warriors, a spear, a sword and a shield. It is a peculiar distinction of the initiates to let their hair grow and to twist it into a pigtail of which they are very proud. [10] At this later stage the initiates will be called *el morani*, pl. *il morani*, i. e. those who have been circumcised.

It is generally stated, and apparently even by the Masai themselves, that as soon as a youth is circumcised he becomes a man. The evidence shows clearly that the expression "becomes a man" does not describe the real social status of a newly circumcised. Even if the statement is taken to mean that through circumcision a boy has attained the status of a man, and therefore is entitled to full participation in Masai social life, the statement is at variance with the evidence. As a matter of fact no Masai is allowed to marry soon after circumcision. In order to marry he must be at least a senior initiate, i. e. a member of the senior age-unit. [11] A newly circumcised (i. e. a junior, and to some extent also a senior initiate) may

[10] On this particular custom, cfr. MERKER, l. c., p. 148; BIGNON, in *J. S. and R.*, 1918, n. 34, pp. 80 sq.

[11] The seniority of the age units is discussed in the next paragraph. With reference to the last above we note that even when a senior initiate marries, he is not allowed to beget children, as this is the privilege of the elders. See below, where LEAKEY and FOX are cited.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

[56] when the *oipuonani* hospitable pelvis was recognized as a general leader. [**]

[57] Judicial activity is not a real part of the *oipuonani*'s office. It all depends on his personality and on how much he is favoured by his age-mates, who may ask him to arbitrate and settle their disputes. [**]

The election and the status of the *ewowi*-elders as the ceremonial leader of the age-unit has already been described. A peculiar duty of the *ewowi*'s office is the responsibility " for the exact turn-out of the moran (initiates) ". [**] Merker, [**] and Hirzel, [**] state that the *ewowi* was responsible to the prophet (*laibon*) for the organization of raids. The anonymous author of *M.E.* 63, p. 4, describes [377] him as the *manoni* of the unit when this was at war: " as long as he is alive they (the unit-members) cannot be beaten by the enemy. For this reason they take him on their raids ".

The relationship between the *oipuonani* and the *ewowi* is not clear. It seems certain that the latter has a more ceremonial and ritual character than the former.

The term of office for all these officers is limited to the existence of the age-unit as such; but they will always be distinguished and sought for their opinion.

[58] The analysis of the unit's leaders does not offer a complete picture of the internal structure of the age-unit. This structure rests on two other institutions, namely the *manyatta*, which is the proper

[**] The *oipuonani* was not expected to take part in the actual fighting; he had to be in the rear to govern the action or, as Fosbrooke, p. 36, puts it, " probably because the *laigonanos* were the charm which had been obtained from the *laibon*, and its loss could not be risked ". At present, adds Fosbrooke, p. 36, " the relations between senior *laigonanos* and their juniors are very lax. It is probable that this is due to the prohibition of raiding and consequent reduction of the occasions on which large-scale concerted efforts are required. In the old days when large groups of moran (*ilaikiani*) came together for raids the senior *laigonanos* (sing.) most of necessity have asserted his position, and the others would have obeyed him, to ensure the success of the venture ".

[**] " It appears ", writes Fosbrooke, p. 36, " to be the privilege of the aggrieved party to select his judge... If a local *laigonanos* has a reputation for fairness and justice, he will be called even from a distance, but proceedings are not invalidated if no *laigonanos* is present ".

[**] Fosbrooke, p. 36. So, no initiate was supposed to cut off his pig-tail without the permission of the *ewowi*.

§8| sandals, they chose a handsome shield of buffalo hide,
[704] beautifully made, elliptical in shape, and warranted to stand a tremendous blow from a spear. The price being asked, a bullock was mentioned as the very lowest cost price. But the unfortunate maker had to be content with a scraggy sheep—and a blow. This purchase accomplished—for the Masai never make shields or spears, though there is nothing in the possession of which they pride themselves so much—
§8| they returned to the kraal, and then called for an El-konono.
§63 This is an inferior race kept in servitude to the Masai, for whom they make spears and swords. They do not go to war, and are not allowed to intermarry with their superiors. They all speak Masai, though it is believed they have a language of their own. In response to the call a miserable, half-starved object appeared with a selection of most
§8| murderous-looking weapons. After a careful examination
§11 Moran selected a spear, with a blade two feet and a half long, a wooden handle fifteen inches, and a spike at the end about one foot and a half. The blade had an almost uniform width of from two to three inches, up to near the top, where it abruptly formed a point. A sword and a knobkerry of formidable appearance completed his warlike equipment.

§8| These important acquisitions made, our hero now pro-
[702] ceeded to dress himself up as become his new character. He first worked his hair into a mop of strings, those falling over the forehead being cut shorter than the rest. Instead of the ivory ear-stretcher hitherto used, he put in a swell
[703] ear ornament formed of a tassel of iron chain. Round his neck he put a bracelet of coiled wire, and round his wrists a neatly formed bead mitten. On his ankles he bound a strip of the black hair of the *colobus* (monkey) of Central Africa. A glorious layer of grease and clay was plastered on his head and shoulders. This completed, he donned a very
[704] neat and handsomely decorated kid-skin garment, of very scanty dimensions, which served to cover his breast and shoulders, but hardly reached below the waist, and thus stood forth the complete military master, ready for love or war.

§82 And now the great step of his life was taken. Thus far he had lived in the kraal of the married people, and accordingly had to comport himself as "only a boy." Now he proceeded to a distant kraal in which were none but young unmarried men and women. To keep up his dignity and supply him with food his father provided him with a number

[text continues on p. 250]

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

of bullocks. Reaching the kraal, our friend found himself among a large number of splendidly built young savages—indeed the most magnificently modelled men conceivable. And here let me for a moment pause in my story to indulge in a passing word of description.

There is, as a rule, not one of the El-moran under six feet (I am speaking of a superior class). Their appearance, however, is not suggestive of great strength, and they show little of the knotted and brawny muscle characteristic of the ideal Hercules or typical athlete. The Apollo type is the more characteristic form, presenting a smoothness of outline which might be called almost effeminate. In most cases the nose is well raised and straight, frequently as good as any European's (though passing into the negro type in the lower class, such as Wa-kwafi). The lips also vary from the thin and well-formed down to the thick and everted. The eyes are bright, with the sclerotic whiter than is common in Africa. The alæ are generally narrow, with a Mongolian upward slant. The jaws are rarely prognathous, while the hair is a cross between the European and the negro, rarely in piles, but evenly spread over the head. Hair is scarcely in any case seen on the face or any part of the body. The cheek-bones are in all remarkably prominent, and the head narrow both above and below. The teeth and gums of almost every one are such as I have already described, though I think I have neglected to mention that the two lower middle incisors are extracted. Tattooing is not practised; but every Masai is branded with five or six marks on the thigh.

Such are the main characteristics of the El-moran; but before we resume our narrative let us note a few facts about the young damsels—the Dilim—who are soon to be flirting with our hero.

Happily facts support the verdict of gallantry when I say that they are really the best-looking girls I have ever met with in Africa. They are distinctly ladylike in both manner and physique. Their figures are slender and well formed, without the abnormal development about the hips characteristic of the negro. They share, like the men, the dark gums, and the bad sets of teeth. The hair is shaved off totally, leaving a shiny scalp. As to dress, they are very decent, and almost classical, if a stickler [illegible] — [illegible] anything to do with indigo [illegible]. They wear a dressed bullock's hide from which the hair has been scraped. This is tied over the left shoulder, passing under the right

6: Thomson K-3. (1883-1884)1887
FL12 Masai FL12

726 ever, a party had been sent to the chief lybon of the Masai —Mbaruiten—to seek advice as to the time of their start, and to procure medicines to make them successful. On their return the party mustered, and set off. It was a remarkable sight to behold these bloated young cut-throats on the march, and it is almost an impossibility to convey any clear picture of their appearance in words. The Frontispiece illustration, however, will help to some extent.

704 Let us pause and in imagination watch some enthusiastic
726 young ditto buckling on the armour of her knight. First there is tied round his neck, whence it falls in flowing lengths, the *ukiberi*,—a piece of cotton, six feet long, two feet broad, with a longitudinal stripe of coloured cloth sewed down the middle of it. Over his shoulders is placed
[257] a huge cape of kite's feathers—a regular heap of them. The kid-skin garment which hangs at his shoulder is now folded up, and tied tightly round his waist like a belt, so as
[302] to leave his arms free. His hair is tied into two pigtails, one before and one behind. On his head is placed a remarkable object formed of ostrich feathers stuck in a band of leather, the whole forming an elliptically-shaped head-gear. This is placed diagonally in a line beginning under the lower lip and running in front of the ear to the crown. His legs are ornamented with flowing hair of the colobus, resembling wings. His bodily adornment is finished off by the customary plastering of oil. His sword or sword is now attached—it does not hang—to his right side; and through the belt is pushed the skull-smasher or knobkerry, which may be thrown at an approaching enemy, or may give the coup de grâce to a disabled one. His huge shield in his left hand and his great spear in his right complete his extraordinary equipment. For the rest you must imagine an Apollo-like form and the face of a fiend, and you have before you the beau-ideal of a Masai warrior. He takes enormous pride in his weapons, and would part with everything he has rather than his spear. He glories in his scars, as the true laurel and decorative marks of one who delights in battles.

726 With astonishing hardihood, Mirum and his comrades,
[671] three terribly armed, shaped their course towards Swahili-land; for, strangely enough, they have found that they can lift the cattle with greater facility than [illegible] —in spite of the Swahili guns and a large population. The reason is the complete absence of anything like patriotism or public spirit among the coast people. Their argument

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

885 becoming bald or developing grey hairs, but that he could not take the regulation dose of purgative as formerly. From this, coupled with the fact that he could not take such liberties with his stomach, he gathered that he was not quite so strong as formerly. We can imagine how he would curse his luck and look fiendish on discovering this unpalatable truth. There was nothing for it but to marry, and become a staid and respectable member of society. He had sown his wild oats.

583 Casting about, he fixed upon a damsel after his heart.
885 The preliminaries having been arranged—the number of bullocks to be paid, &c.—she was sealed to him. Then an
[304] operation was performed on the damsel. Recovered from its effects, she had to wait till the calving season, as abundance
[300] of milk is an indispensable requisite in the honeymoon. Meanwhile, she allowed her hair to grow till it assumed the
[301] appearance of an old shoe-brush clotted up with blacking. Round the head she wore a band of cowries from which depended a number of strings, forming in fact the bridal
585 veil. At last the happy day arrived, and the final seal was
885 put upon the marriage by both parties disposing of their chain earrings, and substituting a double disc of copper wire arranged spirally. The lady also shaved her head, laid aside the garment of the ditto, and clothed herself with two skins, one suspended from the waist the other from the shoulder. Strangest of all, however, and strikingly indicative of the fact that he had exchanged the spear for the distaff, Moran had actually to wear the garment of a ditto for one month. Just imagine what fun it would be in this staid and dignified country of ours, if a young man had to spend his honeymoon in a cast-off suit of his wife's maiden clothes. What our friend's feelings were in this guise, I do not know, and this veracious chronicle does not admit of conjecture.

And now Moran's sole idea was to rear a brood of young
885 cattle-lifters, and so that he got them, he was not very
[302] particular as to the manner of it. He was not jealous, asked no awkward questions, and employed no spies. If a friend should visit him, he was hospitable in a degree not consistent with a high level of morality. We shall have prudently follow his example of non-inquisitiveness; for we might find that the domestic affairs of our friend's household will not bear a too curious scrutiny.

885 He was now wholly a changed being—as indeed who is
262 not when he gets married! His strict rules of diet were

But the launon is held in great respect by his age-mates, and any demands that he makes on them must be fulfilled. It is stated that he is the only official whose order must be obeyed. In discussing this with an elder, I pointed out that this should give the office great political importance, in reply to which the elder indicated that such did not necessarily follow, as "we an always tell the launon what order to give!"

Hollis state that the launon is responsible to the laibon for the appearance of the moran in case of war; this may well have been so in the old days, for it is generally admitted to-day that he is responsible for the smart turn-out of the moran. Thus unless in cases of sickness or mourning, a moran is not supposed to cut off his pig-tail without the launon's permission. It is alleged, however, that the office is losing its status and authority, for whereas the Dareto age launon is supposed to have gone on frequent 'tours of inspection' and to have inflicted many fines, nowadays many Kisale shave their heads without consulting their launon.

During eldshood, by virtue of his previous position, the launon is still held in respect, though no specific duties seem to attach to him. He may perhaps ply some part at the unoto and ngeherr ceremonies of the age next-but-one- below, by virtue of the ol piron relationship.

Another official chosen at the unoto is called *ol buro engeni*, who splits the skin of the ceremonially slaughtered ox. He is given four or five cattle as a fee, and in after life is held in respect, but appears to have no duties.

At the ngehar ceremony, an official, the *Loserutye*, is chosen in respect of the whole generation, whose position corresponds to that of the launon at the unoto. As there is only one ngeherr ceremony for all sections of the Masai, so there is only one loserutye. No duties, but considerable respect, appear to attach to the office in after life.

If however there is to be no left-hand circumcision the *Il piron* elders arrange to hold the fire-drilling ceremony. 561

This ceremony finally binds together the *Il piron* elders and their moran charges. The warriors and the *Il piron* elders decide on the suitable site for the first warrior village. The warriors, together with their mothers, sisters and cattle move in close to the site chosen and for the time being occupy any deserted village in the vicinity. When the warriors announce that they are in readiness, the elders give orders that on the morrow all the cattle are to move to a new village. Next morning at sunrise, the *Il piron* tell the warriors to bring the heifers, four sorie, four calves (all black). The heifers must have perfect eyes, straight tails, each must have four teats, in fact they must be perfect in every way. The warriors must find also a young bull, either a black one, or a fawn one; it must be perfect in eye, have erect horns, and its dam must still be alive.

The warriors are warned that after the ceremony, the bull must not be castrated, or sold, or slaughtered for food.

The nine cattle having been selected, eight moran are called for, and eight girls. The warriors must have unblemished eyes, must not have killed a Masai, or have committed any serious offence against tribal laws; also they must not all be right-handed. [528]

The girls, too, must be free from blemish and must not have reached the age of puberty. The warriors don a short coat of black calf skin, make a circle of white round the eyes, down each cheek meeting under the chin, and each carries a bow in his hand. The warriors and girls then drive the cattle to the centre of the chosen site and prevent them from running away. The rest of the warriors watch this proceeding until as soon as the ceremonial bull and the heifer have taken up their positions; the remainder are driven forward to the waiting group. The warriors then seize the ceremonial bull by the horns and twist its head so that the right side of its face is uppermost. A piece of hide which must have been cut from the back of an ox which when slaughtered was found to be in perfect health, is then placed on the bull's upturned face. The *Il piron* elders who performed the first ceremony were dressed in robes made from sheep skin. New fire-sticks are then produced, placed on the bull's cheek and fire made by drilling, by the *Il piron* elders. [512] [512]

The smouldering charred wood falls on the hide, pieces of frayed outer bark are added, and the glowing ember is blown into a flame, when a fire will start with dry clean wood. The fire is then placed on the ground in the centre of the village; the place is given the same name. Large pieces of wood are added. One elder is then left to look after the fire whilst the others walk in a circle round the assembled

THE COIFFEUR OF THE MASAI WARRIOR

By H. F. I. Elliott

308 It is surprising to find that in Hollis' standard work on the Masai there is no precise description of the head gear of the 'morani' or warrior. No doubt the fashion has been described somewhere, but some details of present day practice in Tanganyika Masailand may perhaps be put on record here.

Of all the distinctive features of the Masai, this is the one which attracts most attention from the casual traveller and invites references to 'Roman Centurions', 'Red Indians' and the like. Its advertisement value is certainly considerable and not ignored by the Masai in their conscious [186] or unconscious efforts to preserve their identity. Certainly removal of the coiffeur and its concomitant red ochre has a surprising effect in [149] obliterating Hamitic characteristics of feature and bringing out those derived from the now liberal admixture of 'Bantu' blood.

561 It is still so customary for youths after circumcision to adopt the 302 traditional garb, even though they may be sons of progressive parents 198 and themselves have been to school, that there might well be an 'old school pigtail' for graduates of the Masai school. It is by no means unusual to hear a pair of pig-tailed and ochred 'morani' discussing their performances in some inter-house football match of their school days, while leaning on their spears in the precincts of a cattle market.

302 There are many variations of head gear to be found in Tanganyika, one, two, three or more pigtails, the 'ridged helmet' style, heavily plastered and loosely braided styles, but it seems to be purely a matter of fashion and not linked with clan, section, age set or even locality (except in so far as fashions naturally tend to be localised). The construction of all is basically the same and the result is covered by the single term 'Ol daika'.

The materials used in the head gear are as follows:

[324] (i) a length or lengths of pliant but straight stick one foot to fifteen inches long, cut from the tree known as 'Ol-ailati' (*Tamarindus indica* L., the name is also applied to the shrub *Grewia* which may serve the same purpose at highland altitudes).

(ii) a strip of the inner skin of a sheep an inch wide and two or more feet in length.

[325] (iii) several feet of fine string made from ox gut or tendon.

[324] (iv) a foot or two of cord made from the 'olorenti' tree. This tree is, I think, correctly identified by Hollis with a species of fig, *Ficus Sycomorus*, the cord being prepared from the aerial rootlets. But there is some doubt in the matter which perhaps a reader of this note may get an opportunity to clear up. For Bartlemewie

HAIR GROWN READY FOR PLITAIL.

STYLE OF PLITAIL MOST COMMON IN
NAIROBI AREA

[Facing p. 61]

(Common Trees and Wood Plants of Kenya Colony) gives the Masai name of *F. Hochstetteri* as 'Ol-sebit' and identifies 'Ol-retel' (the name used by my informants) with a small tree growing on highland forest edges called *Maesa lanceolata* Forsk.

(v) Fat, sheep fat for preference, but otherwise the best bovine rib fat.

(vi) Red ochre (*el Kerte*).

(vii) Ornaments, usually comprising a metal clasp, wire bangles usually strung with coloured beads (*enginik*) and double-lobed copper weights (*esekerwa*).

The method is as follows: The hair is grown until it hangs on the shoulders, that is, about nine inches long. This is done naturally and only in exceptional cases has to be shed out with cow hair. During the growing period the hair usually remains in a mop, but occasionally is braided into short pigtails.

As soon as the necessary length has been reached, the hair is parted transversely across the top of the head, that is at right angles to the European fashion. The largest portion, that at the back of the parting, is painstakingly twisted by hand into braided strands which are then grouped round the end of the 'stick' stick or sticks (according to the number of pigtails to be worn) and lashed on with the gut string. The ends and hair ends are then bound neatly with the sheep skin strip so as to taper to a point.

The hair in front of the parting is divided into three equal portions and braided. The ends of each portion are bound together with gut string. The two side pieces which fall in front of each ear are then tied together by a cord under the chin, tight enough to hold them flat against the face. The central forelock is finished off with a metal clasp.

If the warrior wishes to wear the ultra-smart 'helmet' style, the single pigtail is brought forward over the top of the head and its tip bound to the tip of the 'forelock' but as the pigtail stick is pliant and would therefore pull the forelock up, the latter is bound down by a further cord, passing across the forehead and tied at either end to the tips of the 'side-locks', which as we have already seen are firmly tied down to the face by the chin cord. As soon as the pigtail is securely fastened in the ridge position, the whole outfour is liberally coated with fat, tinted with *redwoodite*, and the 'helmet' effect is complete.

The wire bangles with coloured beads pass through the top of the ear, and the copper weights are of course suspended from the earlobes, which have been carefully lengthened during many years of pauls — initially by the insertion of wooden plugs. In extreme cases the ear lobe has been so stretched that if it is desired to get it out of the way, it can be hitched right over the crown of the head onto the opposite ear!

300. The fur-plastered 'helmet' collect : open to the objection that it soon spoils in the rain and the wearer adopting the style will have, if the weather is at all doubtful, a 'rain-water' attached round his neck and dangling down the back of his vest. This is a little band of finely prepared skin from a goat's stomach and gives full waterproof protection to the head-dress in case of need.

[Pl. 11]

301. In fact, however, the 'helmet' style : heavy and uncomfortable with its tight forehead string and is worn for special occasions and short periods only. The fur is then washed off, a sheep put back on the forehead and the pigtail left to dangle comfortably or be divided into several smaller and lighter pigtails, the hairs of which are arranged symmetrically so that the pigtails tend to fan up instead of hanging closely together.

Kenya

[31] As only those candidates who belong to a given village may be operated on in that village, it is seldom that there is more than one circumcised at a time, but should there be two or three candidates belonging to a single village they would be circumcised together on the same day at the same time. There is no elaborate ceremonial accompanying the operation or preparatory to it. A boy will continue herding his cattle until the late afternoon of the day before that fixed for his circumcision. He is then fetched back to the village and has his hair shaved off by his mother, and has new sandals and a new skin dress given to him. This dress must be made of the skins of four cows sewn together, and will be worn the following day during the operation. The actual operation takes place next day, either early in the morning or in the middle of the day. If it is in the morning, the cattle are kept in the yard until the ceremony is over, but if it is in the middle of the day the cattle must be brought into the yard and kept there during the ceremony, for it is absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony. Sheep and goats are not included in this rule. The boy (or boys) sits on an ox-skin in the courtyard in front of his mother's hut wearing his new cow-skin dress and sandals, and the operator performs the operation with a special small knife without any elaborate ceremonial. The boy then retires to his hut to convalesce. A fat cow is killed for the patient, who is fed on meat boiled in fat and on plain cold fat, "so that he may get well quickly." After about five or six days the other boys in the district who have already been circumcised and have recovered, call for the boy, and he joins their band for the period of their novitiate.

[32] [33] *The Novitiate.*—The period of novitiate varies in length of time, as a boy must remain in the novice stage from the time that he is circumcised until every other candidate has been circumcised too. Usually a period of about two years elapses between the time of the bull-eating ceremony and the time when the last candidate has been operated upon. Then the group undergoes the hair-shaving ceremony which marks their transfer from the novice stage to the warrior stage; thus, the last few to be circumcised may only have a few weeks in the novice stage, while others may be about two years in that stage. During the novitiate, there are certain rules and regulations which must be observed by the novices. They wander about the country in bands armed with bows and bird-arrows visiting more especially those villages where they hear that both candidates have just been circumcised, and relieving them in their groups. During the whole novitiate period the novices wear a skin cloak, which is left off, when being [illegible] any form of sexual intercourse, nor may they use evil words, but only plain fat on their bodies. They are required to shave as many birds as they can, and to skin them and stuff them roughly with grass, and tie them to their hair as a decoration. More and more skins are added to this head-dress as the weeks go by, until at length a boy has a complete wig of stuffed bird skins. Certain birds must on no account be so used, notably birds such as pigeons, doves, and

11: Leakey E-5 (no date) 1939 FL.12 Masai FL.12
Kenya

551
541

Ensoriki. These bird skins, once fixed to the hair of the head, may not be removed until the general hair-shaving ceremony, when the hair of each novice is shaved off with the skins attached. During the period of the novitiate the boys are known as *ildurian* and are free to go anywhere "like women," and, in fact, may even visit the *manyatas* or warrior villages of the existing warrior groups with impunity.

There are special dances, called *esiapiko*, which are danced by the novices alone. [535]

551
541
542

The Shaving Ceremony.—When at length all the candidates have reached the novice stage, the shaving ceremony, which marks the end of the novitiate, takes place. For this ceremony the novices are assembled in territorial groups, and each boy has his hair publicly shaved off by his mother (or in the event of his mother being dead, by another of his father's wives). This shaving ceremony is accompanied by the killing of a ram for each novice, after which his father presents him with a spear, shield, sword and headdress, which are the insignia of his new status as a warrior. [531] [532] [534]

The new warriors now form themselves into groups, and organise the building of villages, which will be their headquarters. These villages are the *manyatas* of the warrior groups (see below). [535] [536]

Part III.—Warriorhood.

The Age-Group System.—The general word *ilmoran* means an age-group in general, and this word is liable to cause considerable confusion unless very great care is taken, as it denotes in a general way several widely different forms of age-groups. All those warriors who pass from the novice stage to the warrior stage at the same time—in fact, all those boys circumcised between a single re-waiting ceremony and the succeeding hair-shaving ceremony—are grouped as members of a single age-group which is given a name which lasts for life. Besides this permanent name, however, the age-groups during the warrior stage are known by the alternating names of *jenjimakor* and *manyapilunge*. [54]

There may never be more than three age-groups in the warrior class at the same time; and also, a group with the name of *jenjimakor* must always be the senior warrior group. This, in effect, means that a single age-group cannot be transferred from the warrior class to the elders' class, but that two groups, a *jenjimakor* and a *manyapilunge*, must move out together, leaving the next *jenjimakor* as senior age-group in the warrior class, and temporarily the only age-group in the class. As soon as the two senior groups have moved out together, the next group, already in the novice stage, transfers into the warrior class with the name of *manyapilunge*, and in due course yet a third group will be initiated and enter the age-group as *jenjimakor*, after which no further transfer of a novice group can take

FL 12 FL 13 FL 14

in of animals. It is apparently this fact which explains why there are so few cases of unchastened girls conceiving despite the Masyoko sexual organization. My informants insist that cases of conception only occur when a girl has been persuaded by a man to have full intercourse just after her menstruation. It is quite easy for a girl to see to it that she does not have full intercourse if she does not want it, since there are always at least two other couples sleeping on the same bed, and there is also always a married woman in the same hut to see to it that no force is used by the men.

(For details of procedure should an unchastened girl conceive, see Childbirth.)

FL 14 FL 15 FL 16

Permanent Lovers.—Besides the usual day-to-day lovers described above, a girl may also have a more permanent lover in the sengete in which she lives, chosen from among the ranks of those who have been her usual lovers. The actual choosing ceremony takes place in public, but the choice is usually made privately beforehand. This permanent lover in some cases will eventually be the girl's husband, but this is not usual, as nearly every Mawi girl is betrothed during childhood (see Marriage), and usually girls are quite content to marry those to whom they were thus betrothed. Should a girl be unwilling to marry the man to whom she is betrothed she usually continues to become pregnant by her "permanent lover" and to persuade him to marry her (see Childbirth).

FL 17

The actual ceremony of selecting a "permanent lover" takes place as a public affair. A group of the warriors, including the man, collect together and one of the man's friends then summons the girl and hands her a spear, and she is told to go and give it to the man she chooses as "permanent lover." Having thus been publicly accepted, the warrior from then on becomes responsible for supplying the girl with such ornaments and necklaces as she may need from time to time, and he also gives her a special necklace to be worn as a token. After this ceremony she continues as before to sleep with any of the warriors who may ask her to do so in the way detailed above (see Sex Life). Equally the men may sleep with any of the other girls, but the girl and her "permanent lover" can arrange to sleep together without adopting the usual formula and procedure.

FL 18 FL 19

The Kwanto Ceremony.—After nine years of Junior Warriorhood a big ceremony called *Kwanto* takes place, at which all the members of a given group from the whole of the Mawi country, north, south, east, and west, are required to be present. This ceremony marks their *first* promotion to Senior Warriorhood. During the whole of the nine years of Junior Warriorhood they have not been allowed to shave their heads at all, but their hair has been gradually tied and twisted into a long pigtail at the back of the head, which is the sign of Junior Warriorhood. (The only exception to this rule of not shaving the head during Junior Warriorhood is in case of seven illness, when the head may be shaved (Use dates).)

[56] the nine days the elders in charge of the ceremony go about looking out for two
[96] warriors from the group noted for their humility and honesty, and having selected
them they keep their names very quiet, as the position for which they are being
chosen is not an all sought after. In fact, as soon as the selection has been made,
the relations of the two men chosen are heavily bribed in order that they shall
allow them to be appointed.

[56] *Shaving Ceremony.*—On the tenth day of the ceremony the heads of all the
[62] warriors of the age-group are shaved, and during the shaving the elders come and
point out the two warriors whom they have chosen, and publicly proclaim them as the
[96] heads of the group during its time in the senior warrior stage. These two men are
called respectively *olaiguenani* and *olaiwanpuo*, and there are certain very strict
regulations and restrictions attached to their position, the breaking of which would
result in punishment by death; hence the unwillingness of the warriors to be
chosen for these appointments, and the bribing of their relations. Unfortunately,
no information about the duties of these two, or of the restrictions which they
must observe under penalty of death, could be obtained from my informants. After
[56] the shaving ceremony is over and these two have been appointed, the warriors go
back to their normal life; but before doing so they first go all together for a few
nights to a new village built for the purpose called *ngang'ungwiki*, and from there
[56.1] they scatter to their own districts. They may not, however, return to their old
manyatta, which they vacated when they came to the *Emuro* ceremony, but must build new manyatta.

Becoming Elders.—The length of time spent in the senior warrior class depends entirely upon whether a man belongs to an age-group called *jumjumber* or *mwatapelange* (see the *Age-group system*). Transfer from the senior warrior stage to the *Elders'* stage takes place as a group transfer, but one age-group cannot transfer alone, but always two groups, a *jumjumber* and a *mwatapelange*, must transfer together. No transfer, therefore, can take place until there are two age-groups in the warrior stage who have gone through the *Emuro* ceremony. Once there are two such groups in the senior stage the actual time of transfer is dictated by whether or not there is a new age-group waiting in the novice stage ready to move up into the junior warrior stage, for as stated above (see the *Age-group system*), there may never be more than three age-groups in the warrior stage at one time. Equally no two warrior groups may move out into the *Elders'* stage until there is a new age-group in the novice stage, or otherwise it would mean having a single age-group alone in the warrior stage for too long, and this would be a serious thing when only the warrior groups are the fighting forces of the tribe. The actual transfer from the senior warrior stage to the *Elders'* stage takes place without any ceremonial, and the men just leave their manyatta and go and live with their wives, with whom as yet they have never lived, although the wives may be mothers with several children (see Marriage).

11: Leakey E-5 (no date) 1930 FL.12 Masai FL.12
Kenya

from having the honour of the feast of her initiation." Should the man decide to marry the girl, this heifer is counted as one of those which must be handed over for the marriage transaction (see Marriage). 848 582 884

Girls' Initiation.—Among the Masai girls are initiated singly and not in groups, nor are they initiated until a good many years after puberty, for as soon as a girl is initiated she must be married, and cease to have any intercourse with the warriors or boys. Except under the circumstances described above, a girl is not initiated until her breasts begin to droop to a marked extent. As soon as this is noticeable, her mother informs the father, who makes the necessary arrangements. If the girl's mother is living at the time at a *manyatta* with one of her sons, then the girl's initiation will take place at the *manyatta*, otherwise it will take place at the home village. The essential point is that initiation must take place in the mother's hut (or in the hut of another of her father's wives, should her own mother be dead). The father comes to the place when the day of the ceremony has been fixed and beer is prepared. A ram called *ekiduijuke* is slaughtered either before the actual operation or just after it. This is the "ram for childbearing," and is supposed to insure fertility. [825] This ram is eaten by all those present at the ceremony. The actual operation is performed by an old woman, who is a skilled operator (she may be either a Masai or a Dorobo), and the girl sits on a skin inside the hut during the operation. [304] The operation is said to be the same as that used by the Kikuyu on their girls, and this is a form of clitoridectomy, but exact details cannot be obtained from the men. [191] As soon as the operation is over the operator washes the girl to "cleanse her of the blood spilt" and a ram is then slaughtered and given to the operator. This ram is called *ekiapuat*. Next a ram is killed called *ekiduiatar* to provide meat and fat for the girl during convalescence. 584 582

Shaving Ceremony.—Finally after the girl is healed and before she can go to her husband's village, a ram is killed called *ekiwrat*, which is the "ram for the shaving," and at the same time the girl's head is shaved by her mother. [302]

Part V.—Marriage.

Exogamy.—Marriage is always exogamous as far as sub-clans are concerned, but marriage within the main clan is allowed. This rule not only applies to marriage but to all forms of sexual intercourse. No one, whether as a boy, warrior, or a married man, may at any time ever have sexual intercourse with any woman, girl or child of his own sub-clan. This is the strictest rule of all Masai sex regulations, and the penalty for any breach of this rule is very severe indeed (see below). 592 614 834

A woman remains a member of her own sub-clan even after marriage, but her children belong to the sub-clan of her husband. 614 885 861

Betrothal.—Amongst the Masai there are two usual methods of betrothal:— 584

(1) Betrothal of unborn children.

(2) Betrothal of infant girls.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

warriors may have sexual relations with initiated women. This is regarded as being the first stage in a warrior becoming an elder.

The warriors have their heads shaved—usually by their mothers—at the close of the *E-Unoto* ceremony, but they allow the hair to grow again, and plait it into a pig-tail when long enough.

Milk Drinking by Warriors.—A warrior may not drink milk unless it is handed him by another of his age-group. They must therefore always go about in parties of two or more. The procedure on arrival at a village where they want some milk is as follows :—

The warriors enter the village and stand in the open space within the circle of the huts till one or more of the old men comes to greet them. They ask for a hut of their age-group, or, failing that, a hut of an elder of their *Ol Piron*. On being shown a hut to enter they go in and sit down on a bed or the stool, and wait till milk is handed to one of them (for description of hut see p. 402 ff.) He shakes up the milk, removes the cap of the gourd, and hands it to his companion, who drinks it. If only one gourd is brought they share it, handing it from one to the other. If a second gourd is brought the warrior to whom the first gourd was originally handed may open it and drink it himself provided that he has given the first gourd to his companion. Belching after a drink of milk is a sign of repletion and is good manners, showing the guest's appreciation of the hospitality of his host.

Ol-Ng'esher of Milk.—This ceremony is performed by each warrior individually. He is given milk by an elder in his mother's hut, and drinks it by himself. He shaves his head and does not grow a pigtail again. Thereafter he may drink milk by himself. He usually marries very soon after this ceremony, and is no more regarded as a warrior after it. The ceremony usually takes place nowadays a year or two after the *E-Unoto* owing to Government policy of reducing the period of warriorhood as much as possible. In the Purko, most of the *Il-Sidanak* have already performed their milk *Ol-Ng'esher*, although there is as yet no left-hand age-group for their generation.

I have heard it said that in some tribes there is a ceremony of handing over warriorhood from one generation to a junior one. Among the Masai there was no such ceremony. When the young warriors of a new generation became strong enough they fought and defeated the old ones, taking on the warriorhood by force.

Meat Feasts.—No man may eat meat which has been touched by an initiated woman until he has performed the second *Ol-Ng'esher* ceremony, called the *Ol-Ng'esher* of meat. After that he may eat meat which a woman has touched if he likes. The Il Meruturut and Il Kitoip age-groups of the Purko were said to be going to have their meat *Ol-Ng'esher* in June, 1930; but I left Africa before it was due, and therefore cannot describe the ceremony.

A man of the generation immediately older than the warriors must not be seen eating or drinking milk by a warrior until one of the warrior age has given him a heifer.

[P. 466 - B]

Wearing the Gule bale in pigtails, of tailor; other people of both sexes shave their heads periodically. In both sexes the ear-lobes are pierced and elongated, and the two lower middle incisor teeth are removed. Cicatrical patterns are often made on the upper part of the body in both sexes.

Iron-work

Iron is used for weapons (spear and sword of warriors, and arrows of elders), axes, knife-blades, razors, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and war-club, separate the Masai and Samburu culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great "shovel-blade" with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged war spear is important: senior warriors have black shafts, others reddish ones, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that arises between senior and junior warriors. The sword has a long narrow blade and is kept in a red leather sheath attached to the belt. The winged spear-blade and sword have been borrowed by the Sambu, Kipsigis, Kuyo, Kony and others of the Sambu division, together with the war-clubs; the Elkeyo have imitated them.

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 3 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 266 is correct) about 1 ft. in diameter. Shields are cut out of a solid block of wood and have three legs. Horns are used for summoning people, but there are no musical instruments or drums.

Beliefs and Religion

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of *Enk-ai* (the Masai word for God, rain, and sky). As to ancestor-worship, it is generally said that the Masai do not believe in an after-life (and also of the Sabi); but the alleged belief that the soul of a fallen or sick man turns into a snake implies some belief in the survival of the soul. This matter needs further investigation; and Merker's statement that each Masai is taken to paradise by his guardian angel and let in by *Enk-ai* if he has been good is alien to Nilo-Hamitic thought. *Enk-ai* is recognized as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both *Enk-ai* and Mastamy, the fallen who died c. 1900; thus Thomson heard the Il-Kiteyok prayers to *Enk-ai* and Mastamy, and the Sambu war dance after a victory, recorded by Hollis after Mastamy's death, contained also an invocation to *Enk-ai* and Mastamy. The "minor deity called Sotonkok" which Thomson thought was an earth-spirit, appears in Krapf's book as the Sotonkok, "the mediator between God and men." But the Masai word *sotonkok* means no more than "that which keeps the earth," and this would seem really to apply to *Enk-ai* in his role as creator. *Enk-ai*, god, is grammatically feminine, and his wife *O-ngie*, the moon, is grammatically masculine.

Death and Burial

The bodies of most people are put out for the hyenas, to the east of the kraal, and laid on the left side so that the face looks eastward, with the legs drawn up, the head supported by the left hand, and the right hand across the breast. The

[illegible] ceremony of old, "I am the son of Tawaki-ko," and "I am the son of Kuki-nui-hale" and drew their breaking wave into the ceremony. They fill their gourds with [illegible] and their women home and are covered with great ceremony at Manai village on [illegible], being fed on a few numbers of milk and water, known as "blue water."

Once pointed, the young men formed into two columns, some [illegible] apart, and marched to the village. Many were [illegible] and some the lava-mass caps. Around their waists and ankles they wore gaily coloured lengths of cotton and braided flying around concave-shaped bells in their thighs. The clashing of the bells was deafening. This ceremony pressure in the village is carefully planned so that the young men do not have to walk through or near any water or cross a stream. On entering the village, the columns counter-marched, then joined together into double file and entered the green. As they passed, their mothers called out: "Bakapuli!"—"Blue water!"—but many of the women were busy attending to their decorating fan. There was a number of very violent men as soon as the columns had joined within the circle of houses. Then the columns split up into groups and marched back and forth across the green, each group [illegible] to an elder blowing a bone horn (one of the very few Manai [illegible] instruments). Here and there two groups would halt and, forming line, faced and bow to one another, or to the O-Gogoro fan.

Due to the afternoon of this day the members of the so "pure and clean" their own bands. All the hair, eyebrows, eyelashes, is removed by means of a specialist Manai razor. Milk is used as glue of soap. Whilst being shaved, each young man squats in front of the fan on the ceremonial hale on which, as a fan, he will sit in the ceremonial, and which, in future, will form the top front of the mother's hut. A hale of the fan from the O-Gogoro will be fastened to the top of their mothers' hale, the remainder being thrown into the will green which form a part of their hands. Great care is taken that none is left lying about in the open in the hale should any of the hair—a great affront to the young man's sacred cult.

During the course of the day the bamboo and a night hale, with between the houses were replaced with new ones bearing green leaves. This is a symbolic act, meant to ensure that the dance may flourish as "green fan" were.

The third day is called "The Day of the Sacred Fan." During the morning a hale, a gift to the O-Gogoro from his father, is drawn into the hale and daughtered. The second, called "The Love of the Night," ends in a hale-raising, well hale, and dark with a white [illegible] all the young gathered in the daughtering place in ancient dark tags from "The Latter-up of the Hale," while their families remain in the village in an atmosphere of great expectancy.

Late in the afternoon the hale of the young, naked and still covered with decorations, were running back to the fan. There is blowed a deafening welcome from the family, where in their hut is a hemispheric pavilion erected and around the sacred fan. Inside the whole place was full of young hailing their families around the O-Gogoro, everyone dressing and highly excited. Each young man wears, on the third finger of the left hand, a ring from the hile of the O-Gogoro's hale. These rings are really solid rings of hale shaped from mother hang with a hale over one end to take the Gogoro's finger. After a time, the "pure" are covered, their shaved heads glistening, white circles of decorations like spectacles round their eyes and garlands of green leaves round their necks. This hand is a group near the O-Gogoro while the O-Gogoro was hit to be late. In front of the dwelling was placed the hale on which he had sat to be shaved, and on this was set his daughtered [illegible] and also to relatives was was present a quantity of [illegible] with fat leaves. The O-Gogoro, who accepted all was conscious of the will of engagement, then sat on the stool.

Fig. 1. Wawi woman from below Wilangoro.

[illegible] That various rumors of dazu and words of their language also found entry among the Bagoma fellows independently.

While some travelers recognize at least a certain relationship between the three branches, others claim to have observed such great accurate differences between them that one might be doubtful about their racial unity and ask oneself whether the Wakwilla and the Wabwali of certain colonies should not be counted among the Bagoma. This error is explained by the fact that these travelers have come into contact with them only superficially. [illegible] these contributors going too far from isolated individuals to the generality, so that they regarded the Wabwali, strongly mixed with Bagoma, as pure, and Bagoma strongly mixed with Wawi blood as Wabwali.

Ill. 5. Young Ibanes. I and 4 pure-Ibanes, 2 mixed with Negro blood, 3 doubtful.

The Ibanes's protection

when convinced of their innocence by giving up their roving life, whereas the Wondandies, by sacrificing their lands, were able to continue their limited nomadic life as hunters; and neither of them needed to beys the great dim.

/10/ Even though, in general, one should be very careful in attempting about drawing conclusions from linguistic frames, it seems permissible here, on behalf of the three branches belonging to one people, to point to their language as well.

As a matter of fact, we find the same language among the Ibanes and Wokuafi, with the limitation that for the latter, with the great number of Ibanes dialects, sometimes this one, sometimes that one is their own, according to the location of their area, whereas the very widely ranging Ibanes probably understand almost all the dialects. In addition, for the Wokuafi, in places, according to the degree of their mixture with Negro tribes, a language of the latter's is more or less familiar. Of the Wondandies, the Ø generic speak only the language of the Ibanes, whereas the Ø and

recovery from this pain. Mbwiyas owned outstanding work through the discovery of a protective vaccination against lung disease of cattle. According to the corresponding accounts of Zambo and four old women, Mbwiyas, several years before his death, had already prophesied the appearance of Kadenpan that did not take place until after it and the subsequent subjugation of the blood by Europeans. In the outward appearance of his own nothing divulged his power. On a thin, average-sized figure sat an ugly head whose face was disfigured more particularly by the lack of one eye — allegedly a blob defect. This bore circumstance led to the origin of the legend that the chief must always be one-eyed and that the father should destroy in child-hood one eye of the son later following him. The face was even more repulsive because of a scanty, slightly gray full beard. That is, in contrast to the other men, neither the *ci ciheni* nor the *ci gaiwah* and *ci ishwalla* mentioned further below may pluck out their beards, because they would lose their supernatural power through the removal of the beard hairs.

The chief's village consists of a large number of huts lying close together, several of which serve as the dwelling of the *ci ciheni* with his numerous wives. Mbwiyas had about 100 wives; the still young Zambo has only 30 of them. No escape was may enter from dwelling huts of the chief and his wives or appear in their immediate vicinity. Close by are found the rest of the huts, one of which is intended for conferences and receptions and in which a few elder men close to the chief as helpers and advisers (*ci Kalgaiwah* chief of *ciheni*) live with their families, whereas the others are occupied by warriors who form the defense of the village and, on the mandate of the chief, his bodyguard. In his last years of life, when Mbwiyas was mentally disturbed, he often spent months on the open steppe in a small hut made of branches, around which the warriors accompanying him camped in a large circle. The ceremony in the chief's camp is very simple. One of the men watching about city in the village leads the newcomer into the conference hut, where he waits for the chief. As soon as the latter appears, the stranger

[illegible]

[illegible] People gather in the vicinity of the bride in the cool morning hour under a large shade tree, to which each of the participants brings something edible and potable, a dumpling, a goat, a pot of honey, a calabash of milk or honey beer. The children belonging to the family of the bride and to her relatives drive up a herd of cattle belonging to the bride's father. The herd of cattle is immediately slaughtered to feed the guests. Bride and groom are formally adorned, that is, shave all [illegible] collect on the upper body and head with a paint made out of beef fat and red ochre. These present sit in a large circle, one half of which is formed by the bridegroom with the men and the other by the bride with the women and children, so that the bride and groom are opposite each other. Whenever the guests partake heartily of the food, the bridal couple may not take anything because they would become sick from it, would get a rash around their mouths, but rather they must have patiently a flood of good teachings and advice. After finishing the banquet and the dance following it, which does not cease to an end until shortly before midnight, everyone returns: the bride goes with her mother into the father's hut, the bridegroom together with other women into another one. On the following day people again assemble for dancing. On this day only two dances are slaughtered: the bridegroom brings one, his father-in-law gives the other. Women and girls rub their bodies and skin spices with the fat of the animals. After the meal the bride is handed over to the bridegroom and the two move into their own hut, to which the man's mother brings a small child from the neighborhood. The man takes the child from her and puts it on the lap of his wife, who gives the child milk to drink out of a gourd bottle. This ceremony is supposed not only to impose the milk for someone pregnant, but it is also believed that it has the magic power to bring them forth.

In some regions it is customary for married people to remain together immediately after the wedding, and the wife may not leave the hut either on the wedding day or for the following five days. In other the wife goes for a time, 30 days or two months, to her mother or mother-in-law, or, if her husband already has several wives, to his principal wife, in order to be instructed in the work of the household and, with the help of her betrothed, to build a hut of

[illegible]

(CCC) Names — Male and female names. — Meaning of the names. — Giving names to male individuals, function, examples of names. — Giving names to female individuals, function, examples of names.

551 A great part of the names used today is of ancient origin. Some have written or an unnamed man, whose perhaps or old man has known or who lives on only to relate, had a certain name, which is then given again and again to children or adults. Its meaning is not known, perhaps that here was also named after another, without anyone's knowing an explanation for the meaning and origin of the name. Other names are derived from origin, dreams, experiences, — physical or character traits, times, etc., or signify fantasy or, finally, refer to personal favorites in food, clothing, ornaments, and weapons. In these names, too, the attachment to the old can be recognized, since the designations from which they are formed are often no longer used today or old and also are only little known. Male and female names are known, and others are given to unknown form to both sexes. The names of more generally well-known, older ones are also /[illegible]/ lengthened by putting the syllable [illegible] or [illegible]. When parents see the names of their children who are at a young age, they add to the male name [illegible], to the female one [illegible], that is, my. Deceased persons who left no descendants are not mentioned by name, but rather one says: the deceased or the deceased daughter of N. There are no special names for twins. A child born with extra fingers or toes is often given the name Maginwijh. If one sees anyone his name, he usually looks away and too another one standing beside him answer.

(Fig) 95 Usually before a boy's upper incisors come through, but at this time in the house, his mother chooses a name. The day of this name-giving is often — not always — celebrated with a festival, the [illegible] [illegible], to which the married men and women among the relatives are invited and are regaled with beef and honey beer. For the festival the child's head is shaved for the first time, as is the mother's for the first time after her confinement. The hair of both is placed under the latter's sleeping place. Toward dusk a child's to the

/1st cont./

[Pg] places, they wait until that day. Shared pain is half the pain, and a certain cayenne is part of good breeding among the brown Masai maidens too. The circumcision of boys and girls on one day takes place at different spots, and, while no female creature may come near the boys' place, so too no man or boy may enter the hut where, in the presence of her mother, the daughter is circumcised. On the day before the latter's head has been shaved and her hair tossed under the skin of the bed. She has removed all her ornaments and has clothed herself with a long apron (ol gila, el gilani), which her mother has made. The latter is now trying /67/ to make the parts coming into question numb

with cold water and, during this, encouraging her little daughter sitting on the ground with beating heart. The operation is a simple excision of the clitoris and is performed with a sharpened piece of sheet iron (ol mamaja) such as is used to shave the head. Then the small wound is washed with milk, which, together with the blood shed, seeps into the ground. A blood-stanching agent is not used here either. Until complete healing the girl remains, as es sibeli (pl. es sibolio), in the hut of her mother. Instead of the bird skins and ostrich feathers that the boys put on, she wears around her forehead a ring plaited out

/87 cont./

881 of grass (ol máristas), into the front of which she sticks an ostrich
[301] feather, and, just like them, paints her face with white clay. On
[302] the circumcision day the women of the kraal arrange a feast among themselves, for which the girl's father has given a head of cattle
[583] and her mother has brewed honey beer. As soon as the bridegroom of the es siffiglki (pl. es siffiglkin) -- this is the title for a circumcised girl and for a young woman -- learns that she is well again, he brings her father the last remainder of the bride price, whereupon nothing more stands in the way of the wedding.

The above-mentioned years counted as circumcisionless years for the boys do not come into consideration for the circumcision of the girls, as, indeed, is in the nature of the matter: rather, they may be circumcised at any time.

VIII.

000 Age grades. -- Designation of the members of the different age grades of both sexes. -- The terms of address, affected by membership in an age grade, among male individuals, female individuals, and male and female individuals between each other.

561 As among almost all culture-poor peoples, so too among the Masai the social position is assigned to the single individual in general
[562] by the age grade to which he belongs. That this is shown most clearly in the life of the man is explained by the mere fact that he is the lord living for his own pleasures: far below him stands the woman, who has a right to live only because of her labor power for him and her ability to bear children.

Until circumcision the male individual is regarded as a boy (ol aijoni, el aijok): during the preparation for circumcision and until after the healing of the wound, he is called es siholi (pl. es sibolio). Thereafter, for a space of time of about two years, he is introduced to the warrior's life and during this period is called ol barnoti (pl. el barnot). When this apprenticeship, during which folly and youthful exuberance are supposed to spend themselves, is over, he is regarded as a full-fledged warrior, ol morkai (pl. el móran). As such the Masai spends his "best years," until he leaves the warrior standing at the age of 28-30 in order to get married and, as ol móruo (el morusk),

According to this, the institution of the age classes together with the existence of the age grades, which were more sharply defined and made more prominent in their meaning by the former, seems so important for the maintenance of a constantly war-ready group that the thought elevates as to whether that institution did not first become formed out of a setting for such a level of warriors. The warriors' living together as a valuable impetus for commoditship and esprit de corps, to which lies a chief condition for success in war, leads further to celibacy and then to free love; one can see in its sequel the women's society that belongs to an age class. This in turn then is the free way for another right, of which, indeed, we also find remnants among the Masai.

X.

Introduction of the youths to the warrior life. -- Their free war expedition. -- The ol ellenei given them the name for the age class. -- Shield ceremonies: an individual consecrated pots and their meaning. -- The youths become warriors.

As soon as the circumcision wound has healed, the circumcised exchange the long sporm (ol gerid, el gerid) for the short skin-cape (e mugin, /711/ mugrin), again put on their ornaments, anoint their bodies with red paint and, after they have once more dressed their heads, set out as el barnet (sing. ol barnet), formed from barne = half-headed), armed with spear, club, sword, and shield, into the bush to celebrate the el gerud i el gerid. Spear, shield, and sword are gifts from their fathers; they have carved the club themselves. As we shall learn later in connection with the warriors, they divide themselves into mess-groups of five or six. In the bush they erect a hut of thorns for themselves or even build small huts out of leaves. The festival consists of consuming large quantities of meat and nothing but meat. For this each participant furnishes a fat ox obtained from his father, which must be plain-colored, black if possible.

Children, as well as young men and women, wear on the fingers an adornment ring (of gold, of glass) made out of four or five coils of copper wire, the ends of which, on the outside, often have fine spirals (Fig. 60). The five ring is worn on the middle finger of the right hand, the second one on that of the left, the next ones on any other fingers. It is not a rarity for a woman to wear rings on all her fingers, including the thumbs. Mothers stick on the second toe of the right foot of their babies a [illegible] simple ring of copper wire as protective magic against illness. If previously one or two of their children have already died at an early age. Now and then one also finds rings made out of sheet iron, on which the outer part of the circle bears distinctive appendages above and below (Fig. 61). The blacksmiths call them an engineer and maintain that they stem from the workshops. It is certain that they are not made by the blacksmi[illegible]

302 Boys and married men frequently shave their heads so that the hair is scarcely more than an inch long. Women shave their heads even more often, and, to be sure, either entirely or only a strip all around. For shaving [Figs. 62-63 and 65. 66 appear here] they use

[illegible]

Fig. No. [illegible]

Fig. No. [illegible]

Fig. 65. Gala style of Indian.

[illegible] a dampened little piece of dawn lace which is called of [illegible] (Fig. 65). Before the dawning the hair is moistened with water. The head is usually shaved during the so white days, the 18th to 21st day of the month, so that on the [illegible] day, of course, the 17th day of the month, the head is not held. The short hair is combed into the form brace of the head. Beard hair and each lashes that grow back into the eye are plucked out with tweezers (Fig. 63 [at bottom]). An exception to this is made by the men of the El [illegible] lineage, who are not permitted to pluck out their beard hair because otherwise they would lose their power, in particular the supernatural use that enables them to bring and to conjure every rain.

[illegible] *[illegible]* [illegible] and eyebrows are shaved. Women also shave the pubic hair, whereas men plack it out with the fingers or tweezers. Young women let the hair grow out, when it has the necessary length, curl it between two fingers, through which apparently some little balls, which, on closer inspection, prove to be spools twisted and rolled together. Sometimes hair is a related together into strands (or braids, or braids) with red points, a mixture of normal fair and red ones, which hang meaningful around the head. Furthermore they are lengthened by rubbing in fibers of the bark of the baobab (or adansonia) and of another tree called *al [illegible]*. In order to have use of this the hair-roll/fars peculiar to the Mesa women, but adopted by many neighboring tribes (Fig. [illegible], [illegible], [illegible]) [illegible] of designs). On this the hair is parted consecutive over the head from ear to ear, and then that of the back half of the head is divided into three parts, one over the forehead, the other two at the

Fig. [illegible] Fig. [illegible] Fig. [illegible]

/[illegible]/

[illegible] complete, whereupon the tips of the strands are wrapped with hair to the length of an inch. The back hair, lengthened up to fit contours, is placed around a foot-long stick and on this wrapped tightly with hair to gain leather wrapped this, so that it forms a stiff band (cf. detail showing to the side). Over this braid one set is frequently tied the to these similar ones. Often the tips of the little sample braids (sing. ol [illegible] ol [illegible]) are joined with that of the braid [illegible] braid (cf. [illegible] ol [illegible]) and the former tied together under the chin (ol [illegible] ol [illegible]) (Sheets of Illust. (3).

[illegible] 5. This hair style has the purpose of protecting the head from the harmful influences of the sun's rays. To that, one has let the hair grow long and, since the long strands fell annoyingly into the face at every movement, put it together into [illegible]. The Tonga helped themselves more simply, in that they shaved the front part of the head and left the protection of the thick padding of hair in the back part of the head.

[illegible] The hair is often perfumed with the root powder of [illegible] (Curcuma spec.). /[illegible] /Ills. 40 and 51 appear here./

[illegible] The white facial painting of the newly circumcised has already been mentioned. Younger people, especially women and young girls, on all festive occasions, smear the entire body (under as it is not clothed), with red paint, which they like to perfume with the pulverized leaves of [illegible] (Lippia [illegible] Kirch.), which smell like vanilla. With one finger the woman then often strip it off the skin leaves in separation lines (cf. [illegible], cf. [illegible]) so that a kind of tracing is produced. One who has killed an enemy in war paints his body at the following dance festivals with white and red earth in stripes (Fig. 67). This painting is called [illegible] /Figs. 67-69 appear here/ [illegible]. At festivals one also often sees on the face of the woman a red triangle, its apex starting at the alae and widening out up to the middle of the cheeks (Fig. 68). When boys

with fresh blood. The juice is so caustic that it burns the skin, and the tattoo, after two days, may be pulled off, so that the design becomes visible as a white scar, which often, however, already after eight to ten days, has become pigmented again. There are no percentage or marks of distinctions when they serve only as beautification and consist of larger or smaller tattooes (see fig. [illegible]).

Fig. [illegible] Fig. [illegible] Fig. [illegible]

Fig. [illegible] Fig. [illegible] Fig. [illegible]

which are made with the razor. Working is rubbed into the incision. The most common ornamental scars of the men are found on the deltoid muscle (Fig. 70 a, b, c) and have a horseshoe shape (a rab, a rabbit). More rarely among men one sees tattooing on the abdomen (Figure 71 a and b), which, on the other hand, is quite common among women (Fig. 72 a to b). The lyre shape in different variations is the most common. Abdomen tattooing is called *el kiyamah*.

[illegible]

[illegible]

The two middle lower incisors of boys and girls are loosened by pressure with a knife and then removed with the hand. [illegible] and, to be sure, either in childhood or also in connection with the change of teeth. Most often given as the reason for this was "so that in drinking milk and heavy beer one can spit in a long stream through the gap in the teeth (see [illegible]), " which is part of good breeding. This is, of course, not the real reason, this rather seems to have

fallen into oblivion. Fingernails are worn rather long and, if they become too long, are bitten off, not cut off. The pieces bitten off are thrown away. The toenails are not cut; they wear off sufficiently in walking, etc.

[illegible]

[illegible] 1. [illegible] (Cassava). The [illegible] wedge is reported as good cattle fodder. (Tables on the data.

11. [illegible] (Spondias lacrimo Roxb.). Good fodder grass for small livestock.

12. [illegible] (Cassia). It is popular to sprinkle the hair [illegible] the fragrant leaf powder.

13. [illegible] (1)

1. Also called [illegible]

(Wrightia [illegible] (1) — The root is chewed as an remedy for [illegible] lion. The [illegible] use drips into the eye a cold extract of leaves [illegible] called.

14. [illegible] (Ficus Mollenhoeki Bak.).

15. [illegible] (3)

1. [illegible] is [illegible] to also mentioned because of its healing effect for decoration.

(Dayia [illegible] Hgk.). Secret medicine of the [illegible]. In some places a decoction of ten fingers-sized pieces of root, mixed with milk, is drank for gonorrhea. For decorative price in the back use drinks a root decoction that is sweetened with honey. The women to childbirth, soon after delivery, is given a root decoction, to which fat is liberally added, as a tonic and to pressure milk secretion.

16. [illegible]. The fruits are edible.

17. [illegible] (Bothrocaria [illegible] Pax.). It is believed that the cow has pain in the udder, the latter is washed with glowing twigs.

18. [illegible] (Dovria spec.).

19. [illegible] (Adenia [illegible] Harms).

20. [illegible] (Andropogon [illegible] L.). Good fodder grass, but feared for the eyes of cattle during the blossoming stage, because of its sharp, stiff spikes.

[illegible]

[illegible]

[illegible] 901. [illegible] (Myrsiphyllum [illegible] D.C.). Good fodder for small livestock.

902. [illegible] (Sorghum [illegible] S. Sc.). Approximately six finger-sized pieces of wood are cooked in goat-meat broth. The soup is drunk as a cure for gonorrhea.

903. [illegible] (Mimosa [illegible]). One chews several (approximately six to ten) of the pungently spicy grains for constipation. The frequent consumption of the powdered grains in beef blood acts as a nerve stimulant for the warriors.

904. [illegible] = [illegible].

905. [illegible]. If chickens eat the root — scratching it for the [illegible] plant — they have pains in the rectum.

906. [illegible] (Cotula [illegible]). The juice of the pepperwortlike smelling leaves is dripped into the eyes of cattle to cure inflammation.

907. [illegible]. The root is given a leaf decoction to lessen the expulsion of the afterbirth. If this takes an abnormally long time.

908. [illegible] (Sesbania [illegible] L.). A root decoction is drunk for anterior dysentery.

909. [illegible] (Cuscuta [illegible]).

910. [illegible] (Pennisetum spec.). Good fodder grass, valued especially for bulls.

911. [illegible]. Good fodder grass.

912. [illegible].

913. [illegible] (Asparagus [illegible] Pl.). The blue, grapelike fruits are edible.

914. [illegible] (Dregea [illegible] E. Sch.). The root bark, together with that of [illegible], is used to make necklaces. Powdered root is sprinkled in the hair as perfume. A root decoction is popularly added to the honey beer as a taste corrective. It is also regarded as lowering for catarrh and, for this, is drunk with meat broth, or, as a laxative, between the consumption of milk and meat.

915. [illegible] = [illegible] (Trichilemia [illegible] Hess) is a good fodder grass.

/101 cont./

[illegible] points downward. The alae are flat, their lower edge is slightly shaped upward. Lips moderately thick. The set of teeth would be faultless if the two middle incisors of the lower jaw had not been pried out. Shape and color of the teeth are perfectly beautiful. It is expressly to be noted that the two middle incisors of the upper jaw are perfectly vertical, a rare case. The ear lobes are moderately enlarged. The face is high-arched. Cheeks are quite far back. The fine ear jaw out. The head is slender and long-fingered. The nails are large, long, and narrow. The legs are thin and straight.

No. 6.

Lehmann, ♂, about 28 years old, a native of Lehmkhlak. Lineage. 21 measures.

Skin. Tissue of the soft parts firm. Skin color: forehead and cheek dark-gray—reddish-brown (28), chest somewhat darker, back of head black-brown (43), palm of head gray-reddish-brown (between 28 and 29), scrotum black-reddish-brown (27), nipples somewhat lighter. On the right thigh are found two scars 2 cm. long, resulting from dens with poisoned arrows. Color of the iris brown (3) with clear blue edge. Around the lower half of the iris, a strip of brown pigment 1 mm. wide lies on the sclera. Eyes almond-shaped, palpebral fissure wide-slit, set somewhat obliquely. The abundant hair is /102/ arranged in a braid coiffure, a rear braid, a small forehead-braid, and two small temple-braids. It forms a pad on the head about 1 cm. thick, so that the measurements of the cephalic vault does not give any usable results. Head, from the crown view, rounded, egg-shaped with narrow front end, more strongly projecting at the occiput. The transverse profile of the occipital view can be ascertained, by feeling with the fingers, as symmetrically rounded. The crown is arched and lies toward the back. Sinciput is high, occiput more strongly arched out. Face is broad-oval, drawn to a point toward the chin.

/392 cont./

*142 [302] Palpebral fissure set very obliquely and slit wide. The moderately abundant head-hair is arranged in the warrior braid-coiffure. Head, from the crown view, rounded, egg-shaped with narrow front end, moderately rounded at the occiput. Transverse profile of the occiput symmetrically rounded. Crown is arched quite high and lies toward the back. Sinciput high, occiput more strongly arched out. Face broad-oval. Profile slight general prognathism. Chin receding. Hair edging of the forehead angular-crooked. Forehead high, steep, full-arched. Cheekbones directed more forward. Nose medium-sized, rather /393/ low and broad. Root of nose flat toward the forehead; bridge straight; tip blunt and directed straight out; nostrils oblique-oval; alae puffed out very little. Lips rather thick. The middle incisors of the lower jaw have been pried out. The corresponding upper ones are set obliquely forward in such a way that their longitudinal axis stands at an angle of 45° to the vertical. Between the two is found a natural gap 4 mm. wide. The teeth are large, long, and narrow. Both ear-lobes are considerably stretched, the upper auricle-edges pierced once. Foot high-arched. First toe juts out. Hand medium slender. Nails large, long, narrow. Legs sturdy and straight.

No. 10.

Legobí, ♂, about 25 years old, a native of the steppe near Ngiri. Lineage: El massañgua.

Thin. Tonus of the soft parts firm. Skin color: forehead and cheek dark-gray--reddish-brown (28), back of hand, scrotum, and nipples black-reddish-brown (27), chest somewhat lighter (between 27 and 28), palm of hand light-gray--reddish-brown (between 29 and 30). Color of the iris dark-gray--yellow-brown (2), with an outer slate-blue border 2 mm. wide, which is milkily clouded at the outer edge. Palpebral fissure set obliquely and slit wide. Head hair 2 cm. long. Head, from the crown view, rounded, egg-shaped with narrow

561 class name, and is allied with the next (or previous)
701
[881] group, the first being the right hand grade and the other
being the left hand grade. After several years the
[884] junior warriors go through another ceremony and become
full warriors. Their total period of warrior duty may
714 be about 15 years. The warriors are distinguished by
their hair style and spear.

714 The hair style involves a complicated
302 plating of the hair with some combination of cords,
pieces of hide or gut, bark, or sticks all liberally
plastered with sheep or cow fat and red ochre. Elliott
(1948) has detailed the methods and materials used and
variations in style between areas.

714 The warriors' spear is often over five feet
411 long. It has a long, narrow, double-edged blade, an
equally long but round and pointed tail, and between
them a very short wooden hand grip serving as a shaft.
Warriors also carry a flat, double-bladed long knife or
short sword called a simi. These useful weapons are
177 carried at the waist in a red leather sheath. Originally
44 the metal weapons were produced by metal-working tribes.
326 They now come from England and the first thing a moran
does after buying a spear or simi is to file off the
411 brand name. When in ceremonial dress or at war the

Masai FL12

CHAPTER 10

Masai Herds and Mara Lions

I

THE Masai have won respect by their contempt for civilization and all that it has offered them. For half a century Europeans have been tempting them with all the material bribes, indeed even non-material ones, for which every Bantu and Nilotic people is avid. There is scarcely an African of the fat lands who would not sell his soul for a school certificate. The Masai have rejected school certificates with a proud and lofty disdain.

Will a certificate fatten a bullock or swell the belly of a cow? Masai hearts are with their cattle; they desire no finer destiny for a son than to walk in the dust of a larger herd than his father's. The young man who dreams of glory sees fine white bulls and brindled cows and green grass knee-high, he does not see the stone bungalow, the shining motor-car, the well-cut suit, the framed diploma so alluring to his darker fellow-countrymen. He likes to wear his hair in matted pigtails smeared with red ochre and rancid butter, to stand with one foot against the other knee, to eat a compound of bullock's blood and curdled milk, to carry his long spear and to keep his women in their beads and coils and fly-infested mud burrow as his ancestors did—those ancestors whose lion head-dresses and painted shields filled the hearts of lesser breeds with terror, and won the right of conquest over the steppes of eastern Africa from their northern Somali deserts to their southern tsetse bush.

For the Masai have pride, and pride is a quality we recoil from in ourselves and half-admire, half-deplore in others. An Englishman today must stamp with the hob-nail boots of equality upon the little shoots of pride that cannot help but spring up in his heart; but when he sees the fine, free growth of it in others, an envious respect attacks him. For

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

claim to belong to them live elsewhere. Merker gives as the principal divisions three provinces, Kisongo, Loita, and Olbruggo. This is perhaps not according to Masai traditions, but is not incorrect as a practical description of the present distribution of the tribe. The Loita and Olbruggo, also known as Elburgon and Purko, are both subdivisions of the Naivasha district, of whom the former acquired importance by refusing to accept the present Laibon, Lenana, and following instead his brother Sendeyo. Besides these districts, there are four clans representing genealogical not territorial divisions: Aiser, Meñgana, Mokesen, and Molelyan. The Aiser seem to enjoy a certain primacy. The medicine men all belong to this clan, which is specially connected with Mount Ngong (to the south of Kikuyu), also called Ol-doinyo loo-'l-Aiser, the mountain of the Aiser.

According to the social system of the pastoral Masai the male sex is divided into boys, warriors, and elders. The first stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circumcised about the same time (see p. 261 for details) are said to belong to the same age, and are known collectively by a distinctive name, such as 'the White Swords' or 'the Invincibles.' After circumcision the warriors plait their hair, but, except for a small skin hanging over the shoulders, and their arms and ornaments (which are described by Mr. Hollis), go absolutely naked. They subsist entirely on meat, milk, and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in separate kraals with the immature unmarried girls, with whom they are allowed to cohabit freely. Tradition[1] (see p. 117) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the diminishing numbers of the race. Besides this, female morality after such a girlhood was naturally low, even when the Masai kept to themselves. Now that they have come into contact with civilization, prostitution and venereal disease have become deplorably frequent. About the age of twenty-seven or thirty, or nowadays when raiding is forbidden somewhat earlier, a warrior marries and settles down. If he

[1] It is said that among the Dinka, Bari, and Shilluk there are similar customs of free love.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

is a man of wealth and importance he may be elected chief[1], in which case he is responsible for the discipline of the warriors and their appearance when summoned to fight, though he does not go to the wars himself. As with most East African tribes an elder's ideal of existence seems to be ease, not unmixed with drunkenness. Proverb No. 64 (p. 249), 'Don't lie with your feet against a post like the father of many sons,' meaning 'Don't give yourself airs,' is a vivid picture of the Masai pater familias taking his ease in the primitive posture of lying on his back with his feet against a post, while his family do all the work for him.

Masai women, unlike the men, are carefully dressed in leather garments, but a rare, and according to our ideas most unbecoming, custom forces them to shave their heads. Before marriage they are circumcised, and signalize their change of state by wearing large circular earrings and necklaces of brass and iron wire. Both girls and women have their legs and arms encased in iron ornaments, so that they can sometimes hardly walk.

This military organization of the Masai made them a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or polity analogous to the kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship and desirous only of military glory. Retirement from this band of warriors as a chief was honourable, but seems to have been recognized as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.

The nearest approach to a central and superior authority among the Masai is the medicine man or Laibon (more correctly Ol-oiboni; see p. 324, &c.). They all belong to the Kidongi family of the Aiser clan, and are said to be descended from a personage called Ol-le-Mweiya, who came down from heaven and was found by the Aiser sitting on the top of Mount Ngong. This was nine generations ago, the genealogy having been preserved. The influence of the

[1] The chief is elected from the warriors, but leaves their ranks at once and becomes an elder.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

the ceremony is started by his being shaved, after which a sheep or bullock is slaughtered, which is called The (animal) that has caused him to be taken out (from the boys' ranks). 881

On the second day the boy sallies forth to cut a tree called El-latim[1], which is carried by girls to the kraal, where it is planted at the door of the hut.

The next morning the boy goes and sits down outside the kraal to get cold. He also washes himself with water in which a fern called Father's spear[2] has been soaked. 881 304 [824]

When the sun is some way above the horizon, his mother opens the gate of the kraal, and fetches an ox-hide which she puts on the ground by the right-hand door-post.

The boy then takes his place on the hide, and the operator, a Dorobo, comes together with the men whose duty it is to hold the boy.

The man who holds him straightens out his legs, and the boy sits between them and is circumcised[3].

If the boy winces during the operation, his mother is beaten with sticks; and if the boy's parents know that he will behave like a coward, they go away and hide themselves.

As soon as the operation is over, the

[1] This tree is generally called Ol-oilalei (*Zizyphus mucronata*, Willd.), but it is called El-latim during the circumcision festivities.

[2] *Asparagus sp.*

[3] The circumcision of the Masai has been described in Thomson's *Through Masailand*, in Johnston's *The Uganda Protectorate*, and in *The Journal of the Anthropological Society for Great Britain and Ireland*, June, 1901 (Bagge). [113]

hide on which is the blood is carried by the boy and placed on his bed.

When the boys have all been circumcised they are called 'Sipolio (recluse).

They remain at home for four days, and bows are prepared for them.

They then sally forth and shoot at the young girls, their arrows being blocked with a piece of honey-comb so that they cannot penetrate into the girls' bodies.

They also shoot small birds[1], which they wear round their heads together with ostrich feathers.

The Sipolio like to appear as women and wear the surutya earrings and garments reaching to the ground. They also paint their faces with chalk.

When they have all recovered, they are shaved again and become Il-barnot (the shaved ones). They then discard the long garments and wear warriors' skins and ornaments.

After this their hair is allowed to grow, and as soon as it has grown long enough to plait, they are called Il-muran (warriors)[2].

The warriors are fond of the titles 'L-oingok (the bulls) and 'N-gaminini (the generous people), for they may then wear bells or a bracelet called il-torongen.

Now to become one of the Oingok, a warrior must kill many savages,

[136] [1] The bird which the Sipolio wear round their heads is the mouse bird (*Colius affinis*, Shelley). Boys who behaved in a cowardly manner during the operation are not allowed to shoot these birds.

[2] This word is commonly but incorrectly written Elmoran.

The extraction of teeth.

There is something called em-bwata, which means the extracting of the two middle incisors of the lower jaw. 304 752

A knife is used with which to perform the operation.

The Masai extract their children's two middle teeth twice. They extract them first of all when the child is about eight months old, and all its teeth have grown. Then they wait.

After the child has lost all its milk teeth and obtained the permanent set, i. e. when it is about twelve years old, the teeth are extracted a second time, and never grow again.

When a child has had its teeth extracted, donkey's dung is put on its face in order to cool it. [237]

The origin of this custom of extracting teeth was to enable people, in the event of a man falling ill or being on the point of death, when his teeth would pain him, to pour water through the orifice[1].

[1] Hinde (*The Last of the Masai*, p. 42) writes: 'The origin of this custom is supposed to date back to a time when tetanus was a great scourge amongst the Masai, and they discovered that it was a comparatively simple matter to feed a man suffering from lockjaw if two of his front teeth were missing.' [113]

When a woman gives birth to a child, neither she nor the child are shaved until the latter has four

[113] [117] [114] Sir H. Johnston, in commenting upon this, says (*The Uganda Protectorate*, p. 803): 'It may be this explanation has been invented recently to explain a very ancient custom inherited by the Masai from the Nilotic stock, which was their origin; for amongst these people the removal of the lower incisor teeth is a very common practice.' Hinde's explanation, however, appears to be very widely spread.

[171] [1] This very uncommon practice for women to shave their heads is also followed by the Dinkas, Baris, and Latukas (Cummins, 'Sub-Tribes of the Bahr-el-Ghazal Dinkas,' *Journal of the Anthropological Institute*, June, 1904; and Baker, *The Albert Nyanza*, p. 90, &c.).

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

monies are not performed by some selected individuals on behalf of others, as for *Embolosat* and *Endungore-Engibata*. Also from a territorial point of view all these ceremonies differ. A single performance of *Embolosat*, which opens the class-period, is valid for all Masailand; *Endungore-Engibata*, which opens the unit-period, is sectional; individual initiation is held at each village. The following diagram illustrates the correspondence.

A candidate's age for individual initiation is indicated by FOSBROOKE as 16-17 years. The principle for admission to initiation seems to be that the candidate must have passed his puberty, and his father must have performed "the passing of the fence" as described above. [67]

Circumcision is the central point of Masai individual initiation. The ceremony is performed in three stages, *a*) a testing of the past moral behaviour of the candidate; *b*) the ordeal of circumcision; *c*) a period of special segregation.

a) On the eve of circumcision day the candidate is completely shaved by his mother. The elders are entertained with meat and beer [68] at the house of the candidate's mother. [69] Then the elders

[67] Cases may occur of boys who have to be initiated at an earlier age for some special reason. FOSBROOKE, *l. c.*, p. 28 records the instance of a father's orphan having to be initiated in his early puberty in order to inherit.

[68] HOLLIS, *l. c.*, p. 297, states that a bullock is slaughtered and called *el-oirupukinisk* — the (animal) that has caused him to be taken out of the boys' ranks. FOX says that a number (5, 6 or 9) of gourds of beer are offered to the elders.

[69] There is no special meaning in the use of the mother's house. The custom is occasioned by the arrangement of a Masai polygynic village. Every

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

881 "ask the boy (candidate) various questions as to his past behaviour, and he is put on oath to answer truly".[70] Apparently no special ordeal such as we find among the Kipsigis is attached to this testing.

b) The operation may be performed "in the morning or the evening according to the particular custom of the family concerned" (Fox). Generally it takes place early in the morning. The operator [648] is said never to be a Masai. Generally he is a Dorobo, and sometimes a Kikuyu (Fox). This peculiarity is worth noting, especially if it is compared with the great care observed in selecting all other leaders or officers out of the pure Masai.[71]

881 304 Before the operation is performed, the candidates take a cold bath in order to make their body insensible, or remain "shivering in a state of nudity until the sun rises" (Baggoe).[72] Candidates are then operated upon, outside the village near the right-hand post of the gate. The patient must not betray any sign of suffering. That would disgrace him and all his family. A few elders assist and support the patient during the operation, and help him to his mother's house after the wound has been washed. Once inside he is given food (fresh blood) and a special beverage, called *eng alipata*, after which he is allowed to speak.

881 [891] The circumcised youth is presented by his mother's brother with new sandals, and henceforth he is not supposed to make use of any garment worn before the ceremony. A procession by four girls (cfr. Fox), waving branches takes place to the entrance of the [594] boy's hut. The elders are again entertained with meat and beer;

[595] wife of a man has her independent house where she lives with her children and cattle. But the whole homestead belongs to the father, and it would be quite correct, though not as precise, to say: the house of the candidate's father.

[70] We may assume that these questions are connected with the candidate's moral and sexual behaviour. Fosbrooke states that "prior to circumcision [834] no youth may have intercourse with a circumcised woman. This is a rule most strictly adhered to". The same custom is observed among the Nandi-speaking peoples.

[71] Cfr. the election of the *Ol Ol opolos* at the *Embolosat*; of the *ol oonoi* boys, the *oipuenoni*, and the *mojengema* at the *Endungoro-Enjikata*; of the *ol ounoni* at the *unoto*.

[72] Leakey states that it is "absolutely essential that the cattle shall be [231] in their enclosure during the whole of the ceremony". No further details are given nor are reasons offered for this fact which is not mentioned by any of our Masai authorities. However, it shows that circumcision is not related to the cattle aspect of Masai culture.

produced that unpleasant setting of the teeth which belongs to him in common with the whole of his race. The gums being tender, and the beef tough and leathery, the teeth acquired an outward projection unpleasant to behold, and, what was still worse, they seemed to become separated from each other, till they appeared as isolated fangs. It was noticeable also that his gums were of a very dark blue colour. Neither of these characteristics, however, were any disad- 855

vantage to the young Masai, as in his country to be hideous is to be beautiful.

As a boy Moran—for such we may call him for convenience' sake—was pleasing in the extreme—when his mouth was shut. He was the very ideal of an imp, and for diabolical versatility would doubtless have made an admirable page, such as were so much in vogue in former times. At a very early age Moran broke away from his mother's apron-strings, and with miniature bow and arrow aped the bigger boys in their play. As he had no linen to soil, he only roused his mother's laughter if he turned up encrusted with filth. He 857 855 515

6: Thomson K-3 (1883-1884) 1887
FL12 Masai FL12

was not even put through the horrors of the tub. Sometimes, however, his mother, in a fit of affection, and imbued with the belief that some day he would make a name for himself as a smasher of skulls and a lifter of cattle, would make up an unctuous and odoriferous composition of grease and clay, and anoint him therewith till he shone forth with a splendour dear to the Masai heart. On these occasions he would strut forth with all the pride proper to a small boy who has just had a suit of new clothes.

And so life went on, and he was promoted to the rank of a boy proper. He was provided with a real bow and arrow. A square piece of sheep-skin was tied over the left shoulder, leaving the legs quite bare. He now began to cultivate, not a moustache, but his ear-lobes; that is to say, he took means to stretch them out till they would almost touch his shoulder, and he could nearly put his fist through the distended portion. This is done by first putting a slender stick through the lobe, and gradually replacing it by a bigger, till a piece of ivory six inches long can be inserted lengthwise.

Our hero now looked longingly forward to the day when he should be a warrior; but meanwhile he must employ himself herding the goats and sheep. This was his first occupation. He had by this time acquired some notion of the geography of the country around, as his parents had not been stationary, having been compelled to move about from place to place according to the pasturage. The donkeys on these occasions conveyed their household gods, though his mother had to carry nearly as much, and build the hut after. He had also to accompany his parents in moving up from the plains to the highlands in the dry season and *vice versâ* in the wet season. Beyond these studies in practical geography his education proceeded in a very irregular fashion. He learned something of the mystery of the universe by hearing his elders continually howl out prayers by the hour together to some unseen Being called Ngái (God, or the heavens). He heard also that the place of Ngái was among the eternal snows of Kilimanjaro, or that the thunders of Donyo Ngái (an active volcanic mountain) were His voice.

It is very pleasing to think of Moran at this period reclining under a bush or standing watchfully over his flock with one foot brought up to his knee and supported by his bow, trying to penetrate the great problem as to the whence, whence, and whither of life. We can imagine him appeal-

FL12 Masai FL12

882 of bullocks. Reaching the kraal, our friend found himself among a large number of splendidly built young savages—indeed the most magnificently modelled men conceivable. And here let me for a moment pause in my story to indulge in a passing word of description.

142 There is, as a rule, not one of the El-moran under six feet (I am speaking of a superior clan). Their appearance, however, is not suggestive of great strength, and they show little of the knotted and brawny muscle characteristic of the ideal Hercules or typical athlete. The Apollo type is the more characteristic form, presenting a smoothness of outline which might be called almost effeminate. In most cases the nose is well raised and straight, frequently as good as any European's (though passing into the negro type in the lower class, such as Wa-kwafi). The lips also vary from the thin and well-formed down to the thick and everted. The eyes are bright, with the sclerotic whiter than is common in Africa. The slits are generally narrow, with a Mongolian upward slant. The jaws are rarely prognathous, while the hair is a cross between the European and the negro, rarely in piles, but evenly spread over the head. Hair is scarcely in any case seen on the face or any part of the body. The cheek-bones are in all remarkably prominent, and the head narrow both above and below. The teeth and gums of almost every one [304] are such as I have already described, though I think I have neglected to mention that the two lower middle incisors are extracted. Tatooing is not practised; but every Masai is branded with five or six marks on the thigh.

Such are the main characteristics of the El-moran; but before we resume our narrative let us note a few facts about the young damsels—the Ditto—who are soon to be flirting with our hero.

Happily facts support the verdict of gallantry when I say that they are really the best-looking girls I have ever met with in Africa. They are distinctly ladylike in both manner and physique. Their figures are slender and well formed, without the abnormal development about the hips characteristic of the negro. They share, like the men, the dark [302] gums, and the bad sets of teeth. The hair is shaved off totally, leaving a shiny scalp. As to dress, they are very 291 decent, and almost classical, if a stinking greasy hide can have anything to do with things classical. They wear a dressed bullock's hide from which the hair has been scraped. This is tied over the left shoulder, passing under the right

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

ceived from the traders, he, of course, did not keep himself, but divided among his sweethearts of the kraal. 431

And so with war and women, life passed in happy fashion. His demeanour was serious, and his expression ferocious, though he acquired an aristocratic *hauteur* truly striking. He showed curiosity in a dignified manner. He rarely indulged in vulgar laughter, and smiling was hardly possible on a face which could only be called fiendish. 157

He passed some twenty years in this manner. At last his father was found to be on the point of death, and he was sent for. Shortly after his arrival, the old man succumbed. 764 885

EAR ORNAMENTS, MARRIED WOMAN.

It was not thought necessary to recognise this common-place occurrence in any way whatever, and therefore Moran lost no time in picking up the corpse and throwing it outside the kraal. Next morning, he smiled grimly as on going out, he kicked aside some freshly-picked bones, and glanced at some disgusting hyenas slinking away, in company with marabout storks, while vultures flapped grossly overhead.

He was now sole heir of his father's herds, for his younger brothers did not receive a single head of cattle, though they had captured in their raids considerable numbers of them. Any they might secure now, however, would be their own property. Moran decidedly preferred the free and easy life of the warrior's kraal, but, alas! he discovered, not that he was 428 885 885

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

885 becoming bald or developing grey hairs, but that he could not take the regulation dose of purgative as formerly. From this, coupled with the fact that he could not take such liberties with his stomach, he gathered that he was not quite so strong as formerly. We can imagine how he would curse his luck and look fiendish on discovering this unpalatable truth. There was nothing for it but to marry, and become a staid and respectable member of society. He had sown his wild oats.

583 Casting about, he fixed upon a damsel after his heart.
885 The preliminaries having been arranged—the number of bullocks to be paid, &c.—she was sealed to him. Then an
[304] operation was performed on the damsel. Recovered from its effects, she had to wait till the calving season, as abundance
[302] of milk is an indispensable requisite in the honeymoon. Meanwhile, she allowed her hair to grow till it assumed the
[301] appearance of an old shoe-brush clotted up with blacking. Round the head she wore a band of cowries from which depended a number of strings, forming in fact the bridal
585 veil. At last the happy day arrived, and the final seal was
885 put upon the marriage by both parties disposing of their chain earrings, and substituting a double disc of copper wire arranged spirally. The lady also shaved her head, laid aside the garment of the ditto, and clothed herself with two skins, one suspended from the waist the other from the shoulder. Strangest of all, however, and strikingly indicative of the fact that he had exchanged the spear for the distaff, Moran had actually to wear the garment of a ditto for one month. Just imagine what fun it would be in this staid and dignified country of ours, if a young man had to spend his honeymoon in a cast-off suit of his wife's maiden clothes. What our friend's feelings were in this guise, I do not know, and this veracious chronicle does not admit of conjecture.

837 And now Moran's sole idea was to rear a brood of young
885 cattle-lifters, and so that he got them, he was not very
[842] particular as to the manner of it. He was not jealous, asked no awkward questions, and employed no spies. If a friend should visit him, he was hospitable in a degree not consistent with a high level of morality. We shall here prudently follow his example of non-inquisitiveness; for we might find that the domestic affairs of our friend's household will not bear a too curious scrutiny.

885 He was now wholly a changed being—as indeed who is
262 not when he gets married! His strict rules of diet were

B. Junior Warriorhood. — circumcision — subdivisions of age — formation of Manyattas — relations between junior and senior warriors — promotion (Unoto).

881 As in the case of other ceremonies, it is not the details but the wider significance of the operation which claims our attention. The first most
●304 important point is that circumcision is the visible sign of admittance to
561 full membership of the tribe, and that anyone desirous of becoming a "Masai" must be operated upon. After admittance there are many ceremonies of promotion but it is not essential that every member of the tribe should attend; it is essential, however, that he should be circumcised. Prior to circumcision no youth may have intercourse with a circumcised woman. This is a rule most strictly adhered to. Further, the moran, whose perquisite the mature girls are, deny the youths' access to their girls. Consequently circumcision and its attendant ceremonies admit the youths to a full sex life.

881 Hollis states that circumcision usually takes place between the ages of 13 and 17, though orphans and the children of poor parents frequently
304 wait until they are twenty. My own observations would indicate that
428 16 or 17 is the lower limit, except in the case of youths whose fathers have
561 died, who want to be in a position to inherit. The existence of this latter custom, circumcision to permit inheritance, is a good example of the meaning of the ceremony. If it has not been performed, the youth whose father dies cannot inherit; the cattle, wives, etc., must all be taken over by a paternal uncle as guardian pending the circumcision of the eldest male child. But if permission can be obtained for his circumcision a youth of ten or twelve can assume control of a boma, to the exclusion of all other relatives. In other words, as stated above, circumcision is the mark of full membership of the tribe.

561 When the initiation of a new age has been sanctioned circumcision takes place singly or in groups of two or three in the father's boma. The ceremony is usually performed during or at the end of the rains, a time of plenty amongst the Masai, and is suspended during the dry season. Four successive years are taken up with the circumcision of an age, and it is natural that those circumcised in one season possess a marked feeling of affinity towards one another. This shows itself in the possession of a group name for each batch, the same names being employed from generation to generation. They are, for the first batch, *il Changen opirr* or *il Kiperen*, followed by *il Paringotwalang*, *il Kirimbot* and finally *il Tareto*. The above refers to a right hand age; a left hand age, being fewer in number, possesses only the three last-mentioned divisions.

561 When all of one age have been circumcised they divide themselves into companies (*isirit*) each of which forms a warrior village or barracks
621 (*emanyatta*). In Tanganyika the manyattas are usually formed on a territorial or sectional basis, e.g. Engasumet, Olmolog, Mferegi (areas) or Selei, Purku, etc. (sections), though Whitehouse describes a ceremony whereby the warriors, presumably of one area, divide themselves up, frequently on a clan basis.

(Common Trees and Wood Plants of Kenya Colony) gives the Masai name of *F. Hochstetteri* as 'Ol-edeti' and identifies 'Ol-retel' (the name used by my informants) with a small tree growing on highland forest edges called *Maesa lanceolata* Forsk. 302 [824]

(v) Fat, sheep fat for preference, but otherwise the best bovine rib fat. [237]

(vi) Red ochre (*ol Karia*). [386]

(vii) Ornaments, usually comprising a metal clasp, wire bangles usually strung with coloured beads (*engiok*) and double-lobed copper weights (*esekeriwa*). [301]

The method is as follows: The hair is grown until it hangs on the shoulders, that is, about nine inches long. This it does naturally and only in exceptional cases has to be eked out with cow hair. During the growing period the hair usually remains in a mop, but occasionally is braided into short pigtails.

As soon as the necessary length has been reached, the hair is parted transversely across the top of the head, that is at right angles to the European fashion. The largest portion, that at the back of the parting, is painstakingly twisted by hand into braided strands which are then grouped round the end of the 'siteti' stick or sticks (according to the number of pigtails to be worn) and lashed on with the gut string. The stick and hair ends are then bound neatly with the sheep skin strip so as to taper to a point.

The hair in front of the parting is divided into three equal portions and braided. The ends of each portion are bound together with gut string. The two side pieces which fall in front of each ear are then tied together by a cord under the chin, tight enough to hold them flat against the face. The central forelock' is finished off with a metal clasp.

If the warrior wishes to wear the ultra-smart 'helmet' style, the single pigtail is brought forward over the top of the head and its tip bound to the tip of the 'forelock' but as the pigtail stick is pliant and would therefore pull the forelock up, the latter is bound down by a further cord, passing across the forehead and tied at either end to the tips of the 'side-locks', which as we have already seen are firmly tied down to the face by the chin cord. As soon as the pigtail is securely fastened in the ridge position, the whole coiffeur is liberally coated with fat, tinted with red-ochre, and the 'helmet' effect is complete. [237] [386]

The wire bangles with coloured beads pass through the top of the ear, and the copper weights are of course suspended from the earlobes, which have been carefully lengthened during many years of youth — initially by the insertion of wooden plugs. In extreme cases the ear lobe has been so stretched that if it is desired to get it out of the way, it can be hitched right over the crown of the head onto the opposite ear! 301 304

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

particular relation. The naming ceremony is as follows:—When the child can run about a *small* ram is chosen and killed by the women of the village and eaten by them (and not by any men). The child is then given a name which is chosen by the assembled women. It is usually named after some friend of the family either living or deceased, and great care is taken that the person after whom the child is named is (or was) good-looking and of good character, as otherwise the child would grow up ugly and of an evil nature. This is the name used by the family and by friends, but after initiation a boy is always called "Son of 'so-and-so,'" and not by his own name (except by his family). After a man is married and has named sons of his own he is called "Father of 'so-and-so.'" 553 551

Teeth Extraction.—As soon as a child of either sex has cut all its milk-teeth the two central lower incisors are knocked out, and this operation is repeated when the permanent teeth grow. There is no ceremony attached to this removal of the teeth, which is performed with a small, sharp two-edged knife. The reason given for this practice is, that in the case of any illness, if the patient keeps his mouth tightly closed, water and gruel can be poured in through the hole so formed. 304 [852] [412] [758]

Ear Piercing.—At the age of about 6 or 7, children of both sexes have holes pierced in the cartilage round the upper part of the ear, and as soon as the boys start herding cattle and the girls start drawing water they have the lobes of the ears pierced. Ears are pierced in order to prepare them for carrying ornaments, and the holes are stretched to the size which the individual requires by means of a gradual increase in the size of the inserted stretching plug of rough wood.

Games.—All sorts of childish games are played by the children during their early days, but I could not obtain any details from my informants. 524

Clothing.—From a very early age children are given small bits of skin as clothing, and the boys have small sandals made for them. 291

Food.—The food of children is the same as that of grown-ups and is restricted to milk, fat, and meat, as no crops are grown. 262

PART II.—BOYHOOD.

Herding.—As soon as they are considered old enough (and this depends upon the number of other boys in the family available for this work), boys are sent to help herd the sheep and cattle, and they continue to do so until they are old enough to start preparing for initiation. 857

Sex Life.—Initiation is often delayed until some little time after puberty, and it is not considered in any way wrong for these boys to begin indulging sexually as soon as they like, provided that they observe certain restrictions. They may do as they like with the younger girls in the neighbouring villages, provided, of course, that they observe the law forbidding sexual relations with any member of their own sub-clan, 836 883 684 [834]

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

881 As only those candidates who belong to a given village may be operated on in that village, it is seldom that there is more than one circumcised at a time, but should there be two or three candidates belonging to a single village they would be circumcised together on the same day at the same time. There is no elaborate ceremonial accompanying the operation or preparatory to it. A boy will continue herding his cattle until the late afternoon of the day before that fixed for his circumcision. He is then fetched back to the village and has his hair shaved off by his mother, and has new sandals and a new skin dress given to him. This dress must be made of the skins of four rams sewn together, and will be worn the following day during the operation. The actual operation takes place next day, either early in the morning or in the middle of the day. If it is in the morning, the cattle are kept in the yard until the ceremony is over, but if it is in the middle of the day the cattle must be brought into the yard and kept there during the ceremony, for it is absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony. Sheep and goats are not included in this rule. The boy (or boys) sits on an ox-skin in the courtyard in front of his mother's hut wearing his new ram-skin dress and sandals, and the operator performs the operation with a special small knife without any elaborate ceremonial. The boy then retires to his hut to convalesce. A fat ram is killed for the patient, who is fed on meat boiled in fat and on plain cold fat, "so that he may get well quickly." After about five or six days the other boys in the district who have already been circumcised and have recovered, call for the boy, and he joins their band for the period of their novitiate.

881 561 *The Novitiate.*—The period of novicehood varies in length of time, as a boy must remain in the novice stage from the time that he is circumcised until every other candidate has been circumcised too. Usually a period of about two years elapses between the time of the bull-seizing ceremony and the time when the last candidate has been operated upon. Then the group undergoes the hair-shaving ceremony which marks their transfer from the novice stage to the warrior stage; thus, the last few to be circumcised may only have a few weeks in the novice stage, while others may be about two years in that stage. During the novitiate, there are certain rules and regulations which must be observed by the novices. They wander about the country in bands armed with bows and bird-arrows visiting more especially those villages where they hear that fresh candidates have just been circumcised, and enlisting them in their groups. During the whole novitiate period the novices must not cut their hair at all, nor may they indulge in any form of sexual intercourse, nor may they use red ochre, but only plain fat on their bodies. They are required to shoot as many birds as they can, and to skin them and stuff them roughly with grass, and tie them to their hair as a decoration. More and more skins are added to this head-dress as the weeks go by, until at length a boy has a complete wig of stuffed bird skins. Certain birds must on no account be so used, notably birds such as pigeons, doves, and

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

from having the honour of the feast of her initiation." Should the man decide to marry the girl, this heifer is counted as one of those which must be handed over for the marriage transaction (*see* Marriage). 848 582 884

Girls' Initiation.—Among the Masai girls are initiated singly and not in groups, nor are they initiated until a good many years after puberty, for as soon as a girl is initiated she must be married, and cease to have any intercourse with the warriors or boys. Except under the circumstances described above, a girl is not initiated until her breasts begin to droop to a marked extent. As soon as this is noticeable, her mother informs the father, who makes the necessary arrangements. If the girl's mother is living at the time at a *manyatta* with one of her sons, then the girl's initiation will take place at the *manyatta*, otherwise it will take place at the home village. The essential point is that initiation must take place in the mother's hut (or in the hut of another of her father's wives, should her own mother be dead). The father comes to the place when the day of the ceremony has been fixed and beer is prepared. A ram called *olekelnjatha* is slaughtered either before the actual operation or just after it. This is the "ram for childbearing," and is supposed to insure fertility. [825] This ram is eaten by all those present at the ceremony. The actual operation is performed by an old woman, who is a skilled operator (she may be either a Masai [304] or a Dorobo), and the girl sits on a skin inside the hut during the operation. The operation is said to be the same as that used by the Kikuyu on their girls, and this is a [171] form of clitoridectomy, but exact details cannot be obtained from the men. As soon as the operation is over the operator washes the girl to "cleanse her of the blood spilt" and a ram is then slaughtered and given to the operator. This ram is called *oletuguet*. Next a ram is killed called *olkelelartat* to provide meat and fat for the girl during convalescence. 884 582

Shaving Ceremony.—Finally after the girl is healed and before she can go to her husband's village, a ram is killed called *olbarnet*, which is the "ram for the shaving," [302] and at the same time the girl's head is shaved by her mother.

PART V.—MARRIAGE.

Exogamy.—Marriage is always exogamous as far as sub-clans are concerned, but marriage within the main clan is allowed. This rule not only applies to marriage but to all forms of sexual intercourse. No one, whether as a boy, warrior, or a married may, may at any time ever have sexual intercourse with any woman, girl or child of his own sub-clan. This is the strictest rule of all Masai sex regulations, and the penalty for any breach of this rule is very severe indeed (*see* below). 582 614 834

A woman remains a member of her own sub-clan even after marriage, but her children belong to the sub-clan of her husband. 614 585 851

Betrothal.—Amongst the Masai there are two usual methods of betrothal:— 584

(1) Betrothal of unborn children.

(2) Betrothal of infant girls.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

684 *Boyhood. Sex Life.*—In past times uncircumcised boys were severely punished by the warriors if they had sexual intercourse with a girl of any sort. This is no longer the case, probably because the warriors are afraid of Government interference should they ill-treat the boys. [178] [648]

Should an uncircumcised boy have intercourse with a married woman he may, when his time comes to be circumcised, fail to find an elder who will sit behind him according to custom and hold him during the operation, but may have to sit unsupported. In an instance which I observed a boy who had so offended was circumcised in due form on payment of a fine of four oxen. [304]

881 561 The elders who decide when a new circumcision is to take place are those of the *Ol-Piron* generation to that which is about to be circumcised.

Ol-Piron means a firestick, and its significance is explained below under organization of generations and ages.

Ceremony of Seizing the Ox by the Horns.—The Masai call this ceremony *Embolosat o ol-Giteng*, which means the tearing of the ox. *Ol-Giteng* is the general word for an ox and is not confined to the one used at the ceremony. It must be performed first by the Il Kakonyuki section. I have not seen it performed.

881 *Circumcision.*—I will endeavour to describe a circumcision as I saw it. On my arrival a few minutes before sunrise the two boys who were candidates were standing naked and shivering outside one of the village gates. They had previously been completely shaved. An old man poured a little water over each from a pannikin. Ox hides were brought out and each boy sat on one. Each boy was held by an elder sitting behind him. They were just outside the village with their backs to the thorn fence which encircles the village. The operator appeared and circumcised each in turn. He was a Kikuyu and performed the operation with a dirty-looking razor of a type made in Birmingham or Germany. [304] [413]

As soon as the operation was finished new sandals were put on the boy's feet by the elders; and the elder who was sitting behind him stood up, still holding him, and walked him off backwards through the village gate.

As soon as both boys had been circumcised the operator rushed off to repeat the performance at a village near by before the sun was high. I went back into the village with the elders. One of them drew blood from the neck of an ox for one of the candidates. We went into the hut of the mother of one of the candidates, where the boy sat silent on a bed while we elders refreshed ourselves with honey wine. The boy is not allowed to speak for a period after the ceremony, but I have forgotten the length of the period. [273]

A branch of a tree is tied to the front of the boy's mother's hut by leather thongs passed through the wall.

561 178 *The Novitiate.*—Nowadays the novices do not need to remain in this stage till all the other candidates have been circumcised, but shave after a few months. They

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12
Agricultural Masai

In 1932 the Il-Tiamus numbered about 2,250 (3,423 according to the 1948 Census), and though they are of Masai stock, being descended from a Sambur section called Il-Doigio, they have admitted a variety of refugees including Kamasya, and become rather mixed. According to von Höhnel they had originally four villages at the south end of Lake Baringo, but two were deserted on account of Masai and Suk raids, and some of the inhabitants, having lost all their cattle, took refuge on Kokua Island in Lake Baringo. They are expert swimmers and possess canoes, though von Höhnel saw none in 1887. Their dwellings are round huts with rather high-pitched and somewhat convex thatched roofs, and walls of posts and sticks. These are crowded into two permanent villages known as "Njemps Kubwa" and "Njemps Ndogo" in the Tigrish valley a few miles south of Lake Baringo; the closely packed huts almost touch each other, and the mud-walled granaries are surrounded by strong palisades.

In general the Il-Tiamus keep as close as they can to the dress and customs of the pastoral Masai; they have circumcision and *eunoto* and other ceremonies, and practise the "free-love" system of the pastoralists, though without the *manyatas*. Today they have some 180,000 acres of poor land, most of it unfit for cultivation; but they have acquired, since the establishment of British rule, some 12,000 or more head of cattle, and 30,000 goats and sheep, thus achieving in part the ambition of all Il-Oikop to become cattle people again. In the time of Thomson and Teleki, however, Njemps was an important station on the caravan route, and von Höhnel noted that they had a large extent of cultivated land. This was divided into blocks (he says of three to four miles square) which were intersected by irrigation channels bringing water from dams across the river Tigrish. This system was still working in Dundas's time, who says that the opening of the main ditch was performed with the sacrifice of a sheep at the mouth of the ditch.[12] Besides agriculture, the Il-Tiamus fished and hunted, using the bow, and spears of Suk and Turkana types.

It is possible that the fishing group called Il-Molo who live on the east shore of Lake Rudolf is to be classed as Il-Oikop.[13] They subsist on a diet of fish alone which, when Teleki and von Höhnel saw them in 1888, had produced no ill-effects; but it seems now to have resulted in considerable physical degeneration, and in the appearance of rickets in all members of the group. There seems to be a good deal of Gelaba blood in them.

The Il-Arusa round Mount Meru are a large tribe of agricultural Masai, originally of Bantu stock, but now accepted by the pastoral Masai as worthy of recognition as a group which can pay and receive cattle for compensation in cases of homicide. The Baraguyu in Southern Masailand are also to be classed as agricultural Masai.[14]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

Life Cycle

From birth to circumcision a male is a boy, *ol-ayioni*. At circumcision[15] he enters an age-set and becomes a warrior, *ol-murrani*, "one who is circumcised," and may associate with unmarried girls. At the *ol-gesher* ceremony he becomes an elder, *ol-moruo*. Warriors may marry when they become senior warriors. After the *ol-gesher* the newly made elders attend to their family concerns, and get wives

[13] W. S. Dyson and V. E. Fuchs, "The Elmolo," *JRAI*, 1937, LXVII, p. 327; von Höhnel, II, pp. 138–40.

[14] The people known as WaMeru in northern Tanganyika are not Masai, but people of Bantu stock who have imitated them.

[15] There is some uncertainty as to the age at which boys are circumcised. Hollis gives the limits as 13–17 years; Fosbrooke gives the lower limit as 16 or 17.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

553 and three old men. If it has not previously received a name, it may have been
852 called by the name of its father's father; but at the naming ceremony it receives a name which may be that of its father or a name not connected with any relative. People are also given nicknames referring to their physical or other peculiarities.
551 There is much uncertainty about Masai names; but every man has a patronymic, consisting of *O-le*, "son of," preceding his father's name; this he appears to assume after circumcision. Girls after circumcision may be referred to as *E-na*, "daughter of," preceding their fathers' name. At marriage, the husband gives his wife a new name. The practice of tecnonymy is a regular feature. Before the circumcision of his eldest son, a man becomes known as "the father of" So-and-so, i.e., if his son is called Sendeu, he becomes Menye Sendeu; his wife similarly becomes Ŋoto Sendeu, the mother of Sendeu.

551 The name of a dead child, woman, or warrior is not spoken again, and if the
768 name is an ordinary word, that word is no longer used by the family. Thus, if a man called Ol-onana, "the gentle one," died, on his death the word *nana* would be replaced in his family by some such word as *polpol*, "smooth."

Circumcision (E-murrata)

881 Boys' circumcision ceremonies take place at intervals of about three years, and
●304 the circumcision period is "open" for about four years. Though the operation may be performed on boys singly or in small groups, the whole number of those circumcised at the same time throughout Masailand forms an associating group corresponding in some degree to the Nandi *mat* (see pp. 31 and 49). Judging by the published accounts, circumcision was a much less prolonged and ceremonious affair than among the Nandi. Before a boy can be circumcised, the father must submit to what is called *em-polosata e-sita*, "the passing of the fence." After making honey-wine, he stays alone in a small hut outside his kraal, dressed as a warrior. After four days, some elders bring him back to his kraal, where he is told to remove the warrior's clothes and become an old man. His son may then be circumcised.

[m] Circumcision begins with the shaving and bathing of the initiate; in the afternoon after this has been done an ox or sheep is killed and eaten by the warriors and elders of the neighbourhood. On the second day, the boy cuts a tree called at
[824] this time *e-latim*,[21] which the girls of the kraal carry to the door of the hut [in which the boy sleeps?], where it is planted. On the third morning the boy gets up early and sits outside to get cold; after sunrise he is circumcised, the operator being often a Dorobo. From the fourth to the seventh day he remains at home, and then goes out, shooting with blocked arrows at the girls, and with other arrows at small birds
[894 which he wears hung from his head. This is his occupation till he has recovered:
292] during this time he is known as *o-sipolioi* and wears the dress of a married woman, including the *i-surutia* ear-rings, and an ostrich-feather on his head. After recovery he is shaved, given weapons and warrior's clothes, and becomes *ol-barnoti*, "the shaved one," i.e., a junior warrior. Till his local company forms its *manyata*, he lives at home.

Girls undergo the operation of clitoridectomy in preparation for marriage. There are no special times for this. An ox or sheep is killed before the operation. During the period of recovery they are known as *e-sipolioi*, and wear on their heads a wreath of the Hyphæne palm, *ol-merisian*, or of grass, instead of an ostrich feather.

Age-sets

561 Unlike the cyclic age-sets of the Nandi division, those of the Masai are of linear type, that is, they do not work in recurring cycles and do not come into existence till they are required. Nevertheless, it is clear from the lists of Krapf (1854), Hollis (1905), and Fosbrooke (1948), as well as from the Taveta age-sets (Hollis, 1901), that some at least of the names are fixed and recur. In 1939 the names Il-Kisalie

[21] *Zizyphus mucronata*; normally called *ol-vilalei*.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

Warriors do their hair in pigtails, *ol-taika;* other people of both sexes shave their heads periodically. In both sexes the ear-lobes are pierced and elongated, and the two lower middle incisor teeth are removed. Cicatrized patterns are often made on the upper part of the body in both sexes. 302 304

Iron-work

Iron is used for weapons (spear and sword of warriors, and arrows of elders), axes, knife-blades, razors, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and *e-rrap* arm-clamp, separate the Masai and Nandi culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great "shovel-blade" with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged war-spear is important: senior warriors have black shafts, others reddish ones, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that arises between senior and junior warriors. The sword has a long narrow blade and is kept in a red leather sheath attached to the belt. The winged spear-blade and sword have been borrowed by the Nandi, Kipsikis, Keyo, Kony and others of the Nandi division, together with the arm-clamp; the Kikuyu have imitated them. 411 [412 171] [171]

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 3 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 34*b* is correct) about 1 ft. in diameter. Stools are cut out of a solid block of wood and have three legs. Horns are used for summoning people, but there are no musical instruments or drums. 411 714 352 322 534

Ritual and Beliefs

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of *Enk-ai* (the Masai word for God, rain, and sky). As to ancestor-worship, it is generally said that the Masai do not believe in an after-life (said also of the Suk); but the alleged belief that the soul of a laibon or rich man turns into a snake implies some belief in the survival of the soul. This matter needs careful investigation; and Merker's statement that each Masai is taken to paradise by his guardian angel and let in by *Enk-ai* if he has been good is alien to Nilo-Hamitic thought. *Enk-ai* is recognized as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both *Enk-ai* and Mbatiany, the laibon who died *c.* 1890; thus Thomson heard the Il-Aikipiak praying to *Enk-ai* and Mbatiany, and the Nandi war dance after a victory, recorded by Hollis after Mbatiany's death, contained also an invocation to *Enk-ai* and Mbatiany. The "minor deity called Neiterkob" which Thomson thought was an earth-spirit, appears in Krapf's book as the Neiterukob, "the mediator between God and men." But the Masai word *naiterukop* means no more than "that which began the earth," and thus would seem really to apply to *Enk-ai* in his role as creator. *Enk-ai*, god, is grammatically feminine, and his wife *Ol-apa*, the moon, is grammatically masculine. 771 774 [114] 776 [782]

Death and Burial

The bodies of most people are put out for the hyenas, to the west of the kraal, and laid on the left side so that the face looks eastward, with the legs drawn up, the head supported by the left hand, and the right hand across the breast. The 764

D 197 the El asiti also have their own idiom, which will be briefly discussed at a later place.

M 197 802 184 D 197 802 D M 771 304 619 [197] D M 174 612 [844] [976] D M 614 613 D M 128 Corresponding to the uniformity in language, the number words are the same among the Masai and Wakuafi, whereas the Asá and El asiti have their own words for only a few numbers, but in general always make use of the ones used by the other two branches. One finds a complete correspondence for all three branches in their religious view, and the manner of circumcision customary among both sexes. The peculiar circumcision of the boys is practiced by no other people at all, with the exception of one lineage of the Tatoga, closely related to the Masai people. In birth and death, too, all three have the same customs, while in the rest of their customs one finds only unessential differences which are based solely on the difference in their external way of life. The most striking proof for the three branches' belonging together, however, lies in their descent.

The people as a whole are divided into three large tribes, the L aiser, the El mulelyan, and the El mengana, each of which is made up of a number of lineages, and every Asá, as well as every Ol kuafi and Ol massani, is a representative of one of these lineages.

If we now concern ourselves further with the ethnography of the Masai in particular, which is at the same time that of the Wakuafi, we are thereby including the ethnographic traits of the entire people; the stressing of individual differences that have developed among the Wandorobo in the course of time and under the influence of changed conditions will be reserved for the third part.

/16/ Second Part

I.

000 Tribes, lineages, sublineages. -- The En gidon lineage. -- The chief: his rule and policy, magic medicines, genealogical tree, village, ceremonies, foods. -- The sorcerers. -- The El kiborōn lineage. -- The rainmakers.

M 614 613 Every tribe (en gischomi) is divided, as has already been mentioned, into a number of lineages (ol gelata, el gelat). Among these, in turn, one distinguishes principal lineages (ol gelata kitok)

/62 cont./

881 in a long leather apron reaching to the feet (ol gelā, el gelāni),
[292] which his mother has made for him for this purpose. On the following day all the boys to be circumcised appear before sunrise at a place in the vicinity of a kraal, chosen by the three or four operators needed each time. The warriors also assemble there at the same time in order to be present at the operation. Since the latter is very painful, the coolest part of the day is chosen. The boys pour cold water over each other, in order to become numb. The operation,
[752] which is professionally performed by old men, especially Wandorobo,
[887] is the following /the following paragraph has been translated from the Latin of the original source/:

881 After the outer skin of the penis has been drawn back and the
304 inner lamella of the foreskin nearest the back of the glans has been cut around with a knife, the glans lies in an elongated sheath, which is then cut on top so that the glans passes through. Half of the skin that thus hangs far down below the glans is removed, and the rest grows together within 14 days and, after healing, looks like an uvula (1).

1. The following should also be mentioned here /the rest of the footnote has been translated from the Latin/: In order to look cut (circumcised), boys sometimes smear the glans with the juice of an herb of the genus Euphorbia, called "ol jugi." The swelling glans prevents the foreskin from sliding forward.

[412] /63/ A finger-long, pointed, and double-edged knife serves as instrument. During the operation the boy sits with legs apart on the leather apron spread out on the ground. After it, the wounded part
[752] is washed with milk, which, caught in the apron together with the blood lost, is carried by the circumcised boy, who strides backwards for this, into his mother's hut and is poured on the ground there. An
[866] agent to stanch the blood is not used. During the circumcision
[626] itself the parents of the boy remain in their hut, for if the latter moans or cries out from the pain, they are punished with abusive

881 /63 cont./
[304] words and blows by the assembled warriors, because they did not
[866] rear their son to have the hardening and self-control necessary for
[626] a warrior, while the weakling is reviled for a long time afterwards as ebiryo = coward, or toronō = the bad one. After the circumcision all the men of the neighborhood gather in the kraal, where they are
[872] regaled with meat and honey beer by the fathers of the ones just circumcised, after the latter have kindled a fire with juniper twigs (Juniperus procera). The festival is called ol ogor l el aijok amerite,
[252] that is, the festival of the circumcised boys. Unbelievable amounts (1)
[262]
[261]

1. I once observed that my four Masai boys together at an evening meal ate over 80 pounds of lean meat.

of raw or half-cooked meat slightly roasted at the open fire are consumed in the shortest time by the married men and women, whereas the warriors neither eat meat nor drink honey beer, but only take
[522] some fresh milk. People joke and laugh and everyone seems to
[521] want to outshout the others. The warriors boast of alleged heroic deeds in former wars and discuss the prospects of the ones circumcised that day on their first military expedition, which will perhaps take them to this or that region, where they themselves had made an attack only a short time before. The fathers dream of their sons' future heroic deeds and are happy at the thought of the rich booty with which
881 the budding warriors will augment the paternal herds. Suddenly the
626 glances of a few who had just been joking darken and turn toward
152 a distant hut at whose door a solitary old man is sitting. They jump up and go toward him with quick steps. The angry expression on their faces matches their rough and abruptly uttered invectives and threats, in which one hears the reproaches that the old man has brought up his son to be a weak coward, who during the circumcision betrayed his pain by a twitching of facial muscles and a half-suppressed groan, which they, however, jeeringly compare to the roar of pain of a bull being cut. The old man has quickly fled from their imprecations into his hut, and his attackers vent their wrath on two gourd bottles of honey beer left standing, which they knock over and

/66 cont./

881 place, they wait until that day. Shared pain is half the pain, and a certain coyness is part of good breeding among the brown Masai maidens too. The circumcision of boys and girls on one day takes place at different spots, and, while no female creature may come near the boys' place, so too no man or boy may enter the hut where, in the presence of her mother, the daughter is circumcised. On the day before the latter's head has been shaved and her hair tossed under the skin of the bed. She has removed all her ornaments and has clothed herself with a long apron (ol gĕla, el gelani), which her mother has made. The latter is now trying /67/ to make the parts coming into question numb

[302] [301] [292] [752] [29] [30] [142]

with cold water and, during this, encouraging her little daughter sitting on the ground with beating heart. The operation is a simple excision of the clitoris and is performed with a sharpened piece of sheet iron (ol moronja) such as is used to shave the head. Then the small wound is washed with milk, which, together with the blood shed, seeps into the ground. A blood-stanching agent is not used here either. Until complete healing the girl remains, as es siboli (pl. es sibolio), in the hut of her mother. Instead of the bird skins and ostrich feathers that the boys put on, she wears around her forehead a ring plaited out

[304] [412] [752] [301] [302]

/141 cont./

301 In order to make the ears suitable for holding ornaments, their
• 304 lobes are pierced in early childhood with a strong acacia thorn and distended by the insertion of longer and longer wooden plugs. The
[824] plugs (Figs. 43 a and b) are mostly made out of the wood of the
[531] eń gadardar tree (Ochna Merkeri Gilg), often quite beautifully marked. The weight of the ornaments enlarges the holes still more, so that they often hang down extended ten centimeters. At the same time the upper edge of the ear is also pierced in one or two places.
301 In these the women wear bunches of four to eight small chains to 20
[237] centimeters long (Fig. 44); the men wear just as many ol olmár
[136] (sing. ol olmári), a clock-key--shaped ornament made out of tin (Figs. 45 a and c) or out of brass wire (Fig. 45 b), often also a pess on a wire ring, a polished mussel shell, which ornament /142/ is called eń jili (n jii) (Fig. 46), or a wooden stick 15 centimeters long (ol beniń, el beniña [Fig. 47, upper part]), or a quill of the porcupine (olaiai or ołai, Hystrix africae-australis). Around the lower part of the enlarged ring of skin of the ear lobe the men wear a tube four centimeters long (ol gisoi, el gisoi [Fig. 47]), wound out of thin iron wire, /Figs. 47-51 appear here/ whose end coils are wrapped with copper wire, while on the rest of the coils usually hang small chains 6 to 20 centimeters long (ol bisiai, el bisia). If these are only short, they are as a rule glued together with red paint (Fig. 48). In place of this ornament one also often sees an oval,
[824] perforated tin disk (eń goboiai, ń gobóia) and other things, or a nut-shaped ornament that /143/ is carved out of the nut of the Hyphaena palm (Fig. 49). Married women and old men wear, tied in the ear lobes with a thin strap, the large double spirals (e (e surudiai, surudia) made out of thick brass wire. They are supported by a leather strap put over the crown of the head, since, because of their great weight, the ear lobe is unable to do so. It is
[531] regarded as particularly beautiful if they are further decorated with a leather band sewed across them and stitched with four rows of small beads, on which hangs a row of small chains. This decoration, which, incidentally, is found only among women, is called ol
[535] giriéngata. For dancing, young girls often wear a string of beads (Fig. 50) around the forehead and occiput, or two strings of beads lying one above the other an inch apart (Fig. 51), which are joined, ladderlike, with small chains. The ornament is called er nárule.

[TEXT CONTINUED ON PAGE 189]

302 with fresh blood. The juice is so caustic that it burns the skin, and
the latter, after two days, may be pulled off, so that the design
• [304] remains visible as a white scar, which often, however, already
304 after eight to ten days, has become pigmented again. There are no
[412] tattooings as marks of distinction rather they serve only as beauti-
fication and consist of larger or smaller incisions lined up in figures,

Fig. 70a. Fig. 70b. Fig. 70c.

Fig. 71a. Fig. 71b. Fig. 71c.

which are made with the razor. Nothing is rubbed into the incision. The most common ornamental scars of the men are found on the deltoid muscle (Fig. 70 a, b, c) and have a horseshoe shape (e rab, e rabbi). Have rarely among men one sees tattooing on the abdomen (Figure 71 a and b), which, on the other hand, is quite common among women (Fig. 72 a to k). The lyre shape in different variations is the most common. Abdomen tattooing is called ol kigenoto

/151 cont./

• 304 [412] (el kigerot). The tattooing is done by its wearer himself, a man with the small, double-edged knife (ol alem), a woman with the ol moronja. With a hook-shaped thorn /152/ the place in which the incision is to be made is drawn up, and then the roll arising through this is cut into in tempo.

Circumcision

*539 According to the myth of the Masai, God commanded them to
*773 circumcise boys and girls and sent them this command through
*171 Marumi.
*121 God said: "The Masai shall circumcise the children." Accord-
• 304 ing to Genesis 17, circumcision is a sign of the covenant between God and the people of Israel, which means, first of all, that God's command for circumcision is given only for the Israelites, not for other peoples, through which circumcision became a tribal symbol for Israel. It is such, however, even today among the Masai, in contrast to the many other peoples who observe the custom of circumcision, and, to be sure, not only in the opinion of the people, but also in reality, because the Masai are the only people (1)

1. This form of circumcision is also found in only one lineage of the Semite Tatoga people.

with this peculiar form of boy circumcision.

Now we know, however -- and I shall come back to this -- of a series of older Semite peoples, that is, driven out of Arabia earlier, that they likewise practiced the circumcision of boys. This raises the question: how was it possible that the Israelites, and, to be sure, even in their oldest myths, regarded circumcision quite common in Arabia at that time -- so it seems -- expressly as their tribal symbol? Might it perhaps be possible that they originally had the Masai form of circumcision and later exchanged it for the simple circumcision for political or other reasons, just as at the time of the Makkabäer /Maccabees/ (I. Makk. 1, 16) they tried to feign to their opponents the presence of a foreskin, a procedure that, as far as I know, no other people ever used for practical reasons? At any rate,

/329 cont./

*539 political and economic interests, for example, at the time the
*773 Israelites became sedentary, incomparably more important than at
*171 the time of the Makkabäer /Maccabees/ /330/ probably argued for
*121 the usefulness of a change in the form of circumcision. The objec-
•304 tion that the Jews in the second century B. C., as a civilized people, were considerably more adaptable than they were as a primitive people becoming sedentary can be countered in that circumcision was also of much greater national and religious significance in the later period than at that time.

Now, however, what does the Bible say? First of all, it contains nothing that might make one conclude that the Israelites had not practiced circumcision during their sojourn in Egypt (1).

1. The passage in 2nd Moses /Exodus/ 4, 24-26 can not be taken into consideration here, since its content belongs to the myth: compare the previous section, "Moses-Marumi."

On the other hand, in view of the great significance of this operation, we must assume that any omission of it would have been espressly handed down. Now in the fifth chapter of Josua /Joshua/, the part (Verses 2 and 3) consisting of a combination of the Jahve /Yahwist/ and Elohim documents reports from the period immediately after the crossing of the Jordan: "At that time Jahve /Yahweh/ said unto Josua /Joshua/: make thee stone knives and circumcise again the sons of Israel for the second time. And Josua made him stone knives and circumcised the sons of Israel at the hill of Araloth (2).

2. = at the hill of the foreskins.

(Verses 8 and 9): When now the whole people had been completely circumcised, they remained in their places in the camp, until they had recovered. And Jahve said to Josua: This day have I rolled away the reproach of Egypt from off you." Verses 4-7 are not to be considered in this connection, for they stem from a later editor,

/330 cont./

*539 and the accuracy of their content, according to which the Israelites
*793 omitted circumcision during their passage through the wilderness, is
*171 more than doubtful, because first no older author reports it, and then
*121 also nowhere has a corresponding divine command been handed
304 down -- as one would have to expect.

"And Jahve said to Josua: This day have I rolled away the reproach of Egypt from off you." What does it mean: the reproach of Egypt? I understand these words this way: Today I have taken from you what in Egypt, i.e., by the Egyptians, was regarded as a reproach to you. Now what could have been so regarded there for the Israelites in connection with the circumcision of male individuals? Certainly not circumcision itself, for in Egypt this was a privilege of the priestly and warrior caste. But since it was neither noncircumcision nor circumcision that brought about a reproach to the Israelites, provoked scorn among the Egyptians, it could very well have been another form of circumcision! But if this was the one still customary among the Masai today, the words of the second verse, "and circumcise again the sons of Israel for the second time" (3),

> 3. A pleonasm otherwise never recurring in the whole Old Testament in this form: literally more accurately, according to the Hebrais text, the passage says: "Return again to circumcise the sons of Israel for the second time."

become intelligible without artful interpretation, for by means of a second operation, by /331/ cutting off the part of the prepuce appearing among the Masai like a pendulous uvula, a condition that looks like simple circumcision is achieved.

The Masai and Israelites meet again in the motive for circumcision. Through the fact that God handed over to Marumi, along with the command for circumcision, the instruments necessary for the operation in question as well as decreeing the use of the knife serving for the circumcision of the girls also for the cutting of the umbilical cord of the newborn child, and, in connection with that, handed him the loin belt for the woman in childbed, there is shown

/331 cont./

*539 as the closest association of ideas: circumcision -- conception --
*773 birth. Therefore circumcision is regarded here as a means, even
*171 though not necessary for conception, nevertheless desirable for it
*121 and promoting it. We find the same thought in the Bible, where
• 304 God, in Gen. 17, 6, when he announces to the 99-year-old, childless Abraham the sign of the covenant, i.e., circumcision, says: "And I will make thee exceeding fruitful, and I will make nations of thee."

According to the preceding, the circumcision of boys seems to owe its origin to the view that it increases the procreative ability of the man. Quod judicium positum est in experientia, virum membro circumciso coire longius, feminam magis irritari. Viri membro non circumciso coëuntis seminis ejaculatio acceleratur, saepe nimis, priusquam feminae voluptas venerea culmen ascenderet. Membro circumciso seminis ejaculatio retardatur et cum voluptatis venereae culmine congruit, quod ad conceptionem efficiendam faustum est. /It is a judgment based on experience that a man with a circumcised organ has intercourse longer, and excites the woman more. The ejaculation of semen of a man having intercourse with an uncircumcised organ is speeded up, sometimes too much, before the sexual pleasure of the woman reaches a climax. When the organ has been circumcised, the ejaculation of semen is slowed down and coincides with the climax of sexual pleasure, which is favorable to bringing about conception./ This leads to the conjecture that the lawgiver who introduced the circumcision of boys was acting with the intention of promoting conception and along with that increasing the number of births, i.e., multiplying the people. Circumcision
[881] became a preparation for marriage and, accordingly, is still carried out by the Masai, as among other primitive peoples, only after the onset of puberty. A later age made it a tribal symbol for the Israelites and Masai and, as such, moved it among the former to
[186] earliest childhood. Through the belief -- strong in Israel as well as among the Masai -- in the divine favor before other peoples, the tribal symbol then became a visible sign of this, from which is derived the explanation of circumcision as a symbol of religious

/331 cont./
*539 purity (1).
*773
*171
*121
*304
[186]

1. That circumcision among the Israelites -- as is assumed -- attained religious significance only during the Exile is refuted, it seems to me, by the use of the stone knife in earliest times.

as the Bible often designates it.

Circumcision certainly does not owe its origin to considerations of cleanliness -- as one so often hears -- since the desire for cleanliness could be satisfied more simply in other ways and without an operation not always entirely safe. Furthermore, we also find this custom preferred precisely among those peoples who certainly do not attach any particular value to cleanliness. Moreover, however, I also doubt that /332/ the utility of circumcision in the matter of cleanliness is actually so great, for among the only very scantily clad primitive peoples the part in question is so much more exposed to the effect of dust, etc. and injury by thorns, spiny leaves, blossoms, and grasses than it would be otherwise.

The circumcision of girls among primitive peoples may also be
[581] interpreted as a preparation for marriage. Among the Masai, besides the point in time at which it is undertaken, the way of life of the girls before and after the operation argues in favor of this. Clitoride excisa libido diminuitur et cohabitandi cupiditas retinetur. /Clitoridean excision lessens desire and, in cohabiting, restrains passion./ This
[843] has, in the opinion of the people, great advantages for the growing
[853] and suckling child, as is also shown by the continence rules of the Masai during pregnancy and the suckling period.

As we know, the Bible knows of no circumcision of the girls. That such was customary in Egypt, however, even during the oldest Biblical period, is taught by the 15th of the British papyri, in which there is mention of the circumcision of the girl Tatemi, the daughter of Nefori of Memphis. Here, too, the girls were circumcised at the age of puberty (1).

1. Ploss, "Das Kind in Brauch und Sitte der

/332 cont./

*539 /footnote 1 continued/ Völker /The Child
*773 in the Habits and Customs of Peoples/."
*171
*121 The question has been raised as to whether the Israelites might
• 304 not have perhaps taken over circumcision from the Egyptians, and a conjecture affirming this is supported by the Biblical statement according to which Abraham set out uncircumcised for Egypt, where he must have learned of the circumcision laws existing there for priests and warriors, and further by the passage in Gen. 17, according to which, on the same day, he undertook the circumcision of himself and of Ismael /Ishmael/, the son conceived by him with the Egyptian slave woman Hagar. This surmise would indeed not be entirely unfounded if Abraham were a historical personality and the events associated with his name were historical happenings. But since Abraham belongs to the myth (2),

> 2. That is, the Abraham who, according to Genesis, is given the command for circumcision; the figure of the Biblical Abraham seems to be based on a mythical and a historical person.

it is nothing but an idle speculation, which is not even supported by the fact that it might have been intentionally constructed by the author of the Biblical myth to be understood in this sense.

*121 The deeper and more extensively ethnology goes into primitive peoples, the more clearly we see, first, that a closer or more distant relationship in race also corresponds to such in the mental life and its manifestations, and, moreover, that these peoples, despite centuries of proximity with others, show no tendency to make the latter's ethnographic traits their own if not violently forced by them to do so. Therefore, where it can not be positively proved that one people has adopted from another a custom deeply entrenched in folk life, or that this custom /333/ is foreign in the milieu surrounding it, one will have to assume for the correspondence in the ethnography the same cause as for the commonality of race, namely, a common

/333 cont./

*121 original homeland, which, as is still most clearly recognizable among primitive peoples, has marked not only the somatic charteristics, but also the psyche of the people.

*121 Now, what is the situation with regard to the racial relationship
• 304 of the most ancient peoples whom we know practiced circumcision?
174 It has been determined that the tribes related to the Israelites, the Ammonites, Edomites, and Moabites, as well as the Arab tribes of the northern part of the peninsula, also observed the custom of circumcision (1).

1. According to Ploss, "Das Kind in Brauch und Sitte der Völker /The Child in the Habits and Customs of Peoples/."

We know further that the Egyptians and Babylonians practiced circumcision, and finally we now also know that all these peoples either were pure Semites or the Semitic element was very strongly predominant in them.

Now this by no means is to say, however, that circumcision was originally peculiar to all the Semites (2)

2. I found, for example, that a lineage of the Tatoga, frequently mentioned in these pages, does not practice circumcision. Besides, we know that in Egypt the common people were not circumcised.

and only to them; on the contrary, it seems foolish to try to answer the question as to the time and place of the origin of this custom, which also exists among so many non-Semitic peoples. Most probably it may indeed be that circumcision stems from a time whose history we attempt to patch together out of the finds of skeletal remains, etc. If, on the basis of the ancient Israelitish command that circumcision is to be performed with a stone knife, we may conclude that it originated in the Stone Age, one might suspect an even earlier period on the basis of the interdict that rejects the use of the reed splinter for it.

/333 cont./

*539 *773 *171 *121 304 The situation is different with regard to the question whether it was perhaps peculiar to the Semites in general to trace circumcision back to a divine command. We know from the Bible that the Israelites trace it back to this. The law according to which the uncircumcised could not be initiated into the secrets of the temple and of science points to a similar view among the Egyptians. I do not know how the Babylonians thought concerning this point. The Mohammedan and Christian peoples, for obvious reasons, can not be considered in answering the present question. Thus there remain only the peoples of interior Africa who are as yet uninfluenced by Islam and Christianity. Now among these I found both among the Masai and among the Semitic Tatoga people and the Semito-Nigritians of the Iraku area the belief that circumcision was ordered for human beings by God.

*539 *773 *171 *121 304 413 /334/ Finally, it is still to be pointed out that the tradition of the Masai is also familiar with the use of the reed splinter (os sangasch) for the operation on the human body in prehistoric times. When the angel Ol dirima brought the Masai the ten commandments, it mentioned in the 8th commandment the use of the os sangasch splinter for the cutting of the umbilical cord. Later God prohibits the Masai the use of it, for it is a prohibition when he commands that from now on the ol moronja is to be used for the same purpose. Thus we find here a further parallel between the Israelitish tradition and the tradition of the Masai, for since all of the Israelitish law is made up of commands and prohibitions of God, we may assume that the traditional prohibition of the reed splinter in the myth was based on an expression of divine will (1).

1. The fact that among many Negro peoples too the reed splinter is used to cut the umbilical cord is meaningless for the above question and signifies only that even beyond the wood stage the freshly torn reed splinter was retained as an aseptic instrument for those operations for which it was adequate and suitable. A similar instrument is the tap root of a species of lucerne, pulled out

/footnote 1 continued/ of the ground as needed and carefully freed of its rind, which the Wadschagga use as a uterus probe to induce abortion, as I observed on Kilimandscharo.

The Naming of God

We find a further correspondence in the traditions of the Masai and Israelites in the fact that in the period before the lawgiving, whose epoch is bounded in the Bible by the beginning and end of the works of Moses, God bears a different name than he does afterwards, and that among both peoples the fact of the change of name is handed down by a divine word from this very epoch. 2nd Moses /Exodus/ 6, 2 and 3 reports: "Then God spoke with Moses and said to him: I am Jahve /Yahweh/. I have appeared to Abraham, Isaak /Isaac/, and Jakob /Jacob/ as El Schaddaj (2):

2. I.e., the Almighty.

but I have not revealed myself to them under my name Jahve." And in the tradition of the Masai, the angel Ol dirima speaks at the command of God in the first of the ten commandments: "There is only one God. He has sent me here. Heretofore you called him E'majan (3)

3. = The Forgiving One, the Pardoning One.

or E'magelani (4):

4. = The Almighty.

from now on you shall call him 'Ng ai." It is to be noted especially that the meaning of the names El Schaddaj and E'magelani is the same, the Almighty, and that further E'majan is the Forgiving One, the Pardoning One, an epithet that in the Bible is often applied to God, for example, 2nd Moses /Exodus/ 34, 6, where Jahve calls

/387 cont./

*142 Medium fat. Soft parts firm. Skin color: forehead dark-gray--reddish-brown (28), cheek somewhat lighter, chest black-brown (42), back of hand black-reddish-brown (somewhat lighter than 27), palm of hand gray-reddish-brown (between 28 and 29), scrotum black-brown, likewise nipple. Below the navel a tattooing in the form of a flat bow opened toward the top. Color of the iris: black-brown, with dark gray-blue toward the edge. European eye form; palpebral fissure set straight. Hair abundant, curly. Head, from the crown view, rounded, elliptical, moderately rounded at the occiput; from the occipital view, symmetrically rounded. Crown arched. From the side view, the crown lies toward the back; the sinciput is medium high, the occiput more strongly arched out. The face is broad-oval and shows a scarcely noticeable general prognathism. The chin is vertical. The hair edging of the forehead is angular-crooked. The forehead is high and steep with faintly projecting frontal protuberances. Eyebrow ridges and glabella projecting very little. Nose medium-sized and medium broad; root moderately deepened; bridge slightly convex; tip blunt and directed downward; nostrils oval and set obliquely; alae flat, their lower edge curved upward. Lips moderately thick. The two middle incisors of the /388/ upper jaw directed forward and outward, the two middle ones of the lower jaw pried out; otherwise the set of teeth intact. Teeth medium-sized and broad. Ear lobes considerably enlarged. Foot medium-arched; the first toe juts out. Hand slender and long-fingered. Nails large, long, narrow. The legs are sturdy. The shanks show a rachitic curvature, which, according to Naharé's statement, was considerably more pronounced in his childhood and to which he owes his name, which means "crooked leg."

Merero, ♂, about 30 years old, born in the steppe south of Lake Naiwascha. Lineage: El bartelēle.

Medium fat. Tonus of the soft parts firm. Skin color: forehead, cheek, and back of hands black-reddish-brown (27); chest somewhat darker (between 27 and 42); palm of hand gray-reddish-brown (29); scrotum darkest brown-black, likewise nipples. On either side of the navel, line tattooing |~ Color of the iris black-brown with

[304] deep blue edge. Palpebral fissure set barely noticeably obliquely. The partly curly, partly spirally rolled hair is present in abundant quantity. Head, from the crown view, rounded, egg-shaped with narrow front end, moderately rounded at the occiput. Transverse profile of the occipital view symmetrically rounded. The crown is arched and lies somewhat toward the back. Sinciput moderately high, occiput more strongly arched out. The pointed-oval face shows medium-strong prognathism in profile. Chin projecting. The hair edging of the /390/ forehead is angular-crooked. The forehead high, steep, full-arched, with slightly protruding frontal protuberances. Cheekbones directed backward more. Nose is small, low, broad, root set flat toward the forehead, bridge straight, tip blunt, directed straight out, nostrils oval and longitudinally set; alae flat, their lower edge curved upward. Lips moderately thick. Of the two middle incisors of the upper jaw, the left one is missing

/396 cont./

M
* 142 light-gray--reddish-brown (30). Color of the iris: dark-gray--yellow-brown (between 1 and 2), with slate-blue edge. Palpebral fissure set obliquely and slit wide. The curly head-hair is ca. 2 cm. long. Head, from the crown view, rounded, egg-shaped with narrow front end, moderately rounded at the occiput. Transverse profile of the occiput symmetrically rounded. Crown is arched and lies toward the back. Sinciput high, occiput more strongly arched out. Face oval. Profile slight general prognathism. Chin vertical. Hair edging of the forehead angular-crooked. Forehead high, steep, full-arched. Nose large, medium high, somewhat broad. Root of nose moderately deepened toward forehead; bridge straight; tip medium-pointed and directed straight out; nostrils oblique-oval; alae almost flat. Lips rather thick. The teeth are large, the front ones long and narrow. The medial incisors of the lower jaw have been pried out; gap is 14 mm. wide. The upper middle incisors are set somewhat obliquely forward and outward. Both ear-lobes considerably enlarged. The upper auricle-edges each pierced twice. Foot medium-arched. The first toe juts out. Hand slender. Nails almost large, long, narrow.

♂ El kibujuni ♀ El mdiljan ♂ El mulogo ♀ es dorobo

♂ ♀

♀ Tugimi.

Emaciated. Tones of the soft parts medium firm. Skin color forehead and cheek dark-gray--reddish-brown (between 28 and 29), chest somewhat darker (30), nipple only slightly darker than chest, back of hand almost black-reddish-brown (between 27 and 28), palm of hand gray-reddish-brown (somewhat lighter than 28). Color of the iris black-brown (1). Palpebral fissure is set somewhat obliquely and slit wide. Head hair shaved. Head, from the crown view, rounded, egg-shaped, with narrow front end, rather flattened at the occiput. Transverse profile of the occipital view is symmetrically rounded. Crown is arched and lies toward the back. Sinciput high, occiput more strongly arched out. Face is broad-oval. Profile shows a very slight general prognathism. Chin somewhat projecting. The hair edging of the forehead is angular-crooked; the forehead high, steep, full-arched, with clearly recognizable frontal protuberances.

301 Women and occasionally men wear necklaces of beads. Women have ornate jewelry consisting of rings, beads, beaded bracelets, and wire loops around their [304] neck, wrists and ankles. Both men and women pierce and stretch their ear lobes; the women wear large ear bangles through them and the men use them to carry snuff containers or other articles about the size of a 35 mm film casette.

411 Spears, simis, and knobkerries and shields may [714] be carried by the men. Elders often carry a long staff [561] instead of a spear. Cooking utensils are simple, some- 415 times consisting of a few pots and pans. Bedding consists [513] of hides, with sometimes a blanket. The gourds mentioned 472 above are always present. When moving from one place to another a pack saddle is used which consists of two large (two by three feet) flat rounded plates made of sticks bound and laced by leather thongs. These are tied above and on either side of the donkeys' backs, giving the appearance of semi-folded wings. Hides, lodgepoles, cooking utensils, and other kit are placed on 443 the donkey's back between these. Trade goods are purchased or traded from small dukas around the edge of the area or more recently from itinerate traders who visit the larger and more accessable bomas in trucks.

326 ax or ten arrow points, a goat each; for the other things he is paid
[435] with milk. If the orderer furnished the iron wire, only half of the prices named is given as payment for the labor.

From thick brass and copper wire (os sojai, es soja; os sojai ebor, brass wire; os sojai adó, copper wire) the blacksmiths draw thin wire. For this they use as tools the en gáuo and the ol gamět. The former is an iron approximately a foot long (Fig. 26a), which is an inch thick in the middle and on both sides often tapers to points. In the center it has a few conical holes of different widths through which the wire is drawn. Not infrequently the en gáuo also consists only of a piece of strong sheet iron that /116/ is not pointed at the ends. The ol gamět (Fig. 26b) serves as tongs and has the shape of sugar tongs whose grasping arms are squeezed together by an iron spiral
325 drawn around them. The drawing of small pieces of wire is done by hand, whereby one man grasps the en gáuo, the other the tongs. For larger work the former with its two points is wedged into a forked

[413]

Fig. 26b.

wooden block, while the wire already drawn through is fastened to a roller resting on two forked branches. By a slow turning of it the wire drawing then proceeds. In order to make the wire still thinner, it is drawn a second time through an iron with a smaller hole. The
306 spiral-shaped neck-ornament of the Masai women (es segengeï e
301 murt), the double-spiral earrings of thick brass wire (es surudiai,
325 surudia) the women and old men, the arm and leg cuffs of iron
462 wire (es segengei, with designation of the part on which they are worn), as well as the tin ear-pendants (ol aimír, el aimér), are made by

306 /116 cont./
301 the wives of the blacksmiths. Smaller ornamental objects of wire
325 are made by the other Masai women. The small chains of iron and
[462] copper wire are not made by the Masai themselves, but are bought
[439] ready-made from the caravan people or the sedentary neighboring tribes.

XIV.

000 Character. -- National pride. -- Disrespect for foreigners. -- Designation of foreigners. -- The Masai in the service of the European. -- Attitude of the Masai living among his people toward the European. -- The Masai toward their kind. -- Hospitality -- Position of the woman. -- How the Negro illustrates the character of the Masai. -- Expression of emotions and other gestures. -- Strength of vision. -- Art sense. -- Color sense. -- Orientation ability. -- Song. -- Ideal of beauty of the human body.

186 The most outstanding trait in the character of the Masai is their
779 national pride which is based on the religious view that they are the
829 chosen people of God. God created the world and all that is in it
[181] only for them. All non-Masai are subject to the Masai people and their property belongs to them. This explains the haughtiness and the deep disdain toward the sedentary Negroes, who are not familiar with 'Ng ai and have no share in the good things created by him and who therefore are condemned to wrest their daily food from the
[461] soil in the sweat of work. On the other hand, God cares for the Masai as for his children, they need not work: "en dobira mēti sidai = work is not good, everything belongs to them anyway, and, since the Negroes do not give it voluntarily, the Masai take it by force. In fact, the Negro, in the opinion of the Masai, only has justification for existence as keeper of the livestock created by 'Ng ai for the Masai.

186 In general the Masai designates all non-Masai as el meg (sing. ol meggi), a term that is to be translated as "unbeliever." /117/ The Masai does not know friendship and loyalty toward the

*648 Resignation of Sir Charles Eliot.

The policy subsequently adopted by the Secretary of State for Foreign Affairs in dealing with applications for land, which had been received in respect of areas inhabited by the Masai, led to the resignation of Sir Charles Eliot, and hastened the concentration of the Masai within the confines of reserves set apart exclusively for their use, the policy which Sir Charles Eliot had maintained should be resorted to only in the last extremity.

*648 311 166 Mr. Hobley's investigations regarding Laikipia.

While he was acting Commissioner, Mr. Hobley continued to collect information on the subject of the Masai grazing grounds and came to the conclusion that the Masai were not effectively occupying at any period of the year more than one-fifth of that grazing. He considered, however, that the concentration of the Masai in certain portions of the Rift Valley could only be regarded as a tentative solution of the Masai question, while the final settlement of the problem could be attained by placing the whole of the Masai tribe on the Laikipia highlands. He described Laikipia as an extensive plateau stretching from Loroghi mountain on the north to the Uaso Narok on the south and south-east and bounded on the west by a steep escarpment. Until 1890, this plateau had been inhabited by a powerful branch of the Masai, called the Laikipia, who were in that year attacked and dispersed by the Purko division with the loss of all their cattle. The great cattle plague of 1891 killed off most of the Purko captures and they once more retired south leaving Laikipia practically unoccupied. The western part of the plateau was not so well watered as some of the Rift Valley, but the Masai reported that owing to better distribution and the considerable amount of rainfall the grazing was more dependable than and superior to that of the Rift, and had formerly carried much larger flocks and herds than those possessed by the Masai in 1904. The Masai also expressed themselves as quite satisfied in regard to the water supply on Laikipia and as willing to move from the Rift Valley to the plateau.

Sir Donald Stewart's views.

On his arrival in the Protectorate, Sir Donald Stewart gave immediate consideration to the matter and came to the conclusion that the removal of the Masai from the Rift Valley into two reserves was the only real settlement to the question. Masai and Europeans could never live together without endless trouble and friction; the Laikipia lands were well known to the Masai and well suited to them; they were some way removed from the Railway and not tempting to the settlers then in the Protectorate, though it was quite possible, he wrote, that when the Masai had grazed down the grass and got it sweet, envious eyes would be cast on their lands. He, therefore, emphasized the necessity of making these Laikipia lands an absolute native reserve for the Masai and asked that no applications for land by the settlers would be entertained within its limits.

Agreement of 1904.

On the 9th of August, 1904, he held a meeting with the Masai Chiefs at Naivasha, at which were present Lenana, Masikondi, Legalishu and other principal chiefs representing the Purko, Kakonyukye, Loita, Damat and L'Otayok sections of the tribe. After explaining the position to them, he asked if it was true that they were agreeable to move to other lands of their own free will and give up the Rift Valley to European settlement. They replied that they were willing to do so under certain conditions, which appeared to be reasonable, and Sir Donald Stewart made a formal agreement with them, embodying their requests. This agreement was translated to and signed by all of them, and the Commissioner also signed, with a proviso that the Secretary of State's approval was necessary before the agreement became valid. Later, he held another meeting with the Masai of the Kaputiei, Matapatu, L'Odo Kilani and Sighirari divisions, at which the same three head chiefs were present. The agreement was read over and explained to them and they asked to sign the paper. The text of this agreement, the "Masai Agreement of 1904," is to be found in Appendix 1.

The settlement arrived at was to be enduring "so long as the Masai as a race shall exist." Compensation was stipulated for in respect of a few small plots of cultivation (which would not amount to more than some two thousand rupees in all), and the Commissioner saw no objection to the reservation of a tract of land on Mount Kinangop for the exercise of their religious ceremonies connected with circumcision. The land which had been used in 1903 was situated seven miles

648*
319
166

to the north-east of Naivasha, in an open plain without either timber or water, and the land now asked for was some seven miles beyond, situated at the base of the hill Ngorinitu, along which runs a small though perpetual stream, the Nagarangata, and an area of some five square miles was considered sufficient for their requirements. A road area, half a mile broad, would be bearoned off as a path by which Masai could travel between the areas reserved for the two sections of the tribe and an administrative station would be established on Laikipia.*

Secretary of State's approval.

Lord Lansdowne conveyed his approval to the Agreement by telegram on the 15th of October, 1904 and by despatch on the 21st of that month, and in his despatch he concurred in the opinion that Masai and Europeans could never live together without friction. The remarkable influx of colonists from South Africa and elsewhere and the rapidly increasing number of applications for permission to settle in the Rift Valley lent force to these considerations. It was clear that the squatting of numerous colonists on the land over which the Masai flocks and herds had hitherto roamed without hinderance and the need of all new-comers to gain access to the principal watering-places must inevitably lead to disputes and probably to disturbances which might easily assume the shape of a bitter and vindictive struggle between the two races. This aspect of the case had come forward prominently owing to the fact that a large number of intending settlers had applied for grants which would practically absorb the best and most favoured grazing grounds of the Masai between Lakes Nakuru and Naivasha.

The Secretary of State recapitulated the position which had been arrived at with the East Africa Syndicate with whom arrangements were being made in June and July, 1903, for the grant to them of 500 square miles of land in the Naivasha Province, north and east of the Railway. It was not, he said, until the terms with the Syndicate had been finally arranged that he was warned that this grant, to which by that time the Government was committed, would materially curtail the best grazing grounds of the Masai; that the effect of large additional grants in the same vicinity would be to deprive the tribe of the best of their remaining pastures; or that the Masai had, in formal conference, only undertaken to raise no objection to the grant of the Syndicate land on the condition that the remaining grazing grounds were left to them.

He had, therefore, come to the conclusion that it would be advisable at least temporarily to exclude European settlers from the lands which still remained to the Masai in the Rift Valley after the grant of this concession, but he realized that this step was tantamount to the provisional creation of a Masai reserve in the Rift Valley. He, therefore, welcomed the solution of the problem proposed by Sir Donald Stewart in the form of the Agreement of 1904, by which the Masai would move from their old country and thus make it available for European colonization and which would involve the definite and permanent establishment of two reserves for the northern and southern sections of the tribe respectively.

The Secretary of State emphasised the fact that the definite acceptance of the policy of native reserves implied an absolute guarantee that the natives would, so long as they desired it, remain in undisputed and exclusive possession of the areas set aside for their use. In concluding his despatch, he remarked that the scheme submitted appeared to offer every possibility of a satisfactory solution of a difficult problem, and that he was the more glad to be able to express his approval, as it could probably not have been withheld without occasioning much disappointment to the Masai and shaking their confidence in the authorities of the Protectorate.

The Masai Move, 1904.

Steps were at once taken to move the Masai from the Rift Valley to Laikipia and from Nairobi to Ngong. The latter move was undertaken without difficulty, but some pressure had to be put on the Masai, of the Rift Valley, to induce them to leave their grazing grounds for the Northern Reserve. The separation of one

* On August 9th, 1904, the day on which Sir Donald Stewart met the Masai Chief at Naivasha, he signed the lease to the East Africa Syndicate Limited, the terms of which are alluded to in page 156. Though no reference is made in the Agreement with the Masai it must be presumed that the area so demised was excluded from the lands set apart for the Northern Masai Reserve by the Agreement of 1904.

*648

166

part of the tribe from the other was regarded with suspicion, it being suspected that the Government were adopting this policy in order that they might the more easily annihilate the tribe by defeating the sections each in turn. Further, almost immediately after the move commenced, it was found that the water supply there was totally inadequate for the requirements of the Masai.

The Masai, in fact, so neglected to carry out the terms of the agreement, as largely to destroy its meaning. Five sections, referred to as the Kilburgu, Gekunuki, Loita, Damat and Laitutok undertook to move absolutely to Laikipia. A considerable portion, estimated at about one quarter, of the first-named section remained in the Southern Reserve or in the uninhabited country between the Uaso Nyiro and Mara Rivers. The Kakonyukye (Gekunuki) moved from the neighbourhood of Naivasha to Il Melili and the southern slopes of the Mau. The Loita continued to occupy the Loita Hills and Plains. The Damat made use of the country watered by the Southern Uaso Nyiro and its tributaries and the last named section continued to inhabit the region to the north of Kilimanjaro.

Extension of the boundaries of the Northern Masai Reserve.

The boundaries of the Northern Masai Reserve had been fixed by the Agreement of 1904 as follows:—

On the north, the Loroghi Mountains.

On the west, the Laikipia Escarpment.

On the south, the Lesuswa or Nyam and the Uaso Narok, and

On the east, the Kisima.

A short while before his death, Sir Donald Stewart, realising that the area so enclosed was inadequate, promised an extension of the original boundary, but he died before he had been able to place on record what had occurred at a conference held with the representatives of the Masai and those settlers who had taken up land in the area proposed for this extension. The provisional boundaries agreed upon seem to have been:—

On the east of the Aberdare Range, the Uaso Nyiro.

On the west of the Aberdare Range, the southern boundary was the Equator and the western boundary the crest line of the Osobugo loo-'l-dian and the Laikipia Escarpment.

Further extension of the Reserve.

This extension, however, was insufficient, and Sir James Hayes Sadler, in February, 1906, proposed a further enlargement, making the southern boundary of the reserve the northern boundaries of the East Africa Syndicate land, the eastern boundary the Uaso Nyiro, and the western boundary the crest of the Osobugo loo-'l-dian, as before. Several settlers, who were under the necessity of vacating their land, were compensated by additional grants elsewhere.

Northern Reserve a Closed District.

By a Proclamation, dated the 30th of May, 1906, the Northern Masai Reserve, whose boundaries are therein defined, was declared a closed district.

The further extension of the Northern Reserve.

On April 6, 1906, the Secretary of State signified his concurrence with these proposals. But the Northern Masai were still discontented. Their stock, after the removal from the somewhat foul grounds of the Rift Valley, had increased enormously, and at least once every year they had to break the boundaries of their reserve, both on the East and on the South, the grazing within the reserve allotted to them being insufficient. On the East they were permitted, every dry season, to cross the Uaso Nyiro and pasture their herds and flocks between that river and the Uaso Nanyokye, *i.e.*, over an area of 200 square miles outside their reserve. On the South, they settled on the shores of Lake Ol Bolossat, and Sir James Hayes Sadler asked, on November 23, 1906, that these grazing grounds might be relinquished by the East Africa Syndicate in exchange for land elsewhere, the lands so relinquished to be handed over to the Masai. No agreement, however, was come to with the East Africa Syndicate, and although this area was much used by the Masai, it never actually formed part of their reserve.

In the year 1907 there was a partial failure of rains and the Masai were allowed to break their boundaries eastwards across the Uaso Nyiro, southwards towards Mount Kippiperi, and westwards towards Lake Solai. Their stock was estimated by Mr. Collyer, the District Commissioner Rumuruti, at 70,000 head of cattle, and 1,780,000 sheep and goats, and it was amply demonstrated that, for their large and increasing herds, the grazing to be found in the Northern Reserve would be totally inadequate in a period of severe drought. It was suggested that the time was opportune for inducing the Masai to part with their superfluous cattle, but proposals were also considered for the permanent and final extension of their reserve. On September 23rd, 1908, Sir J. Hayes Sadler forwarded to the Colonial Office a recommendation made by Mr. Bagge, that the 200 square miles east of the Uaso Nyiro should be definitely added to the reserve, but no extension of this nature was made and the subject was dropped, when more detailed consideration was given to the possibility of moving all the Masai from the Northern Reserve.

Proposals to extend the Northern Reserve.

648*
311
162
131

When the move of the Northern Masai was started at the end of 1904, the Provincial Commissioner at Naivasha thought it would be advisable to keep a few Masai near the Government station, in order that Europeans of the Rift Valley might the more easily obtain the services of herdsmen and servants. These Masai, of the Kakonyukye division, were allowed to settle with their cattle on Government land. The rapid increase of the stock belonging to the Purko Masai, on Laikipia, caused an insufficiency of pasturage for the Kakonyukye Masai, who had moved north from the Rift Valley and these latter, therefore, gradually returned to join their friends and relations near Naivasha. They took up their residence on all the unoccupied farms, squatted on the East Africa Syndicate land, grazed over the whole of the Commonage, and became a general nuisance. They were repeatedly warned by Mr. Bagge and others that they must leave Naivasha, but the move was not undertaken until 1910, when they went to the Loita Plains, to the west of the Masai Southern Reserve, afterwards called the extended Southern Reserve, taking with them some 10,000 head of cattle and 30,000 sheep and goats.

The Kakonyukye Division.

648*
311
166

In addition to these Kakonyukye Masai, there lived in the Loita Plains about 2,000 Masai, with 20,000 cattle and half a million sheep and goats. Some of these were Senden's (Loita) Masai, whilst others were Purko Masai, who, instead of moving to Laikipia in 1904, went South and occupied what was at the time an unexplored region.

Purko on the Loita Plains.

In the year 1908, various suggestions were made with a view to moving the Masai from the Northern Reserve to the area lying between the Mara River and the Southern Uaso Nyiro. This country, like Laikipia, had formerly been occupied by various sections of the Masai, the Loita, L'Otayok and Damat, who had, for the most part, disappeared from the area. The suggestion to move the Masai was undoubtedly made in the interests of European settlers, some of whom had cast envous eyes on the grazing grounds of Laikipia, as Sir Donald Stewart had prophesied when submitting the Masai Agreement of 1904.

The suggested removal from Laikipia.

In the month of December, 1908, Mr. McClure and Captain Monckton, the Assistant District Commissioners of Ngong and Sotik, after extensive tours through the Loita country, submitted reports in which it was stated that the area south of Sotik and between the Uaso Nyiro and the Mara River, comprised some 2,300 square miles, of which 1,300 square miles were waterless. The Masai population numbered approximately 2,270, with 20,000 cattle and 100,000 sheep. The land, as a whole, was unsuitable for European settlement, though several areas might be regarded as good farming land, but these were so disconnected, as to render impossible their proper supervision. Further, permanent streams were so far apart as to preclude the possibility of allotting such farms on a continuous system. The land was generally suited to the requirements of a nomadic and pastoral tribe such as the Masai.

Reports on Loita.

On the 4th of January, 1909, the Governor mentioned the proposal to Lenana, and somewhat to his surprise, found that the Laibon was entirely in favour of it, provided that the settlers left the suggested area, but he doubted whether the

Lenana's views.

*648
311
166

water in that country was sufficient for the requirements of the Northern Masai. Lenana's main object in recommending the move was to re-amalgamate the various sections of the tribe, in order to enable him once more to exercise direct control over all his followers. Ever since the removal of the Northern Masai to Laikipia, he had found his authority to be waning. The Rift Valley Masai had been separated more from the Nairobi Masai than Lenana had expected when the Agreement was signed. This separation was, to a large extent due to the fact that the Government had failed to carry out all the conditions of the treaty. The road half-a-mile broad, which was to have been left inalienated between the reserves had been reduced to such an extent that it was practically useless for cattle, and the land on either side had been leased to Europeans. In August, 1908, the movement of cattle between the reserves was altogether prohibited, owing to quarantine regulations, and the Masai of Laikipia were thus, to all intents and purposes, cut off from their Laibon at Ngong. Legalishu, who was present at the meeting, could not be induced to give his opinion on the subject. The Governor stated that the question of the move would not be contemplated by the Government unless it was in accord with the expressed wishes of the Masai, and he refused to comply with Lenana's suggestion that the matter might be settled without delay, for he considered that further investigation was necessary to ascertain whether the suggested area was suitable for the accommodation of the Northern Masai.

Reports on the Loita Plains.

As Lenana was so much in favour of the move, and as the reports sent in by Mr. McClure and Captain Monckton, though not enthusiastic, had been sufficiently encouraging, the Governor gave orders for two senior officers to inspect the country, and Messrs. Bagge and Hollis were entrusted with this work. The driest season of the year, March, was chosen in order that the country might be seen at its worst, and an extended tour was made through a part of Mau, Il-Melili, Ngatet and the Loita Plains to the Mara River, thence along the Anglo-German frontier, the Loita Hills and the Southern Uaso Nyiro to Naivasha. The gist of the reports submitted by these officers was that the land and grazing were, on the whole, good, but that there was an insufficiency of water and, much as they would like to see all the Masai concentrated in one reserve, they could not recommend the move until steps had been taken to irrigate the land, and until the settlers who were living in the area had been given farms elsewhere. Mr. Bagge, however, pointed out that the inclusion in the reserve of any of the country known as the Mau Plateau had not been considered, and that it was probable that by engineering works the water supply might be considerably increased. He suggested that an engineer should be sent into the area to report on the prospects of irrigation near the l'Ongainet River.

Irrigation of the Loita Plains.

On Sir J. Hayes Sadler's departure from East Africa, Mr. Jackson instructed Mr. Watts, the Commissioner of Public Works, to visit the Loita Plains, and to report on the possibility of irrigation. At the same time, the settlers in the area which might be allotted to the Masai, were to be approached with a view to ascertaining if they would be prepared to move, should the scheme be carried through on consideration of receiving compensation on Laikipia or in the vicinity, to the extent of their present holdings, plus half as much again. Mr. Watts drew up an elaborate report and showed that by the expenditure of £5,280 the whole of the area could be watered. He also estimated that after deducting 1¾ million acres for grazing of game, forest and waste areas, there remained 2¼ million acres of good grazing land available for the support of 150,000 cattle and 1,200,000 sheep, reckoning seven acres per cow and one acre per sheep. A sum of £2,000 was inserted in the Estimates for 1910-1911 as a commencement for the irrigation scheme, but was disallowed by the Secretary of State.

E-Unoto Ceremony, 1910.

In August, 1909, the District Commissioner of the Northern Masai Reserve reported that the Purko warriors wished shortly to proceed to the Kinangop reservation which had been set aside for the E-Unoto ceremonies, and to take some 10,000 cattle with them. The Purko Masai living in the Loita Plains likewise asked, through Lenana, for permission to proceed to Kinangop. Arrangements were made with the East Africa Syndicate, and the Northern Masai were

permitted to take their cattle to the Kinangop Reserve, but, although the Masai living in the Loita Plains were informed that they themselves might go to Kinangop, they were forbidden to take their cattle with them for fear of infecting, with East Coast fever, the stock belonging to the European farmers through whose lands they would have to pass, and of carrying this disease to the Northern Reserve. 648* 31 166 561

By December, the Northern Masai, with 10,000 cattle but unaccompanied by their principal chiefs, Masikondi and Legalishu, had moved to Kinangop, but the ceremonies were commenced prematurely, for Lenana, on hearing that the Southern Purko might not take their cattle with them, withheld his sanction, which is necessary, according to the custom of the tribe, before a start can be made. On January 14th, 1910, he sent orders to Kinangop for the warriors to proceed with their cattle to the Southern Reserve in order to hold the ceremony at Ngong. At the same time he appealed to the Governor and pointed out that, unless his authority were recognized and his instructions obeyed, he feared a disruption between the two sections of the tribe.

On February 2nd, Sir Percy Girouard held a meeting at Nairobi, at which were present Lenana and those elders of the Northern Reserve that were taking part in the ceremony on Kinangop. Lenana made a direct appeal to the Governor, and stated that the condition of affairs which had arisen since the last E-Unoto ceremony, whereby free inter-communication between the two sections of the tribe had become impossible, was gradually but surely disintegrating his authority, a matter of great regret both to himself and to his people. It was, he explained, an unheard of thing that there should be two ceremonies for one section of the tribe, one on Kinangop and the other at Ngong, and, since the Southern Masai were forbidden to take their cattle to Kinangop, he desired the Northern Masai to proceed to Ngong to hold the cermony there. He further stated that it was his most earnest wish that all the Northern Masai should move from Laikipia and inhabit the proposed extended Southern Reserve. The Governor informed Lenana that he could not sanction the move of all the Masai without consulting Masikondi and Legalishu, but, as regards the ceremony, he was quite willing that it should be held at Ngong if that was Lenana's wish and if he could arrange matters with the people concerned. The Masai elders then proceeded to Lenana's kraal to discuss the matter with him there, with the result that they returned to Kinangop, and, having collected their cattle, proceeded with the warriors to the Southern Reserve. It was, fortunately, unnecessary for the Government actively to intervene in support of the Laibon.

Meeting at Kiserian.

On February 24th, 1910, a second meeting was held at a camp known as Kiserian, close to Lenana's kraal near Ngong, with the Masai. At this meeting there were present, besides Lenana, Masikondi and Legalishu, respectively the senior elder and the spokesman of the senior warriors (who are generally referred to as the two chiefs) of the Northern Masai. These two representatives of the Northern Reserve not only agreed to the suggested move but expressed themselves in favour of it. It was accordingly proposed to carry it out as soon after the rains had commenced as practicable. 648* 31 166

The preliminary move.

Mr. Collyer, the District Commissioner of the Northern Reserve, was appointed Special Commissioner for the move, and, as several Provinces and interests were affected, he was directed to correspond with the Secretary for Native Affairs, who was to arrange the details, and submit recommendations for the displacement of the white settlers from the Southern Uaso Nyiro.

Everything went well. The majority of settlers were public spirited enough to consent to the Masai passing over their farms, and four separate routes were arranged. Special officers were deputed to accompany the mobs of cattle and a survey was commenced on Laikipia for farms to which the settlers from the Southern Uaso Nyiro might proceed.

In April, gastro-enteritis, which for some time past had been prevalent all along the line from Naivasha to Kisumu as well as in the northern Masai Reserve, broke out among the Masai herds in epidemic form. It is possible that this had [232]

*648
311
166
[232]

something to do with the readiness of the Masai to move, for their methods of quarantine are to quit foul ground and drive their herds on to fresh pastures. Be that as it may, the Masai started towards the middle of April of their own accord, and before the Government was really ready, those from the extreme north of the reserve pressing south, and those on the southern boundaries leaving the reserve by the routes that had been arranged. The drought may have expedited their movements, for no rain had fallen in the Northern Masai Reserve whilst there had been a plentiful quantity on the Loita Plains, on Mau, and near the railway.

The Move Suspended.

On April 20th, 1910, a telegram was received from the Secretary of State ordering the move to be suspended and before the end of the month, steps had to be taken to send the Masai back to their reserve. The Secretary of State's telegram was followed by a despatch, dated April 22nd, 1910, intimating that, inasmuch as the agreement signed in 1904 was solemn and binding, it could not be cancelled without the clearest proof that the proposed agreement was in accordance with the wishes of the Masai and especially of the northern section. A document must be procured of equal formality with that of 1904 and must be signed by an equally representative body of Masai. Owing to the severe form which the cattle disease had taken, it is probable that the move could not have been undertaken in any case for fear of infecting the stock on European farms and in the Loita Plains, and this was made the excuse for the postponement. But the Masai were neither willing nor, indeed, able to remain in their reserve, for there was very little grazing owing to the drought and the ground was foul; and before many weeks were past, between twenty and thirty thousand cattle had been driven across the Northern Uaso Nyiro. Permission was afterwards granted to the Masai to occupy the 200 square miles between the Rivers Nyiro and Nanyokye.

The Meeting of May 30, 1910.

On May 30th another meeting was held at Ngong, and a provisional agreement was entered into between the Governor and the Masai, according to the terms of which the tribesmen, being satisfied that it was to their best interests that the Masai people should inhabit one area, and not be divided into two sections, as must arise under the treaty of 1904, agreed to move from Laikipia to the Loita Plains, when the Governor should notify them. There were present, as representatives of the Masai, Lenana, Masikondi, and Legalishu, Saburi (whose position in the Southern Reserve was analogous to Masikondi's in the Northern Reserve), the heads of clans, *i.e.*, the principal elders, of the Northern Reserve, and the spokesmen of the senior, the junior, and the coming age-groups of warriors. The Governor was supported by Messrs. Hobley and Lane, Provincial Commissioners, Mr. Combe, Crown Advocate, Mr. Hollis, Secretary for Native Affairs, and Mr. Collyer, the District Commissioner of the Northern Reserve. The Rev. Dr. Scott was also present as an independent witness. The agreement, which was entered into by the Masai of their own free will, was translated and fully explained to them. There was, however, one dissentient voice, and, during the discussion which preceded the signing of the agreement, Legalishu said he did not consider the new area large enough. The Governor informed the Masai that the move, if it was to take place at all, must be a voluntary one, and he asked Lenana, Masikondi, and Legalishu to depute representatives to visit the country with Mr. Collyer. He further promised the Masai that, if they did not wish to move, they need not do so, and that if they did move, and the area was found to be too small, the country across the Mara River towards Kisii would be included in their territory. Before a final agreement could be entered into, the return of the party that would go and inspect the land would be awaited, and their report considered.

Mr. Collyer's visit to the Loita country.

Mr. Collyer spent two months in the Loita Plains, on Mau, and Ngatet, and in the Il-Melili country. The two men from the Northern Reserve who accompanied the party were both nominated by Legalishu, and, when they returned to Laikipia in August, they reported that the proposed area was too small, that there was an insufficiency of water, and that the Sotik would steal their cattle. This report was accepted by the chiefs and elders of the northern section, and a large gathering, led by Masikondi and Legalishu, met at Rumuruti, on August 27th, 1910, to

inform Mr. Collyer, the District Commissioner, of their decision. They said that, as their Laibon wished them to move, they were ready to go if the Governor ordered them to do so, but that they did not wish to leave Laikipia. As this was their determination, no attempt was made to influence them, no pressure was put upon them, and the subject was not again broached to them. 648* 311 166

On March 7th, 1911, Lenana died. He had been suffering from dysentery for a month, but was getting better, when he suddenly collapsed. The Assistant District Commissioner in charge of the Southern Masai Reserve, Mr. Crewe-Read, was with him a few hours before his death, and discussed various minor questions with him. Lenana did not nominate his successor, as is the custom with the Masai Laibons, for he only realised a short time before he died, that his last hour had come, but, when he felt he was dying, he made the following speech in the presence of numerous witnesses:— The death of Lenana. 648* 311 166 791

"Tell the Government to look after my children and to give them the money which I should have earned if I had been alive. Tell my people to obey the Government as they have done during my life. Tell the Laikipia Masai to move with their cattle to the Loita Plains."

April 2nd was fixed upon as the date for a meeting with the Masai representatives of both the Northern and Southern Reserves in order to select a successor to Lenana. Masikondi, the senior elder of the Northern Masai, was too unwell to proceed to Ngong, but he delegated his powers to two of the members of his clan. Legalishu, with the other heads of the clans and the spokesmen, of the various age-grades from the Northern and Southern Reserves, were present, and the proceedings were watched on behalf of the Government by Mr. Lane, Provincial Commissioner of Naivasha, Mr. Hollis, Secretary for Native Affairs, and Mr. Crewe-Read. Seggi, Lenana's eldest surviving son, a youth of thirteen years of age, was unanimously chosen as Laibon. Owing to his youth, it was decided to appoint two Regents to assist him in governing his people, one for the Southern and one for the Northern Reserve. Ngaruya, a cousin of Lenana, was selected as Regent for the south, and Legalishu for the north. When these ceremonies were completed, Legalishu stated, on behalf of the Northern Masai, that he wished to ask that they might be permitted to move to the extended Southern Reserve. This change of opinion was undoubtedly due partly to the dying wishes of Lenana and partly to a fear of disruption between the two sections of the tribe. On the other representative expressing a like request, the Masai were informed by their Provincial Commissioner that they would have to proceed to Nairobi and approach the Governor personally on the matter. 429

Sir Percy Girouard held a meeting with the Masai representatives on April 3rd, 1911, in Nairobi. Legalishu, as spokesman of the Northern Masai, again stated that it was their wish to move to the extended Southern Reserve. The Governor repeated that, if the move were to take place, it must be a voluntary one, that the Masai were completely free to accept or reject the proposed arrangement, and that, if they did reject it, the pledges made to them by the Government in 1904, would be scrupulously adhered to. They thereupon replied that it was their own wish that they might be allowed to move. A formal treaty was drafted, and another meeting was held on April 4th. The members of the Executive Council and the Provincial Commissioners were summoned, and, in the presence of all, the Governor asked the Masai whether or not they wished to move to the extended Southern Reserve. The reply was again in the affirmative. Several minor points were then discussed, Legalishu acting as spokesman. The principal matter was the water question. The Masai stated that, if the Government would help to improve the water supply, they themselves would contribute towards the work by the payment of bullocks. They requested that all Europeans should be removed from the area, and that as much as possible of the area known as "The Promised Land," which had been applied for by Mr. Powys Cobb, should be given to them. Protection from possible Sotik raids was asked for and granted. Finally, the Masai begged to be allowed to start the move as soon as there was sufficient grass along the routes, and asked that they might not be hurried. They were informed in reply, that the move was contingent on the approval of His The Agreement of 1911 648* 311 166

*648
311
166

Majesty the King, and that, if they were permitted to move, they would be allowed to proceed slowly. After this, the treaty was translated and fully explained to them, and the Masai affixed their marks in the presence of the European officers. The treaty was then sent to Rumuruti to ascertain if Masikondi and such of the old men as were too infirm to attend the meeting at Ngong approved of the terms.

The agreement, as drafted, was submitted to the Secretary of State, who approved of its terms, by telegram, on the 29th of May, and by despatch on the 2nd of June, 1911.

The Masai Move of 1911

The Masai were accordingly informed that the Government had agreed to their moving from the Northern Reserve into an extended Southern Reserve. The move was arranged to proceed along four routes throughout June, July and August. No compulsion of any kind was used, and administrative and veterinary officers were detailed to escort the mobs of cattle across the European farms.

Congestion on the Mau.

One of the routes, which proceeded by Lake Naivasha, went straight into the extended Southern Reserve, and those Masai who travelled by this route soon reached the Loita Plains. The other three routes converged on the top of the Mau into "The Promised Land." The first Masai to arrive on the plateau went right through to their destination, but the succeeding parties, finding the grazing good, remained, erected their kraals, and decided not to push forward into the plains below. Unfortunately, no precautions were taken to induce them to leave the plateau, and there was consequently a great congestion at the commencement of the heavy rains, which usually fall on the Mau towards the end of August and in September. The roads became impassable, and the people and stock suffered from cold and discomfort. They accordingly returned to the European farms lying between Njoro and Elmenteita Stations on the Uganda Railway.

Desire to return north.

In consequence of this check, the Secretary for Native Affairs and the Director of Agriculture were sent, on August 21st, to investigate the situation, and they reported that there was nothing to show that the move was other than temporarily checked. It had, however, considerably affected the views of some of the people, and a desire appeared, more particularly on the part of Legalishu, to return to the north.

Masai returned to Laikipia.

As it was impossible for the Masai to remain on European farms near the Railway for any length of time, the Governor issued directions for them to be sent back to the southern part of Laikipia, and to the land belonging to the East Africa Syndicate, adjacent to the former Northern Masai Reserve. The carrying out of the necessary arrangements were entrusted to Mr. John Ainsworth, Provincial Commissioner, Kisumu, who met the Masai representatives at Elmenteita and Nakuru early in September. Mr. J. K. Hill placed 150,000 acres of Syndicate land at the disposal of the natives, and the move eastwards into this land was completed by September 16th.

Character of the Move.

This check was undoubtedly the result of the Masai having proceeded too quickly. They pressed forward even when asked by European farmers (through whose farms they were passing) to hold back, the farmers being desirous of trying to open up a trade with them. No police measures of any kind were adopted, testifying to the voluntary character of the move. It appears that the Masai did not suffer to any extent by the journey, and the losses reported were those which would naturally take place in large movements of stock.

Underestimates of Masai stock.

The move had brought to light one matter of importance; previous calculations of the number of stock possessed by the Northern Masai had been greatly underestimated, and the probable figure was computed at 200,000 cattle and 2,000,000 sheep, a large increase over the original estimate, made in 1911, of 80,000 cattle and 1,500,000 sheep. That such an error should have been made is accounted for by the superstitious opposition of the Masai to the counting of any of their stock.

A report submitted by the Director of Agriculture at this time stated that the extended Southern Reserve was, more or less, fully stocked, partly owing to the fact that those Masai who had originally occupied the Southern Reserve had broken their boundaries, and driven their flocks and herds into the extended reserve, and partly owing to the arrival of 50,000 cattle and half-a-million sheep from Laikipia: The extended reserve was, however, stated to be capable of holding more stock if necessary, and investigations were immediately made regarding the suitability of the land across the Mara River.

Report on Extended Southern Masai Reserve.

648*

166

The tour of investigation was undertaken by the Director of Agriculture and the Director of Public Works, and the report sent in was to the effect that the area available consisted of one million acres of the finest grazing land in the Protectorate, exceedingly well-watered, and superior to the former Northern Reserve. The country was practically uninhabited, owing, it was said, to the fact that some years before the Masai who then occupied the country were decimated by small-pox while, simultaneously, almost all their cattle died from rinderpest. Messrs. J. K. Hill and C. O'N. Chaplin, two prominent settlers, accompanied the Director of Agriculture on his tour, and submitted separate reports, testifying to the excellent quality of the land in question as a grazing area. In view of the eminent desirability of including all the Masai in one reserve, the Governor felt compelled to recommend that this further area should be allotted to the Masai.

Tours in the Ol-Orokuti.

The position at this point was that an area of 4,300 square miles on Laikipia, of which not more than 1,200 was well-watered, was to be exchanged for 6,500 square miles in the south, of which 1,500 was described as some of the best stock country in British East Africa, and through the remaining 5,000 square miles of which flowed the perennial rivers, the Mara and Uaso Nyiro. It was further stated that the whole of this southern area was free from tsetse fly or other disease-carrying fly.

Laikipia compared with the Southern Extension.

Meanwhile, on receipt of information respecting the check in the move, the Secretary of State had wired instructions that those natives who had not been provided with suitable accommodation in the south must be immediately provided for in the Northern Reserve. They could not be allowed to remain on private lands without giving rise to future difficulties, and the whole question of an eventual move must be suspended until the suitability and capacity of the new reserve had been thoroughly examined, it had been inspected by representatives of the Northern Masai, and until their full and free assent to the resumption of the move had been obtained. The actual move, if these conditions were fulfilled, must not be made until the Governor had satisfied the Secretary of State that an adequate water supply would be immediately available, and that the preparations for proper supervision of the move were complete.

The Move suspended.

After the check which took place in 1911, and the subsequent withdrawal on to European farms, the Masai returned to the Northern Reserve. Officers were immediately detailed to make a census of the Masai on Laikipia, and the returns showed a population of not more than 4,000 adults, together with 160,600 cattle and 1,068,100 sheep. It was calculated at the same time that there was, in the Southern and extended Southern Reserves, accommodation for 351,000 cattle, and it was therefore decided that the extensions of the Southern Reserve were more than capable of holding all the Masai stock from the north.

Census of Masai on Laikipia.

In November, 1911, six elders and a few warriors from the Northern Reserve accompanied Mr. R. W. Hemsted on a tour of inspection of the trans-Mara country. They were shown every part of the Ol-Orokuti (trans-Mara) area, and unanimously expressed the opinion that the country was eminently suitable for the Masai and their cattle.

Tours in the Ol-Orokuti.

In the same month Legalishu deputed four elders to visit the district, and these elders accompanied by Mr. Hemsted, toured the Ol-Orokuti for fourteen days. Their opinion on the area was not expressed, and they returned nothing but evasive answers, at the same time admitting that the grazing was sufficient and the water supply adequate.

Meeting at Naivasha.

On the 10th of February, 1912, a meeting was held at Naivasha between the representatives of Masai from the Northern, Southern and extended Southern Reserves and the Secretary for Native Affairs (Mr. Hollis), supported by the Provincial Commissioner, Naivasha and several other administrative officers. There were present Masikondi and Legalishu with some thirty elders of the Northern Reserve, Ngaroya, the Regent of the Southern Reserve, carrying the iron club, as representing the Laibon, Ole Kotikosh and other Purko Masai, who had already moved into the extended Southern Reserve, and Ol le Seti with other Kakonyukye Masai. Legalishu and Masikondi stated that they did not now wish to move and that they believed the country offered to them in exchange for Laikipia was inadequate. Ngaroya said that he was authorised to inform them that it was the Laibon's wish that they should move south and so reunite the tribe, but the northern chiefs declined to carry out this wish of the Laibon. Ole Kotikosh expressed the desire of the rest of the Purko division to be allowed to proceed with the move south, and Ol le Seti stated that most of the Kakonyukye were already in the extended Southern Reserve and that the remainder wished to follow. As a result of this meeting the members of the Purko division who had remained in the north were permitted to move with their cattle, and arrangements for the move were entrusted to the Provincial Commissioner, Naivasha, on the 18th of February. The influence against the move exerted by Legalishu, however, was so great that although several of the Purko wished to proceed they were prevented from doing so, and small success attended a visit to Laikipia carried out by Ngaroya and Ole Kotikosh with a view to using their influence in favour of the move.

Directions to the Masai to move.

On the 8th of May, while Sir Percy Girouard was on leave in England, the Secretary of State decided that the Masai should be directed to move to the Southern from the Northern Reserve, but he gave instructions that the lands vacated in the north must not be dealt with in any way until the matter had received his approval.

Arrangements for the move.

Arrangements for the move were at once put in hand. On the 10th of May, Mr. Bowring, the Acting Governor, proceeded to Naivasha accompanied by Mr. Hollis, Dr. Milne, the Principal Medical Officer, and Mr. Brandt, Acting Chief Veterinary Officer, in order to discuss with Mr. McClellan and the local officials the details of the move. Two routes only were to be used, one *via* Kisanteita and across the Mau by the land known as "The Promised Land," and the other *via* Gilgil and Eburu and across the Mau near Lake Naivasha. A broad track, twenty-five miles long, had been cut through the forest from the western slopes of Mau to the Mara River. Not more than 10,000 cattle were to be allowed to move in the first instance by each route and no further mobs were to follow until the first ones had settled down. Adequate arrangements were made for the supervision of the move and medical and veterinary officers were provided.

Meeting at Naivasha, 21st May, 1912.

On the 21st of May, a meeting was held at Naivasha when it was explained to the Masai that the Government had decided that the terms of the treaty entered into on April 2nd, 1911, should be kept and that the northern Masai would be required to move. The chiefs offered no opposition, and, indeed, appeared to be relieved that the Government had come to a decision on the matter. Ngaroya, the Regent of the Southern Reserve, expressed his thanks on behalf of the Laibon and stated that it was a great satisfaction to all the Masai to know that they would be brought together again and not be divided into two sections. Legalishu agreed to move with the first batch and to help the others to settle after they had crossed the Mau.

The "Masai Case."

On the 28th of June, 1912, Mr. A. Morrison addressed the Colonial Office, intimating that he, in company with Mr. A. D. Home and Mr. A. W. Buckland, had been instructed to act for Legalishu in the taking of legal proceedings against the Government on behalf of the Masai. Action was brought in the High Court by Ol le Njogo and others against the Attorney General and others in May, 1913, and the case was dismissed with costs by the Chief Justice. An appeal was made to the Court of Appeal for Eastern Africa in December, 1913, but the appeal was dismissed with costs. Conditional leave to appeal to the Privy Council was

granted, but lapsed owing to the appellants failing to give security for costs. Further details of the proceedings will be found in Appendix 3.

While the move was in progress the question of the allotment of land to settlers who were affected by the removal of the Masai from Laikipia was brought up. The claimants fall into two distinct categories, viz. :—

(1) Those who, in 1904, abandoned their farms, or claims to farms, on Laikipia in order to make room for the Masai who were, in that year, settled in the Northern Reserve; and

(2) Those who had abandoned their farms in the Lemek Valley and in the Southern Uaso Nyiro in connection with the move then progressing.

The original intention in respect of those of the first class was to make grants of land to them elsewhere. These Laikipia settlers were allowed time to make their selections, but, before these selections had been made, the removal of the Masai from Laikipia was mooted and the settlers preferred to wait in the hope of being, after all, able to take up their land on Laikipia as originally intended. The negotiations for the surrender of claims of those settlers who came within the second category were begun in 1909, and were carried out on the basis of a grant of land equal in area to that surrendered in the Southern Reserve, plus fifty per cent., or a sum of money, by way of compensation for improvements, if any. It was understood that no definite promises had been made that the Laikipia lands would be available for exchange, but there was little doubt that it had been taken for granted that this would be the case. Mr. Bowring consequently suggested that, in offering farms to claimants efforts should be made to offer farms approximately equal in value to the land to which the claimants would be entitled on Laikipia, were this land available. At the same time they would be given the alternative of waiting in the hope of being eventually granted land on Laikipia. The Secretary of State considered it desirable, from the public point of view, that no one who was to be compensated in connection with the movement of the Masai should be granted such compensation on Laikipia. He further directed that the claims should be satisfied purely on the basis of area, without reference to the hypothetical value of Laikipia lands. The satisfaction of such claims was to take precedence, within a reasonable limit of time, of any further general allotment of Crown Lands.

On the 23rd of October, 1912, further facts were telegraphed to the Secretary of State regarding the lands on Laikipia. It appears that, on April 7th, 1910, the Commissioner of Lands had informed the Governor that the result of the negotiations with the Masai would be the granting of approximately 200,000 acres on Laikipia. On April the 13th, the Governor had accepted the Commissioner's proposals, and, on that authority, the Land Office had informed the parties concerned that, if they surrendered their land in the Southern Reserve, they would be given areas in the Northern Reserve or its vicinity when the move had been accomplished. Similar promises had been made by the Governor to Major the Hon. R. F. Carnegie and Lady Southesk on the 14th of June, 1910. Sir Henry Belfield was therefore of opinion that the Government was under a legal obligation to fulfil the promise made on the completion of the move. He anticipated the most serious results if land on Laikipia was now refused to claimants. All the Southern Reserve farmers confidently expected to receive one and a half times their previous holdings out of the lands to be vacated by the Masai and the Governor feared that there was no chance of their accepting land elsewhere.

On receipt of this information the Secretary of State concurred in the view that the Government was committed to the grant of lands vacated by the northern Masai to the claimants in question and felt reluctantly compelled to discard the principles which he had previously laid down. He therefore directed that the obligations entered into in 1910 must be discharged, and as the land, if left vacant for any length of time, could only become useless, or at any rate, greatly impoverished, he approved of arrangements being made for the necessary grants, due regard being had to any prior claims which ought to be admitted to lands on Laikipia in view of the fact that the claimants surrendered their holdings there when the Masai were transferred from the Rift Valley in 1904.

311

The Meeting of December 5th, 1918.

On December 5th, 1918, the Governor met the Masai chiefs at Naivasha. The remarks then made by Lenjishu and his followers were evasive, and no attempt was made to express their true feelings in the matter or to disclose their reasons for taking legal proceedings against the Government. The Governor was of opinion that only a minority of the tribal elders, headed by Lenjishu and Mankwesh, were responsible for this action, ostensibly on behalf of their tribe, and that the personal avidity and ambition of these two men were doubtless contributory causes of their organised opposition to the approved Government policy. Those who opposed the move had no valid ground for their objection as to the suitability of the new country to which they were being moved.

Completion of the move.

On the 9th of April, 1919, Sir Henry Belfield informed the Secretary of State that the Masai move was completed. With the exception of 2 Dido Lekutuk division all the Loitokitok Masai were located in the extended Reserve, while that division, after remaining for some months on the Uaso Nyiro, moved to the Kapetiei country and settled there. Reports showed that the losses suffered by the Masai on account of the move had been very small. Rinderpest was rife, both in Loitokitok and the south, from which many hundreds of beasts died, but the veterinary officers who were in charge of both areas did all that was possible to prevent the spread of the disease. Sheep suffered on one or two occasions, but only a few succumbed. Two dipts were being used, each with an officer in control, and of the thousands of sheep at those dipts not one was lost. The death rate of the Masai themselves, directly attributable to the move, was probably nil. On the whole, the Masai behaved well throughout, and there was very little friction with settlers. Statistics show that the number of Masai moved between the 10th of June, 1919, and the 27th of March, 1920, was [illegible] adult males, 4,181 women and 3,721 children, a total of 10,[illegible] souls, while nearly 200,000 head of cattle and 500,000 sheep were counted. The number of sheep is probably very greatly underestimated. The Secretary of State expressed his appreciation of the manner in which the delicate and difficult task had been performed.

Attitude of the Masai after the move.

On the completion of the move the Purko division evinced a considerable disinclination to cross the Mara River, but no steps were taken to induce them to do so and a large number of Masai, including all the Purko Masai, moved into the trans-Mara region in September, 1919.

The Masai did not, on the whole, settle down contentedly in their new surroundings and they showed a disposition to make the most of everything. Complaints were incessant that the country was unsuitable for them and for their stock, and every device short of active resistance was employed to obstruct the Administration and to defeat the ends of justice. Information concerning crimes was withheld, and escaped prisoners were assisted and harboured. Chiefs and elders proved anything but helpful and were occasionally absent defiant. The "Masai Case" was undoubtedly responsible for much of this feeling, but it is also probable that the natives resented the closer administration which had been rendered possible by the amalgamation of the two reserves.

This discontented feeling began to disappear some six months after the completion of the move and with, numbers and stock thrifty discussed to question. Two years after their arrival the Masai could be described as contented and happy in spite of their dissatisfied disposition.

Disposition and previous conditions.

Prior to the arrival of the Masai from Loitokitok, the country constituting the extended Southern Reserve had been occupied by members of the Loita, Dorori, Kisongo and Siria tribal divisions as well as by about one-quarter of the Purko division. These sections had undertaken to move to Loitokitok in 1918, but succeeded in evading the terms of their agreement with the Government and, while admitting that they had no claim to the land, occupied the area and came to regard it as their own. By these Masai the arrival of their fellows from Loitokitok was resented, while the latter were displeased at finding the best grazing grounds already taken up. A considerable amount of friction ensued, more particularly between the Purko and 2 Dorori divisions.

[238
978]

133 one or two streams which are permanent and which run for some distance from the foot of the hill. The most important are the Ikoronga and Kidongo, but several other springs are to be found on the mountain itself. The upper portions of Mazel Creek, as well as the northern slopes are covered with good grass, suitable for grazing during the wet season, but the Mazel usually proceed to the Ilaro permanent watering places in the dry season.

Following the line of the Longido-Kajiado road northwards, more broken country is encountered, with the Ngongonyo and Ol Kesumbu Hills on the right forming the western boundaries of the Kyiri plains. This part of the reserve is bare and barren with little grass, and water can only be obtained by digging. The road lies generally at an altitude of between 4,000 and 5,000 feet, and the first permanent water that is to be found is at Ikoli. There are some permanent springs on the slopes of the Ikorongonyo and Ngongonyo Hills. North of Ikoli the country is covered with grass, and some excellent grazing grounds comparatively free from tsetse. To the east lies the broken country of the Ilonga Hills, which contains numerous water-holes, some of them permanent, but no permanent rivers. The line of the Magadi Railway is then reached, north of which lie the Kapiti Plains, stretching north-westwards into the Ukambani country. These plains are at an altitude of about 4,500 feet, and are covered with grass, though the ground is somewhat stony.

To the west the ground rises fairly uniformly to the Ngong Hills, Dalaya Lemayo, and Ol Doinyo Sapuk. West of these heights lies the monument of lava rock, running north and south, which forms the eastern wall of the Rift. The Masai Reserve at the Kikuyu Escarpment is a sandy and gravel-covered direction to Ol Doinyo Sapuk and the Tanaka Station, thence North-westerly past Lenagi, to the Anglo-German boundary near Boundary Post 61.

East of this escarpment the country is at a much lower level, is barren, rocky and destitute of water. A few isolated hills rise up, but it presents the appearance of a rugged desert and is practically uninhabited. Descending from the escarpment, at a mean altitude of 4,000 feet, the general altitude of the foot is little more than 1,000 while in the neighbourhood of Lake Magadi the country falls to 2,000 feet. To the north of the Lake stands Ol Keiyeni, a mass of lava or lava peaks, of which the highest attains an elevation of 4,000 feet, and to the north there is a series of bluffs and ridges. Near Lake Magadi, and extending westwards and northwards for some miles, there are the deposits of an old lake. These are associated with volcanic debris and have in places been overflowed by lava.

Northwards, and some 35 miles west of the Ngong Hills, the country consists of a series of parallel valleys divided by rocky flat ranges, thus is the successive fault movement so definitely marked in the Rift Valley.

West of Lake Magadi the Rift Valley resolves to low altitude, broken only by Ukongoro, a hill which flanks the Uaso Nyiro on the east at a height of 4,000 feet, but at the northern extremity of Lake Natron, a few miles north of the boundary, Ol Doinyo Gare an isolated peak to an altitude of 6,000 feet, 4,000 feet above the average of the Uaso Nyiro at the immediate foot.

The country to the east of the Uaso Nyiro, and lying in the Rift Valley, is undoubtedly the poorest portion of the reserve from a pastoral point of view. East of the Kaiado-Longido road, and in the Ingito Hills, the country may be described as fair stock land, and though water is not plentiful, and though there are in general considerable distances to be covered between water-holes, a considerable quantity of stock can be maintained on it by utilizing the river areas during the wet season. Statistics show that this area does in fact support about 110,000 head of cattle and nearly 200,000 sheep.

Those remains the country situated in the Rift Valley from the Ewaso to the Uaso Nyiro. The Ewaso River does not fall within the Masai Reserve, as a stream flowing above general range in the wet weather and it is, therefore,

000

Towards the end of the year 1906, a tour of inspection was made by Mr. McClure, the Acting District Commissioner, Kapiri, and Captain Sherlock, the Assistant District Commissioner, Fort Jameson, in the country lying west of the Northern Line Dams, more especially of the area known as Chisali and the Lusaki Plains and Hills. This inspection was conducted with a view to ascertaining the potential value of the area as a place for European settlement. The opinion of these officers was that the land near Fort Jameson was, on the whole, unsuited to such settlement, because, although possessing of the land available for cultivation, [illegible] of the area would be impracticable. The government officers were at pains to preclude any possibility of obtaining land on a commercial plan, but they suggested that it was admirably suited to a remote and pastoral tribe, such as the Bemba.

A portion of the west bank of the Lusaki Dam, and the Lusaki Valley, had already been allotted to Europeans, but some 2,000 square miles of land were left available for Europeans as native settlement. Of this area, 1,000 square miles might be described as unsuitable, i.e., without permanent water of any description. After a moderately wet season there would be sufficient water for such a tribe as the Bemba. The year 1906 had been unusually dry, but a fair amount of standing water was found in dry river beds.

Large numbers of Parley Bemba had recently migrated from Tigaire to Chisali, the Kabwe and Kapiri Plains, their numbers being estimated at 2,000 men, women, and children, with 30,000 head of cattle, and the grazing generally in Chisali was said by the Bemba to be exceptionally good. The value of the neighbouring grazing in the Lusaki Plains was greatly reduced by the absence of springs or other permanent water, but this country had previously been occupied by three chiefs of Bemba—the Lusaki, Chiwayula, and Chisali.

These officers estimated that the area could easily provide dry and wet weather grazing for 100,000 head of cattle, provided the water difficulty was overcome, and reported that the occupation of the area contained to the country over the Anglo-Portuguese border.

The country was next visited by Messrs. Sugar and Rolle, who toured, from the 19th of March until the 28th of April, 1908, the area lying between the Lusaki Dam and the Kafue River with a view to ascertaining the value of the region for occupation by the Bemba then located in Lusaka, paying special attention to the water supplies. They reported that the two large dams, the Lusaki Dam and Kafue, were in order apart of their second plants, that there were several minor streams of no great length, and that water was obtainable by digging at various points. Some of the best water on the Lusaki Dam was already in the occupation of white colonists, and a considerable portion on Il Bolli was also needed for irrigation. Under the observed conditions, Mr. Sugar was unable to recommend the removal of the Lusaka Bemba into the region, and he suggested the investigation of the possibilities of the Kafue uplands.

[illegible]

Prior to the meeting, Mr. Hollis visited the Uasin Gishu Native Reserve and several of the adjoining farms and obtained the following information. The Uasin Gishu Masai in this area numbered in all between 1,600 and 1,800 souls, and paid tax on 440 huts. They possessed 15,000 head of cattle and 25,000 sheep and goats. 4,000 head of these cattle were in the habit of grazing on land belonging to Captain Grogan, who received toll in bullocks at the rate of 1 per cent. per annum. There were 30 kraals on Lord Delamere's land, containing 3,000 head of cattle, which were allowed this privilege without payment. The remaining 7,000 or 8,000 cattle were for the most part in the Native Reserve. Statistics of the Uasin Gishu Masai. GA8* 231 [62] [65]

The two reserves occupied by the Uasin Gishu Masai in February, 1911, were separated by a strip of alienated land, and steps were taken to re-acquire parts of adjacent farms belonging to Captain Grogan which would join these two areas and form one native reserve having an area of some 40,000 acres. The Masai were informed that, when this reserve had been allotted to them, they must regard the question of boundaries as definitely settled. They were also given to understand that, in lieu of hut tax, they would be required to pay a cattle tax of R. 1 per head or a stock tax of one head out of every head of 100 cattle, sheep or goats. Further extension of the Reserve. GA8* 311

In July, 1911, the Provincial Commissioner, Naivasha, reported that dissensions had occurred between Chief Lenkoro and the hereditary Laikon, Walikondi, leading man in the Masai Reserve. Lenkoro had been constituted Chief by Mr. (now Sir Frederick) Jackson when he was stationed at Ravine and had acquired a considerable following. Charges of witchcraft had been brought against Walikondi, with the result that he requested permission to move, with the other Masai, from Laikipia into the Southern Masai Reserve. His following expressed a desire to accompany him. It seemed, however, that such a movement would be the cause of friction between the Uasin Gishu and the other Masai, who have little in common, and it was decided to hold the matter over, at any rate until the Masai Move was an accomplished fact. Dissensions between Lenkoro and Walikondi. GA8* 518 954 791

In May, 1912, the sanction of the Secretary of State was requested to an exchange of land held by Captain Grogan in the Naivasha Province for an area on the Athi Plains. Captain Grogan was willing to exchange 14,438 acres, to be used for an extension of the Uasin Gishu Masai Reserve, for 30,000 acres on the Athi Plains. The Secretary of State approved this arrangement in June, 1912, and the Provincial Commissioner, Naivasha, was instructed to take steps to mark out the extended Uasin Gishu Masai Reserve. GA8*

A description of the Uasin Gishu Masai Native Reserve was accordingly drawn up, and read as follows:— Uasin Gishu Masai Native Reserve Boundaries. GA8* 131

"The reserve is divided into three parts:

"No. 1. Commencing at the point where the Nakuru Eldama Ravine Road crosses the Emoroson (or Nasoito) River the boundary follows the right bank of this river down stream to its junction with the Ewaso (or Sagori) River; thence along the left bank of the Ewaso River up stream to the point where it is crossed by the Nakuru Eldama Ravine Road; thence along this road in the direction of Eldama Ravine to the point of commencement.

"No. 2. Commencing at the point where the Ewaso River is crossed by the Nakuru Eldama Ravine Road the boundary follows that road in the direction of Nakuru to the most northerly corner or portion L.O. 487; thence in south-westerly direction along the western boundary of L.O. 487 to its intersection with the eastern boundary to L.O. 502; thence northerly and westerly along the eastern and northern boundaries of portion L.O. 502 to the Ewaso River; thence along the right bank of the Ewaso River down stream to the point of commencement.

"No. 3. Commencing at the most westerly corner of portion L.O. No. 484 on the Eldama Ravine Road the boundary follows the western boundaries of L.O. 483, 484, 482, 481 in a north-easterly direction to the most northerly corner of the latter (which is also the western corner of L.O. 482); thence in a south-easterly direction along the southern boundary of L.O 482 to the Kole River;

[pages preceding p. 167 not processed]

SECTION VII

THE MASAI EXTRA PROVINCIAL DISTRICT

GENERAL NOTE

MASAILAND constitutes an Extra Provincial District under an Officer in Charge, holding the powers of a Provincial Commissioner, with two District Commissioners, stationed at Kajiado and Narok. The legislation in force in other parts of the Colony applies to the District, but the Outlying District Ordinance, No. 25 of 1920, has also been applied to it, in order to provide a means for controlling immigration from other tribes, a matter to which, as will be subsequently shown, much importance is attached by Masai tribesmen. The area of the District is 15,177 square miles and the population was estimated in 1945 at 53,000.[1] The density is thus 3.4 per square mile. 631 [34] [61]

The Masai District contains in its more northern section a considerable area of land which ranks for agricultural or pastoral purposes with parts of the neighbouring Highlands reserved for European use, though it is to be noted that the rainfall here is more variable than in the central part of the Highlands. The lower parts of the District have a lower and even more variable rainfall, with the result that there is an area, conservatively estimated at a little over 5,000 square miles, which is arid and for all practical purposes waterless.[2] But the value of the large area held by the Masai is not to be judged by its agricultural possibilities, for if the Masai no longer justify the character assigned to them by history as "a virile tribe of predatory nomads," they have at all events maintained their traditional habit of life as a pastoral people, and though there is some cultivation in the Naivasha-Ngare area and also near Ngong, this forms only an infinitesimal part of the District, and is for the most part carried out by Kikuyu immigrants on behalf of the local Masai. 311 132 311 563

It is of interest to note that in 1904 the number of cattle was estimated at only 50,000 and the sheep and goats at 600,000. This may have been an underestimate, though it must be realized that the country was still to some extent suffering from the effects of the great rinderpest epidemic of 1890, which had entailed such catastrophic results both on the numbers and the military power of the Masai. By 1914 the estimate had gone up to 600,000 head of cattle and over a million and half sheep and goats.[3] The Masai herds suffered severely in the drought of 1933 and 1934, when their losses of cattle were estimated at over a quarter of a million. But a recent estimate has put the number of cattle at over 700,000, with 800,000 sheep and a large number of donkeys. The further increase in the number of cattle is to some extent affected by the existence of tsetse, which is prevalent on the South Kavirondo boundary, in the extreme west, and also in the middle area, where the Kajiado and Narok Districts join. But if the present estimate of the stock is correct, 233 195 [131] 471 233

Mbugwe are Bantu. There is also a small group of Tindiga, leading virtually a bushman life in the Lake Eyasi basin, to whom reference was made in Section I.[1] There would appear to have been a movement both northward and southward on the part of the tribes, who were previously contained in a very small area by the Masai invasion of the early part of the century.

THE MASAI DISTRICT

The Masai District forms the southern portion of the large block of country in Tanganyika and Kenya, extending to no less than 21½ million acres in extent, occupied by the Masai tribe, whose numbers were given in the 1951 Census as 48,945 in Kenya and as 47,276 in the 1948 Census in Tanganyika. There will be found in the Chapter dealing with Kenya Colony further reference to the tribal characteristics of the Masai, and it will be sufficient to give here only those facts which bear in particular on the position they occupy in Tanganyika.[2]

The southern movement of this tribe from the neighbourhood of Lake Rudolf seems to have come to an end about the middle of last century, but its spearheads had in 1890 penetrated as far south as the Great Ruaha River and even to Uhehe in the Iringa District, whence they were driven back by the Gogo and Hehe. There were many isolated Masai raids after that time, but these were in the main carried out by Kenya Masai, whose incursions were directed towards the coastal areas on the east, and indeed took them on occasion as far as Mombasa. The Masai settled in Tanganyika do not seem to have attempted a further movement of any importance into the neighbouring areas of the Territory.

The Anglo-German Agreement of 1890 cut the Masai country into two parts, roughly equal in area, though the population remaining under the British jurisdiction was somewhat larger than that which fell under German rule. The result was to make an effective division between the Kenya and Tanganyika Masai, and though the two sections have retained a community of racial interest, this has not extended to the political field. Such political unity as the Masai people possessed had existed largely for war purposes, and in peace time political as apart from religious authority was dispersed among the headmen exercising control over the groups having a customary right of pasturage in particular localities. There was moreover lacking in the case of the Tanganyika Masai a motive which might have led them to identify themselves with the Kenya Masai, namely, the need for protecting their lands from alienation by Government for the benefit of Europeans. The troubles created in Kenya by the efforts of Europeans to secure possession of Masai lands[3] were not repeated in Tanganyika, where the Masai have remained undisturbed in the occupation of the country they held at the period when European rule was established.

The present Masai District comprises, in the north, the Loliondo area, the dominant feature of which is the vast Serengeti plain, with the extinct volcanoes which mark its southern end. In the centre, south of the Rift Wall, the plateau type of country is characterised by volcanic hill masses, which provide a number of permanent water sources. In the South lie extensive thorn scrub steppes, with a low and very variable rainfall.

Practically the whole of the area included in the District is used only for pastoral purposes. If tradition is correct in holding that the tribe was once

[1] See page 216.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

divided into two sections, the agricultural ('l-oikop) and the pastoral Masai, there now remains in Tanganyika little vestige of the former.[1] A few scattered plots are cultivated by Masai, but it is with the help of alien labour. For the rest, there a little cultivation by the small Sonjo Tribe (3,521 in the 1948 Census), a people living below the Rift Wall who have not been assimilated by the Masai. The only other tribe in the District, the Dorobo (believed to number about 1,500), who are known traditionally as the "hunting people," are possibly a survival of the original inhabitants, and have become practically a servile class to the Masai.

As a pastoral people the Masai are semi-nomadic in the sense that they move with their herds in order to avail themselves of the seasonal variations in water supplies, so that they in effect practise a system of rotational grazing. They are credited with the possession of three-quarters of a million cattle and large herds of sheep and goats, but the number of their stock is subject to large and rapid variation in times of drought, and moreover East Coast fever, rinderpest and other diseases take a heavy toll of them. In the late 'eighties a combination of drought and disease almost wiped out their cattle and greatly reduced the numbers of the people themselves. Though like many other African pastoral tribes they make a cult of their cattle, they show little interest in improving their quality, and in the past have been prepared to dispose of them only in so far as they might need cash for their Poll Tax or for the few articles of food required to satisfy a people whose ordinary diet is limited to milk, meat and blood. To some extent, this position was improved during the recent War, which provided a stimulus to production of beasts for sale.

From an economic point of view therefore the Masai present a difficult problem, since the contribution they make to the economy of the Territory does little to justify their occupation of so extensive an area as twelve million acres. From a social point of view they are also a problem, owing to their reluctance to avail themselves of facilities for education. And as will be further explained in the following pages, they present an equally difficult problem of native administration, for their social system is still reminiscent of a period when their chief concern was in fighting or raiding at the expense of their neighbours.

THE FORMATION OF THE SYSTEM OF NATIVE AUTHORITIES

As already indicated, the diverse social and economic conditions prevailing in different parts of the Province have been reflected in the variety of forms taken by the Native Authorities as now constituted. Before, however, proceeding to describe these in detail, it will be convenient to give here a statement which summarizes their chief features. See page 284.

THE MOSHI NATIVE AUTHORITIES

In the Moshi District the present formation of the Chagga Native Authorities is the result of a somewhat radical reorganization carried out in 1946. Up to that time the Chagga had been split up over nineteen chiefdoms, divided from each other not only physically by the deep ravines of the mountain side, but also politically by the obstinate clan feuds and jealousies of past days. These chiefdoms were all treated as of equal standing, though their jurisdictions varied from 11,500 taxpayers in the Machame chiefdom to 400 in the Mrao. They were united in a Council of Chagga Chiefs, which was conspicuous mainly

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

The 1948 census gives the following figures: 161

		Male	Female	Total
Kenya	Narok	17,068	17,788	34,810
	Kajiado	12,683	12,995	25,678
	Samburu	9,900*	10,200*	20,000*
	Il-Tiamus	1,734	1,689	3,423
		41,142	42,669	83,711

* Estimated.

		Male	Female	Total
Tanganyika Districts	Arusha	24,710	27,310	52,020
	Masai	23,271	24,005	47,276
	Mpwapwa	728	740	1,468
	Handeni	435	537	972
	Pare	826	747	1,573
		49,970	53,330	103,300
Total for Masailand		91,112	95,996	187,050

This shows only a small increase over the 1941 estimate for the Kenya Masai, where 10,000 Samburu are deducted; but it doubles the previous estimate for the Samburu and shows a substantial increase in the Tanganyika Masai.

The livestock estimates for the Kenya Masai are: 231 233

	Cattle	Goats and sheep	Donkeys
1918	750,000	2,000,000	18,000
1930	700,000 to 1,000,000	1,000,000	170,000

The figures for cattle among the Tanganyika Masai are 500,000,[1] but these may be underestimated. They vary in fact from about 600,000 to 750,000 according to season and other factors.[2]

The total area of Masailand in Kenya and Tanganyika is about 41,000 square miles or 26,240,000 acres (15,000 square miles or 9,600,000 acres in Kenya, and 26,000 square miles or 16,640,000 acres in Tanganyika). After deducting 3,000 square miles or 2,000,000 acres from the Kenya Land Unit as being useless on account of bush or tsetse fly, the Kenya Masai have about three acres per head of stock which is shared with sheep and goats; whereas in country such as theirs cattle alone require anything from three to five acres per head, owing to the low rainfall, poor grazing, scarcity of rivers, and frequent droughts. Their Land Unit is also a Game Reserve. 131 311

Sources: Sandford, 1919; E.A. Census, 1948.

PHYSICAL ENVIRONMENT

At the height of their power in the middle of the 19th century the Masai occupied a stretch of country which covered some 500 miles from north to south, and, at its widest, 150 miles from east to west. The northern limit was approximately Lake Sukuta (now mud flats), 20 miles south of Lake Rudolf; the southern, Lenjoge, near 175 131

ol balelo l eń ger, male lamb;
em balel' eń ger, female lamb.

233 The far greater part of the steppes offers excellent pasture; only
• 311 smaller or larger isolated stretches are quite unsuitable for this. The
[823] Masai know these precisely and scrupulously avoid them. What makes
them unusable is first of all the occurrence of grasses that bring about
digestive disorders and the lack of salt in sufficient quantities, through
which a similar effect is brought about. In good pasturing places one
[135] always finds salt licks. The rain water standing in a depression in the
ground has leached out the very saliferous earth and, after evaporation,
[825] has left behind a more or less strong, gray crust of salt. It is self-
evident that one avoids those places about which the presence of the
above-mentioned harmful insects is known. It is striking, however,
that ticks are not feared at all.

361 When the pasture around the kraal has been grazed off, a change
233 of dwelling is decided upon, which takes place as soon as a new
pasture ground has been found by a few people sent out. Then there
is activity in the kraal long before daybreak. After the cows have
been milked, the cattle moves off as the first party. Then the herds
of goats and sheep follows, and after these /177/ the calves. Young

MAN'S ROLE IN THE GRASSLAND ECOSYSTEM

The Masai are not now and probably never have been in a real equilibrium with their environment. Their history as we know it can be interpreted as roughly parallel to a part of the Americans' exploitation of the United States; exploiting a bit of land and then moving on west until there was no more land to the west.

[178]
[177] The exploitation of land by the Masai was a very long term process until the advent of the Europeans. The combination of peaceful administration, veterinary services, and matches have greatly accelerated the rate of exploitation, but they do not appear to have altered the basic processes. The only difference is that this time the Masai have no more land to the west.

It would be interesting to know if this basic lack of equilibrium with the environment was common to other pastoral tribes in Africa and especially those who preceeded the Masai.

As described and discussed above, the grassland ecosystem in Western Masailand, including its wild fauna, is maintained -- and created -- by a combination of

*13 grazing and burning. We have no evidence of fires in
• 311 the area lit by any agency other than man. Fires might
182 be started at rare intervals by Lengai Volcano. They might be ignited by lightning. But if the climatic regime of the past 20 years or so is typical, lightning fires must be exceedingly rare. Creation and maintenance of the grassland ecosystem requires frequent burning. The inescapable conclusion is that man is very closely associated with the origin and maintenance of the ecosystem.

This conclusion is obvious and not new. Swynnerton in 1936 (p. 464) discussing the spread of tsetse files wrote:

> The wooded savannas which cover east Africa today are essentially the product of a cultivating, grass-burning man. Few fires are lighted by nature, and fewer still can have arisen when the whole country was under the cover of the evergreen forest and deciduous thicket which evidently preceded so much of the savanna and which today succeeds it when we exclude the grass fires. Whether our savannas originated before the advent of man or after -- perhaps many thousands of years ago in a man-settled Sahara with a moister climate than today -- none can say. It can, however, be said with some confidence that G. morsitans and G. swynnertoni, the two tsetse species that essentially belong to savanna, owe their present distribution to man.

*13 Yet there is a curious reluctance on the part of many to accept the importance of human activities in shaping the landscape. H.C. Pereira wrote (pers. comm. 1961) that: "All ecologists agree that natural tree and grass savanna associations in Africa are stable climax

MASAI HERDS AND MARA LIONS

For 177 648

Westerners the Masai have become the symbol of a vanished aristocracy, a lost cause they can afford to keep as a household pet who has the spunk to stand up to its master.

The Masai way of life is certainly doomed. For a while it may continue, but nothing in the end can resist the pressures of Western materialism. The British have protected it by freezing a tribal pattern of land ownership, enshrined in a treaty to which the Masai hold with all the desperation of a man clinging to a raft when the waters are rising. That treaty, which confirms them in possession of their grazing-grounds 'for ever', was made to keep out Europeans. Now it is no longer white settlers who threaten them, but black ones. Will a treaty made for the one purpose serve for the other? Only while the British enforce it; when politicians of the land-hungry Kikuyu and Luo peoples occupy the seats of power in Nairobi, the borders of Masailand seem unlikely to remain intact.

For here lie the last reserves of fertile, well-watered and unused land in Kenya, hitherto protected by the strongest guardian of the land in Africa: the tsetse fly. In the last ten years, modern techniques of mastering tsetse-borne diseases, and the tsetse fly itself, have reached a point where all this land could be thrown open to settlement. The question now is partly one of expense, and partly of politics. The Masai themselves do not cultivate. So long as their treaty with the British Government holds good, they will resist to the last man the opening of their land to settlement by the cultivating tribes. 311 648 [136]

II

The Tanganyika–Kenya border cuts through the Masai's territory, most of which is open, semi-arid grassland useless for any purpose other than seasonal grazing by scrub cattle, even if water could be tapped by boreholes. But in the west, where Masailand approaches Lake Victoria, and on the Mau escarpment's south-western slopes, soil and rainfall would support a sizeable population of cultivators. 133

The Masai, numbering about 85,000, keep about one 000

21:Huxley Q, T-5 (no date) 1960 FL11 Luo
Masai FL12

imbecility—or perhaps not remarkable, since nothing has been more characteristic of the half-century of European intervention in Africa than the slap-happy introduction of bright, well-meaning ideas by enthusiasts of all kinds, without any regard for their long-term consequences.

Anyway, vets controlled diseases, livestock multiplied and their hoofs and mouths destroyed the precarious grass cover of the plains. The result is that, except where the tsetse fly remains in control, the Masai are living in country poised upon the edge of deserthood. Some of it has gone over the edge, some hovers on the borderline, some has not reached it yet. And so pressure mounts upon those regions that are still protected by the tsetse fly.

Overcrowded people outside want to get in, overstocked Masai themselves want to take their herds where grazing is still rich and deep. If either succeed, unless they adopt very different methods, they will destroy those regions as surely as they have damaged their present inheritance. Agricolas and vets do not want to see these last remaining areas opened up without strict control. But governments are terrified of controlling anyone by what may be represented as harsh measures, and administrators have inclined to caution since the Masai speared to death a D.C. who was persuading them to sell some steers. So the matter, like many others, rests in a state of suspended flux, and everyone hopes for good rains.

III

Down on the Kenya–Tanganyika border, not so very long ago, there lived an Englishman who kept in touch with the world by carrier-pigeon. For three or four months of the year no vehicle could reach him, and even in the dry weather it was a long, hard, bumpy seventy-mile journey from Narok, where the road ends. The aeroplane has changed all that. An hour's pleasant flight from Nairobi brought us comfortably to rest beside a tributary of the Mara river.

First we flew over the Mau, that range of mountains forming the south-western wall of the Rift Valley. Covered with forests of cedars and olives and, higher up, of bamboos, the

21:Huxley Q, T-5 (no date) 1960 FL11 Luo
Masai FL12

133 Mau is the source of all the rivers watering the western half
[137] of Masailand, Kipsigis and part of the Rift Valley. The birthplace of innumerable streams, it is, in theory, protected by its status as a forest reserve.

185 Looking out from the small yellow aircraft expertly handled
●311 by June Wright, one of the best commercial pilots in East Africa, one could quickly see how different theory was from practice, here as elsewhere. In a forest reserve no one is allowed to fell trees, cultivate, start fires or graze livestock. In less than half an hour, I counted seventeen active fires and saw the shambles created by innumerable others. Whole ridgebacks of the mountain, sticking up like black spines, were as bare as slag-heaps and already runnelled and creased by gully erosion. Older fires were still smoking in some of these devastated areas; one could see the forest being eaten into like a great fur pelt attacked by moths.

As sure as fate, one day there will be no more water for cattle in the streams below. 'God is punishing us,' will say the Masai: but it will not be God, it will be themselves. The
[233] streams are already shrinking and the Masai are driving their herds farther into the hills to find grazing. They cannot take cattle into forest and so they burn a way in. They are creeping upwards, spreading destruction as they go in order to escape the consequences of destruction they have already caused.

[222] Other fires are started by honey-hunters who burn down trees to smoke out the bees. Often, in the forest, you can see blackened hollow cedars and olives killed by fires tucked into the roots. If the foliage is dry and the wind right, the fire will spread and get out of hand.

563 And then there are 'acceptees': a clumsy term given to men of other tribes who are settling in Masailand, family by family, with the permission of Masai elders. They are tenants: but it is very unlikely that they will ever go.

[167] In South Nyanzaand in Kipsigis it is reckoned that upwards of two thousand families a year are crossing the southern border into Masailand and Tanganyika. In recent years a
[582] good many Masai have married Kikuyu or Kamba wives
[842] because so many of their own women are sterile; at one time there was quite a trade in Kikuyu girl-children, exchanged for cattle.

21:Huxley Q, T-5 (no date) 1960 FL11 Luo
Masai FL12
Kenya FL1

cattle. The Kikuyu and Kamba have brought in the habit of eating ground maize. And so when a man of some other tribe asks a Masai elder if he may cultivate a patch of land, and offers in return to supply maize, the elder will often agree. The cultivator will clear his patch and grow a crop; next season, he will ask permission to bring his wife and family; soon his cooking-stones, his household goods, his thatched hut are installed; he is there, probably for ever. His daughters may grow up to marry Masai men. That is the way the Masai doom will overtake them—as a people, as a warrior race.

M 177 563

Some of these acceptees, used to the cold, are creeping up into the Mau, burning the trees to make their *shambas* as they have done before in other places. Their actions are illegal, but there is no one to enforce the law and no one dares to do so. This country the Masai know to be theirs. If they agree to let people cultivate in the forest, who is the Government to gainsay them? Attempts to remove intruders might well be met by force, and that is a thing no Government dares to contemplate. It was an attempt to use force, after all, for the ultimate good of the people, that led to the Hola disaster. If the tenant were to be hurt, and the Masai to be angered, and a fracas to arise, denunciations of colonialist oppression and tyranny would thunder from the benches of the House of Commons and repercuss all through the Secretariat. So the Mau forests burn.

M 648 311 563

IV

From our camp on the Talek, a tributary of the Mara, Dr. Philip Glover showed us a little of a tsetse research project which combines the excitement of scientific discovery with that of tracking in the old-fashioned, footprint-in-the-sand way. A tough, enthusiastic and handsome young man called Jungle Smith, helped by several veterinary scouts, has cut traces in the bush to make a grid three miles square. Each trace has been cleared of vegetation so as to leave a path receptive to the footprints of animals.

K 654

Each morning, scouts patrol the grids with notebooks in which they enter every spoor they see. By about eleven o'clock

K 654 136

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

cattle" and "red bulls". HOLLIS,[24] recorded two subdivisions of the Uasin Gishu, "the black striped cattle", and "the red striped cattle", which were, very probably, no other thing than the moieties. 614 634

The Masai *clans*, *ol gilata*, pl. *il gilata* or *en gishomi*, pl. *in gishomi*, are patrilineal and exogamous. Generally, they do not seem to be totemic. However, HOBLEY,[25] and the author of *MS*. No. 48 have recorded the names of a few clan totem. FOX,[26] refers also to the association of snakes with some clans. 614

The true exogamic unit of the Masai seems [illegible] any individed unit, either clan or branch of the clan. A[illegible] may be adopted into another clan then his original one. The same provision applies even to an alien (Kikuyu, Dorobo). The adoptee, however, never attains the same social status as a full member of the clan. He is free to leave at any time, provided he returns whatever he was presented by his patrons, such as cattle or any other valuable. 614 597 [554]

The relationship between clans and their territorial distribution is not very clear. Analysis would suggest that in the past, clans were territorially separated. At present, there is still a tendency for members of the same clan to live close by to one another and occupy neighbouring encampments. Some sections are almost made up by members of a single clan. Thus, the *Molelian* clan is predominant in Kapiti section; the *Atayok* clan is predominant in Dalalakotok section. Such facts, however, seem to be the exception. Usually clans are represented at a time in many different sections "There is no rule", writes HOBLEY,[27] "governing the distribution of the various *gilat* (clans); often members of as many as three *gilat* will be found in one *moru engang* (elders' village) or a *moran manyat* (warriors' village)". 614 361

Water and cattle are generally clan possession. When new water sources are discovered, they are claimed on behalf of the clan. All clan members who live in the neighbourhood are entitled to make use of them. A foreigner may also be allowed to water his cattle there. If disputes arise, they are settled by the council of clan-members on the spot. As a matter of fact, these water sources are the centre of ordinary social life, as FOSBROOKE[28] writes: "The 614 623 312 423

[24] HOLLIS, *l. c.*, p. 456.

[28] FOSBROOKE, l. c., p. 42.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

614 623 312 423 clansmen frequently meet on the water, and other matters — marriage, debts, etc. — come up for settlement before the tribunal". Clan ownership does not exclude individual ownership, which is integrated by the former as a sort of higher supervision. The point is that no clan property must be passed over to other clans without the owning clan's approval. HOBLEY,[29] states that cattle used to be marked by a clan brand showing clan-possession, and sometimes by a brand of the individual owner.

614 672 682 The corporate bond arising from clan relationship is confirmed by cases of murder compensation. Even if a murderer is a wealthy man, and might pay all the compensation out of his own stock, "the other branches of the clan would still contribute and they would pay their share". However, "if a Masai kills a member of his own branch of the *gilat* he pays compensation himself, and the other branches do not contribute".[30] LEAKEY, on the other hand, was told by his informants that no compensation is expected when a man kills a member of his own branch. They say: "what would be the use of taking a fine from one's own sub-clan?"[31] HOBLEY reports further that "each branch of the *gilat* to whom the murdered man belongs, receives a share of the compensation: 2-3rds to the murdered's father", and the rest is distributed among the other elders of the clan.[32] This is also confirmed by the notes of MAGUIRE on the penal code of the Masai.[33]

614 One should note that the corporate bond formed by clan relationship is of a particularist nature. It ties members to their own clan in opposition to other clans within the same tribe.

* * *

648 642 175 The many efforts of the Administration to identify a native political institution for local government make a very interesting piece of etnographical history. First in Kenya, and also, after 1918, in Tanganyika, one *laibon* was recognised as the Paramount Chief of the Masai. In Kenya such an office was abolished in 1918, while a graded system of councils was introduced: a Central Masai Council, 14 Native Councils and local Headmen. They acted as tribunals,

Section 10.—THE WATER SUPPLY.

Tour by Mr. McClure and Captain Hourihan—Tour by Messrs. Boggs and Hollis—Tour by Mr. Watts—Government liability to improve water supply—Boring at Rokocha—The Tana-Kora area—The Rumuruti area—the Percy Grosvenor's proposal—Mr. Corkopolo's work—Mr. Blain's proposals—The engagement of Mr. Watts—Necessary improvements—The construction of the Lenwik Dams—Recommendations by Messrs. Watts and Stoddard—The completion of the Lenwik Valley Dams—The Barkwest Dam—Further proposals by Messrs. Watts and Stoddard—Liability of the Masai to provide funds—The Ngare Gwi Dams—Work in the Kedong Valley—The Wakiri Dam—The Pangani Dam—Mr. Bellers and Marmaret Dams—Contributions by the Masai—Damage to Dams at Lenwik and Ngare Gwi—Shortage of funds—The completion of the Ngare Gwi Dams—Repairs to Lenwik Dams—Mr. Watts' final report—Mr. Stoddard's proposals—Liability to repair damaged Dams—General recommendations—Drainage of swamps on Wakiri River—Dams in the Rift Valley.

Towards the end of the year 1908, a tour of inspection was made by Mr. McClure, the Acting District Commissioner, Ngong, and Captain Hourihan, the Assistant District Commissioner, Sotik, in the country lying west of the Northern Uaso Nyiro, more especially of the areas known as Ghero and the Loita Plains and Hills. This inspection was conducted with a view to ascertaining the potential value of the area as a place for European settlement. The opinion of these officers was that the land near Sotik was, on the whole, unsuited to such settlement, because, although portions of the land could be converted into farms, the holdings would be so disconnected by reason of lack of permanent water, that proper supervision of the area would be impracticable. The permanent streams were so far apart as to preclude any possibility of allotting land on a systematic plan, but they suggested that it was admirably suited to a nomadic and pastoral tribe, such as the Masai.

A portion of the west bank of the Uaso Nyiro, and the Lenwik Valley, had already been allotted to Europeans, but some 2,300* square miles of land were left available for European or native settlement. Of this area, 1,300* square miles might be described as waterless, *i.e.*, without permanent water of any description. After a moderately rainy season there would be sufficient water for such a tribe as the Masai. The year 1908 had been unusually dry, but a fair amount of standing water was found in dry river beds.

Large numbers of Purko Masai had recently migrated from Ngatot to Ghero, the Rotonik and Morijo Plains, their numbers being estimated at 2,000 men, women, and children, with 20,000 head of cattle, and the grazing grounds in Ghero were said by the Masai to be exceptionally good. The value of the magnificent grazing in the Loita Plains was greatly reduced by the absence of springs or other permanent water, but this country had previously been occupied by three clans of Masai—the Loita, L'Oleyok, and Dumat.

These officers estimated that the area could easily provide dry and wet weather grazing for 100,000 head of cattle, provided the water difficulty was overcome, and reported that the ravages of fly were confined to the country near the Anglo-German border.

The country was next visited by Messrs. Boggs and Hollis, who toured, from the 10th of March until the 20th of April, 1909, the area lying between the Uaso Nyiro and the Mara River with a view to ascertaining the value of the region for occupation by the Masai then located in Laikipia, paying special attention to the water proposition. They reported that the two large rivers, the Uaso Nyiro and Mara, were 36 miles apart at their nearest points, that there were several minor rivers of no great length, and that water was obtainable by digging at various points. Some of the best water on the Uaso Nyiro was already in the occupation of white colonists, and a considerable portion on Il Moldi was also marked off for alienation. Under the observed conditions, Mr. Boggs was unable to recommend the removal of the Northern Masai into the region, and he suggested the investigation of the potentialities of the Mara uplands.

* It is possible that these areas were over-estimated owing to the absence of an accurate survey.

*648
312

Mr. Hollis was of opinion that half of the area of 2,300 square miles was useful for cattle during the greater part of the year, owing to scarcity of water, while in one-eighth a fly was found (a species of tsetse) which caused great infection to cattle. He was, however, considered that, if it were possible to irrigate the waterless parts or to dam up some of the springs and make known, the greater part of the Lotia country would become an excellent grazing area. He suggested that a sum of £1,000 be set aside for the purpose of watering the country, and that an engineer be detailed to inspect and report on the area. At the same time, he pointed out that money spent on such inspection would not be thrown away, even if the Masai were not moved from Laikipia, as any improvement of the area in question would mean that more land became available for white settlement.

Report of Mr. Watts.

The district was accordingly visited by Mr. G. E. Watts, Commissioner of Public Works, who left Kaimbi on June 20th, 1918, and spent a month investigating the possibility of providing a sufficient water supply for the stock which might be transferred from the Northern Reserve. From an consideration of the geological properties of the area, Mr. Watts considered that the conditions obtaining throughout the country between Lake Rudolf and the Kagera Rapids, were similar to those previously dealt with by him in India, and he therefore considered that similar methods could be used. These were:-

(1) The sinking of wells;

(2) The damming of streams by permanent earthen, masonry, or concrete dams, and providing a waste weir round the dams, being sluices in the dams themselves;

(3) Making small masonry dams across streams and allowing the flood water to flow over them; and

(4) The construction of small dams with trees, boulders, and clay, and allowing water to percolate through in ordinary times and to flow over the top in the floods.

He considered that no improvements were necessary on the Mara River, or between Lake Rudolf and the left bank of the Uaso Nyiro over the Mara, and by way of Suguta, as the country was already well watered, and he recommended the following constructions:-

(a) For the northern portion of the Lotia Plains, two canals 15 miles apart and 15 miles long, and carrying [illegible] gallons per hour.

(b) For the southern portion of the Lotia Plains, a dam composed of trees, boulders, and clay in the hills above the Chalbi River, and a further 10 miles long.

(c) For the Lotia Hills, dams to form artificial reservoirs; these would be simple of construction, as grass and some other kinds of good cleavage were found in the hills.

(d) From these hills to the German boundary, and in Ukaso, a combination of the well and dam system.

In the plain below Sulwang spring and in the Lorwh Valley more investigation was necessary.

He considered that a sum of £[illegible] would have to be expended on these works before the whole area could be utilised for grazing purposes, and he asked that provision to the extent of £[illegible] be made in the estimates for 1918-1919 to make a commencement. This sum was inserted in the Estimates but was disallowed by the Secretary of State.

Commissioner's liability to remove, 1919 Masai.

During the negotiations which preceded the Masai move, the Party Governor informed the Masai Chiefs that he would be willing to assist the tribe in sinking wells and improving the water supply if it was found that the water in the proposed Southern Reserve was insufficient for their requirements. He stipulated, however, until the removal of the Masai to the Southern Reserve [illegible] the approval of the Secretary of State on the 20th of May, 1911.

G48 # 312

In August, 1911, Mr. Cardgale was sent to construct roads as proposed by Mr. Wade from the Uaw Ryles to the Lotu Plains. [illegible] was available for this work and a sum of [illegible] had been sanctioned for the improvement of the water supply in the extended Southern Reserve. The project seemed to be one which would involve greater expenditure than that originally anticipated, owing to the configuration of the country; the construction was therefore delayed, while the best means of improving the water supply were re-considered and Mr. Cardgale recalled.

A meeting was held at Nakwa on the [illegible] of September between the Provincial Commissioner (Mr. Abercrombie), the Director of Public Works (Mr. McGregor Ross), and Executive Engineer (Mr. C. H. Cornell). In addition to the anticipated difficulty and cost of construction of the roads, it appeared doubtful if the water from the Uaw Ryles was sufficient to provide water for any extended scheme of distribution on the Lotu Plains. The configuration of the country was considerable and the water difficult of access. It was therefore urged that further investigation should be made before the Maud (where southward movement had resulted a check) was finally moved into the area.

On the [illegible] of October a report was received from Messrs. MacDonald and Atkinson in respect of the O-Ondaki country, from which they had just returned. The area was said to contain one million acres of the finest grazing land in the Protectorate and to be well watered. Some investigation was, however, necessary in order to locate all the available sources.

On the 14th of November, Mr. E. D. Bowser reported that the south end of U-Ingwatu, extending into the Ondonga District, was well watered by permanent streams and could hold more stock if necessary.

Before he went on leave in February, 1912, Sir Percy Girouard suggested that water might be supplied from the Uaw Ryles by rain for distribution in the country within seven miles of the river. Conditions of site might be found which would allow of water being lifted for a portion of the distance by rain and delivered for the remainder by gravitation.

The banks of the Uaw Ryles were examined by Mr. Cornell in July, 1912. He found no suitable place for the installation, but several places were located on the Lotu Plains which could be reached later below by means of inexpensive dams. In particular he mentioned the valley of the River Sutan as being eminently suitable. No provision was made for the installation of rams.

It had originally been thought that the provision of facilities for watering cattle in the Uaw-Ryle district would be the most urgent work required in the extended Southern Maud Reserve, but it was soon found that other districts demanded prior attention. In the first place, it was evident that, owing to the very large herds of cattle using the roads from the Ruo towards the Ruo River, it was necessary to protect the water holes on route, particularly in the Lewuh Valley.

On July 20th the Provincial Commissioner, Kalwako, had asked for sanction to employ a European overseer, then working on the north route through the Ruo Forest, in constructing dams first on the Ruomount and then on the River Sutan or other strong holes in the Lotu Plains. Sanction had been given and Mr. Cardgale reached the Lewuh Valley at the end of August. As the work in this valley was more urgent, he attempted to dam some small streams on the North side of the valley but found the ground to be exceedingly porous. There were few well defined springs in the neighbourhood but their capacity was small. He eventually proceeded to work on dams on the Lotu Plains.

On the 21st December, 1912, Executive Engineer Mr. Blake submitted a scheme for storing water in four dambs in order to provide water facilities for cattle on the Lotu Plains. He was of opinion that the volcanic nature of the soil and the holes in the underlying strata made the success of earthen dams very uncertain. The high rate of evaporation—about six inches per month in the dry season—would cause a serious loss of water in the case of earth dams with a large exposed surface and he suggested several concrete reservoirs or low walls as an alternative.

Iron tanks were preferable on account of the lower initial cost and the practicability of moving them to the most suitable places as they became known by experience. The cost of a tank of 5,000 gallons per month, which would be sufficient for 100 head of cattle, was estimated at Rs. 1,000. It was suggested that 20 such tanks should be provided as an experiment, and funds amounting to [illegible] were asked for for this purpose. Outside springs in the Kalang Valley were suggested for treatment by this method, but information was lacking as to the permanency of the various springs and the number of cattle which would be placed in the neighbourhood if the water were made available by this method. No action was therefore taken on this suggestion.

At the beginning of the year 1913, [illegible] had been spent by the Provincial Commissioner, Nairobi, in making small dams in various parts of the extended Northern Reserve, but the [illegible] sanctioned in September, 1911, for use on this work had been practically untouched.

The Engineer of the Rift.

In January, 1913, the Chief Secretary recommended the engagement of a competent engineer to make careful surveys of the area between the Uasin Rivers and the Mara River, to take observations and to superintend the works decided on. The draft Estimates for 1913-14 contained provision for [illegible] to be expended on buildings and works in the Southern Masai Reserve and it was considered inadvisable to divide this area under specific sub-heads until the requirements of the water supply were better known. The Governor considered that it was of the utmost importance that the reserve should be ready for occupation by the time the Masai move (this is proposed) was completed, and gave orders that steps be taken without delay to effect further progress with the works. The dams already constructed had not been favourably reported on and it considered that the work could not be delayed until the money set aside for the project in 1913-14 became available. He proposed to engage the services of Mr. Watts, formerly Commissioner of Public Works, and obtained the Secretary of State's approval to this appointment on the 20th of January.

Surveys, dams, etc.

The Masai moved from Lelkipia had engaged a goldsmith for the country east of the Mara River, and he had owned the area. The dams constructed by Mr. Catchpole had sufficed for the existing requirements of the Masai near the Lemek Valley, but more extensive works would be necessary in the future and it was suggested that Mr. Watts should examine this part of the district [illegible] with a view to commencing waterworks on a larger and more permanent scale.

The rains had been so abundant since July, 1912, that the grazing in the Uasin-Mara country was all that could be desired and greatly in excess of the actual necessary requirements. The Provincial Commissioner, Nairobi, reported that construction of that area be postponed until March, 1913, which would be the first occasion on which it might be impaired by a period of drought.

The Inspection of the Lemek Dam.

Mr. Watts toured the Ol- and Trans-Mara areas in March, 1913, and left Nairobi on the 17th of April to inspect and report on one of the dams constructed by Mr. Catchpole in the Lemek Valley.

Summary of Mr. Watts' and Mr. Hobley's tours.

On the occasion of Sir Henry Belfield's tour in the Masai Reserve in July, 1913, Mr. Watts submitted an interim report on the work he was doing in the Lemek Valley. His general project was the damming of a stream which had been left unfinished by Mr. Catchpole, and raising and lengthening of Mr. Catchpole's dam, which had been practically destroyed by the heads of cattle in May, and the construction of a dam below those made by Mr. Catchpole and on the same stream. The first dam was to be forty feet high, and built in a narrow deep gorge in a stream above the other two dams. A drain was to be cut which would act as a feeder from this large dam to the smaller dams down the valley. Mr. Watts mentioned that the longer stream of the Ol-Lemek rises in Mau, cross the angle water to flow at the surface of the valley below, and so form a permanent stream, thus tending to keep the lower dams full throughout the year.

648 F
312

By the 23rd of July, the big dam was 30 feet high, with 24 feet of water behind it. The lake would eventually be 400 feet long and 130 feet wide, and would contain [illegible] cubic feet of water. A waste branch was provided to remove surplus water in the rains. The dam was being composed of stone and earth, and the estimated cost was [illegible].

The two lower dams were to cost [illegible] each, and were constructed each to contain [illegible] cubic feet of water. They were situated so as to be full throughout the year by one small stream.

Mr. Watts estimated that the water in the dams would suffice for stock grazing over an area of 100 square miles near the site, and hoped to complete the works during October, 1918.

In September, Mr. Watts discussed the general question of the water supply with Mr. Sheppard, and joint recommendations were submitted by these officers in October. The report stated that the whole country from the Upper Kyiyo and its tributaries to the Bura River was closely grazed wherever water was available, and that in the area between the Upper Kyiyo and Kipkio the country near water was grazed and the remainder denuded by grass fires. The only good grazing remaining was to be found on the slopes of the Bura, on the hills near Kamasia towards the Anglo-German border, and in parts of the Trans-Bura country. It was necessary, therefore, to improve the supply between Ngong and the Upper Kyiyo and on the plateau above the Lonyo Escarpment in the Trans-Bura. Such improvements would render a vast area, which could only be utilized for a few weeks during each summer, available for grazing all the year round.

Mr. Watts explained that the estimate of £1,200, made in 1916 was made on account of 10,000 head of cattle only, and that the question of water supply had been considerably enlarged by the revised estimate that [illegible] head of cattle were to be provided for. Little difficulty had been experienced during the year 1918, as the rainfall had been above the normal, and many of the natural sources of water had held out longer than usual.

As a major scheme, Mr. Sheppard suggested that the water should be brought in a canal or pipes from the River Sondai on to the top of the Bura spurs and into the valley below Mount Suswa. Mr. Watts estimated the cost of this project at £[illegible] or £[illegible], and, in the event of this work being considered too expensive, he suggested that this area might be improved by the construction of dams at eight places where water in holes was known to exist.

In the Trans-Bura area three or four dams were necessary on the plateau.

Mr. Watts asked for the insertion of £[illegible] in the draft estimates for 1918-19, which sum would go far towards the construction of the dams at the suggested places. Work on the grazing areas in the mountains situated between the hot springs at Ol'gorai Olonos and the German boundary might be delayed until the year 1919-20. These areas were not being used for lack of water, and the country was being denuded by grass fires.

Work on the Lemek Valley dams was completed in October, 1918. The big dam was 42 feet high in the highest part and 170 feet long at the top. There [illegible] head of cattle watered at it. The smaller dams were dry until early in November, when, as a result of heavy rain, water accumulated in them, but it was not until the end of December that they were filled to all level.

The dam at the Lemek Valley

On completion of his work in the Lemek Valley, Mr. Watts proceeded to Sonkomai, situated 10 or 12 miles to the south-east on the edge of the Lorbo Plain, and started work in the middle of November. There were only three or four small springs at Sonkomai, as intended to be [illegible] feet long and 17 feet high in the highest part was commenced, the dam being faced in front with stone pitching carefully handpacked. By the middle of December it was high enough to store [illegible] gallons of water, and a temporary waste weir was made to carry off the water.

The new dam at Sonkomai

Water collected in the dam in December and continued to it during the three following months though some 10,000 head of cattle watered there daily.

#648
312

During the year 1913-14, £3,000 was spent in making these dams in Lemek Valley and Barlamat, and during the 12 months beginning on the 1st of March, 1913, Mr. Watts spent eight months in construction work.

Further proposals by Mr. Watts and Hemsted.
